From this truly Rooseveltian vagueness it is satisfactory to turn to Gov. Wilson's speeches of Monday. The Lawrence strike illustration of the benefits of the protective tariff he used most effectively. Here are poor people receiving $8 a week in one of the most highly protected industries in America, an industry which has gone to Congress after Congress and begged for high protection, chiefly on the ground that the American workingman is benefited by the tariff. No one has seen of late more clearly than Gov. Wilson how the country suffers from its swaddling clothes; and how industry has fettered both itself and its labor by its tariff. As a result, the men in the unprotected industries are at this moment, as the Governor stated, getting better wages than most of those who labor for the protective tariff barons. His amazement that the country has so long been fooled by this tariff swindle, thousands of emancipated Americans will now share.

The result of the Maine election is, from the national point of view, quite as encouraging as there was any good reason to expect. The tidal-wave victory of the Democrats in the September election of the off-year 1910, it would have been a most extraordinary performance for them to repeat in this Presidential year. The proper comparison is with Presidential years, and the Democrats have improved on their record of 1908; the Republicans, who elected their candidate for Governor by a plurality of 7,600 in 1908, won this year by a plurality of only 3,000—the net Democratic gain being thus 4,600. And this in spite of the fact that the 1908 election was abnormally favorable to the Democrats. The Maine September plurality in Presidential years, from 1896 to 1904 inclusive, ranged from 26,800 to 48,400; and even in 1892, the year of the tremendous Cleveland victory, the Republican plurality was 12,500. The Maine September election is entitled to no very great weight as a pointer for the nation's verdict in November; but in so far as it shows anything, it is a highly favorable indication for Wilson.

The display of political justice made by the Kansas Progressives in holding on to the Republican electoral ticket in the very act of trying to defeat the Republican nominee for President, is having its fit reward. It is turning Taft Republicans in Kansas to Wilson. Yet the Kansas Rooseveltians did no more than Flinn has so far been doing in allowing Roosevelt electors to remain on the Republican ticket in Pennsylvania. The Republican party, it is said, is so hopelessly corrupt that no decent man can have anything to do with it except in States in which its banner can be captured and carried to victory over the forces which would naturally follow it. This comports rather oddly with the loudly proclaimed come-outer policy of the leader of the armies of the Lord, but if nothing less than the flying of the black flag and the consequent misleading of part of the enemy's hosts will win at Armageddon, who can object to such a ruse? It is no new thing for the devil to appear as an angel of light in order to deceive the elect, but when before were the elect so cunning as to reverse the process?

Public opinion will hold Gov. Glasscock to his promise that the murderers of Walter Johnson, who was put to death by a mob for a crime of which he was plainly innocent, shall not be allowed to go scot free. Gov. Glasscock has been prominently before the public as a pioneer in the new movement which proclaims as its object the vindication of human rights as above property rights. It now behooves him to see to it that in his own State the most elementary of all human rights, the right to life, is not restricted to white men. The West Virginia Governor promises that the guilty men shall be brought promptly to trial. Unfortunately, even this does not make it certain that justice will be done. The story of Coatesville has shown what a perverted public conscience can do when the factor of race hatred comes into play.

The "system" within the Police Department of New York city may be the most important single factor in the highly complicated situation arising out of the murder of Herman Rosenthal. But the courts, too, enter into the problem. Here, as in so many other important public questions, the direct way out and the common-sense way out is blocked by a riotous jungle-growth of legal technicality. We are not referring to the rich opportunity for evading the ends of justice offered by the peculiar legal standing of the men indicted for the murder. When a dozen lawyers defending half-a-dozen prisoners begin pleading immunity and State's evidence, and what not, and the rain of legal writs, habeas corpus, certiorari, and what not sets in, there will be a merry time, indeed. But even to that we are accustomed. The public has learned to accept it as a natural thing that the lawyers of a man on trial for life or liberty shall twist and double and block and delay and resort to every other trick in the amply-furnished bag of the modern criminal lawyer. The public is even grown used to see the judges lending themselves, weakly or complacently, to this disgusting game of subterfuge and chicanery. That is an old story. But what shall be said of the same game when it is not a question of a man being tried for life, but simply being subjected to departmental discipline, as in the case of Inspector Hayes?

The following headlines are taken from one of the leading New York papers:

Morse at Work in His Old Office.
Back in the Street to Stay, but Won't Say What He Intends to Do.
Looks in Best of Health.

The Morse referred to in these headlines is none other than the Charles W. Morse whose sentence of fifteen years' imprisonment in the Federal Prison at Atlanta was commuted by the President on January 18, 1912, "to expire at once," when barely more than two years of it had been served, on the sole and express ground that the President had been assured, on high Government medical authority, that Morse was afflicted with a fatal disease, so that his "duration of life will be, in all probability, less than one month if kept in confinement, and in the event of his release under commutation of sentence it is not probable that he will live as long as six months." It is lamentable that, in one of the few conspicuous cases in which a criminal having wealthy and powerful connections has been sentenced to heavy punishment, a way should have been found virtually to set aside the deliberate sentence of the court, to circumvent the vigilance of the President and bring to naught his honest determination that justice should have its course.

The attention of the managers of the Carnegie Hero Fund should be called to a certain Chicago instructor in music. There was brought to him a girl who had been found by the music teachers of her home town to be a musical genius, lacking only a little expert training. The Chicago professor, instead of accepting this verdict and proceeding to turn the pupil into a Jenny Lind, suspended judgment until he should have examined her proficiency. Then came his heroic act. He made his examination—and advised the girl's mother to take her daughter home and make a good cook and housewife of her. The "insult" was promptly resented, and although the money paid the instructor in advance was returned, he was threatened with legal proceedings for his unprecedented course. That he was a hero of a new type and should be recognized as such is evident.

The tragically sudden death of Lieut.-Gen. Arthur MacArthur at the dinner of the survivors of his Civil War regiment removes another important figure of the war with Spain and in the Philippines. As a mere boy he was adjutant of one of the best Wisconsin regiments of the Civil War, and came back as its colonel at twenty-one, wearing a medal of honor for carrying its flag over the breastworks of the enemy when but eighteen years old. As a general in the Philippines, he showed great strategical ability. His plan of campaign in 1900 and 1901 was well thought out and as well carried out. Moreover, he was a humane and tactful officer, and there are many who think that if he had had supreme command at the beginning of the Philippine trouble the record would have been quite different and not as disgraceful to the American nation. At any rate, Gen. MacArthur was an unusually able and broadminded officer, of culture and charm, whose staff was sought both by our officers and by foreign attachés for its high tone and quiet efficiency. More than that, Gen. MacArthur was singularly modest, never parading in public and never dabbling in politics. Altogether, he deserves to be remembered as a very high type of the American soldier, and there is something quite fitting in his demise in the midst of the men he brought back to Milwaukee from the battlefields of the South, just forty-seven years ago.

The difficulty of whistling down the Philippine aspirations for independence is materially increased by the establishment at Washington of a monthly journal, called the *Filipino People*, by the Philippine Commissioner, Manuel L. Quezón. The avowed purpose of the publication is the promotion of "the great cause of Filipino independence," the clearing away of misconceptions regarding the character of the Filipino people and their capacity for self-government, and the demonstration of the practicability as well as the desirability of setting up an independent republic in the archipelago. A significant statement in the announcement is that Mr. Quezón has obtained such assurances of support for this policy from the Democratic leaders in Congress that he expects the Jones bill for qualified independence to pass the House next winter. The Senate is less favorably disposed, but the campaign in behalf of partial and then complete independence is promised to continue until it is successful.

People will continue to sneer at golf as an old man's game, because that is one of the untruths that sound so well. But the defeat of Harold Hilton by a boy just out of college, coupled with the fact that the British amateur championship was recently won by a boy of nineteen, shows plainly that success at this game is not dependent on the sedentary virtues of old age. The match in which Hilton was put out by young Waldo is described as nerve-racking from beginning to end. The veteran British player left the field badly worn out, and his conqueror appears to have been more than once on the verge of collapse. People will still disparage the character of golf for strenuousness, but in their hearts good Americans will conceive a greater measure of respect for a game that carries with it the possibility of nervous prostration.

Syndicalism seems to have had its run in England for the time being. Reports of the proceedings at the congress of British trade unions agree with what observers on the spot have said concerning the state of exhaustion to which the labor unions in that country have been reduced by the series of bitter strikes, of which the dock strike was the last episode. In that series of general strikes, the champions of syndicalism, or "one big union," professed to see the beginning of the end of the present industrial régime. Labor had at last awakened to the consciousness of its powers when exerted in mass. Henceforth no mere petty local trade strikes. One general strike after another was to bring the economic life of the nation to a standstill and the capitalist class to its knees. But events have shown what events on the Continent had shown before, and what the astute Social-Democratic leaders in Germany have recognized: that the general strike means playing with fire. Unless those who initiate a general strike are prepared to go to the point of actual revolution, it can only spell failure.

In Russia, in the autumn of 1905, a general strike forced the Czar to grant a Constitution; but it was a strike in which the entire nation, irrespective of class, participated. The nation could not repeat the effort; when the revolutionists proclaimed a second general strike in November of the same year, the attempt not only proved a failure, but brought about the loss of much that had been gained in the first assault. It is the theory of the syndicalist leaders that the general strike educates the working class for revolution, and that by dint of repeated attempts they will some day bring off a strike that will turn into a revolution. The contrary is true: every unsuccessful general strike leaves behind it a discouraged and disorganized mass.

The latest census returns from Ireland indicate a continuance of the improvement in regard to decline of population. The emigrants for the year are estimated to have numbered 30,000, which is 4,000 below the average for the last decade. The decline in population during that decade was only 1.2 per cent. It was 5.2 per cent. for the ten years preceding. Equally encouraging are the prison statistics, which show a reduction in the total number of prisoners received during the year. Stress is laid upon the difficulty of teaching the prisoners trades, since agriculture is the chief industry of the country and few of the prisons have land. The picture is by no means that of a sinking ship which is often imagined.

It is not Germany that we have to fear, after all, but our hereditary foe, England. Why? Because in her possession of Bermuda she holds the key to the Panama Canal. This is the reason that she was so willing to agree to the Hay-Pauncefote treaty, and it is also the reason why we are lost unless we maintain a fleet of overpowering strength on the Atlantic. As a keen-eyed journalist notes, "England has strengthened and strengthens to-day her West Indian squadron in proportion to the growth of the United States navy, but always with the advantage that Bermuda is so much nearer the Panama Canal than the base for our Atlantic fleet." It follows, as the night the day, that Bermuda, under her present ownership, constitutes a constant menace to the Monroe Doctrine. The wily British, in order to cover their own movement in this regard, have not hesitated to launch reports of attempts by other nations to interfere with our control of the canal, even casting suspicion upon their ally, Japan. Worst of all, as we are reminded, Bermuda "was taken from us by a reprehensible trick, as any student of American history can verify." Our duty, then, is clear. Where is the man who will take Bermuda for us and enable us to sleep in security?

There is one community of Englishmen in which the outcome of the Olympic games was not received with bitterness, and that is the British settlement at Shanghai. The *Celestial Empire* begins its comment on the result with "Hip! Hip! Hurrah!" for the Swedes, and goes on to note that the Americans were beaten for first place only because they did not take part in the yacht races. Yet the population of Sweden, this journal reminds its readers, is less than that of London. To be sure, the Swedes were competing at home, and therefore in considerable numbers, but this fact does not detract from their victory in the eyes of this distant English newspaper. Nor does it look for the explanation of their triumph to their American trainer, and proceed to denounce such careful preparation as unsportsmanlike, if not ungentlemanly. On the contrary, it remembers that Sweden is essentially agricultural. "There," it finds, "is the substratum of success—open-air life, good lungs, hardy frames, strong muscles." In addition to these, it points to the Swedish method of physical development.

Our American school teachers frequently have a habit of thinking themselves much abused and underpaid. But to teachers abroad the position of our men often seems ideal. Just now the facts about the great suffering among teachers in Austria have again come to light in an effort to ameliorate their condition. One of them who writes to the *Frankfurter Zeitung* says that in most teachers' families the wolf never leaves the door. There is not only genuine suffering, but often destitution, for in many families the income does not amount to ten cents per head a day. As a result, the teachers are driven to every sort of expedient, out of hours and in vacations, in order to keep body and soul together, even taking up the most humiliating pursuits. To be able also to carry on a trade is considered great good fortune. This correspondent states that he knows a teacher who regularly picks up the remnants of the children's luncheons at the close of the lunch hour, in order to take them home to his starving children.

Dr. Morrison's recent letter in the London *Times*, dealing with present conditions in China, has served to quiet in part the stories of violent dissension between President Yuan Shi-Kai and the Radical party headed by Dr. Sun Yat-Sen. Of course, differences do exist between the Moderates of the North, as represented by the President of the Republic, and the Radicals of the South, by whom the late revolution was initiated. But owing to the peculiar political structure of China, the danger of these differences to the young republic is minimized. The loose, sprawling aggregation of provinces that make up the Chinese state is a perpetual guaranteee against sudden change. A rebellion might be smouldering away for years in one section of the country without greatly affecting matters at Peking. It was this condition of affairs which made a successful rising against the Manchu dynasty so difficult. But once the revolution has succeeded and the republic is installed at Peking, the same forces work in its favor. It is just the opposite situation to that which prevailed in France after 1789. In that highly centralized state, no great event could occur in one section of the country without producing a repercussion in every other section. A revolutionary triumph in Paris meant revolutionary ascendency pretty nearly everywhere else. Reaction at Paris meant reaction in the provinces. Things are much less coherent in China.

NICARAGUA AND MEXICO.

In official circles at Washington it is held that the revolution in Nicaragua is over. "No serious disturbances are looked for." But there is one serious disturbance that has already occurred, and worked damage it will take years to remedy. This is the damage wrought to the nation's reputation for fair dealing with weaker neighbors. Suspicion of our motives, always rife in Latin America, has been strengthened into active fear. Some two thousand American marines are now running the Nicaraguan national railways. This is a spectacle which renders null and void all the efforts of our diplomacy at conciliation with Spanish America. The festal journeys of our Secretaries of State become mere ludicrous episodes. But it is not for the Latin republics only that our adventure in Nicaragua has a sinister meaning. For ourselves it has set up a dangerous precedent which will not fail to be used by the professional trouble-brokers as an excuse for similar adventures on a larger scale.

As we reread the story of the five weeks' revolution in Nicaragua, we can see what substantial foundations there are for the charge that this Government went into Nicaragua or was fooled into going to Nicaragua, in behalf of self-seeking American interests. The right of the American Government to intervene for the protection of its subjects, whenever a foreign Government is unable or unwilling to extent such protection, is unquestioned. But what were the facts in Nicaragua? The revolution began on July 29 when President Diaz dismissed Gen. Mena from the post of Minister of War. The earliest fighting occurred on July 31. Three days later American marines were landed at Corinto. Did a perilous situation really develop with such startling rapidity, or have we here a touch of that forehandedness which made the Panama revolution of 1903 one of the most telepathic revolutions in history? Dire news of imminent need of the kind that has been flowing in so steadily from Mexico for more than a year began to issue from Nicaragua. American lives were in danger. American women were compelled to take refuge on board of our men-of-war. Yet, as always, the only American lives that seem to have been endangered were those of the professional American soldiers of fortune, whose love of excitement and loot evokes such frequent demands on the American Government to protect its citizens abroad.

Highly significant, too, is the record of military operations during this latest revolution. As one goes through the newspaper accounts day after day, the story is one of an uninterrupted series of victories for the Nicaraguan Government's forces. The first attack by the revolutionists ended in their defeat, and from that moment their fortunes steadily declined. Here was no evidence that the Nicaraguan Government had broken down. There was no long deadlock as in Mexico. The threatened condition of anarchy seems to have remained a threat. Our representatives in Nicaragua began to call for protection from the drop of the hat. But as late as August 30, the British Consul at Matagalpa, where dire events had been predicted for weeks—for American newspaper consumption—writes to his Government in the following dispassionate terms:

> The present local authorities are doing all in their power to guarantee life and property, but the circumstances are very difficult. Certain elements, who are well known for their rancor, hostility, and idiosyncrasy, have frequently expressed evil intentions against foreigners. Should this element gain control of the revolution in the neighborhood of Matagalpa, I believe the lives and property of his British Majesty's subjects would be in danger.

On August 30, then, the possibilities were that, *if* a certain thing happened, there *might* be danger, at Matagalpa. But to our own State Department anarchy had been loose at Matagalpa for weeks. It must have read with relief Admiral Southerland's recent report that conditions at that place are "exaggerated."

The pity and shame of it all is that in Nicaragua, in the short space of a month, we should have gone so far to undo the valiant campaign in behalf of national honor and international justice and peace that has centred about Mexico. For nearly two years now the best conscience of the country has successfully backed up Mr. Taft in his resistance to the tremendous pressure that has been exerted in order to force intervention in Mexico.

But now, after holding fast so long to the counsels of national honor, Mr. Taft seems to be wavering in regard to Mexico. Within the past few days there has been a sudden and violent outburst of intervention talk. Language of portentous gravity is employed in Washington dispatches about the state of mind now obtaining in official circles. The reasons for this change, or alleged change, are, however, either not assigned at all or indicated with extreme vagueness. The only thing that seems to appear with any clearness is that President Taft and those near to him are entertaining the idea of intervention in a far greater degree than was the case a short time ago. If this be true, the time has come for impressing upon the President in the most solemn possible way the tremendous character of the responsibility which he will assume if he should venture upon such a step, or if, by calling Congress together in special session, he should take action pointing towards such a step. Before taking upon his conscience the burden of an act fraught with consequences of incalculable gravity and duration, he must ask himself whether there has been established, beyond the peradventure of a doubt, the imperative necessity to do so. Unless this question can be answered unmistakably in the affirmative, his duty to his country, to Mexico, and to humanity commands that he shall firmly abstain from it, no matter how plausible the reasons in its favor which may be urged by those in his immediate environment, by interested parties here or in Mexico, or by the voices which represent a shallow and thoughtless patriotism.

THE SYRACUSE GATHERING.

The Progressive gathering at Syracuse—plainly more of an assemblage than a convention—displayed much of that same fervor, earnestness, and belief in its regenerative power which was so noticeable at the Chicago Roosevelt Convention. The spectacle was for the newspaper correspondents again a most unusual one, for it was more nearly a gathering of sociologists and social workers than of politicians, or of political workers, or the usual delegates. There appeared also to be more manifest than at Chicago the feeling that this is a wonderful new social movement, aside from Roosevelt's personality, and one that is bound to endure. If not an uprising of the people, it is one, some members feel, of those who work for the people. In the eyes of the settlement workers, it is humanity throwing off its chains. They who work for others have had years of labor to establish themselves and their profession; why is it not right, they ask, that they, the keenest of social observers and students, should now come into their own?

Well, it suggests nothing so much as the enthusiasm of that first revolutionary assembly in Paris in June, 1790, into which they carried a man a hundred and twenty years old, the "Eldest of the World" Carlyle dubs him, that his fading eyes might yet dwell upon the convention which was to regenerate this terrestrial sphere. Not that we would sneer or gibe at either. The spirit of unselfish reform which actuated many of the men and women at Syracuse is to be welcomed in public life; its absence has been but too sharply felt. Where, for instance, were our social workers in 1898, when some rebels in the Citizens Union offered to Colonel Theodore Roosevelt the nomination of Governor? Their social consciousness was not then so keenly awake as now. When the valiant colonel, fresh from Kettle Hill, threw over the independent nomination at Senator Platt's request and declared those men to be falsifiers who thought they had his word to stay on the "goo-goo" ticket, the independent movement went by default. The social workers of that day voted for Boss Platt's ticket with all the "yellow dogs" carried into office by Col. Roosevelt, and were quite content that their hero should take his weekly breakfast with Boss Platt to counsel and plot for the week ahead.

But passing over ancient history, we confess that, with all our respect for the sociologists and workers who dominated the 1,500 delegates at Syracuse, the gathering was topheavy. Take the list of the platform-makers; is there not a trifle too much sociology; does it not smack too much of the East Side or West Side settlements? Is this assembly really the cross-section of the population the ideal democratic body should be? Those were amusing stories of the labor man who wanted more "labor bunkum" in the platform; and of the farmer delegates who reminded the men from the slums that some of the people of New York State live elsewhere besides in the tenements. Is it really wise and democratic to let any group, whether of laboring-men, or philanthropists, or farmers, dominate? Is it not a truism—particularly so of the social workers—that those who are closest to these heart-stirring social problems are often the least able to view the problem as a whole, to hold the proper perspective? Are there not often among them those who in their spiritual pain are too impatient, cast loose from all their bearings, and welcome every suggested reform, the wilder and more radical the better?

As to the moral obscuration of those of this group who would directly tie up good causes to a man of Mr. Roosevelt's unstable character, overweening personal ambitions, blind egotism, and proven treachery, we have in the past expressed ourselves vigorously enough. That these newer "ministers of social justice" should deliberately espouse the doctrine of seeking to do good without regard to the means employed, seems to us one of the most discouraging signs of the times. There are even professional teachers of ethics among them! But waiving this, we would not deny that their platform, and the character of the gathering, will make a powerful appeal to the electorate which no one can overlook, least of all the professional politicians. This will be heralded as an unbossed Convention, and the seething discontent in the State, to which we have so often called attention, will be mightily attracted by it.

And this feeling will be strengthened by that flash of unforeseen enthusiasm which led the Convention, after long wrangling over two candidates for the nomination for Governor, suddenly to choose instead a third man, fully as worthy of the office as either, and probably stronger as a candidate than either. Oscar S. Straus has behind him an honorable record of public service as well as an unblemished character. With him for the head of the ticket, and with the remainder of it of good quality, the Progressive party enters upon its campaign in New York State in a position of undeniable strength. The campaign for Mr. Straus is one which will have to be seriously reckoned with, and which both of the old parties will be put to their trumps to meet.

WORK AND PLAY IN EDUCATION.

Teachers in Cook County, Illinois, took violent exception the other day to the remark of Superintendent Maxwell of this State, that concentration as a study should receive greater attention than vocational training. "The basic work of the school," declared the Cook County Superintendent, roundly, "is to put the pupils on a self-supporting plane, and vocational training is the most logical avenue to the ultimate achievement of that purpose." Not many days later, Superintendent J. M. Greenwood of Kansas City gave an address to his teachers, in which he, too, dealt with the topic of vocational training. After repeating what he had said upon it eighteen months before, that unless this innovation is intelligently directed, it will injure what is sound in our schools without benefiting any considerable number of persons, he expressed his agreement with the conclusions of Edwin C. Cooley, former Superintendent of Chicago schools, who returned some months ago from a study of the vocational schools of Germany, Austria, and Switzerland. Dr. Cooley holds that the period of childhood, by which he means the years from six to sixteen, should be preserved for general "cultural" education, with adequate attention to the training of eye and hand, and that even in strictly vocational training, the aims of culture should not be abandoned.

How thoroughly "reactionary"—that blessed word—are Superintendent Greenwood and those who think with him! He has even dared to assert that the amusement theory of education has been carried to a ridiculous extent. The early studies—reading, writing, spelling, arithmetic, grammar, geography, and United States history—are, he feels, the right studies for boys and girls, and "form an infinitely better background for the child's future progress than any amount of half-learned miscellaneous stuff picked up at random from the various departments of science, art, civics, agriculture, history, or literature." This is downright educational heresy, and both he and Superintendent Maxwell ought to be excommunicated for harboring, and especially for publishing, such views. If an eight-year-old boy or girl prefers the saw or the needle to the books that his elders have prescribed, who are these superintendents that they should say the child nay? It is an open secret that we have failed in our endeavors to compel our children to learn; if we are not to be allowed to cajole them, their outlook for an education is hopeless. Let them play in the kindergarten, and make their own selection of studies as soon as they evince a desire to choose; so they shall be willing to remain in school and shall come out in the end scholars to be proud of.

This pleasing hope is a little shaken, to be sure, by considerations put forward in an article in the *Educational Review* entitled "Oxford—a Contrast," the contrast being between English and American university men in their attainments and their ability to master intellectual tasks. The unfavorable reports made to the officers of the Rhodes Trust by Oxford tutors concerning the scholastic ability of our Rhodes scholars, printed in the fifth annual report of the Carnegie Foundation, may be summarized in the testimony of one of them: "As a general rule, they know nothing well, but something about a great many things—the kind of knowledge you might get from attending public lectures." That last phrase ought to be engraved over the door of a thousand university lecture rooms, as a warning to lecturer as well as auditor. We have been in the habit of looking upon Germany as the exponent of thoroughness, but our undergraduates may congratulate themselves when they approach the standards in this respect of outworn England.

Princeton's adoption of the preceptorial system was a signal recognition on the part of one of our great universities of this want of thoroughness, but the real sign of that lack has been in existence much longer. It is the endless multiplicity of "courses," the infinite subdivision of the field of knowledge and investigation. Instead of a subject, our students study a segment. At bottom, it is a question of ideals. We pride ourselves on our breadth; we admire the versatile man. The master of one thing we may have to employ now and then, but he is not the man who evokes our enthusiasm. In a pioneering stage, this attitude is natural enough, if not inevitable. But we have played the coward too long behind that great bulwark "pioneering." If vocational training should help to open our eyes to the fact that education is as serious as that most serious of all matters with us, business, this gain may go far to offset the loss suffered in other directions.

DISAPPOINTING VACATIONS.

The tide of those returning from vacation comes streaming into the cities from all sides, thronging docks and railway terminals, trying the backs and souls of baggagemen, and making them a shade more vicious in their professional conduct than usual. This host divides into two parts. On one side is the group of those who have found complete satisfaction in their outing. They come wrapped in garments of content and tan. Mingled with them, however, is that unfortunate second group of the disappointed. They have failed to get either the profit or the joy they looked for. Accordingly, they either enlarge upon their disappointment or steal away to sulk in their tents. So large is this second group that it is worth while to investigate the causes for its being.

By their choice of a vacation spot too many people nowadays are keyed up to the highest pitch of expectancy. Their perusal of guide-books and transportation-company "literature" has made them see in vision nothing short of paradise. As this is not to be found anywhere in life, obviously they are bound to meet with disillusion and regrets. Their roseate dreams once shattered, they are completely benumbed at being stranded in an "unpleasant" place. They look upon the dark side of their surroundings. They persist in this, taking a sort of mournful pride in the lack of conspicuously attractive points. They see the place, not for what it is, but for how much it falls short of what they expected. As a natural result, they settle into a mood of apathy. But the true and philosophic way to make the most of what is thought a bad bargain has been set forth by Stevenson in one of his essays, "On the Enjoyment of Unpleasant Places":

> It is a difficult matter to make the most of any given place, and we have much in our own power. Things looked at patiently from one side after another generally end by showing a side that is beautiful. . . . I have often been tempted to put forth the paradox that any place is good enough to live a life in, while it is only in a few, and those highly favored, that we can pass a few hours agreeably. For if we only stay long enough we become at home in the neighborhood. Reminiscences spring up, like flowers, about uninteresting corners. We forget to some degree the superior loveliness of other places, and fall into a tolerant and sympathetic spirit which is its own reward and justification. Looking back the other day on some recollections of my own, I was astonished to find how much I owed to such a residence; six weeks in one unpleasant country-side had done more, it seemed, to quicken and educate my sensibilities than many years in places that jumped more nearly with my inclination. . . . So, wherever a man is, he will find something to please and pacify him; in the town he will meet pleasant faces of men and women, and see beautiful flowers at a window, or hear a cage-bird singing at the corner of the gloomiest street; and for the country, there is no country without some amenity—let him only look for it in the right spirit, and he will surely find.

Another sort of person unhappy in holiday-time is the man who likes a place well enough as a place, but is discontented on account of its familiarity. Because he has seen it all time after time, he is envious of the thousands who every summer roam the world in search of novel and wonderful sights. Yet those who go abroad every summer little dream that near their own familiar homes is to be found perhaps equal beauty. Meanwhile, those near home bewail the fact that they cannot travel. Their eyes are closed to the vision at hand. Lowell tells a pointed anecdote:

> I was walking through the Franconia Notch, and stopped to talk with a hermit who fed with gradual logs the unwearied teeth of a saw mill. . . . At length I asked him the best point of view for the Old Man of the Mountain.
>
> "Dunno—never see it."
>
> Too young and too happy either to feel or affect the juvenilian indifference, I was sincerely astonished, and I expressed it.
>
> The log-compelling man attempted no justification, but after a little asked, "Come from Bawsn?"
>
> "Yes" (with pensinular pride).
>
> "Goodle to see in the vycinity o' Bawsn."
>
> "O, yes!" I said, and I thought—See Boston and die! . . .
>
> "I should like, 'awl, I *should* like to stand on Bunker Hill. You've ben theer offen, likely?"
>
> "N—o—o," unwillingly, seeing the little end of the horn in clear vision at the terminus of this Socratic perspective.
>
> " 'Awl, my young frien', you've larned neow that wut a man kin see any day for nawthin', children half price, he never does see. Nawthin' pay, nawthin vally."

So the world goes, one man taking time and money to get within view of what the other man never thought of raising his head to see. The persons who must stay in a familiar spot would be spared much discontent could they but realize what vistas lie all about them. Perhaps "Nawthin' pay, nawthin' vally" must ever remain a law of human nature. But, as the philosophic critic concludes, "there is one exception, wise hermit—it is just these *gratis* pictures which the poet puts in his show-box, and which we all gladly pay Wordsworth and the rest for a peep at. The divine faculty is to see what everybody can look at."

LEARNING ENGLISH THROUGH THE CLASSICS.

Why is it that so few persons can write good English? I do not mean English distinguished in style, but just good English, that says what it means clearly and says nothing else. This complaint is made by those who have to teach college freshmen; and the fault does not end with freshmen. A circular of the English Board of Education says: "The weight given in entrance examinations to Scripture knowledge often approaches vanishing point." It means: "Scripture knowledge often gets few marks or none," and the mixed metaphor only obscures. *Quis custodiet ipsos custodes*—who will look after the literary police?

Now perhaps the most effective way to make our thoughts clear is to express them in a foreign language: and this is true above all of Greek. The faults of modern English, as generally written—dead metaphors, abstractions, periphrases—are found equally in French and worse still in German: but not in classical Greek. English may be clear: Greek must be clear, or it is not Greek. If, therefore, the pupil is trained to express his thoughts in Greek, he is necessarily trained to express his thoughts clearly.

For this sort of training the Greek language has merits that no other language has, at least in the same degree. I place first, as most important, the merit of truth; I mean, that the words correspond to the sense more exactly than in any other language. This is most important, because no one can learn Greek at all without learning this, and thus it affects not only the scholar but the boy of moderate powers. Let me take a few instances:

> The observant reader, who has marked our young lieutenant's previous behavior, and has preserved our report of the brief conversation which he has just had with Captain Dobbin, has possibly come to certain conclusions regarding the character of Lieutenant Osborne. ("Vanity Fair.")

This would be in Greek:

> Εἰ ἐνόησας ἅττα μὲν πρὶν ἐποίησεν ὁ Γεωργός, ἅττα δ' εἶπεν οὐ πολλὰ ὄντα τῷ Γουλιέλμῳ. ὡς καὶ ἐγὼ διηγούμην, ἴσως ἤδη καὶ περὶ αὐτοῦ κατανενόηκάς πως οἷός ἐστιν.

You see that the English does not make it clear that our young lieutenant is Lieutenant Osborne; says the same thing twice when the observant reader marks; does not make clear how the report is preserved; and uses five abstractions which call up no image whatever, "behavior," "report," "conversation," "conclusions," "character." Four of these five abstractions are acts, and are properly expressed by verbs; one is a dead metaphor, which does not express the thought better, or indeed as well, as an adjective. It is true that this can be simply expressed in English: "If you have noticed what Osborne did, and if you remember what he said, as I told it, you will know something of what kind of a man he is." It can be so put, but the point is, that it is not so put; the roundabout way is the usual way in English, whereas the straight way is not only the usual way in Greek, but it is the only right way. I take a few more instances from a novel I happen to be reading:

> I had hoped to cheer him with the story of a visit I had by chance paid that afternoon to the Asolando tea room.

> Ἐδείπνησα περὶ μεσημβρίαν ἐν θαυμασίῳ τινὶ καπηλείῳ· καὶ ταῦτ' εἶχον ἐν νῷ διηγεῖσθαι ὥστ' εὐφραινειν αὐτόν.

Notice the string of prepositional phrases, and again abstract nouns to express acts: the form also of the sentence is such, that it might end at "visit," "paid," "afternoon," or "tea-room": whereas the Greek has three distinct parts, each complete in itself, and no part of each is such that it can be dropped:

> He could never overcome a tendency to sea-sickness.

> Ἀεὶ ἐναυσία, οὐδ' ἦν ἄκος οὐδέν.

Again an abstraction without a picture, and a meaningless metaphor.

> It was over a cup of tea in the Asolando that Bennet made the first notes for his revolutionary essay on the Sapphic fragments in a dog-eared text still treasured among the Room's memorabilia.

> Ἐνταῦθα δὴ πρῶτον αὐτοσχεδιάζει ὁ Βενετὸς ἅμα πίνων τὸ περὶ τῶν Σαπψοῦς, ὅπερ καὶ ἤμελλε πάντας τοσοῦτον ἐκπλήττειν. κεῖται δὲ καὶ νῦν ὥσπερ θησαυρὸς τὸ βιβλίον πάνυ κατατετρυμένον, ἐν ᾧ γέγραπται τὰ ὑπομνήματα ἐκεῖνα.

Six prepositional phrases, only one finite verb; and this to express two main thoughts and two subordinate thoughts. Notice how the epithet "revolutionary" is made to imply what ought to have been clearly said. This is another common English fault, which is greatly favored by politicians: many of their epithets imply the logical fallacy of begging the question which they are expected to prove, but a course of Greek would enable the hearers, if they wished, to detect these fallacies. I have omitted to note other faults, such as using long Latin words when a short English word does better. This is sometimes done on purpose, to throw an air of mystery over a simple thing, for fun, but most of these sentences are not meant to be funny. Another misuse of the epithet, common enough, must be mentioned: when it is used to throw in something by the way that really belongs to another part of the passage, or does not belong to it at all:

> The team spoke well for Miss Hollister's stable, and the liveried driver kept them moving steadily.

Why liveried? A liveried driver drives no better than a driver without livery: the word has no meaning there unless there is a logical link. If it was worth while saying that he wore livery, it should have been said earlier.

The passage also contains other faults. What did the team say? That the stable was good? The author means that the horses were good, not that these horses proved that there were other good horses in the stable, or that the stable was good. It is strange that the team should speak at all; that has hardly happened since Balaam's day: but if the team does speak, why should it be nothing more to the point than this: "The good horses proved that her horses were good." In this passage, the author's democratic love of show peeps out: but this type is generally found with the sentimental and picturesque touch. Examples are: "She leaned her small oval head against his broad, hairy breast." "She opened her blue eyes at him." "He followed the black-robed figure." "She tapped her little foot." But in these the color or size or shape has nothing to do with the point. This vice is seen even in good authors; as when Prescott says ("Peru," I, 381) in describing an assault, "they poured into the plaza horse and foot, each in his own dark column." These picturesque expressions are highly offensive in Greek prose; they are not so in English, only because we have allowed ourselves to think loosely. It is greatly to our benefit, then, to study a language where such things are not allowed.

In some degree, Latin is like Greek. Latin is more direct than modern languages, but it falls far behind Greek. This is partly because Latin has no article, partly because the indirect constructions are stiffer, more artificial, and do not always admit of a finite verb. In expressing how thoughts are related, Latin has some advantage, because it is very concise and its rules very strict: but even here, the Greek can do as well if necessary, though it prefers liveliness. In directness, simplicity, truth to life, the Latin falls far short.

I have now shown that the Greek language has merits which most other languages have not, and none in the same degree.

I have of set purpose confined this proof to the elements, to that which every one who learns Greek must learn and must continually practice: it appears to be highly useful that boys should be practiced every day in the art of saying exactly what they mean. But for those who advance further, the language has other shining merits, which I think no one will dispute. No language can express so many fine variations and shades of thought. Thus the student has to carry further the art of saying what he means. English has often one expression for two distinct thoughts: and when this is so, the two always come to be confused, and the untrained mind thinks that there is only one. For instance: "if I write" has not the same sense in the following:

A. Why do you write?
B. If I write, I have my reasons.

A. Please give my kind regards.
B. If I write, I will.

This is only one of a thousand examples. The enormous number of particles represent so many shades of feeling, that they can only be rendered by tone, gesture, movement of the face. There are scores of verbal inflections, each with its part to play. The learner is always learning new varieties of expression; few indeed learn all that can be learnt of the Greek language, and what it can do. If I do not dwell on this, it is because no one will deny it. My point is, that the process of making the thoughts clear, which we saw in the elements, is carried on to very high refinement by further study. This kind of training will be of great benefit to the ordinary mind: a great natural genius may do without this or any other training of the sort: but our schools are full of ordinary minds, not great natural geniuses.

But some one may say, these things are not quoted from English classics. One of them is: the rest are quite familiar English style, as all readers will agree. But further to meet the objection, I will take a few sentences from a good translation of a Greek classic, where the Greek has no style—it is merely Greek—and the English is meant to have style. I open the book at random:

> Is the King designate to have such a force attached to his person as will enable him to enforce obedience upon unwilling subjects. . . . . Even upon the supposition that his authority is wholly constitutional. . . . (Welldon.)
>
> Πότερον ἔχειν δεῖ τὸν μέλλοντα βασιλεύειν ἰσχύν τινα περὶ αὐτόν ᾗ δυνήσεται βιάζεσθαι τοὺς μὴ πειθομένους πειθαρχεῖν; . . . εἰ γὰρ κατὰ νόμον εἴη κύριος . . . . (Aristotle, "Politics," iii, 15.)

The Greek has only one abstract noun, "force": the English has five, of which two are foisted in without need ("person," "supposition"), one represents an action ("obedience"), one a descriptive word (κύριος). We are so used to these things, that a simple rendering would sound to most ears bald. My point as before is, not that English cannot be simple, but that it is not, and that Greek study may help to mend this. Things are still worse in metaphysics and other kinds of philosophy; where even in technical subjects Greek words always mean something: the very terms of grammar record to the student something of what goes on in the scholar's mind. Cicero, who invented most of the Latin terms of philosophy, cannot always be understood without Greek; but Plato, in his most abstruse parts, uses words which human beings could use in their daily life. It is thus that all arts and sciences seem to live when we read of them in Greek: in English, how dead they are! and how fearful is the jargon of books on plants, animals, the earth, Mendelism, pragmatism, and all the other isms and ologies. I have listened to a skilful coach teaching boys botany for an open scholarship: a large part of his work was to write on the board huge compounds in outward appearance Greek, which each described some harmless flower. The men of science so-called—I say so-called not to cast contempt on nature, but to protest that this word applies to knowledge of man's mind no less—who hate Greek like poison, use its dictionary to compound the most horrible simples. They are hoist with their own petard. Intoxicated with the exuberance of their own verbosity, they lose the power to speak as human beings, and not only fail to express any meaning they may have, but fall into fallacies of reasoning. I will quote here an instance, chosen because the reviewer in the *Athenæum* (1910, p. 737) chose it for special praise, as a "specimen of argument":

> The whole species of giant armadillo having been destroyed by the sabre-toothed tiger, the latter's teeth formation rendered it impossible for him to prey on any animal. The sabre-toothed tiger thus found himself in pronounced and fatal physiological isolation, which is only one of the many startling symptoms of retribution arising from a dysteleological life.

I must first translate this into English, that you may see what it is meant for—not what it means: that we shall see later:

> The sabre-toothed tiger had teeth so shaped that he could not eat anything but the giant armadillo. When he had eaten all the giant armadillos, there was nothing left for him to eat. Last of all, he died also. This is startling, but it often happens so, because nature punishes those creatures which——

I confess I cannot make out what the rest does mean, but I seem to see that the tiger's unpardonable sin was that he was a specialist. Men of science so-called err in the same way as their tiger, and when their sabre-teeth have devoured all those who have studied Greek and the art of saying what they mean, they will find themselves in pronounced and fatal physiological isolation, unless they have used the meanwhile to learn how one sabre-toothed tiger can eat another. It was unkind in the reviewer to choose this as a specimen of argument; for in the first sentence our author has not said what he means; he has said this: "Because all the armadillos were eaten, therefore the tiger's teeth were so formed that he could not eat anything else." And what is "pronounced isolation"? There is no reference in the argument to the pronunciation either of the tiger or of the armadillo. We are left to guess what word the tiger pronounced when he found that the armadillos were all done. "Physiological isolation" means, I suppose, that the tiger's teeth were so shaped that he could not eat anything now that there were no more armadillos: which has been said once already. And is it a symptom of retribution, or the retribution itself, that the tiger had to starve? As to "dysteleological," I give it up: but I guess that the tiger ought to have looked ahead, and got some other teeth ready for the time when the armadillos should be no more. That is a good moral, fit for serpent-toothed politicians as well as for sabre-toothed tigers; but I must say the blame here seems to lie with nature rather than the tiger. It was a mean sort of trick, a bad practical joke: startling, I agree, but the tiger could hardly help himself. The situation has its irony: if the tiger had known Greek he must have heard the proverb, "look to the end," and a precious life might have been saved.

If any one thinks that this is not a common style, let him purchase Sir T. Clifford Allbutt's "Notes on the Composition of Scientific Papers" (Macmillan): a good half-crown's worth. Here speaks a distinguished man of science, whose words must carry weight: not a benighted classical man fighting in the last ditch to save his own skin.

This last sentence is not meant to imply that the present writer so describes himself. No: he is rather holding a crown of gold over the head of one who rakes in the muckheap. Greek is more precious than fine gold: Greek is wisdom, comfort, and delight. Its very dry bones, as some might call them, have been the subject of the foregoing words: even in these there has been shown to be profit for the humblest, the most stumbling learners.

W. H. D. ROUSE.

Cambridge, England.

NEWS FOR BIBLIOPHILES.

Details which have now been made public in regard to the Widener Memorial Library to be erected for Harvard, show that it is to be a building of great size and scope, larger, in fact, than the Boston Public Library, and nearly as large as that of New York. The work of demolishing Gore Hall is to begin at once, and until the new edifice is completed, Randall and Massachusetts Halls will serve for library. The structure will be 206 by 275 feet in round figures, the longest dimension being north and south. The main façade will front the interior of the yard, and the main entrance will be directly south of Appleton Chapel. There will also be an entrance from the southerly side.

The façade will be impressive. On a portico, 129 feet long, which extends along the front of the building and is reached by a flight of wide steps at a height of twelve feet from the ground, will rise twelve Corinthian columns, each forty feet high. Behind the portico the main doors open into the library. On the lower floor of the building, the ceiling of which is on a level with the portico, will be large special reading-rooms for the departments of history, economics, and government, accommodating about 150 students. On the first floor will be housed the Harry Elkins Widener collection. The dominating feature of the second floor is to be the main reading-room, which will run across the front of the building facing the college yard, and extending 136 feet from east to west. It will be three stories in height and have seating capacity for 375 persons. The card-catalogue room will be on this floor at the head of the stairs, and behind this will be the delivery-room. On the third floor will be a large room for works on art and archæology. The great cartography collection will also be housed on this floor.

The top floor provides quarters for the English library; the classical library, and other collections, the bindery, and a photographing-room. There will also be on this floor twenty or more rooms for seminars where teachers and their classes may be within easy reach of the reference-room. Special attention has been given to providing facilities for research work. There will be no less than eighty private rooms for the use of Harvard professors and scholars from other institutions who come to the Memorial Library for study. There will also be 350 small private studies, in which the books of a special subject may be brought together.

As yet, the cost of the new building has not been announced, but it will be considerably in excess of $1,000,000. The plans for the structure are by Horace Trumbauer, of Philadelphia, who has done much architectural work for the Widener family. It is now hoped that the work will progress so that the Memorial Library can be dedicated on commencement day in June, 1914.

Correspondence

THE JAPANESE MASK PLAY.

To the Editor of The Nation:

Sir: "Sometimes I have been puzzled to think where I am I have heard so many stories of the ultra-European ways and things here in Japan; how thoroughly Hearn used to despise them! But I am quite certain I am in Japan this time, there's no mistake about it—Japan with poetry at heart." Thus my friend, a foreign critic of art and life exclaimed delightedly to me as we hurried to see a No performance.

Already from the outside of the house where we were waiting for admission we heard the long wailings, high notes, the piercing sound of flutes and tsuzumi, and the curiously sad rhythm mingled with a background of high, distinct declamation.

"Doesn't it sound to you as if it were an old cry, perhaps a thousand years old, which has returned here to curse the modern Japanese civilization of the brandy-and-soda, single eyeglass kind? The sadness of tone bites one's heart, doesn't it?" he said. We smiled to each other, with acknowledgment on my part; and we entered the box. The quiet, even the no small measure of silence within, perfectly astonished him; I am sure it was the first time for him to observe how quietly a performance can be carried on if one wishes to. He was delighted even with those wooden tablets, on which the names were written, stuck on each box; he looked splendid, undoubtedly thinking he was among the select few. In fact, everything is run on a small scale, the stage to begin with, and with only a small audience admitted. "What though the stage be small," he began to say, "the performance simple and brief? That brevity is a great art. I learned it in your Japanese poem a long time ago, which is a song of crickets, a sigh and smile of flowers; limitation is the secret of all highest art. How can you call yourself an artist if you cannot put your soul of art within the limit of a small stage, and within a short period of time? The brief time and the little stage are the sure proof of the mighty value of this No performance as art. Look at the stage with its own roof; it has the dignity of its own existence which our Western stage has not; and that long gallery or bridge, along which the No actors move as spectres evoked from an unknown corner with the newest manner and attitude, is most satisfying with its suggestion of making a beginning and ending there; you might call it Life and Death. The No is the perfection of brevity of dramatic art; it might be compared with the Greek play or the modern Irish plays of Yeats and others. Our ordinary Western plays, doubtless, have a certain beauty of confusion; but we are tired of it. Here we have the No whose monotone makes us perfectly wearied at first, but will be the source of no small delight for many cultured minds. And you have to see the pictorial side of those magnificent dresses of stiff brocade which the actors wear dragging them along slowly to the cadence of the music; what epical dignity of the actors, and what a simple grandeur!"

The No, or this mask play, is not the creation of one time or one age; it has an old history, since it was born like a mystery from the national impulse and love of literature and legends, from our almost blind belief in Buddhism and ghosts, which was encouraged first in the feudal age by the Ashikaga lords from the fourteenth century down to the close of the sixteenth century. It was in those days that we formed the national epics, or poems—that is to say, the No plays. It was the first time, and last, in the history of Japanese literature to have the various traditions and legends, the certain Buddhistic faith and imagination (those things hopelessly neglected by the aristocratic literature of the Kyoto court in the former age), dressed in pure literature. I said it was the last, because the novels and dramas that were sent out later on in the Tokugawa age were not, in a large measure, new attempts from those of the Ashikaga's, but only an emphasis. Yoshimitsu, the third lord of the Ashikaga government, the propagandist of the tea ceremonies and refined arts, may be said to have been the first encourager of the No; and at the time of Yoshimasa, the eighth lord, it had been roughly completed as we have it to-day. In due time, Ashikaga's power declined; and the most wonderful war god arose on the horizon in the person of Hideyoshi, the Napoleon of Japan, who, on the other hand, was a no small patron of art and literature. The No was not left in oblivion in his time, but many new pieces were added to the already great numbers of the repertory, and alterations were made in those already in practice. When the time came down to the Tokugawa feudal era of the seventeenth century, the period of peace and prosperity, it had become the most important factor of the nation's life. To recite lines from the No, and to act on the stage if possible, was regarded to be one of a gentleman's accomplishments; the No play, in contrast to the common theatre, held the most dignified, noble place of entertainment. And so it is to-day. It was thought even sacred; and it began to assume the most necessary role at a wedding ceremony. With the singing of a passage from "Takasago," your wedlock will be sealed.

"Takasago," the happy play celebrating constancy, endurance, health, and longevity, is represented by an old man and an old woman busy in the work of raking up pine needles under the pine trees. The passage says: "True it is that these pine trees shed not all their leaves; their verdure remains fresh for ages long: even among evergreen trees—the emblems of unchangeableness—exalted is their face to the end of time—the fame of the two pine trees that have grown old together." What are these two pine trees? Who are the old man and woman? The ghosts of the trees are nothing but the old man and woman singing the age of golden and happy life.

Among some three hundred repertories now in existence, there is no other like "The Robe of Feathers" that will gracefully carry the delicate, statuesque beauty of composition and sentiment. It is the play of a fairy whose feather-robe was stolen by a fisherman at Mio's pine-clad shore, while she was bathing, and upon her promise to dance was given back finally. Not to go to extremes, even in sadness, is taught in Japan to be the height of cultured manners; here we have every Oriental beauty and lamentation in this fairy who could not fly back to the sky, and sang:

Vainly my glance doth seek the heavenly plain,
Where rising vapors all the air enshroud,
And veil the well-known paths from cloud to cloud.

And she promised that she would dance the dance that makes the Palace of the Moon turn round, and would leave her dance behind as a token to mortal men, if her robe could be restored her. However, the fishermen doubted that she might hurry home to heaven without dancing at all; then the fairy said:

> Fie on thee! The pledge of mortals may be doubted, but in heavenly beings there is no falsehood.

As I said, the No is the creation of the age when, by the virtue of sutra or Buddha's holy name, any straying ghosts or spirits in Hades were believed to enter Nirvana; there is no wonder that most of the plays have to deal with those ghosts and Buddhism. That ghostliness appeals even to the poetical thought and fancy of modern age, because it has no age. It is the essence of the Buddhistic belief, however fantastic, to stay poetical forever. Although the No's repertories do not change, our conception and understanding will be altered; it is thus that they can keep always fresh themselves. Here we have one play called "Morning Glory"; the flower cannot enter Nirvana on account of her short life of only one morning, and of her jealousies that burn on seeing the other flowers who enjoy a longer life. However, her ghost will disappear with satisfaction when the monk gives her a sermon that eternity is nothing but a moment, and to live in a moment is to live in the ages.

This mask play is the simplest affair, with not more than three characters. The three characters are enough to make real poetry move. And how many more do you want, I should like to know.

YONE NOGUCHI.

Kamakura, Japan, August 1.

WORDS IN THE BIBLE.

TO THE EDITOR OF THE NATION:

SIR: There has, I believe, been no computation of the number of words employed in the Authorized Version of the Bible since George P. Marsh published his admirable "Lectures on the English Language" in 1861, later writers having been content to employ his result, with or without acknowledgment. Marsh (p. 263) calculates the number as "somewhat fewer than six thousand." Last year, being the tercentenary of the publication of the Authorized Version, I undertook a new computation of the number, employing for the purpose a much more complete instrument of research than was at Marsh's disposal—Strong's "Exhaustive Concordance of the Bible."

No two calculators would be likely to attain absolute agreement with respect to the words to be included. My own procedure has been as follows: all inflected words have been reduced to their dictionary-form—that is, possessives, plurals, etc., of nouns and pronouns have been reduced to the nominative singular, and thus counted only once; and the same is true of the inflected forms of the verb: e. g., *speakest, speaketh, spake, spakest, speaking, spoken*, are all counted as *speak*. Present and past participles, used as adjectives or nouns, are counted as adjectives or nouns, and not merged under the type-form of the verb: thus (Mark 13:8), "These are the *beginnings* of sorrows"; (Prov. 9:17), "*Stolen* waters are sweet"; of these there are 279, including 14 present participles used both as nouns and adjectives: *e. g.,* (2 Sam. 18:27), "The *running* of the foremost is like the *running* of Ahimaaz the son of Zadok"; (Lev. 15:13), "Bathe his flesh in *running* water." Homonyms, whether different parts of speech from the same root or springing from different roots, are counted as separate words: thus (Gen. 9:2), "The *fear* of you and the dread of you"; (Gen. 15:1), "*Fear* not, Abram"—(1 Sam. 17:34), "There came a lion, and a *bear*"; (Gen. 4:13), "My punishment is greater than I can *bear*"—(Judg. 4:21), "He was *fast* asleep"; (Acts 16:24), "made their feet *fast* in the stocks"; (Matt. 9:14), "Why do we and the Pharisees *fast* oft?" (Joel 1:14), "Sanctify ye a *fast*"; of these there are 307. The following are counted as different words: *Almug* and *algum, alway* and *always, astonied* and *astonished, betray* and *bewray, clad* and *clothed, compact* and *compacted, espy* and *spy, establish* and *stablish, estate* and *state, incorruptible* and *uncorruptible, sometime* and *sometimes, straight* and *strait, thoroughly* and *throughly, travail* and *travel*. On the other hand, the following are not distinguished: *ax* and *axe, gray* and *grey, instructer* and *instructor, naught* and *nought, vail* and *veil, wonderously* and *wondrously*. Proper nouns and adjectives are excluded, with the exception of *Almighty, Easter, Lord, Pentecost*. All Hebrew and Chaldee words are excluded, except *alleluia, amen, hosanna, rabbi,* and *shibboleth*. Of Greek words, *alpha* and *omega* are excluded.

On the basis thus indicated, I compute the number of words in the Authorized Version to be 6,568. If to these were added the inflected forms of nouns, pronouns, or verbs, excluded as above, the total would be 9,884. Whatever error there may be in these figures can hardly be considerable, though it would be rash to claim for them absolute exactness. If there are any who would prefer to change the basis of calculation, the data given above should be sufficient to enable the new total to be readily ascertained.

Textbooks

EDUCATIONAL THEORY.

The University of Manchester has just issued, as the fifth number of its Educational Series, a bulky "Outlines of Education Courses in the University of Manchester" (Longmans), the greater part of which consists of a readable and informing "Syllabus of a Course in the History of Education in England," by Prof. Michael E. Sadler. But the document is more interesting as one of a number of publications showing that the English non-conformist universities have begun to appreciate the possibilities of expansion contained in the American idea of special professional training for teachers. Conspicuous in this enterprise are the University of Manchester and Professor Sadler. We speak of the "American idea" because the literature quoted is almost exclusively American; and the attitude expressed in the references is often surprisingly naïve and also somewhat perplexing. For the pedantry of scientific professional training, imported by us from Germany, is hardly congenial to the English mind, which, in matters of theory, places its confidence in a background of liberal culture and knowledge of the world. Rather vague about sensory tests and *questionnaires*, though respectful and admiring, the English works on education appear, so far, to be superior to our own in literary quality and ripeness of view.

So much, at least, is true of "The Evolution of Educational Theory" (Macmillan), by John Adams, professor of education in the University of London. As a whole, however, the book is disappointing. The first of an ambitious series on The Schools of Philosophy, under the editorship of Sir Henry Jones—a series designed to supply the English reader with a history of philosophy comparable to Ueberweg and Erdmann—we should have expected it to be a thoroughly reconstructive discussion of the whole field of educational philosophy. In historical scholarship, comprehensiveness of reading, and critical insight, Mr. Adams is apparently well equipped for the task, and the work is full of instructive passages. But as a whole it is loosely constructed and inconclusive. He begins, rather inauspiciously, with a lengthy discussion of the distinction of educator and teacher. One is tempted to suggest, as a virtually sufficient definition for present purposes, that an educator is one who talks about education; and it is hard to see what is gained by the substitution of educator and "educand" for the time-honored and fully significant distinction of teacher and pupil. Plato the teacher is at least as impressive as Plato the educator. After several chapters dealing with the data, the historical and pre-historic aspects, the social and individual aims, of education, he reaches what seems to be his main task, a discussion of educational theory under the heads of humanism, naturalism, idealism, and materialism. Here he is most unsatisfactory. His aversion to formal definition, together with a wide, but here confusing, knowledge of the facts, simply leaves his reader in doubt regarding the distinguishing motives of these several tendencies and his own attitude in relation to them. A certain unity is given to the discussion, however, as well as a present significance, by constant reference to the issue of formal discipline—of liberal culture *versus* specific, or vocational, training. Mr. Adams is too clearly alive to the complexities of the problem to commit himself very flatly, but in general he accepts what he holds to be the present consensus of authority (to which, indeed, he is strangely deferential) in favor of vocational education; and in his final chapter he offers a suggestive prophecy, which is unfortunately not elaborated, of a social and educational order in which the distinction of educated and uneducated will disappear, though the distinction, without, perhaps, the distinctive superiority, of liberal culture will still be retained. Altogether, we must say of this book that it mainly reflects the bewildered suspense of most intelligent persons at present regarding the ends and aims of education.

Among the untroubled minds we must include Prof. Frank M. Leavitt, of the University of Chicago, who stands for vocational education because it is "real." Apparently nothing else is real, and thus we must infer that all of the realities of human life are contained within the workshop. Fortunately, his "Examples of Industrial Education" (Ginn) is only incidentally a discussion of theory and may be recommended as a timely and well-executed record of conditions already established in an important movement.

In James Phinney Munroe's "New Demands in Education" (Doubleday, Page) vocational training is only the first among the real. This book is not a piece of cut and dried pedagogy, but a vigorous blast from one of wide experience as chairman and trustee against what he holds to be the futility of our schools—as shown in the domination of the school by the college, the poor quality and unprofessional attitude of the teachers, the neglect of the individual needs of pupils, and, among other things, the worship of the Ph.D., which he frankly stigmatizes as "the curse of American scholarship and American education.". In the last indictment those who have seen "methods of research" extended to the secondary schools may suspect that he is right. His own programme is summed up in the magical word "efficiency." This means first, of course, vocational and manual training. As against Mr. Leavitt, he is unorthodox enough to say that manual training may be recommended on the score of intellectual discipline. But the programme also includes everything else. "The employers" (who, of course, are now to be the arbiters of the curriculum) are no longer satisfied with reading, writing, and ciphering, but demand also health, character, honesty, truth-telling, clean living willingness to work, readiness to comprehend, fertility of resource, vision, alertness, vigor, self-command, dexterity—for the other half of their demands we must refer the reader to page 33. One is always led to wonder whether those who are active in denouncing present conditions have figured out the possibility of uniting all their demands, whether they have counted the cost of individual instruction, and whether they have ever paused to reflect that the curriculum of the three R's is itself the response to the traditional demand of "the employers," who have heretofore proclaimed that business could be taught only in the practice of business.

An attractive little book, definite in its suggestions, and written with good taste and sound judgment, is Walter Sargent's "Fine and Industrial Arts in the Elementary Schools" (Ginn). Mr. Sargent is professor of æsthetic and industrial education in the University of Chicago, and his purpose is to outline a progression of standards of attainment and methods of instruction suitable to the several grades.

Calvin Dill Wilson's "Working One's Way Through College and University" (McClurg) is a Baedeker for indigent and faint-hearted sub-freshmen, supported by statistics and results of *questionnaires* which should enable it to serve also as a thesis for the doctor's degree. If any intelligent youth of good health doubts the possibility of "working his way through," it is well that he be reassured; but it is a pity that the book cannot be used to dissuade those who have no real taste for what the college is supposed to give.

John Palmer Garber's "Current Educational Activities" (Lippincott) is a record of educational thought and activity in the year 1911. It is a useful book for those who wish to know what is being said and done.

A similarly useful work is G. E. Partridge's "Genetic Philosophy of Education" (Sturgis & Walton), in which the author has devoted himself, with heroic self-effacement, to systematic formulation of the educational philosopby of G. Stanley Hall, gathered from a bibliography of nearly three hundred titles. In an introduction President Hall bears witness to the "fidelity of the representation."

ENGLISH.

The new and revised edition of "English Composition in Theory and Practice" (Macmillan), by Professors Canby, Pierce, and MacCracken, and Messrs. May and Wright, of the Sheffield Scientific School, has profited by a number of changes, and is now clearly one of the best textbooks of its kind. Certainly, no other can vie with it in comprehensiveness. The chapters on the Whole Composition, the Paragraph, the Sentence, and the "Right Word" are unusually thorough, especially in disposing in advance of the misapprehensions that students are abundantly given to; and they contain a variety of excellent illustrations. All the "forms of discourse" are included in the book, the sequence being Exposition, Argumentation, Description, and Narration; and in each case the discussion is succeeded by a large number of "models." Although many of these models are taken from the writing of the day—more than half of them, indeed—the book hardly suffers from a cheap contemporaneity, since they are almost uniformly sound in style and respectable in substance. But it is to be feared that the extract from the "sporting" columns of the New York *Sun*, which tells of a "rip-snorting tearing time" on the Polo Grounds, will win the attention of freshman students only too readily; it is hard to see why the authors of the book did not discard it in the present edition. As to the style of the text itself, most of the superfluous flippancies have been remedied, though here and there the appeal to the student is so intimate that the authors have retained certain phrases of decidedly dubious repute, and it must be added that the style is still ungraceful, if not stilted.

Somewhat more old-fashioned in tone and treatment is Prof. William T. Brewster's "English Composition and Style: A Handbook for College Students" (Century). Despite the fact that the book runs to 500 pages, it contains none of the "models" so much in vogue to-day. The four parts are devoted to Composition, Style, Discourse, and Versification. Concrete exercises, unusually well chosen, provide better and more ample suggestions for written work than the ordinary instructor is prepared to give. The chapters are eminently readable, and accord with the present tendency to a simple and philosophic, rather than formally dogmatic, manner of presentation; the first paragraph of the book, for instance, is a clear explanation of the difference between speaking and writing. Used in conjunction with a good prose anthology or with "real books," this textbook ought to prove highly serviceable, particularly in sophomore classes.

So many difficulties beset him who seeks to prepare a literature syllabus that can be used to advantage by lecturers other than the author and his colleagues, that Prof. E. A. Greenlaw's excellent "Syllabus of English Literature" (Sanborn & Co.) is sure to be widely welcomed. It is a book of some 300 pages, half of which, being blank, are available for notes of any kind. Characteristics of literary movements, biographical outlines, dates of works arranged according to *genre*, brief bibliographies, etc., are all presented with such fulness and distinctness that the lecturer is freed from the necessity of dictating the elementary information that ordinarily deadens survey courses in English literature. More material is given than is normally needed in such courses, so that instructors, by omitting and emphasizing as they see fit, may find the syllabus adapted to their aims and idiosyncrasies. Several books of this kind have been published in recent years, but none, in our judgment, so flexible, concise, and comprehensive. The paper, type, and binding are attractive, and the index is adequate.

A novel but sensible little textbook is "Selections from Boswell's Life of Johnson" (Merrill), edited by N. H. Batchelder, which is to be used parallel with Macaulay's essay on Johnson, both for purposes of illustration and of correction. There are no notes and elaborate introductory chapters, and none are needed. Other material for the study of Johnson may be had conveniently in a volume recently added to Holt's English Readings for Schools—"Macaulay's Life of Johnson, and Selections from Johnson's Writings," edited by Prof. Chester N. Greenough, of Harvard University. This is equipped with a study of Macaulay, a chronological table of Johnson's life and times, excellent notes, and a few pages of capital "questions and topics for discussion." Several of Johnson's prayers, it might be added, are included in the selections from Johnson's writings.

Whether, in the crowded programme of our grammar schools, there is room for instruction in "Arbitration," may well be questioned; whether this study might profitably displace some other, is perhaps also a matter for question. Whoever wishes to experiment has at hand a well-written book entitled "The Friendship of Nations" (Ginn), by Lucile Gulliver, which is intended to be used as a supplementary reader, or at least as a manual of exercises for the observance of Peace Day.

A book for teachers rather than pupils is "Sources of Interest in High School English" (American Book Co.), by C. Edward Jones, associate superintendent of schools in Albany, N. Y. The vague title hardly indicates the contents of the book—the results of an investigation, conducted in seven cities of New York State, into the attitude of pupils towards the prescribed, as well as the voluntary, reading in English literature. The investigation ranged from the eighth grade of the primary schools to the third year of the high schools, inclusive, and the preferences of the boys and of the girls were tabulated separately. Since the syllabus used in the seven cities (New York city apparently was not included) conforms to the college-entrance requirements, the data and conclusions are applicable throughout most of the country. The value of the printed report lies in the accumulation of evidence rather than in the inferences drawn. In the matter of interest in style, for example, the writer, after pointing out that this interest at its highest is below that in plot at its lowest, observes that "this seems remarkable, as no subject in the whole course of study is receiving apparently so much emphasis as English composition"; but if one bears in mind that style, as such, can scarcely be expected to interest an immature æsthetic sense, and that interest in plot and character inevitably overlaps if it does not include interest in style, the evidence is by no means "remarkable." The book abounds in charts and detailed synopses that ought to make teachers of literature in our high schools reflect. The problem of prescribed reading in these schools is sufficiently important to merit more investigation and sober discussion than it has had; for the reading habits of adolescence are in large measure the reading habits of maturity, and the reading habits of mature persons in this country, including college graduates, are not all that we have reason to desire.

CLASSICS.

An edition of Herodotus with English notes has been long needed. This want is adequately met in "A Commentary on Herodotus" (Frowde), by W. W. How and J. Wells. The first volume (books i-iv) is by Mr. How, the second (books v-ix) by Mr. Wells. Hude's text is followed, though no text is printed in this edition. The work is evidently not a commentary on Herodotus as Greek, so much as on Herodotus as an historian. Consequently there is almost no reference anywhere to grammatical or syntactical phenomena, nor is there any treatment of the dialect. Considering the great amount of study which has been devoted to the language of Herodotus during the last quarter of a century the omission of any treatment of the dialect in a book distinctly intended for undergraduates is surprising, even if we admit that American school books have gone to the other extreme. The editors are warm admirers and defenders of their author. They acknowledge his many errors of fact, but they insist upon his essential honesty, his genuine attempts at personal investigation, and the tendency of modern discovery to confirm or explain his stories. Many of the important questions involved are too extensive for the commentary and are relegated to the Appendices, twenty-three in all, in which the most recent information is given on all matters of history, ethnology, geography, and statistics which seem to need critical discussion.

The English Classical Association has recently collected in one pamphlet the reports of its various committees during the last eight years "On the Teaching of Latin and Greek" (London: John Murray). The reports included are those on "Spelling and Printing of Latin Texts" (1905), on the "Pronunciation of Latin" (1906), on the "Pronunciation of Greek" (1908), of the Curricula Committee "on the Teaching of Latin in Secondary Schools" (1907), and on a "Four Years' Latin Course for Secondary Schools in which the leaving age is about 16" (1909). In general it may be said that these reports place English classical teaching quite abreast of our own in the matter of pronunciation of Latin and Greek, and a little ahead of our own in the matter of curricula, which are at the same time more elastic and more definite than those in the United States. Most important are the suggestions of the last report as to the work of the first year of the four years' course—our "first year Latin." They are briefly: (1) the limitation of the vocabulary to about 500 of the commonest words; (2) the large use of oral question and answer in Latin based on the text read (here the teacher is expected to provide most of the material himself); (3) much conversion of simple English sentences into Latin, in which the work should be largely oral; (4) the use of previous knowledge of French to help the pupils to a readier comprehension of Latin forms; (5) judicious employment of English and French cognates and derivatives.

The first book to meet specifically these requirements is "A First Year Latin Book" (Cambridge University Press; Putnam), by John Thompson. From the point of view of the above requirements, too little oral work is provided, but the amount of translation from English into Latin will look strange to American eyes. The use of French would also not be feasible here, and it may be doubted whether, except in a few cases, the learner will be helped by his knowledge of that language.

A useful edition of the "First Book of Livy" has been prepared by H. J. Edwards (Cambridge University Press; Putnam). The introduction of nearly fifty pages is devoted principally to the legends connected with the foundations of Rome and the history of the regal period. This discussion is simple, but comprehensive, and shows a full acquaintance with the results of recent excavation and study. The commentary is extensive, and deals almost entirely with matters pertaining to the historical narrative and with matters of language. The former is entirely adequate, but the treatment of the language is vague, inadequate, and sometimes trivial. Students mature enough to appreciate the historical discussion surely do not need to be told that a pluperfect in indirect discourse represents a future perfect of the direct form. A section on Livy's style and language might well have been added to the introduction, long as it is. That is the only serious lack in this edition.

MODERN LANGUAGES.

A French grammar not divided into lessons, and unprovided with exercises for composition, is of scant practical value to teachers in our schools and colleges. Such a book as Sonnenschein's "New French Grammar" (Frowde), even if "based on the recommendations of the Joint Committee on Grammatical Terminology" is likely to be of little use to any but private students; and these, owing to the author's holding fast to the impractical separation of syntax from accidence, will have to read through most of the book before reaching such an elementary but important construction as the partitive, here treated under the genitive case (pp. 151-2).

A practical and interesting book for beginners is Félix Weill's "French Newspaper Reader" (American Book Co.). Extracts from the best French newspapers and periodicals, covering a wide range of subjects, are discriminatingly chosen; and the editing, as in the case of Weill's previous book, the "Historical French Reader," is painstaking and accurate. Besides the vocabulary and notes, exercises for composition based on the texts, copious illustrations, and a plan of Paris are added.

Five of Voltaire's *Contes*—"Le Monde comme il va," "Zadig," "Memnon," "Micromégas," and the "Voyages de Scarmentado"—appear in the Oxford Modern French series, with introduction and notes by H. W. Preston. The notes are copious and helpful, and the makeup of the book is in accordance with the high standard with which the preceding volumes of the series have made one pleasantly familiar.

J. G. Robertson's "Outlines of the History of German Literature" (Putnam) is in a sense an abridgment of the author's comprehensive work on the same subject. It is written with the same good judgment and with due apportionment of space. A book of 300 pages, it offers more than its title promises; for the multitude of facts are woven into a connected narrative, and of the more ancient documents there are summaries as well as characterizations. Resolute omission of unimportant names would have saved some abruptness of transition and occasional faulty articulation; but the arrangement is, on the whole, skilful, and important matters are sufficiently conspicuous. A chronological table, containing parenthetical allusions to English literature, and an index, facilitate the use of the book as a manual of reference.

The edition of Lessing's "Nathan der Weise" (Pitt Press Series; Putnam), by J. G. Robertson, is distinguished by minute attention to the text, by sensible use of the work of historians, biographers, and previous annotators, and by a judicious discussion of the play in its many bearings. Professor Robertson succeeds in inspiring respect without in the least attempting to stifle criticism of the dramatic and poetic form. He does not mention Curme's edition (Macmillan), which his own seems destined to rival.

Edward Manley's "Ein Sommer in Deutschland" (Scott, Foresman) sets forth details of such a ramble as a group of inquisitive and conveniently loquacious people might make in Germany. Much of the matter is in the form of colloquies, but there is enough description to relieve the monotony, and there are innumerable illustrations of characteristic things, some of which, such as tickets, receipts, signs, and coins, are well calculated to arouse juvenile curiosity. Mastery of this book will put pupils in possession of much useful information about the affairs of German daily life.

Wildenbruch's "Rabensteinerin" appeals more to historical than to dramatic interest, and is not free from sentimentality and wordiness. Nevertheless, it is nowhere dull or difficult. The edition (Heath) of R. Clyde Ford furnishes in compact form all the supplementary information that pupils are likely to need.

HISTORY.

"A Short History of Europe (Modern)" by C. S. Terry (Dutton), is the second volume of a manual intended "to be read either as a textbook of European history or it may be used concurrently with a textbook of British history—in order that the student of British history may be able at every point to view it on a European background." The present volume, which is to be followed by a third on the nineteenth century, is a clear, concise, orderly, exposition of the great movements in European history from the Renaissance to the French Revolution. There are plenty of facts accurately stated, but they are grouped and presented in such a way as to bring into relief, rather than to obscure, the subject in hand. The first half of the book brings the narrative to 1715; the last half deals with the rise of Russia, the growth of Prussia, greater Britain, the American War of Independence, the French Revolution, and the Coalition wars of 1806. The best parts of the book are those which deal with such subjects as the colonial expansion of England or the rise of Prussia; but Professor Terry is not so exclusively interested in political history as many English historians are, and he shows a due appreciation of the historical importance of intellectual movements in dealing with the Renaissance and the eighteenth century. Good judgment is shown in giving relatively a large amount of space to the description of the institutions of France in the Old Régime. The book is weakest, as might be expected, in dealing with the Revolution itself.

Three years ago the Committee of Eight, appointed by the American Historical Association, published its report on history in the elementary schools, in which it recommended for the sixth, seventh, and eighth grades a three years' course, devoted primarily to American history, but of which the first year should be given to an introductory study of European history. Two textbooks intended to be used in this introductory course have now been published—Bourne and Benton, "Introductory American History" (Heath), and S. B. Harding, "The Story of Europe" (Scott, Foresman). The plan of the committee contemplated a study of those aspects of European civilization which have entered into the civilization of America, and of the institutions of those countries which, by discovery and colonization, have been instrumental in transmitting the civilization of the old world to the new. Both books seem admirably adapted to the needs of the course as planned by the committee. To run hastily over two millenniums of European history picking out those ideas and institutions that have had an important as well as a permanent influence on America, and to present the whole in a way that will be intelligible to sixth-grade children, is assuredly no easy task, but one which, in the present instance, has been performed with care and ability. Professor Harding's book is about a third longer than that of Professors Bourne and Benton, but as both books devote about the same space to the discovery and settlement of America, Professor Harding has given much the fuller account of the Greek and Roman, and, particularly, of the mediæval period. Both books are written in a simple style, and both are well furnished with useful illustrations. Professor Harding has not been convinced by the arguments of Vignaud, for he accepts both the chart and the letter of Toscanelli. Professors Bourne and Benton follow the wiser course, probably, in saying nothing about Toscanelli, while assuming that Columbus aimed to reach the East Indies.

"Elements of Economics" (Macmillan), by Burch and Nearing, is a manual of about 350 pages, designed for use as a textbook in secondary schools. The authors have attempted to make a "simple statement" of the fundamental principles of the "newer economics." The newer economics maintains that "true advancement lies, not in the production of goods, but in developing the lives of men and women." The authors acknowledge their indebtedness to Professor Patten, and the book clearly shows the influence of his teaching. The divisions of the work are, in order, consumption, production, exchange, distribution, and economic experiments and programmes. The desire to avoid abstraction as much as possible accounts for the relatively fuller treatment of the subject of production; while the plan of emphasizing conditions in the United States has resulted in the inclusion of several chapters dealing particularly with such subjects as American agriculture, business organization, transportation, and the regulation of transportation in the United States. The style is simple and seemingly well adapted to elementary students.

SCIENCE.

Van Nostrand & Co. present another volume of their Electrical Installation Manuals. The new hand-book is on "Testing, Fault Localization and General Hints for Wiremen," by J. Wright.

H. S. Carhart and H. N. Chute have now prepared a "First Principles of Physics" (Allyn & Bacon). It will prove to be an excellent textbook. It is well written, presents the subject in a scientific way, and is interesting. The authors have written the book because most of the writers of recent texts have tried to popularize the subject to such an extent that pupils have reached the end of their study with few definite ideas and little knowledge of the science itself.

Two new books on algebra for preparatory students have been received. "The First Principles of Algebra" (Allyn & Bacon), by Prof. H. E. Slaught and Dr. N. J. Lennes, is fairly good. The writers aim to provide a gradual and natural introduction to algebra, and to give "vital purpose to its study by using it to do interesting and vital things." The first aim is correct enough, but the second is somewhat foolish, for, after all, the writers are trying to teach algebra and not to do other valuable and useful things. If algebra were not valuable in itself, it would be rather a mistake to insist on its study. Of course, what they mean is that so-called practical problems have been introduced. This is a good plan, so long as the problems are used to illustrate algebra and not to make algebra subordinate to other valuable things. "First Year Algebra" (Heath), by Webster Wells and Walter W. Hart, is very well done. The exercises are graded, and specimen solutions are carefully worked out. The descriptive problems are interesting and well adapted to their purpose.

The teaching of Euclidean geometry has changed radically. Instead of confining the instruction to a formal presentation of the problems of geometry, these are cut down to almost skeleton outlines and the emphasis is put on a great number of exercises which the pupil is expected to solve. The exercises include not only abstract geometrical problems, but also the construction of geometric patterns, architectural designs, and graphic statics. Geometry thus becomes a kind of cement to bind together algebraic analysis and mechanical construction. There is no question but that the chief purpose in teaching mathematics should be to train pupils to solve problems and to know the laws, whether they are interesting or not, and it is the opinion of many mathematicians that this discipline is somewhat neglected. Judging from recent elementary textbooks, college teachers will later on encounter a set of flabby mathematicians in their classes. Except for this criticism, "Plane Geometry" (Ginn), by William Betz and H. E. Webb; "Plane and Solid Geometry" (American Book Co.), by C. A. Hart and David D. Feldman, and "A Shorter Geometry" (Cambridge University Press; Putnam), by C. Godfrey and A. W. Siddons, can be recommended as carefully prepared. The writers are experienced teachers, and they have collected interesting problems from many sources.

The same criticism, somewhat modified, may be made of "Practical Mathematics and Geometry" (Van Nostrand), by E. L. Bates and Frederick Charlesworth. The book is stiff enough, but the idea is given that beginners who may later separate into different professions, should learn mathematics in different ways. But what all teachers of the scientific professions wish is to have students who are able to solve problems. The professional information they obtain in their early years is quite unimportant.

The fact that Marshall's little laboratory hand-book, "The Frog" (Macmillan), has gone through eleven editions since its appearance in 1882, and that it still holds its place in some of the best laboratories, is sufficient evidence of its worth. It was intended as a practical guide to the study of elementary anatomy, histology, and embryology; its directions for dissection, and for the preparation and preservation of tissues are clear and concise. Where from its small size, or for other reasons, the frog has proved unsuitable, other animals are substituted. To the eleventh edition, edited by F. W. Gamble, there have been added sections on the elements of cell-division and the development of the germ cells.

The amateur microscopist soon finds that there is no dearth of guide books intended for his use. One of the most recent, Rev. Charles A. Hull's "How to Use the Microscope" (Macmillan), has the merit of being well-written, based on wide experience, and thoroughly practical. Avowedly for the novice, it makes no pretence of offering advice to the expert microscopist. In addition to a discussion of the simple and compound microscopes and the more important accessories, there is a chapter on the preparation and mounting of what a well-known microscopist has called "Oh, my!" objects, and a helpful discussion of simple photomicrography. The book is illustrated by the usual text figures and by twenty excellent full-page illustrations from photo-micrographs of the unfailing fly's proboscis, human flea, eye of an insect, and several whose presence could not have been foretold.

Dr. G. Senter, lecturer in the University of London, puts forth as his chief reason for adding another "Textbook of Inorganic Chemistry" (Van Nostrand) to the large number already existing the following:

> It is now generally recognized that the newer views have contributed enormously to the development of chemistry, but, in spite of this fact, their general adoption into courses of elementary instruction in this country has been very slow. The present book is written throughout from the modern standpoint, and it is hoped that it may contribute in some degree to the wider use of the newer principles at a relatively early stage in chemical courses.

But what is radical in England seems conservative to us. The theories of mass action and dissociation which the author somewhat timidly and unobtrusively introduces into his textbook have been made the basic principles of elementary instruction in American universities for the past ten years. Although not so revolutionary as it appears to the author, the book is none the less valuable—563 pages of good, solid descriptive matter on the elements and their important compounds, followed by a chapter on radio-activity, and an index. No directions for student laboratory work are included, but the text contains many line drawings of apparatus, some of which would be "marked down" on the score of clumsiness, if set up in an American laboratory.

Literature

PATERNAL GOVERNMENT.

Social Insurance in Germany, 1883-1911. By William Harbutt Dawson. New York: Charles Scribner's Sons. $2 net.

Mr. Dawson's latest book should be widely read. It deals with a subject to which the whole English-speaking world is giving a great amount of thought. The last few years have produced the National Insurance Act, the Old Age Pension Act, and the Workman's Compensation Act in Great Britain, and various Workmen's Compensation Acts in the United States. Germany began her career of compulsory general insurance about a generation ago, her latest legislation being the Insurance Consolidation Act of 1911. In the volume before us Mr. Dawson states the principal provisions of the German legislation in language as little technical as possible.

He frankly records his high opinion of the benefits of obligatory insurance, as practiced in Germany. While no formal attempt is made to estimate the relative advantages conferred upon the working classes by the three independent systems of insurance—against sickness, accident, and invalidity and old age—special emphasis has been laid upon the measures which are adopted, with yearly increasing persistence, to prevent and eradicate the evils which monetary benefits at best can only minimize and palliate. No one, we are told, who has followed the development of the German social insurance systems and who knows the immense educative influence which they have exerted upon the working classes, can doubt or wonder that it is the preventive work of the insurance organizations—as applied alike to disease and accident—which most appeals to the imagination, sympathy, and confidence of those in whose interest these laws have been passed.

For, after all, in Germany, as everywhere else, what the self-reliant workman values more highly than distress benefits is, in Mr. Dawson's judgment, a fair and full use of his faculties. What he desires is not sickness-pay, but a healthy life; not accident compensation, but sound limbs and unimpaired energies; not infirmity pensions, but the opportunity and the power to follow as long as possible the employment of his choice. Hence, in their aggressive campaign against disease and their constant endeavor to lessen the risks to limb and life in industrial occupations, the insurance authorities have from the first been conscious of the good will of the working classes, and have from no quarter received greater encouragement and praise than from the recognized leaders of organized labor.

Others who have made a careful study of German social insurance have reached quite different conclusions. Dr. Ferdinand Friedensburg, for example, who was for twenty years a member of the Imperial Insurance Office, has told of the difficulties encountered by the Office in gaining the confidence of the people, and especially of the so-called working classes. Even the Imperial Insurance Office is not omnipotent, and there are impossibilities even in workingmen's insurance. Nevertheless, to quote Dr. Friedensburg, the insured, "spoiled as they have been, now become stubborn and ill-bred; and many petitions are filled with insults and threats to appeal to the Emperor, to Bebel, and to the Social-Democrat *Vorwärts*." Indeed, it is alleged that social insurance, though specially designed to replace pauperism and charity, is itself merely pauperism under another form, and that it has become a hotbed of fraud, and therefore a spreader of demoralizing practices and ways of thought.

Mr. Dawson's book contains pictures of hospitals and sanatoria erected in connection with the preventive work of the German state insurance. He does not tell us that one of these sanatoria which, it was estimated, could be built for 500,000 marks, finally cost 2,700,000, and that it included a hall which the architect declared to be a modern imitation and adaptation of the Baths of Caracalla, to say nothing of a bowling-alley which required an expenditure of 18,000 marks, while the patients were to be entertained by four orchestrions, at 12,000 marks each. With food and drink and entertainment such as they had never dreamed of, it is not surprising that many of the inmates preferred the hospitals to their own homes.

Only the vaguest hint is conveyed of any tendency on the part of the German people to misuse the state insurance. And yet from other sources it is easy to glean that a strong tendency of this description has existed. For example, it cannot be contended that accidents incurred on the way to work are properly industrial, yet all kinds of indirect methods have been devised to help those who have thus been injured to procure pensions. A farmer who had been injured on his way to church claimed that he was going to pray for rain, that his journey had therefore been made in the interests of agriculture, and that he should receive compensation for his accident. Equally absurd is the case of a woman who injured her finger in undressing her young daughter, and who insisted that, as the child had kept the geese, the undressing should be regarded in the same way as unharnessing a draft animal—that is, it should be accounted an agricultural operation. The volumes of court decisions are said, though not by Mr. Dawson, to contain an astonishing list of calamities that have been forced into the category of accidents incurred in the course of occupation.

That the good will of the working classes is as pronounced as Mr. Dawson would have us believe, seems somewhat doubtful. It has been openly charged that every one who can possibly do so endeavors to escape from the burdens of insurance. Both the employer and the employee contribute to the insurance fund, and there are penalties for nonpayment of dues. The delinquencies of the working classes have, it is said, forced the corporations to counter-measures to obtain what is due them, and this statement seems to be borne out by statistics; for in 1908 the fines collected by the insurance companies amounted to 268,177 marks, and those by the trade associations to 412,608 marks.

The cost of insurance is another matter regarding which Mr. Dawson leaves us in doubt. His figures for the direct and immediate cost may be held fairly satisfactory, but what these figures mean with reference to the whole industry of the nation is far from clear. Approximately the aggregate cost of social insurance in Germany, independently of state subsidies and charges upon public authorities, may to-day be placed at £53,500,000. The general opinion is that the burden on the employers from all three systems of insurance is equal to about 4 per cent. of the wages bill. As for the working people, it is probable that the predominant ratio is above rather than under 3 per cent. of their wages.

A better idea of the cost of German social insurance may be obtained from the study of concrete cases. In 1907 the Krupps paid into the insurance funds an amount equal to 2 per cent. on their share capital. In addition, they made contributions of £86,633 to voluntary pension and benefit funds, and of £177,412 to works of general welfare, making a total of £440,885, or nearly 5 per cent., on the share capital, paid in welfare contributions of all kinds. The cost to the "Vulkan" Shipbuilding Company of insurance and welfare contributions was 7¼ per cent. of its capitalization. Similar expenditures by one of the largest smelting and mining companics of Westphalia amounted to nearly 3½ per cent. of share capital. Another Westphalian concern paid the equivalent of 5½ per cent. of its capitalization for sickness and pension contributions and for infirmity insurance. Insurance alone cost four other companies 4.4 per cent., 3.3 per cent., and 4.4 per cent., respectively, of their share capital.

The question whether, and to what extent, German industry is handicapped by the three insurance charges is one which, as Mr. Dawson rightly says, cannot be answered by the help of abstract argument. In the protected home market the cost of insurance is to some extent a matter of indifference to the employers, since all alike have to pay it and take it into account in fixing prices. The consumer, in this as in so many other cases, pays the tax, and then wonders why the cost of living is so high.

Mr. Dawson has apparently convinced himself that state insurance is in no danger of adversely affecting the trade of Germany. This view is not unanimously held by the leaders of German industry. In the reports of the various chambers of commerce we find less hopeful forecasts. Lübeck, for example, has sent out a warning "against an excessive tension of the burdens of social policy." From Essen has come this:

> We must soon reckon with a burden of about 1,250,000,000 marks each year, laid upon our industrial activity simply and soberly for purposes of social insurance. We are far from opposing either the legislation or the development of our social insurance, but in view of the alarmingly rapid rise of all these assessments, we must emphatically admonish the reader of the fact that once these burdens are assumed, they must be permanently borne, whether our foreign competitors follow us or not: and they must be borne in times of economic depression no less than in those of economic prosperity. And, should there come times when our industrial activity—or even merely essential parts of it—should no longer be able to meet the social obligations legally imposed upon it, then there will be no alternative except for the state as the state to assume those burdens, if it is to avoid a catastrophe whose scope none can foresee, even so far as social conditions are concerned.

Though this new book of Mr. Dawson is very far from being the last word on German social insurance, it is nevertheless a timely and valuable publication. The larger part of it is devoted to outlining the insurance law as it stands to-day and to describing the functions by which it is made operative. Here is a veritable armory of facts for those interested in this most important subject.

Not the least interesting chapter of the book is that on Early Experiments in Insurance. Here we are informed that the present legislation has clearly carried forward ideas and tendencies which have been peculiar to German state policy for many generations. Though Bismarck is quoted as saying, in 1882, that it was the tradition of the dynasty which he served to take the part of the weaker in the economic struggle, our author does not attempt to hide the fact that the policy of the last thirty years sprang largely from expediency. Bismarck's idea was "to bribe the working classes, or, if you like, to win them over to regard the state as a social institution existing for their sake and interested in their welfare." As a matter of fact, his aim was to defeat the Socialists at their own game. Socialism was his *bête noire*, and in the seventies he was fertile in legislative proposals to suppress it. After the second attempt on the life of the Emperor in 1878, he succeeded in getting through his Socialist law, which continued in force for twelve years. Payment for this legislation was made by the Prince in the form of "social reform legislation," the insurance laws being the immediate outcome.

CURRENT FICTION.

The Friar of Wittenberg. By William Stearns Davis. New York: The Macmillan Co.

Certainly no one can accuse Mr. Davis of lacking courage. Having written his first novel around Julius Cæsar, he has now selected for the hero of his latest Martin Luther. Will he proceed to the Hero as Man of Letters, and make use of Dr. Johnson next? That would scarcely be a harder task than he has attempted in "The Friar of Wittenberg." The story covers Luther's life from his attack on Tetzel to his retirement in the Wartburg. The history and biography are rather thinly sugar-coated with a love story. Walter, Graf von Regenstein through his German father, and Conte di Palaestro through his Italian mother, has been brought up as a fashionable young nobleman at the court of Leo X. He is the accepted lover of Marianna, a dark and treacherous beauty, daughter of the unscrupulous Cardinal Forli. Banished to Germany for suspected complicity in a murder planned by Forli, Walter comes under the influence of Luther, and falls in love with fair-haired Ilsa von Blankenburg. From this point the good and evil feminine angels contend for the Count—not merely metaphorically, but at last in personal combat. We do not recall any other novel in which the virtuous heroine rids herself of her wicked rival by superior muscle and a dagger-thrust. More surprising still, Ilsa, an emancipated nun, feels no compunction at the time or later; it is true that she can plead self-defence.

In spite of this extraordinary scene, Ilsa is kept for the most part in the background, and Luther holds the centre of the stage. The novelist ingeniously works in many of his sayings, and takes advantage of the opportunities offered by the dramatic moments in his career. The great scene before the Diet of Worms, for instance, is admirably described. But if we look for the man Luther, we shall not find him. Instead of the sturdy peasant-preacher, with his dogmatism, his humor, his frequent grossness and vindictiveness, his intense humanity, we shall find a saint purged of earthly passion, ideally charitable in temper, almost courtly in manner, with a modern indifference to dogma such that he can tell a disciple, "Do not fret too sorely about matters of faith and belief." This is hardly the man who declared that Zwingli was damned for not believing in the real Presence, and who called his opponents "damnable rotten worms" and "snivelling, drivelling sophists bred by the Thomist swine." Readers who want a dehumanized Luther (Luther with Luther left out) can find him here; those who are interested in the man will do better to read a good biography.

High Bradford. By Mary Rogers Bangs. Boston: Houghton Mifflin Co.

This story of a Cape Cod village has the exquisiteness of a piece of old china. There is all the salt of seaport tales, and there are all the delicate old hues of days faded and gone. Its distinctive mark is the evidence of antiquarian research. It is not only the neighbors' doings that form the story, but the family tree, the inherited traits, the ancestral voyages, the touch upon the fates of High Bradford of revolutionary France and savage South Sea islands. We know what High Bradford ate, drank, and wore; what songs it sang, what books lay on its tables, what ornaments on its mantelpieces. Though humor of character drawing is not absent, this is not the story of comic old seadogs. Gently amused at Lady's Albums and Tupper philosophies, the author herself has a style that might have been derived from the elegancies she tenderly smiles at. These are men who have done world's work and women who have not only baked and brewed, but studied and thought and taught. For all the refinement of coloring they stand out sturdily, each a distinct character. The stories of a score of neighbors and relatives are told with due mingling of joys and griefs. For background there are flowering meadows and wooded pond on the one hand, on the other the well-loved and always pervading sea.

Unquenched Fire. By Alice Gerstenberg. Boston: Small, Maynard & Co.

The rich society girl who feels the call of art and goes on the stage is again the subject of a novel. She is becoming a type with only minor variations to distinguish her from the other members of a vast sisterhood. Jane Carrington of Chicago may be known from the rest by a more measured and reasonable pace, for which we thank her. There are some cleverish drawing-room scenes before art's call has become irresistible, and some interesting glimpses afterward of stage rehearsals under an inspiring manager. And there is enough and to spare of freakishness in the heroine's conduct; as in her sudden desertion of her fiancé; her breach of faith with her travelling companions, whom she forsakes almost at the gang-plank to establish herself in New York and haunt the offices of theatrical agents. Then very usual things happen to her, in small successes, financial failure, despair to the point of thoughts of gas, and then a gallant playwright to the rescue. Still failure, and, as a matter of course, in the end a dazzling stellar outbreak. The ordinary gloom of such stories is here tempered to the shorn public. The temptations seem a little trumped up and the tragedy a little trumpery. Most unforgivable of all, Jane's starry ending leaves us still in the vague. We see her twinkle, but how we wonder what she did next!

Miss Billy's Decision. By Eleanor H. Porter. Boston: L. C. Page & Co.

Here is continued the history of "Miss Billy," who in an earlier story made havoc in the house of three bachelor brothers when she came to live with them as her dead father's friends. Now she has grown up, has been engaged to one brother much too old for her, and is engaged to another of the three, an artist. Her fears that his nature is one to care for her chiefly as a girl to be painted, his fears that she has her music more at heart than she has him, lead to a misunderstanding made more serious because there is a beautiful other girl whose portrait is to be painted, and a rising tenor who sings duets with Billy. But time, an automobile accident, and publishers' limits bring all to a happy ending. Billy's early experience is revived with a difference in the case of the tenor who is familiarly called Mary Jane, his initials being M. J. This, however, constitutes a humorous episode rather than a link in the plot. Plot, for that matter, is less a feature of the story than little paths of pleasantness and peace which run through Boston and through the familiar regions of all-conquering girlhood and conquerable difficulties. Visits are made to concert and opera, old teapots are considered, deeds of kindness done, and meals served regularly, all in a wholesome and merry spirit. "Happy ending" must be said figuratively. We are sure we shall hear of Billy again.

LANG'S ENGLISH LITERATURE.

History of English Literature from "Beowulf" to Swinburne. By Andrew Lang. New York: Longmans, Green & Co. $1.75 net.

This posthumous work of one who gloried in the title of hack writer and, indeed, almost glorified that trade, will attract some attention for its author's name, and for its own qualities deserves more notice than the ordinary school book.

In one respect at least its influence will be wholesome. Mr. Lang, although he is himself deeply washed in the romantic dye, writes of the Elizabethan poets in a manner that is beginning to grow rather common, but is nevertheless a much-desired change from the uncritical attitude of Swinburne, and Stopford Brooke, and Saintsbury, not to mention Charles Lamb himself, from whom the mischief sprung. Mr. Lang's treatment of Shakespeare is not wanting in proper enthusiasm, but he is far from subscribing to the sentiment which can be found in a certain textbook to the effect that everything Shakespeare did was the best in its kind. Our present critic can, for instance, speak thus candidly of "Troilus and Cressida":

> Shakespeare when he wrote it "was for one hour less noble than himself." . . . Shakespeare made an impossible blend of Homer (of whom he clearly knew a little), of Ovid, and of the mediæval forms of the Tale of Troy. The elements are wholly incompatible, and the mood of the poet, whether he wrote the play early or late, was unenviable.

Similarly Mr. Lang deals justly and critically with Chapman. He recognizes the "very noble passages of reflection, in which Chapman always shines," but he knows, too, that the translation of the "Iliad," despite Keats's golden sonnet, is on the whole a barbarous and unreadable piece of work. "A splendid swinging metre," Saintsbury calls the "fourteeners" in which the English "Iliad" appeared; "a jigging old measure," Mr. Lang calls them, and Mr. Lang is right. In this way one might go through the whole section on the Elizabethan poets. No doubt Mr. Lang may err here and there, but the sum of his criticism in its literary bearing is sound; it will help to release our teaching still further from the intolerable mode of praise which until recently has been in vogue.

From another point of view Mr. Lang's work, even in these Elizabethan chapters which are on the whole the best in the book, must be regarded as very inadequate. He is pointed, clear, and judicious generally in his æsthetic criticism of individual writers, but he is lamentably weak in seizing the philosophic connection of man with man, and school with school. There is little sense of development, no appreciation of the informing power of great ideas. Thus Bacon, to take one of the high Elizabethans, is finely appreciated as an essayist, but of his influence, whether real or supposed, on the new world of thought, no one would guess from Mr. Lang's rather jaunty paragraphs.

This weakness runs through the book. When Mr. Lang comes to such an author as Hobbes, his treatment can only be described as totally incompetent. Hobbes was one of the great ethical sources in the next age; of his place you would gain no notion from this book. His similarity and contrast with Rousseau you may have reflected on as one of the cardinal facts of literary history, if that history is anything more than æsthetic appreciation; you will get no help in your reflection from Mr. Lang. This is a pity, for to vitalize the study of literature in our colleges, just this sort of reflection needs to be emphasized. No qualified French critic would dare to pass so superficially over a name like that of Hobbes. For another instance of this weakness we may point to Mr. Lang's treatment of the heroic drama. The work of Dryden and his contemporaries in this field is estimated at its true value, or lack of value. But you would never learn from Mr. Lang why the drama of Corneille and Racine is one of the noble literary achievements of the world, whereas the imitation of it in England is false and empty. Perhaps this same inability on the part of Mr. Lang to see the deeper sources and larger connections made it possible utterly to omit the name of one who is coming more and more to be recognized as the first great romantic. What is to be said of a "History of English Literature" that does not even mention William Blake?

It would be easy to multiply these defects and faults—to point, for instance, to the superficial treatment of Byron's "Don Juan," which is barely mentioned and receives less attention than many a short poem of entire insignificance. The fact is that to write such a history, condensing into brief space the whole literature of a people, is a task of extreme, almost insuperable difficulty; whereas Mr. Lang, so far as can be judged from results, entered upon the undertaking in a kind of *gaieté de cœur*, as a book to be jotted down at intervals between more arduous kinds of writing. We regret the duty of criticising so harshly the work of so genial a spirit, now forever gone from us.

Selected Writings of William Sharp. Arranged by Mrs. William Sharp. Vol. I, Poems; Vol. II, Studies and Appreciations. New York: Duffield & Co.

Admirers of William Sharp will welcome this edition of his acknowledged works uniform in style with the edition of "Fiona Macleod." Of the latter the *Nation* (February 16, 1911) has already expressed its opinion at some length, and there is no need on the present occasion to say anything about the relation of Mr. Sharp to his ghostly double. Nor is there any ground for comparing the "Studies and Appreciations" of the present edition with the prose of Fiona. Literary criticism did not come within the ken of that shadowy sibyl, and is not represented in her works. Criticism, indeed, of any sort was not the strongest trait of Mr. Sharp's mind, and it is perhaps a little unfortunate that this first volume of his prose should be given up to his writings in this *genre*.

We do not mean to say that there are not many interesting pages in these essays: Mr. Sharp was too well practiced in the craft of writing to fail utterly in any of its branches. He was in particular a student of the sonnet form, and the prefaces to his "Sonnets of the Nineteenth Century" and his "Songs and Sonnets of Shakespeare," here reprinted, convey solid information (though he accepts without reservation the unfounded identification of Shakespeare's "dark woman" and Mary Fitton) and contain some rather nice discriminations. The study of "La Jeune Belgique" will interest those who care to know about the movement of which Maeterlinck has come to be the accredited chief. Your reviewer, for one, has been pleased to learn here the name of the Belgian author, Léon Montenaeken, of the lilting verses which had long haunted his memory as an unclaimed thing of beauty, *adespoton:*

> La vie est vaine:
> Un peu d'amour,
> Un peu de haine . . .
> Et puis—bon jour!
>
> La vie est brève:
> Un peu d'espoir,
> Un peu de rêve . . .
> Et puis—bon soir!

So, too, interesting quotations abound in the essays on "The Modern Troubadours" and on "Italian Poets of To-day." But in general there is something loose in Mr. Sharp's critical method, as may be seen particularly in his study of "Sainte-Beuve." His judgment does not carry weight; his statements are not always accurate; his enthusiasms need discounting; and his language often displays a certain stiffness and flatness which indicate that the author is out of his proper field.

Of the volume of poetry we are obliged to say that it sins by including much which might be forgotten, and that its bulk emphasizes a certain note of monotony. The mere sensitiveness to the shifting charms of nature cannot long hold the reader's attention, and a poet who depends almost entirely on the spell of reverie may find that in his hearer the mood soon passes into slumber. Mr. Sharp's verse, both that which he published under his own name and that which he attributed to Fiona, lacks the "fundamental brainwork" which, as he might have learnt from his master, Rossetti, underlies all good writing. But we would not exaggerate the defects of Mr. Sharp. Here, as everywhere, his sensitiveness to beauty and his easy surrender to fleeting emotions have not been barren of happy results. As a specimen of his poetical work at its best we may quote part of the "Moonrise on the Antarctic":

> The huge white icebergs silently
> Voyage with us through this lonely sea,
> Noiseless and lifeless, yet they seem
> Like haunted islands in a dream
> Holding strange secrets that no one
> May know and live. In the bright sun
> They shine immeasurably fair,
> Bluer than bluest summer air,
> Or clear to the very heart with green
> Pure light, or amethyst as seen
> 'Mid sunset-clouds—but now they shine
> With a cold gleam and have no sign
> Of loveliness . . .
> . . . And now the spectral isles
> Grow whiter, icier still, and seem
> More hollow, with a strange weird gleam
> As though some pale unreal fires
> Consumed them to their utmost spires
> Yet without flame or heat. And still
> The moon doth rise, and seems to fill
> Each berg anew with life: we sail
> Upon a strange sad sea, where pale
> And moonshine isles float all around,
> Voyaging onward without sound.

Mesopotamian Archæology: An Introduction to the Archæology of Babylonia and Assyria. By Percy S. P. Handcock, M.A. With numerous illustrations, also maps. New York: G. P. Putnam's Sons. $3.50 net.

The father of Assyriology is Sir Henry Rawlinson. On his decipherment of the great Behistun inscription depends the whole of modern Assyriology. To him we owe also those first four volumes of publications of Assyrian texts by the British Museum, which constituted the first library of Assyrian scholars. There has, however, been a tendency on the part of German scholars to minimize his services, partly because of prejudice against and ignorance of English work in general, partly because of that academic habit of exploring minutiæ and magnifying the small at the expense of the great. The first actual determination of any cuneiform signs was made by Grotefend, a Hanoverian schoolmaster, in the year 1802. He thought he had deciphered thirty signs; in fact, eight were correct. He was never able to translate a real inscription, and his work did not exert any apparent influence on the later decipherment of the cuneiform inscriptions. Nevertheless, in all German works on the subject and in American works depending on German scholarship, great importance relatively is given to Grotefend, whereas the epoch-making work of Rawlinson is almost ignored.

To our great surprise we find that something of the sort has been done in the present volume, although written by an Englishman. To Grotefend's discovery, meritorious in itself but having little if any relation to the later development of cuneiform decipherment, are given some three pages, while Rawlinson's work has only one. It is as if, in an account of the discovery of America, Paolo Toscanelli received three times the space assigned to Columbus.

In the chapter on life, manners, etc. (p. 367) the chicken is mentioned among the birds used as offerings in the early Sumerian period, and on page 370 it is mentioned as among the birds included in the bill of fare of the members of Urukagina's court at Lagash. Hehn, in his "Kulturpflanzen und Hausthiere," states that the cock was not known in Babylonia until the Persian, or possibly the very end of the neo-Babylonian, period. Schrader, in his posthumous edition of Hehn's work, adds a note, in which he states that the cock was known in Babylonia in the Sumerian period and was commonly used for sacrifice among the Assyrians, with other similar statements for which he gives absolutely no authorities. It is true that certain Babylonian scholars have recently translated various words in Sumerian name lists as cock, basing such translation generally on a transliteration of the characters having an imaginary resemblance to the sound made by the cock. These transliterations are, however, pure guesswork, as is the translation. There is absolutely no foundation on which to rest the claim of the appearance of the cock in Sumerian or even Assyrian inscriptions other than these entirely hypothetical transliterations and translations of unknown words and characters. When we turn to the monuments—seal cylinders and other archæological remains—we find abundant representations of the goose and the duck, the ostrich, the dove, and various other birds, but the cock does not appear until the Persian period. It may be added that in none of the Semitic languages have we an ancient name for cock, nor is there any word for the cock common to the Semitic languages. The cock originated in India, on the southern slope of the Himalayas, and, passing northward and westward, entered Asia Minor and Europe. The earliest notices of the bird in those regions carry us back perhaps to about 700 B. C., at least 1,500 years later than the period in which our author supposes the cock to have been a familiar article of food and sacrifice among the Sumerians. For reasons which it would take too long to discuss here, the cock did not, in fact, enter Babylonia until a much later date, circa 500 B. C., having been brought in by the Persians. It does not appear in Palestine before the Hellenistic period, nor in Egypt before the Roman.

These are, however, minor matters. This work is a welcome addition to our handbooks of archæology. It is the first systematic attempt to gather together, within a reasonable compass, the archæological material resulting from the excavations in Assyria and Babylonia. The author has done his work conscientiously, covering the life, the art, the industries, and the sciences, in fact, the whole field of the archæology of the Assyrians and Babylonians, with something beyond. It is abundantly illustrated and well published. We commend the book most heartily, as in general trustworthy, one which makes use soberly of the latest results of the excavations and of the latest interpretation of those results.

My Life at Sea. By Commander W. Caius Crutchley. New York: Brentano's. $2.75 net.

Under this title Commander Crutchley has written what he modestly calls "a yarn loosely spun for the purpose of holding together certain reminiscences of the transition period from sail to steam in the British mercantile marine (1863-1894)." The result is an absorbing narrative, told in a strong, nervous style, of the writer's experiences on many vessels and in many waters during thirty years of active seafaring. Shipping as an apprentice of fourteen years, on the sailing barque Alwynton, of 491 tons register, the author went from step to step in rank, passed with a pang of regret from the old sailing ship to the bridge of the steamer that was fast superseding her, and finally retired an officer of the Royal Naval Reserve, a younger brother of Trinity House, and secretary of the Navy League.

The earlier chapters will perhaps appeal most to the ordinary reader for the pictures of life they give under conditions now almost obsolete. There is, for instance, an edifying account in chapter iv of difficulties with a rough and refractory crew, and the approved methods of discipline in vogue in those days may be gathered from the following excerpt:

> To make a long story short, there was only one more case of trouble during the voyage. I found it necessary on one occasion to stretch a man out, and the old man, who was looking on barefooted and dressed in his usual rig of shirt and trousers, kept up by one brace, quietly knocked a broom off the handle, and giving me the stick, observed. "Now, baste him until there isn't a whole 'bane' in his body."

But the whole book is eminently worth reading, and those who will may draw from it not a few morals applicable to modern instances. On ships that the author commanded, boat-drill, without advance warning to the crew, was a feature of the discipline, and "when boats were manned," we read, "they were always provisioned, for stores were kept in a portable state in order to facilitate this matter." His experience was that "boats could be provisioned and swung out ready for lowering in four minutes." Another interesting point is the author's belief in what he calls the "instinct" of a navigator, which he illustrates by an experience of his own, when, having stopped his ship altogether in dense fog, for no definite reason that he could assign, "when daylight came and the fog blew away we saw around us at various distances a dozen or fifteen big icebergs."

One of the *ancien régime*, the author, we are glad to note, puts in a plea for the good old title of "master," now rapidly falling into desuetude. "It is," he says, "a very fine designation and title, but to my mind carries with it the obligation to maintain its meaning. I was never particularly anxious to take the courtesy title of captain, which is commonly assumed on shore by those in charge of merchantmen. Mr. ———, master S. S. ———, looks quite well enough on a visiting card." Besides a forceful, vigorous style, Commander Crutchley has the knack of turning a happy phrase. One such we cannot forbear to quote before leaving this most fascinating volume. It concerns the author's last command, the Kaikoura, a fine vessel, which used canvas as auxiliary to her engines, and it seems to epitomize the transition period of which he writes, and the fond regret of an old-time seaman for the passing of sails: "The Kaikoura was as grateful for canvas as a thirsty man for drink, and revelled in the real sea dance." Not Kipling himself could improve on that.

Notes

The autumn publications of the Yale University Press include the following: "A Journey to Ohio in 1810, As recorded in the Journal of Margaret Van Horn Dwight," edited by Max Farrand; "Colbert's West India Policy," by Stewart L. Mims; "Greek Refinements," by William Henry Goodyear; "The Yale Book of American Verse," edited by Thomas R. Lounsbury; "English Lyrical Poetry from its Origins to the Present Time," by Edward Bliss Reed; "Concordanza delle Rime di Francesco Petrarca," compiled by Kenneth McKenzie; "The Sensuous in Hebbel's Lyric Poetry," by Albert E. Gubelmann; "Yale University Library Catalogue of Early Printed Books Given to Y. U. Library in 1894 by William Loring Andrews"; "Index Verborum Catullianus," by Monroe Nichols Wetmore; "Stellar Motions with special reference to Motions Determined by Means of the Spectrograph," by William Wallace Campbell; "Some Problems of Genetics," by William Bateson; "The Relations of Education to Citizenship," by Hon. Simeon E. Baldwin; "The Meaning of God in Human Experience, a Philosophic Study of Religion," by William Ernest Hocking; "The Christian View of the World," by the late George J. Blewett, and "The Corporation Act of Connecticut," revised and annotated by Eliot Watrous.

The following books are to be published by Houghton Mifflin Co., September 21: "Less than Dust," by M. A. Hamilton; "Concerning Sally," by W. J. Hopkins; "The Seashore Book," by E. Boyd Smith; "Pilgrim Life in the Middle Ages," by S. Heath; "Lafcadio Hearn," by Edward Thomas; "The Task of Social Hygiene," by Havelock Ellis; "The Camp at Sea-Duck Cove," by E. H. Clark; "The Child's Day," by Woods Hutchinson; "The Teaching of English," by E. T. Campagnac.

"Teaching in School and College," a new book by Prof. W. L. Phelps, which Macmillans are publishing, is described as a practical and definite work with no scientific terminology. The same house issue this week the first three of their autumn novels, viz.: Albert Edward's "A Man's World," E. V. Lucas's "London Lavender," and an anonymous story entitled "My Love and I."

Volume I of the new edition of Garneau's History of Canada, revised and annotated by his grandson, Hector Garneau, is soon to be published in Paris by Félix Alcan.

The Century Co. announces September 24 as the day when they will issue Jack London's "Smoke Bellew," and Jean Webster's "Daddy-Long-Legs."

The publication of Roy Rolfe Gilson's "Legend of Saint Jerry" has been postponed by Doubleday, Page & Co. until next spring.

Harper & Brothers state that George Ade, who has returned to this country from Europe, has material for a new volume of Fables.

The University of Chicago Press announces the following titles as the most important on its autumn list: "The Courts, the Constitution, and Parties," by A. C. McLaughlin; "Questions on Shakespeare," by A. H. Tolman; "The Minister and the Boy," by Allan Hoben; "The Ethics of the Old Testament," by H. G. Mitchell; "American Poems," selected and edited by W. C. Bronson; "Old Testament Story: Teacher's Manual and Pupil's Notebook," by C. H. Corbett.

A new association has been formed in Chicago under the name of the Brothers of the Book, for the purpose of bringing out privately an occasional "worthy book." Their first publication is "The Links of Ancient Rome," by Payson Sibley Wild and Bert Leston Taylor.

Wilfrid M. Short, Mr. Balfour's private secretary, has made a collection of non-political addresses and writings from 1879 to 1912, which Longmans will publish under the title of "Arthur James Balfour as Philosopher and Thinker."

From Longmans is also to come "Cardinal Manning, and Other Essays," by J. E. C. Bodley.

John Murray is publishing a translation of Achille Luchaire's "Social France in the Time of Philip Augustus."

George Macaulay Trevelyan's "Poetry and Philosophy of George Meredith" was first published in 1906, and did more than any other one book to give Meredith an outstanding place among the poets of the day. This volume is now issued by Scribners in a pocket edition.

An interesting "Book of English Essays" has been selected by Stanley V. Mackower and Basel H. Blackwell, and issued by Frowde in the World's Classics. The first author is Bacon; the last is Mary Coleridge, whom the reader will be a little surprised, but not displeased, to see included in this august assembly. Jefferies and Francis Thompson might have been omitted.

Baedeker's "Southern Italy and Sicily" (imported by Scribner) has reached a sixteenth edition. For its present form it has been fully revised, particularly that part of it which deals wtih Naples.

Prof. J. W. Mackail's "Life of William Morris," first published by Longmans in 1899, is now brought out by them in two volumes of their Pocket Library. It is unnecessary to say that this is the standard and authoritative, though somewhat disappointing, biography of the poet-artist.

"A Descriptive Catalogue of Manuscripts in the Libraries of the University of Chicago" will be a welcome bibliographical aid to scholars in various fields. The book is compiled by Edgar J. Goodspeed, with the assistance of Martin Sprengling, and is issued by the University Press.

The most recent volumes in the Oxford Library of Translations are the "Public Orations of Demosthenes" (Frowde), by A. W. Pickard-Cambridge. Only the undisputed speeches, thirteen in number, are included. A copious introduction defends the life and actions of Demosthenes from his critics, short special introductions explain the circumstances under which the several speeches were delivered, and difficult questions are discussed in the notes which make up nearly half of the second volume. The translation is very close and accurate, but in excellent English style. The translator has endeavored to render the speeches into "such English as a political orator of the present day might use," although he admits "the necessity of retaining some of the modes of expression which are peculiar to Greek oratory." In this aim he is not successful, for the work is evidently a translation, not so much from the presence of the "modes of expression" referred to, as because of the fundamental difference between Greek and English sentence-structure.

"Sleep-Sniggle," a new double section of the Oxford English Dictionary (Frowde) by W. A. Craigie, owes little to the grandeur of Greece or the splendor of Rome. A large proportion of the words are of native origin, a considerable number are derived from the closely related Flemish, Dutch, and Low German languages, and several words of small reputation but of wide currency have come in recently from vulgar and obscure sources. The first recorded use of "slob" is in Young's "Tour," 1780, where it means Irish mud on the seashore; in 1815 the term is applied to a soft worm used in angling; the third sense, "a dull, slow, or untidy person," appears first in 1861; the Dictionary takes no account of its use in this country as an almost exact equivalent for the slang "mucker"—a person not merely dull and untidy, but rough and vicious. In 1812 "slum" went on record as a cant word for room, and in 1824 we read of "regaling . . . in the back parlor (*vulgo* slum) of an extremely low-bred Irish widow"; but the great wave of social reform rising in the final quarter of the nineteenth century catches up this bit of sporting slang and brings it into prominence as the designation of the places where the "other half" live. By 1870 Lowell can speak of the "slums and stews of the debauched brain"; between 1863 and 1890 the word enters freely into compounds, *e. g.*, "slum-literature," "slum-burrows," "slum-sister." The following quotation from the *Graphic*, 1893, curiously illustrates the effect of the literary exploitation of the slums: "The appearance of respectability . . . deprives him of the *glamour of* slumland."

Another word of obscure lineage, probably imitative in its origin, is "slump"; as a verb meaning to fall or sink into a bog or swamp it is found in the late seventeenth century; but as a substantive it is recorded first in the sense known on the Stock Exchange, Boston *Journal*, 1888: "There was another slump in oil on the Consolidated Exchange to-day"; the recent popularity of the word seems to reflect a general interest in high finance—*Westminster Budget*, 1896, "There is clearly no 'slump' in the matrimonial market." "Smart" as an adjective has thriven in English since the time of Wulfstan, 1023, but it is not represented in the cognate languages. Its sense-development is interesting, particularly in the later stages, when it is recognized as an Americanism: first we find a "smart" whip or a blow—one that causes pain; then a "smart" sorrow or wound; then "smart" words or style or, as in Fuller, "a smart jest, which would make the place both blush and bleed where it lighted": then a "smart" rain; a "smart" (steep) hill; then in English dialect "'a smart few' means a considerable number": Mrs. H. B. Stowe's "Dred," 1856, yields "I sold right smart of eggs des yere summer"; "smart" in the sense of clever or capable is found early in the seventeenth century, and in the eighteenth had the sanction of the *Tatler*; in the nineteenth century it passes for an Americanism, perhaps because the quality denoted by it is fixed upon as the salient feature of the American character—"The Opossum is held in great respect by the Yankees, as a particularly 'smart' animal." In 1888 Mr. Bryce writes: "In America every smart man is expected to be able to do anything he turns his hand to." Nowadays we suspect that "smart" is rather less in demand as a term of approbation for our first citizens. American humor, recognizing that there can easily be too much of a good thing, coined the word "smarty," employed by Mark Twain in 1880, to suggest what happens when the national virtue is run into the ground.

The proverbial love of the biographer appears in Charles E. Pearce's "The Beloved Princess" (Brentano's), an account of the brief life of Princess Charlotte of Wales, the lonely daughter of the dissolute Prince George and the much-wronged Caroline of Brunswick. There is indeed much in the span of her days—the harshness of her father, the seclusion from her mother, the turmoil of intrigue in which she was reared, the sad end of her ambition—to excite a lively sympathy. But it is hardly necessary on that account to cast upon the character and sufferings of her mother a jaundiced eye, especially as the conduct of the Prince Regent is viewed at close range without muttering. The biographer's other qualifications seem to be a long pair of shears and a large pot of paste, together with the modicum of industry requisite to bind the excerpts from some three-score of diaries and reminiscences into a connected account. By this simple means a volume of more than four hundred closely printed pages is filled with the gossip and scandal that diverted the hangers-on at court during the Regency.

Prof. P. J. Blok's "History of the Netherlands" is now completely within the reach of English readers. In its translated form (Putnam), the work occupies five volumes, for the first three of which Miss Ruth Putnam, as interpreter, is responsible, while for the last two her duties have been assumed by Oscar Bierstadt. Volume V is occupied with the eighteenth and nineteenth centuries, the constitutional revision of 1887 being the last incident to receive detailed attention. During the progress of publication we have not failed to notice the successive instalments as they appeared, and there remains small need for further comment. Speaking at large, we may say that Professor Blok is learned, but not sprightly. This statement is less designed to disparage than to explain, and by way of supplement it should be stated that the inherent value of his narrative will repay those who are in search of something besides light literature. The author's preface, which is dated October, 1911, opens as follows:

> With this volume is completed a work which was begun by me more than twenty years back. I realize that it has not been practicable for me to maintain uniformly throughout the narrative the high standard of accomplishment in historical comprehensiveness and in literary form which in my youthful ardor it had been my hope to secure; but I may hope that my book may serve to add to the knowledge of the history of Dutch people, not only with my fellow-countrymen, but with the circles of English-speaking readers on both sides of the Atlantic, for whom this edition has been prepared.

Avoiding detail, our own last word must be that in point of scholarship Professor Blok's work is well done, while, for the rest, it is more likely to be classed among books of reference than among *belles lettres*.

In the compass of a pleasant volume of 537 pages Dr. Percy A. Hutchison has ably collected the best non-dramatic poetry of Great Britain. The general plan of the book may be indicated by noting that the period from Wordsworth to Hood is represented by about 110 pages devoted to thirteen poets, Wordsworth himself receiving twenty pages. For the most part, poems are printed without omission; in the case of Tennyson, for instance, the only poem represented by selections is "In Memoriam." It is scarcely worth remarking that one will examine the book in vain for certain favorite poems, and, on the other hand, will find in it bits of verse that seem superfluous; so much may be said of any anthology not of one's own making. Without serious exception Dr. Hutchison has exerted great discrimination, and he has wisely rejected everything in the nature of biographical outlines and notes, save a few footnote glosses on words. The text itself shows every evidence of scholarly care. The book bears the title: "British Poems from 'Canterbury Tales' to 'Recessional'" (Scribner).

In "The Contest for California" (Houghton Mifflin) E. R. Kennedy aims "to show how Col. E. D. Baker saved the Pacific States to the Union." The work is based partly upon the sources, which are used without discrimination, and partly upon the recollections of the author. Although Mr. Kennedy has a definite thesis in hand, the narrative takes the form of rambling reminiscences rather than that of closely reasoned argument. The book is not uninteresting reading, particularly the first part which describes conditions in California at the opening of the Civil War; but the danger of secession in California and Oregon is probably exaggerated, and the proof that Col. Baker prevented it consists largely in quoting from his speeches in the campaign of 1860, which we are told had a tremendous effect. In the reading, as a matter of fact, they sound rather tawdry, but they may well have had their effect for all that. One is inclined not to trust Mr. Kennedy's judgment in the matter, however, for he is very strongly prejudiced in Col. Baker's favor. For the rest, he is a fire-eating Northerner, unaware that it is no longer good form to wave the bloody shirt; he waves it, accordingly, not perhaps as a follower of Sherman would wish it waved by the political stump-speaker, but very much as such a one would wish it waved by the historian of the great war. "In all the history of fallacies—divine right of rascally kings, supremo right of majorities to oppress minorities, right of factions to murder, as in the French Revolution—there has never one appeared more pestiferous and fatal to its dupes than the centrifugal doctrine of 'State sovereignty.' . . . This virus, this political bubonic plague," etc.

Stephen Bonsal's "Edward Fitzgerald Beale" (Putnam) is the record of an adventurous life hardly to be paralleled outside of America. A grandson of the famous Commodore Truxton of Revolutionary fame, Beale, after some years of naval service, went to California, where he distinguished himself in the early military operations of the Mexican War. In company with Kit Carson, he carried to Washington the news of the battle of San Pasqual. Returning to California across the plains, he was among the first to see the importance of the gold discoveries, and himself carried the first gold to Washington. Repeated overland journeys followed, the most famous being that of 1853, in which he penetrated Utah and traversed the Mohave desert. Subsequently he surveyed a route for a wagon road from Zuni to California, and railroad routes in New Mexico and Colorado. For a short time he was superintendent of the western Indians, in which office his policy of fair dealing incurred the enmity of the whites and the opposition of the Buchanan Administration; and he later held the office of surveyor-general of California and Nevada. During Grant's second Administration he was for a year an acceptable minister to Austria. With the exception of his friend Kit Carson, hardly any man of importance was so closely identified with the early exploration of the West and the development of early transcontinental trade, and the record of his exciting experiences gives to Mr. Bonsal's pages many a touch of vivid personal interest.

The death is announced in Boston of Constant Désiré Despradelle. He was born in France in 1862, and was a pupil of the Beaux Arts. Since 1893 he had been professor of architectural design in the Massachusetts Institute of Technology. His work as architect was done chiefly as member of the firm of Codman & Despradelle.

Col. A. Louden Snowden, a well-known numismatist and diplomatist, has died in Philadelphia, at the age of seventy-five. He had served at one time as United States Minister to Greece, Rumania, and Servia, and also to Spain. For a number of years he was connected with the Philadelphia Mint, for which he made a number of improvements in coining machinery.

Rev. Richard Sill Holmes of New York is dead, at the age of seventy. He was the editor of the *Westminster*, and had published three novels: "The Maid of Honor," "The Victor," and "The Outcome."

William Mailly, a Socialist writer of some influence, has died in his forty-first year. He was at one time managing editor of the New York *Call* and later associate editor of the *Metropolitan Magazine*.

Science

POINCARE AND THE PHILOSOPHY OF SCIENCE.

By the death of Jules-Henri Poincaré the world has lost not only one of the really great mathematicians, but also a most interesting personality in modern scientific thought. His achievements in mathematics are too technical to be discussed here; their importance is really appreciated when we realize that he will rank as the successor of Laplace. But in the middle of his career, his interest apparently shifted to the more concrete problems of physics, and towards the end of his life he became fascinated by scientific criticism and philosophy. In spite of his greatness as a mathematician, it is this latest aspect of his work which appeals most strongly to the world at large.

His philosophical and critical attitude is interesting and, at the same time, baffling. It has been said by one of the keenest of physicists that Poincaré, like Socrates, was imbued with inquisitiveness and skepticism. It is this Socratic spirit which was, at the same time, a source of power and of weakness; for while it enabled him to appreciate the inadequacy of much of scientific theory and hypothesis, it perhaps prevented him from achieving any one great work of the imagination which stands out as peculiarly his own. At times it amounted almost to cynicism, as is illustrated by a remark he made while presiding over a scientic meeting. A paper had been read describing some complicated phenomena, and for a wonder no one had offered an electrical explanation of them. He remarked that it was very unusual for such an oversight to occur; but, no matter, by tomorrow probably forty different hypotheses would be advanced, all equally good. The man who estimates human ingenuity with such detachment is evidently lacking in that naïve power of seeing only one side of a question which is commonly characteristic of the creator of a philosophical system.

By temperament and by training, Poincaré belongs to the classic French school of mathematical physics. In mathematics and physics the French have always insisted on rigorous accuracy, combined with lucidity and finish. As a result their textbooks and treatises are models of clear and logical development. On the other hand, they are likely to give the erroneous impression that the subject has been fully developed and contains few inconsistencies. In the treatises of the great French physicists, such as Poisson, Ampère, or Poincaré, the hypothetical is reduced to a minimum. Starting with a few general principles, they derive laws and conclusions by rigorous mathematics, and such experimental facts as are given are generally those which fit into the plan of the work, while those which are obscure or irrelevant are omitted. For this reason, French physicists may fail in those intuitive flashes of genius shown by a Faraday, but they rarely obscure their meaning by attempting to explore side issues at the expense of the main thought, as Maxwell and Lord Kelvin so frequently did. The training and integrity of the French make it difficult for them to appreciate the more illogical methods of scientific development in favor in England and Germany.

This difference in method was especially true of the school of physics developed by the Victorian physicists. Led by Faraday, this band of great men sought to unify all the branches of physics, to wrest from nature her secrets by experiment, and to visualize the processes of nature by constructing mechanical models of atoms and ethers.

Faraday was undoubtedly the greatest master of experiment that has ever lived, and probably we shall never have again from a single mind such a series of profound discoveries as are contained in his electrical researches. But, having had no training as a mathematician, and having begun his career as a chemist, he was content, when it came to explaining his ideas of electricity, to image all space as filled with lines of force of the most materialistic sort, and he cared very little whether or not these lines were consistent with ordinary mechanical laws or mathematical analysis. Maxwell undertook the task of explaining Faraday's ideas on electricity and the ether in a more orthodox way, and of reducing his lines of force and ethereal stresses to a mechanical and mathematical form. In his "Treatise on Electricity" Maxwell produced a work of genius. He showed that the new idea of Faraday (that electrical energy was a stress in the space surrounding a charged body rather than an influence residing on its surface) led to the same conclusions as the postulate of action at a distance adopted by Poisson and Ampère. He developed the mathematical laws of lines of force; initiated the electro-magnetic theory of light; predicted the propagation of electro-magnetic energy through space, which has resulted in wireless telegraphy; and pointed out the importance of studying the passage of electricity through rarefied gases. But Maxwell unfortunately wrote with so little regard to form that it took much time and many commentators to unravel the perplexities of his book before his ideas became appreciated by Continental physicists.

The third of the great Victorian masters, Lord Kelvin, possessed the rare combination of great experimental insight with profound mathematical ability. He, too, was seldom content to rely on abstract formulæ, but usually illustrated them with a concrete model. Thus his study of Fourier's mathematical series resulted in a machine for measuring ocean tides, and he invented endless models of atoms and ethers to explain his theoretical work on the transmission of light. These three men impressed their methods so firmly on their followers that their influence still dominates the group of English physicists who are making the Cavendish Laboratory illustrious.

Poincaré, recognizing the importance of these new ideas, set himself the task of making his countrymen familiar with them. How deep the antipathy was in France is shown by a passage in his introduction to "Electricité et Optique": "The first time a French student opens Maxwell's book, a sense of uneasiness, and often of repugnance, is mingled with his admiration. And it is only after a prolonged effort that this feeling disappears. Some eminent minds preserve it always." One feels that this was Poincaré's own attitude at first, but he persevered until he became almost sympathetic with Maxwell's point of view. Some years later he wrote: "The English teach mechanics as an experimental science; on the Continent it is taught always more or less as a deductive and *à priori* science. The English are right, no doubt." He recognizes also the straightforward, almost naïve, character of the English mind in the way they build models of atoms out of sticks and strings; in their unquestioning acceptance of the anthropomorphic definitions of matter and force; and in their content with the most materialistic scientific hypotheses. Yet in spite of all this complacent self-content, or perhaps because of it, he sees that they progress steadily and achieve great results. But while Poincaré felt this, and even wished the English method to be cultivated in France, in order that time might not be wasted over fruitless accuracy, his more acute and skeptical mind fretted at English materialism. He examined one by one the postulates of science and found that not one of them had any real or necessary significance. Our environment is to him a riddle without solution, and all we can do is to choose certain appearances which for the time being seem necessary, or at least convenient.

He takes as his starting-point the belief that a mechanical explanation of all phenomena is the most satisfactory to our minds; then he shows that we can always find a mechanical explanation. But, and this is the significant fact to Poincaré, instead of only one mechanical explanation of any given phenomenon being possible, there are an indefinite number of others equally possible. And, as we are totally at a loss for a criterion to determine which is the actual method of nature, we adopt the hypothesis most convenient, add to it until it becomes cumbersome, and thereupon throw it aside for another.

By the time Poincaré has finished with our most cherished scientific theories there is precious little substance left them. Thus mass, instead of being the fundamental and tangible quality by which we recognize matter, becomes only a coefficient which it is useful to introduce into our calculations. As for energy, he is content to say that whatever new notions we may have in the future about the world, at least we shall always find something constant which we may call "energy."

It is pretty well known that half a century ago, men of science felt that their doctrines were destined to be the gospel of the future. Herbert Spencer may be cited as an extreme example of this belief, in his endeavor to unite into a comprehensive scientific philosophy all sorts of things quite irrelevant to science. Hypotheses were advanced which apparently combined all the forces of nature into a few simple types dominating our lives and our environment. To-day these hypotheses are either dead or moribund, and we are again groping for a clue in the midst of a great mass of new facts. We still have, to be sure, abundance of modern hypotheses, but they lack the broad sweep of those they displace; they are tentative, and generally so abstruse as to have little chance of abiding.

Poincaré seized the opportunity, when, in 1900, he delivered his address to the Congress of Physicists, to discuss the foundations of scientific knowledge and to state the new gospel of science. His address was masterly, keen, and searching; but it was a gospel of doubt rather than of conviction, and it leaves us with the feeling that, while we constantly learn new facts and subdue new forces, science has no certainty as a philosophical guide. Our pretty theories are destined to early oblivion, and it is better to indulge in them as little as may be. We make hypotheses and shall continue to make them, merely because we are prone to speculate.

All generalizations, according to Poincaré, are hypotheses. We have no criterion of truth to distinguish among them, or, to use Bacon's term, we can find no *experimentum crucis.* Hypotheses he divides into three classes according to their probability or reliability. First, there are those hypotheses which are natural and necessary, such as the conviction that a straight line is the shortest distance between two points, or that the influence of very distant bodies is quite negligible. Secondly, there are indifferent hypotheses, such as the assumption of the real existence of atoms and an ether, or the characteristics assigned to light vibrations. These he calls indifferent because he thinks they are neither beneficial nor harmful to science. Since they cannot be verified by experiment, they are a sort of metaphorical language intended to give a picture rather of what might be than of what is. And thirdly, there are hypotheses which are real generalizations or laws. Examples of this class are Newton's law of gravitation ,and the law of the conservation of energy. These are subject to verification by observation, and though they may be only approximations, yet they have been tested in so many different ways as to carry general conviction of their truth.

This classification is unfortunate, for it tends to put all knowledge on about the same level of futility. His three classes of hypotheses differ not only in degree of probability but also in kind, and it would be better to give different names to the three classes than to qualify the same name. The first class is composed of our axioms; it includes those immediate generalizations which are so self-evident that we cannot conceive them to be false. The third class comprises those generalizations which have been tested and found to be true within the limits of our powers of observation. We should call them laws. They are so few in number and so simple in expression as not to confuse the mind. The second class really includes all *hypotheses*, strictly speaking. These may perhaps be indifferent, so long as we keep clearly in mind that they are merely fictions of the imagination. But

It is a little difficult to see why science should labor over indifferent things, and Poincaré himself brings this doubt out clearly when he writes that the existence of matter and of the ether are both hypotheses, only that of matter is necessary and will always be held, whereas that of the ether is indifferent and we shall some day abandon it as useless. The misfortune of these hypotheses is that they are useless, very numerous, very complex, and likely to impose finally on the mind the conviction that they are the realities rather than fictions. Naturally we are not condemning the use of the mathematical hypothesis of the average effect of small actions nor of the assumption of the existence of small parts of bodies, but we are convinced of the futility and harm in inventing mechanisms to portray the actions of these separately negligible parts. Either physicists lack the power of clear expression or else many of them see no essential difference in our ideas of matter and the ether. Indeed, modern physicists are writing treatises with the avowed purpose of proving that the ether is the reality and matter only its fictitious image.

However we may regard the effect of hypotheses on the trained men of science, there is little doubt that they do harm when they are taught to students who are learning a science. In most of our textbooks and treatises on theoretical physics as much (if not more) emphasis is placed on hypotheses as on laws and phenomena. Either the idea is given that the reality of the ether and of atoms is of the same kind as that of tangible bodies, or else the mind of the student is confused by abstruse explanations which he cannot understand. The educational purpose of a scientific training for the ordinary person is to inculcate accurate reasoning, and this confusion of fact and fiction, when both are taught as if they were subject to the same objective verification, instead of increasing such accuracy, really induces looseness of thought.

The attitude of Poincaré towards the modern theories of physics which attempt to reduce all forces to electrical action and to replace material atoms by systems of electrified particles, called electrons, is rather quizzical. Thus he says: "Scarcely fifteen years ago there was nothing more ridiculous, more naïvely old-fashioned, than the electric fluids of Coulomb. And now, verily, they have come to life again under the name of electrons. For in what way do these molecules, permanently electrified, differ from the electrified molecules of Coulomb?" Of all the modern theories he believes that of Lorentz to be the most satisfactory. By assuming that electrical forces are due to the force reactions of electrons, and that light is the result of the orbital motions of the same electrons, Lorentz has been able to include in a single whole all the optics and electrodynamics of moving bodies. Though his hypotheses are general and indifferent in themselves, the excellence of his theory lies in the fact that he refrains from attempting any description of the nature of electrons. Other theorists have perhaps arrived at the same conclusions as Lorentz, but they have attempted in addition to conceive a real electron and a real ether and have as usual failed. But Poincaré is convinced that even Lorentz's theory contains an insurmountable error, for his conclusions are opposed to Newton's law that action and reaction between bodies are equal and opposite. If that law is true, we must be able to find reactions between matter and some kind of an ether. This is just what Larmor attempted to do when he proposed the hypothesis that the electron, and therefore matter, was merely a kind of strain existing in the ether, and also Einstein when he makes of empty space a sort of infinite and universal reservoir of energy, useful in supplementing any shortcomings in the electron. Now Poincaré holds that all such attempts which drag in an ether must fail of experimental verification and be classed amongst indifferent hypotheses, since they neither advance nor retard science.

But perhaps too much attention has been given to the skeptical side of Poincaré. He maintained throughout his life the high purpose of advancing knowledge, and his profound work in mathematics, astronomy, and physics is a great heritage to the world. This sketch may fitly be concluded with his own hopeful words:

> Taking all things into account, we are advancing towards unity of knowledge; we may not have progressed so rapidly as was hoped fifty years ago, nor have we always kept to the correct path; but, in the end, we have gained much ground.

LOUIS T. MORE.

The "Handbook of Health" (Houghton Mifflin), by Woods Hutchinson, is a pleasing little book devoted in the main to personal hygiene, but with some reference to the problems of public health. The comparison of the human body to an automobile is one of the convenient exaggerations to be expected of an author who often seems almost to write around available illustrations. Some of the illustrations in this instance are not very pertinent to the subject, but in general the peculiarities of this facile writer are less in evidence in this book than in most of his writings. Dr. Hutchinson favors spouting fountains for public drinking places, and considers the chained cup dangerous. This is in accord with the prevailing sentiment concerning the individual drinking cup, a sentiment that quite overlooks or disregards the possible harm of discouraging the abundant drinking of water by making it difficult or expensive. It might be well to suggest that if both lips are kept inside the cup while drinking the danger of infection will be much reduced. We must protest that the peritoneum is not a cavity (p. 20), although a recent much-lauded medical dictionary does carelessly define it as a sac. The statement that the curd of milk is in large part made up of animal starch is unintelligible, unless the writer has misinterpreted the occurrence of glycocoll in the casein and supposed this substance to be the same thing as glycogen.

A convenient little hand-book, "Navigation for the Amateur," has been written by Capt. E. T. Morton (Outing Pub. Co.). It is designed to aid yachtsmen who wish to cruise and naturally does not attempt to discuss the science of navigation. Any one who has some knowledge of trigonometry and who follows the author's directions should be able to find his boat's position and lay a course.

James Weir's essay on "The Energy System of Matter" (Longmans) starts out with the good scientific belief that the triumphs of science have been in the realm of experiment and fact and not in speculation and faith, but in execution departs lamentably from that principle. The book is an attempt to outline, in simple fashion, a broad and general conception of the operation and interaction of matter and energy in natural phenomena. The reviewer has some claim to a knowledge of the subject treated, but he is compelled to admit that he cannot follow Mr. Weir. Perhaps it is advisable to do away with ethers and other media as they are matters of speculation; but if the author believes space to be a vacuum, he should not try to explain the transmission of energy. Not much is gained by stating that the attractive influence of gravitation appears as an inceptive agency in terrestrial as well as celestial phenomena. Until it can be made clear what his incepting and other occult agencies are, it is useless to try to understand the author's cosmic system.

"Heredity and Eugenics" (University of Chicago Press) may be heartily recommended to readers seeking, as beginners, to get in touch with the discussion of these subjects. The book contains nine chapters apparently representing this number of lectures given at the University of Chicago in the summer of 1911 by Castle, Coulter, C. B. Davenport, East, and Tower. The purpose of these lectures, as the secondary title explains, was to summarize "recent advances of knowledge in variation, heredity, and evolution, and its relation to plant, animal, and human improvement and welfare." The presentation of these questions was intended for a university audience rather than for the biologically trained, and in book form should be welcome and very helpful to the general reader. There is little that is strictly new; in fact, Castle and Davenport have drawn freely from their published books, and, as the lecturers were quite independent, there is naturally some overlapping of topics and some repetition, but not to such an extent as to cause confusion. In most of the lectures there is an admirable reserve, not to say skepticism, in the treatment of large questions which the public is often misled to regard as already and finally settled. The part of the book which treats of eugenics in the limited sense of the word, only about an eighth of the whole text, is the least satisfactory in this respect and otherwise, although the ardent eugenist is the very one who most needs to be taught skepticism and to remember how slight and shaky are the foundations on which they build that seek to extend to human breeding our knowledge of animals and plants. There is a fairly good index, in which we miss Rignano (p. 154), but a pronouncing glossary would be for many a welcome addition to a second edition. Misprints are few and not very misleading, but the "protein forms" of feeble-mindedness (p. 308) is a gem of the first water.

In "Forestry in New England" (John Wiley & Sons), R. C. Hawley and A. F. Hawes have produced a timely and useful book. When one considers that professional forestry in the United States is scarcely more than ten years old, the amount of technical information and facts of practice which these authors have been able to bring together is surprising. The book combines to an uncommon degree the functions of a handbook for the use of forest owners and a textbook adapted to the use of students. It is divided into two parts, the first of which deals with general forestry, the principles which underlie the growth and distribution of forests and their reproduction, improvement, protection, and measurement; and the second with the existing forests of New England—taken up by natural regions—their condition, peculiar problems, and most practicable management. In the development of these topics, the authors have sifted and put into convenient form most of the State, Government, and periodical literature that has been published. By this service alone they will have earned the gratitude of all inquiring laymen, especially such as have found the "scientific pamphlet" too often unenlightening or "out of print." To the forester, however, even more than the forest owner, the book will be most significant in its practical application of the technical knowledge at present available to the management of definite types of forest in specified regions. Hitherto, much of the material published on American forestry has been, of necessity, either general in character or in the nature more of scientific information than of the methods and practice to be based upon it. In the investigation and proper handling of our forests much the greater part remains to be done, and from now on the need will be more and more for expert solution of concrete problems in management. In the systematic presentation of real progress in this direction, "Forestry in New England" is a welcome pioneer.

The first volume of "Bacteria in Relation to Plant Diseases" (Carnegie Institution), by Erwin F. Smith, gave exact directions, with full illustrations, regarding the methods of investigating the author's subject. The same attention to minutiæ is apparent in the second volume, which has just appeared, and the difficulties which confront an observer in this field are as boldly met. There are few branches of scientific activity in which changes in method and in interpretation have taken place more rapidly than in that of bacteriology. It must have been extremely difficult to cut one's way through the tangles as well as Professor Smith has done. A moment's reflection will show that the task of coördination in bacteriology is discouraging. In the first place, no two observers can have at their command exactly the same living specimens of the organisms under investigation, and hence slight differences in appearance must naturally give rise to different conclusions. It is almost hopeless to try to straighten out the terminology and nomenclature in the midst of such confusion. But Professor Smith has made the attempt with measurably good results. He has given to students a textbook of the highest order which will also be of immense use in further study. In reading the pages given to the ways in which bacteria are introduced, one might readily conclude that no plant could possibly escape infection. The water-proof film covering the greater part of all young parts offers a strong defence, but has countless vulnerable points. And even in the firmer, cork-like protection of older organs, there may be places for invasion. The controversy which has arisen over the method of invasion is much simplified by the author's investigation.

One of the most interesting parts of the volume is that which is devoted to the bacteria-producing nodules upon the roots of many of the pulse plants. It is bewildering to think that this subject has grown to such enormous dimensions both in its literature and in its practical applications that it forms to-day a department of study by itself. For these nodules are the seat of an activity which is distinctly beneficial to the plant, enabling the organism to appropriate the free nitrogen of the soil, and they serve to bind together the topic of plant disease and the large question of soil-inoculation. The author's excellent review of the matter is based upon an examination of more than two hundred and fifty works cited in the bibliography, though the subject is exceedingly recent in all of its aspects. The exhaustive study of the "wilt" of the gourd-like plants, covering about ninety pages, has also been well chosen as an example of wide bearings. The illustrations, which have been carefully selected and well executed, have the distinction of not requiring much explanation by text. Owing to these features and to its capital index, the book will prove a comfortable one to work with in the laboratory, and attractive for the general reader who desires to know something about the rapid development in a comparatively new and important field.

Dr. W. J. McGee, the eminent anthropologist, geologist, and hydrologist, died recently in Washington, at the age of fifty-nine. He was the author of many scientific articles, and edited the anthropological department of the International Encyclopædia. The titles of his books are as follows: "Pleistocene History of Northeastern Iowa," "Geology of Chesapeake Bay," "The Lafayette Formation," "The Potable Waters of Eastern U. S.", "The Siouan Indians," "Primitive Trephining in Peru," "The Seri Indians," "Primitive Numbers," and "Outlines of Hydrology."

From London comes the report of the death of Clinton Thomas Dent, at the age of sixty-one. He was vice-president of the College of Surgeons, senior surgeon of St. George's Hospital, and chief surgeon of the Metropolitan police force. He published, besides numerous Alpine and medical writings, two books: "Above the Snow Line" and, in the Badminton Library, "Mountaineering."

Dr. Andrew Wilson, English journalist and lecturer on physiological and health topics, is dead in his sixtieth year. His publications include: "Studies in Life and Sense," "Leisure Time Studies," "Science Stories," "A Manual of Health Science," "Chapters on Evolution," "Leaves from a Naturalist's Note-Book," "Common Accidents and How to Treat Them," "Wild Animals," "Elements of Zoölogy," "Student's Guide to Zoölogy," "Brain and Nerve," and "The Modern Physician."

Drama and Music

Festivals and Plays. By Percival Chubb and Associates. New York: Harper & Bros. $2 net.

Folk Festivals. By Mary Master Needham. New York: B. W. Huebsch. $1.25 net.

Pageants and Pageantry. By Esther Willard Bates, with an Introduction by William Orr. Boston: Ginn & Co. $1.25.

The Festival Book. By Jennette E. C. Lincoln. New York: The A. S. Barnes Co. $1.50 net.

The lately developed penchant for revivals, a tendency characteristic of an age of sophistication, has called forth a whole literature devoted to the topic, of which the four books mentioned above are, each in its way, excellent examples. England started the craze for pageants, and this country has, with customary enthusiasm, gone England one better, till no city of the Middle West, boasting a record of a half-century of busy progress, can feel quite satisfied with its civic enterprise if it has not asserted itself visibly through the medium of an historical pageant.

Along with this desire to celebrate civic and national progress through the spectacular of the pageant, has come a general harking back to the forms and symbolisms, the celebrations and festivals, that were part of the daily life of an earlier, less sophisticated people. In particular, efforts have been made, as by the writers of these books, to include the presentation of such old-time festivals in the normal curriculum of schools. In "Festivals and Plays" the case has been argued with conspicuous ability by Percival Chubb and his associates in the Ethical Culture School of New York. Mrs. Mary Master Needham advances a similar plea, less academically put, in her interesting and instructive little book, "Folk Festivals"; "Pageants and Pageantry" and "The Festival Book" (the former with a helpful introduction and a chapter on Making a Pageant) are practical expositions, giving specimen pageants and folk festivals, of the same argument.

In all of these books is noticeable

an earnestness of purpose and a whole-souled enthusiasm for the subject which commands respect; and it is in no spirit of carping criticism that we inquire whether the enthusiasm may not be misdirected. Is it possible to revive in this age the spirit, for instance, of the old May-day festival? And if the spirit cannot be revived, is it desirable to revive the form? The first of these questions seems to be answered by the mere fact that the themes and conduct of the festivals have to be taught. It seems to us that the very essence of May-day, Christmas, Twelfth Night, and kindred celebrations is their spontaneity. They were evolved naturally, without effort, out of the traditions of a simple folk, who celebrated them because they really wanted to do so. They were the spontaneous expression of what people felt, and when people ceased to feel that way, as they began to do in England early in the last century, they very sensibly ceased to celebrate them. Now, in an age in which the conditions of living are as far removed as the poles from the traditions of May-day, an age which, for good or evil, is extraordinarily complex in its emotions, we are bringing out the May-pole from the lumber-room of memory, and teaching people the forgotten steps of the morris dance.

Our doubts as to the utility of this procedure are on the grounds that tradition is a growth which cannot be artificially fostered, and we suspect that the new-born enthusiasm for "revivals" in this country is in part attributable to our unique position among the nations of the world. With full knowledge of the traditions of other peoples, and justly claiming as part of our own heritage a share in those of the old countries from which we originally sprang, we yet have but few that can be claimed as essentially American. We are impatient to claim a birthright of tradition before the centuries have awarded us one, and we seek to stimulate what can only be a natural growth by artificial means. A man can buy a house furnished with portraits of ancestors already hanging on the walls; but he cannot make them *his* ancestors. So we may adopt the traditions and festivals of every European country that contributes to our population; but we cannot make them our own American traditions. It may be pleaded that borrowed traditions are better than no traditions at all, and Rome may be cited as an instance of a people who found no difficulty in assimilating both traditions and deities of foreign origin; but in our case we are appropriating festivals which, for the most part, the original European users have already discarded as incompatible with the complex emotions of modern life. Were there any doubt as to the artificial nature of these celebrations, it would be dispelled by Mr. Chubb himself, who tells us that the Ethical Culture School "was induced to organize a Normal Course in Festival Methods."

Another field of speculation opened up by the theme of these books is too wide to be fully discussed there; but it is at least an open question whether these festivals and pageants, as a part of the curriculum of schools, have the educational value that is claimed for them. That joyousness can be learned by rote we do not believe. That historical pageants have a certain value in elucidating and making interesting the facts of history we are ready to grant. But as a recognized part of an educational regimen we are inclined to doubt the efficacy of pageantry. The modern tendency in education is to make all learning as unlaborious as possible to the pupil, and, while this represents a very wholesome reaction against the old-fashioned mechanical grind of Latin and Greek grammar, there is the danger lest it may be carried too far. Education is properly not so much the acquiring of information as the disciplining of the mind so that it may be ready to receive information and coördinate it into knowledge. While the rehearsal of a pageant or a festival may be a very delightful exercise for boy or girl, and may impress certain facts of history or of folk-lore upon the intelligence, it is very doubtful whether, as an instrument of education in the broader sense, it compensates for the interruption involved to more serious, if less attractive, studies.

We have elected to treat of the subject generally rather than to give an extended review of the books under notice. In justice to the several authors we must add that, given their point of view, the volumes they have produced are both interesting and helpful to an appreciation of pageantry and folk festivals.

On September 21 Houghton Mifflin Co., will bring out "J. M. Synge: and the Irish Dramatic Movement," by Francis Bickley.

The probability is that "Discovering America," a modern play in four acts, by Edward Knoblauch, produced at Daly's Theatre, is a juvenile effort. At any rate it is vastly inferior in design and execution to the pieces which have given him a prominent place among contemporary dramatists. But it is founded upon an idea which might have been put to excellent dramatic purpose. He proposed, presumably, to illustrate the superior power of the eager, competitive, materialistic life of the New World to bring out the finest qualities of manhood, as compared with the more luxurious and lethargic influences of decadent European civilization. Unfortunately the illustration which he offers in no way proves his case. His hero is a rich young American, who has passed so many years in Rome as an artistic connoisseur that he has become entirely denationalized and lost all ambition and energy. He worships a lovely and angelic Princess—a sorely abused wife—and is about to elope with her when he is overtaken by ruin and forced to return to the America which he despises. After swearing eternal fidelity to the Princess he starts for New York, and then promptly falls in love with a pretty orphan, Ruth Dix, whose sole possession is a wonderful machine for sewing on buttons. He enters into partnership with her, makes a fortune in no time, and is about to marry her when the Princess, now a happy widow, arrives to claim his hand. Thereupon he informs the astonished Ruth that he must at once return to Italy. Again in Rome, he discovers that he cannot be married without a dispensation and, before this can be secured he bitterly reproaches the Princess, who has sacrificed everything for him, with having taken from him everything that was worth living for. For him Ruth is now the ideal woman and business achievement the one source of felicity. He rhapsodizes over the American institutions which he had formerly affected to despise. From any manly point of view his conduct is indefensible. In the end Ruth appears to claim him—much as the Princess had done before—and the latter, after threatening suicide, resigns him to enter a convent. The disingenuous behavior of the reconstructed American wholly discredits the philosophy which he enunciates, and makes him completely unsympathetic. Thus the piece defeats its own object. The representation was chiefly notable for an admirably sincere, graceful, and refined performance of the Princess by Miriam Clements.

It is only by the deftness of its construction that Sir Arthur Pinero's latest comedy, "The 'Mind the Paint' Girl" commends itself to special admiration. There can be no question of the skill with which the story is told, and the different personages are introduced and handled, but the tale itself is conventional and insignificant, while the personages are neither new nor important. As a representation of the every-day life and association of a popular female musical comedy star it is probably fairly veracious. Sir Arthur knows as much on the subject as most men, and his character studies closely resemble those of other dramatists. The two acts which he devotes to a portrayal of theatrical friendships, manners, and morals offer nothing fresh, entertaining, or inspiring. Such truths as they reflect are familiar but not funny. But in the third act, where the heroine recites her own history, in order to dampen the ardor of the silly young Viscount, who is courting her, and turns upon the affianced lover, who has compromised her by his suspicions, only to pardon him and to repledge him her troth, the complication is as dramatic as it is ingenious and effective. In this scene the playwright reveals his old power of invention and eloquence. But unfortunately, this act, which leads up to an effective crisis, is followed by a purely conventional ending, which effectually demolishes any moral which he might have been supposed to have in mind. It is plain that the piece is merely a commercial experiment with glimpses of stage life as its main attraction. In the part of Lily Parradell, the heroine, Miss Billie Burke does very well, although the emotional requirements of the third act are beyond her powers. The general representation is smooth, but never brilliant.

A society bearing the name "The Association for the Promotion of English Singing" has been formed in London.

Eugen D'Albert's new opera, "Chains of Love," will have its first performance in Dresden.

The Portuguese composer, August Machado, has completed a new comic operetta, which is to have its first performance at the Trinidad Theatre in Lisbon. Its title is "The Princess on Her Travels."

Siegfried Wagner has decided to leave to others next year the privilege of celebrating the centenary of his father's birth. He will have no Bayreuth Festival next summer, as he believes that speeches, prologues, and that sort of thing do not fit into the Bayreuth programme. Just why, it is difficult to see, since Richard Wagner included such things in his festival schemes in 1876 and 1882.

Massenet's new opera, "Don Quixote," had no fewer than sixty-eight performances at the Théâtre Lyrique, in Paris last season. At the Opéra Comique, also, he headed the list, with forty-nine performances of "Manon," while his "Werther" was sung thirty-two times. He is the most popular French opera composer of the day. Bizet's "Carmen," as a matter of course, ran him a close race, with forty-five performances, but "Faust," at the Grand Opéra, was sung only twenty-five times. Saint-Saëns occupied a prominent place, with seventeen performances of his "Samson et Dalila," eight of "Déjanire," and ten of "The Ancestor." Wagner's "Meistersinger" was sung ten times at the Opéra, while the Comique revived "The Flying Dutchman," giving it seventeen times. Of operettas, Léhar's "Merry Widow" was in the lead, with 160 performances. A full account of the season has been printed in the "Almanach des Spectacles" of Albert Soubies.

Bruckner is evidently gaining in popularity in Germany. All of his symphonies are to be issued in full score in the miniature edition of Eulenburg, which students and concert-goers have found so useful. Other numbers to be added to this edition presently are Liszt's "Dance of Death," for orchestra and piano (Siloti's edition), and two of Dvorák's chamber works, a quartet and a quintet.

Londoners are justly proud of their "Proms," as the promenade concerts are called. These concerts, the *Telegraph* informs us, are "among the few, the very few, at which you will witness anything like real musical enthusiasm on the part of the paying public." Sir Henry Wood conducts nearly all the promenade concerts. On his programmes for the present summer and autumn season, Wagner's name appears 109 times, that of Beethoven 39, Mozart 28, Tchaikovsky 26, Saint-Saëns 18, Bach 16, Liszt 14, Brahms 14, Weber 13, Elgar, Mendelssohn, Berlioz, and Dvorák 12 each, Handel 10. British composers are not neglected; they supply above 12 per cent. of the music. And all this music, classical and popular, can be heard at about 8 cents a night for "Promenaders," 24 cents for seatholders in the balcony, and 36 cents in the grand circle, where the seats are numbered and reserved. All season tickets, moreover, are transferable.

Helen Keller, though deaf as well as dumb and blind, has repeatedly written that she is able to enjoy music by standing close to a piano and putting one hand on it. Several psychologists have expressed the opinion that she deludes herself, and that she cannot possibly be impressed by music in a definite manner. Prof. W. Stern, of the University of Breslau, made up his mind to study the problem personally, so he paid Miss Keller a visit, the result of which he relates in the current *Zeitschrift für angewandte Psychologie*. He sat down and played the piano, while she leaned with her body against it and also placed one hand flat on the lid. First, he played a simple melody in four-four measure, the rhythm of which he specially accentuated. Miss Keller soon began with her other hand to beat time, on the whole correctly, and when the piece was ended she called it a "soldiers' march."

The professor then played Strauss's "Blue Danube" waltz, which visibly agitated her; her whole body began to vibrate and sway while her facial expression also indicated enjoyment in an unmistakable manner. This piece was pronounced a "country dance." Chopin's funeral march she called a "lullaby," which was not so inappropriate, the professor remarks, as it might seem, for, as a whole, this piece is less tragic than elegiac and sentimental. Miss Keller was also able to tell when a very high or a very low key was touched, and she recognized a trill promptly.

Finance

WALL STREET AND THE POLITICAL CAMPAIGN.

People who watch the Stock Exchange, to determine the drift of financial opinion on either the industrial or the political situation, are getting no great light. In news from the industrial field, we have had within a week the announcement that August's iron production has broken all records for the month; that advance orders on the Steel Trust's books are the largest since 1907; that the corn, oats, and spring wheat crops, according to the Government's monthly estimate, will surpass all previous records in their yield, and that the volume of actual merchandise traffic has already grown so great that by this time every available railway freight car in the country is in use. In politics, following the Vermont election, we have had the vote of Maine for Governor, in which the Republican plurality was the smallest cast in a Presidential year since 1880. But the Stock Exchange hardly stirred. It moved, in the day or two after the returns came in, like one who has been roused from sleep, who lifts his head and listens for an instant, and who then turns over and drops off again.

Now, to observers who count on the stock market as a commentator on the developments of the day, this is clearly disappointing. People who scan the financial columns of their afternoon paper to see how the day's news is "reflected," and who learn that prices are just about where they were yesterday, a week ago, a month ago, are in much the same mood as people who look anxiously for the time, and discover that the clock had stopped several hours before.

When it was asked by people outside of Wall Street, after the Vermont election news had been digested, How will the stock market like the news? the market itself gave no intelligible response. The meaning of the news was plain enough. In so far as it meant anything, it meant a Democratic victory in November—on that point every experienced political expert agreed, though by no means all of them admitted that Vermont's forecast is conclusive. But the very fact of the Stock Exchange's inertia over the Vermont returns, followed by similar inertia over this week's news from Maine, brought another question forward—What result on Tuesday, November 5, would really best please Wall Street?

Now, a good deal has been said in the press and on the stump, especially during the clamorous campaign for the primary election, regarding "Wall Street's plans" and "Wall Street candidates." Any aspirant for the nomination who was even suspected of speaking civilly to Wall Street people was held up to execration. Wall Street was trying to elect its own President; very well then, voters and delegates must watch to see whom it wanted, and then must choose the other candidate.

But which Presidential candidate does Wall Street wish to see elected—the real Wall Street, not the dime-novel Wall Street of agrarian orators and political conventions? Whose election, out of the three formal nominees now in the field, would give most pleasure to this larger Wall Street? If one could answer that question accurately, he might conceivably throw some light on the state of the Stock Exchange.

There is a common impression that Wall Street is for Taft. As an alternative, it may have been so and in a measure possibly still is—though certainly not because of favors past or to come; for of all grotesque political imaginings, that is the most grotesque to any one who recalls the agonized denunciation of the President by the Stock Exchange when the Steel Trust prosecution was instituted, just ten months ago. It probably accepted Mr. Taft's renomination resignedly, on the general ground of maintenance of existing institutions; for Wall Street is not fond of sweeping innovations. Gov. Wilson's candidacy it has looked upon much as other people of a conservative turn of mind have done—admiring his career in the New Jersey Governorship, greatly disliking the Norfolk speech of a year ago, in regard both to manner and to matter of its remarks on initiative, referendum, and recall, but finding itself decidedly reassured by the statesmanlike tone of his acceptance speech.

As for Mr. Roosevelt, Wall Street has passed through as many phases of opinion as the rest of the community has done. It was ready to march in his processions in 1904; bought stocks on his election; pooh-poohed the absurd title of the "Roosevelt panic"; put up the market a bit on the Return from Africa; began to talk of him as a "safe Wall Street candidate" when his renomination was suggested, and even lent him one of its own favorite speculative promoters to underwrite the Third Party venture. But Wall Street is, after all, very human. It is not exactly the insensate machine that La Follette and other Western philosophers imagine; and it was quite unmistakably resentment at Roosevelt's conduct towards Taft in the primary campaign, irritation at his pose as the infallible higher critic of the Constitution, the courts, and the social order, and weariness over his party's reiterated promise to "bring about a new era in our national life and insure prosperity for all," which settled the attitude of Wall Street.

So that, possibly, Wall Street is still in a more or less formative stage of opinion regarding what it would like to have happen in November. Ideas and impressions of this sort are apt to enter on new phases before election day, and both Wall Street and the stock market may possibly present a different aspect in the matter, at some time during the next eight weeks. Sometimes it seems to require one of those mysterious and inscrutable "election scares" to start the wheels of the market moving. Sometimes even a "crop scare" serves the purpose of putting an end to absolute inertia. But Nature has been in a most extraordinarily good humor with the American people in the harvest season of 1912.

G. STANLEY HALL'S
The GENETIC PHILOSOPHY OF EDUCATION

By G. E. PARTRIDGE, Ph.D.
WITH AN INTRODUCTION BY
G. STANLEY HALL, Ph.D., LL.D.

This is the only ordered and comprehensive epitome of G. Stanley Hall's educational philosophy—the essence of many volumes, and written with President Hall's sanction. It summarizes the advanced educational movement, and the ideas it assembles constitute the most important contribution of all time to education. An invaluable book for every teacher, for normal schools, and for libraries. (12*mo.* $1.50 *net, postpaid* $1.63.)

STURGIS & WALTON CO.
31-33 East 27th Street, New York.

SOUTH AMERICAN ARCHAEOLOGY

Being an Introduction to the Archæology of the South American Continent with Special Reference to the Early History of Peru

By T. Athol Joyce

Assistant of the British Museum; Hon. Secretary of the Royal Anthropological Institute

Fully illustrated with tracings of contemporary inscriptions, etc., and photographs of remains, etc. Large 8vo. $3.50 *net. By mail,* $3.70.

This volume traverses a field which is still virgin so far as any authoritative and connected survey of the entire subject is concerned. Prescott's immortal volumes serve only to whet the appetite of the reader. Mr. Joyce shows how Peru, although infinitely supreme, does not, in point of archæological interest, stand alone in the Continent of which geographically it forms so small a part. The book throws light on the daily life and occupations, the burial customs and religions of the indigenous people of South America.

Building Stones and Clay Products

By HEINRICH RIES, Ph.D., Professor of Economic Geology, Cornell University. 8vo, viii+406 pages, 20 figures, 59 full-page plates. Cloth. (October 15th.)

"The finest Review in the English language."—ARNOLD BENNETT

The Review that FIRST PUBLISHED Masefield's Great Poems

THE ONE

Indispensable English Periodical for

AMERICAN READERS

WHY?

Because

IT IS ALIVE!

"Even the most prejudiced observer of the progress of periodical literature must admit that 'The English Review' is the most distinctive achievement of its kind in recent years. 'The English Review' began in 1908, and I need not apologize to other periodicals if I say that not one has to its credit so distinguished a list of contributors; the very names of these contributors alone are sufficient argument in favor of the high position 'The English Review' takes among modern periodicals. But that is not all; were 'The English Review' dependent only upon eminent names it would receive small praise from me. The feeding of any publication with the work of merely 'eminent' writers is the easiest form of editing, a species of mandarinism but contemptible and futile, because it sets a limit to new literary expression. Far from being such blind worshippers of the mandarin in literature, the editors of 'The English Review' have always been ready to print the best work of the rising generation. **'The English Review' is undoubtedly the most vital and the most modern of better type periodicals.** It is alive because its editor is courageous enough to give responsible writers the freedom of honest expression, and for that reason alone, in this age of shoddy thought and imitation morality, 'The English Review' not only deserves, but I trust gets, the support of all lovers of what is clean and vigorous in modern thought. 'The English Review' is the expression of this newer and saner view of life; it represents the highest interests of both literature and freedom—that publication has committed no enormity of frankness, it has just had the courage to print the sort of things that are being discussed in every literary society, in every group of intelligent people, not only in England but throughout the whole of the civilised world."—*Holbrook Jackson.*

THE ENGLISH PEOPLE OVERSEAS

By A. WYATT TILBY

This series presents a scholarly and interesting study of the migrations of the English people to various parts of the world; the threefold incentives to these migrations—trade, religion, and adventure; the effect that the Anglican race has had upon the native peoples among whom they have settled; and the history of the colonies.

SOME NEW BOOKS OF THE YALE UNIVERSITY PRESS

History

THE ORIGIN OF THE ENGLISH CONSTITUTION. By George Burton Adams, *Professor of History in Yale College. Author of* "Civilization During the Middle Ages."

This volume, but just published, is a very timely and authoritative contribution to one of the most absorbing of all historical studies.

"The origin of the English Constitution is found in the Middle Ages and there is no man who knows the Middle Ages better than the author of this volume. . . . The work is thorough, and will be appreciated by students."—*Boston Transcript.*

8vo. Cloth binding. Gilt top. 378 *pages. Index. Price* $2.25 *net; postage,* 15 *cents extra.*

THE PRESIDENT'S CABINET. Studies in the Origin, Formation and Structure of an American Institution. By Henry Barrett Learned.

"Mr. Learned has completed a work of profound research in a domain which is little frequented by historical scholars, and the result is a manual likely to be referred to as an authority. Constitutional history has here received a valuable contribution to its clearness and completeness and the work will be welcomed and valued by specialists."—*The Literary Digest.*

"The book is a welcome and valuable addition to American historical literature."—*New York Tribune.*

"It is quite the most comprehensive and satisfactory treatise on the subject that has yet appeared."—*Utica Observer.*

"The work is authoritative, exhaustive and conclusive."—*Philadelphia North American.*

8vo. Cloth binding. 471 *pages. Index. Price* $2.50 *net; postage,* 20 *cents extra.*

COLBERT'S WEST INDIA POLICY. By Stuart L. Mims, *Assistant Professor of History in Yale College.*

The Department of History of Yale University begins with this volume its important series of Yale Historical Studies. The present work is based on an examination of manuscript material made by the author in France. The volume opens a new field of interest to historical readers and is the first detailed study of Colbert's colonial policy as applied to the West Indies.

8vo. Cloth binding. 385 *pages. Bibliography. Index. Price* $2.00 *net; postage,* 20 *cents extra.*

Literature

THE YALE BOOK OF AMERICAN VERSE. By Thomas R. Lounsbury, LL.D., L.H.D., *Professor of English Emeritus, Yale University.*

This anthology is a chronologically arranged collection of poems by American authors, excluding the work of any living writer. The Editor has made a catholic yet discriminating selection, including specimens of all kinds of poetry, the serious as well as the light, the contemplative, the pathetic, the humorous, and the satiric. Not even have the travesty and vers de société been omitted. Lyrics inspired by the Civil War, as well as the National hymns, find their place in the collection.

Professor Lounsbury, whose commanding position in American letters peculiarly fits him for the onerous task of editorship, has brought wide and accurate reading to his labors, and as far as practicable has followed in each case the author's latest revised text.

A delightful introduction of over fifty pages states the viewpoint of the Editor in regard to anthologies with a wit which charms and a reasonableness which disarms criticism.

All who have read anything of Professor Lounsbury's will desire this book for the sake of his introduction, whether or not they are interested in anthologies in general.

Octavo. Cloth binding. 600 *pages. Index. Price* $2.25 *net; postage,* 20 *cents.*
Bible paper. Cloth binding. $3:00; *postage,* 20 *cents. Bible paper. Full Morocco.* $5.00 *net; postage;* 20 *cents.*

ENGLISH LYRICAL POETRY. From its Origins to the Present Time. By Edward Bliss Reed, *Assistant Professor of English, Yale University.*

This is the first history of the English Lyric which has yet appeared and is the outgrowth of a series of lectures which have been delivered at Yale University during the last decade. It is not only valuable as a work of reference, but is particularly adapted for use in classrooms.

"Professor Reed has brought to his task the necessary knowledge of the scholar and student of literature, and—what is much rarer—taste, judgment and a broad perspective. . . .

"It is for his scholarly but far from pedantic treatment of the earlier phases of English Lyrical Poetry that Professor Reed's book will be especially valued."—*The Athenæum.*

"It is a survey which will interest almost any person who loves good literature."—*Philadelphia Enquirer.*

"An agreeable and valuable reference book containing as it does biographical notes and critical comments."—*Springfield Republican.*

8vo. Cloth binding. Gilt top. 440 *pages. Price* $2.25 *net; postage* 20 *cents extra.*

Religion

THE MEANING OF GOD IN HUMAN EXPERIENCE. A Philosophic Study of Religion. By William Ernest Hocking, Ph.D., *Assistant Professor of Philosophy in Yale University.*

This important work begins with a survey of religion as seen in its effects in history and in personality, opening the question whether religion is chiefly a matter of feeling or of thought. The author discusses James, Bergson, Höffding, and other thinkers, working out a striking theory of the relation between ideas and feelings in consciousness. Professor Hocking has been singularly fair to the various important trends of philosophic thought. The book is readable, serious, original, and thoughtful, and has already secured high praise from leading philosophic thinkers of the day.

Crown 8vo. Cloth binding. Gilt top. 586 *pages. Index. Price* $3.00 *net; postage* 20 *cents extra.*

THE CHRISTIAN VIEW OF THE WORLD. Nathaniel William Taylor Lectures for 1910-1911, Delivered Before the Divinity School of Yale University. By the Late George John Blewett, *Ryerson Professor of Moral Philosophy in Victoria College, Toronto.*

"Dr. Blewett's idea of theology and of the work of the theologian is larger, sweeter and more comprehensive than the estimate in which they have sometimes been held."—*New York Times.*

"A most important contribution to theological literature."—*American Sunday School Magazine.*

8vo. Cloth binding. Gilt top. 344 *pages. Index. Price* $2.00 *net; postage* 16 *cents extra.*

Art

GREEK REFINEMENTS. By William H. Goodyear, M.A., *Curator of Fine Arts, Brooklyn Institute of Arts and Sciences, Brooklyn, New York.*

The aim of the present elaborate and beautiful work is to summarize for architects, art students, and for those who are interested in the history of Greek civilization the notable discoveries of all observers of architectural refinements in Greek temples. The author, who enjoys an international reputation because of his own great discoveries in this field, is eminently qualified to write on the subject. The non-technical treatment and many beautiful illustrations render the work of absorbing interest to those of the general reading public who seek a knowledge of the principles of architectural taste. The edition is strictly limited to seven hundred and fifty copies printed from type.

Royal Quarto, 225 *pages,* 100 *illustrations, Appendices, Index, and Bibliography. Price* $10.00 *net; carriage* 50 *cents extra.*

Just Published

Woman in Modern Society

By EARL BARNES
Author of "Where Knowledge Fails."
At one time Professor of European History in the State University of Indiana, and later Professor of Education in Leland Stanford Junior University

THOSE who fear woman's devotion to work outside the home, her monopoly of education and her full participation in all the activities of men will find their fears formulated and clearly stated in this book. Those who are eager to see women pass on to full partnership with men will be deeply encouraged as they read these pages. Those who look upon this as a transition time, and long to get through it, that the energies of both men and women may be set free to work out a new society where the complementary values of both sexes will be preserved and used to their utmost, will welcome this book as a wise guide in troubled times.

J. G. Frazer, D.C.L., LL.D., Litt.D., Cambridge

THE MACMILLAN COMPANY takes pleasure in announcing the publication of a new, comprehensive and uniform series of classical Greek and Latin texts with parallel English translations of the highest attainable quality.

Designed by Mr. James Loeb, this series, covering the period from Homer to the fall of Constantinople, will revive interest in classical literature in an age when the humanities are being neglected more than ever before for the practical and material, and will enable every reader to become acquainted with the wit, learning, philosophy, and beauty of the great writers of ancient Greece and Rome.

The translations will combine accuracy with sound English idiom, and will, with rare exceptions, be in prose. Each volume will be prefaced by a brief biography and will contain a bibliography and index.

Preliminary Volumes Ready Shortly.

Euripides, Vols. I and II.
Propertius.
Terence, Vols. I and II.
St. Augustine, Vols. I and II.
Philostratus, Vols. I and II.
Apostolic Fathers, Vol. I.

Each volume 12mo. Flexible cloth,* $1.25 *net; Flexible leather,* $1.60 *net.

Published by THE MACMILLAN COMPANY 64-66 Fifth Ave. N. Y.

NEW EDUCATIONAL BOOKS

History of English Literature

FROM "BEOWULF" TO SWINBURNE

By ANDREW LANG, M.A., Hon. Fellow of Merton College, Oxford. $1.75 net.

In writing this manual the aim of the author has been to present his subject in an interesting way so that the student, or general reader, may be enticed to peruse and enjoy "the immortals" on his own account. To read about them is good, but to learn to appreciate them for ourselves is the goal in view.

An Anthology of Modern English Prose

(1332-1892)

By ANNIE BARNETT and LUCY DALE, late Scholar of Somerville College, Oxford. With a Preface by ANDREW LANG, From 1332 to 1740, $0.80 net; from 1741 to 1892, $1.00 net.

Recommended for study in connection with Lang's "History of English Literature."

The Science of Logic

By P. COFFEY, Ph.D. (Louvain), Professor of Logic and Metaphysics, Maynooth College, Ireland. Two Vols., $2.50 net, each.

Differential and Integral Calculus

By LORRAIN S. HULBURT, Collegiate Professor of Mathematics in Johns Hopkins University. With Numerous Figures. $2.25.

An Introductory Text-book for Colleges and Engineering Schools in the preparation of which the first endeavor has been to make a *teachable* text-book. This end has been kept in view in the general planning of the book, in the selection and arrangement of the topics, and in the details of presentation.

Applications of Logic

By ARCHER T. ROBINSON, Assistant Professor of English in Massachusetts Institute of Technology. $1.20.

The purpose of this work is to adapt some of the more fundamental theories of the subject to the practical aim of instruction in the expression and criticism of thought.

Elements of Plane Trigonometry and Tables

By DANIEL A. MURRAY, Ph.D., Professor of Applied Mathematics in McGill University. With Protractor. $1.00.

This book is shorter than the author's "Plane Trigonometry," by the omission of many of the notes and several of the topics in that book and by the more condensed treatment of other topics. The line definitions of the functions, however, are explained more fully in this book and the unit circle is more freely used.

Present Philosophical Tendencies

By RALPH BARTON PERRY, Assistant Professor of Philosophy in Harvard University. $2.60 net; by mail, $2.76.

A Critical Survey of Naturalism, Idealism, Pragmatism, and Realism, together with a Synopsis of the Philosophy of William James.

Introductory Philosophy

By CHARLES A. DUBRAY, S.M., Ph.D., Professor of Philosophy at the Marist College, Washington, D. C. With a Preface by Professor E. D. PACE of the Catholic University of America. $2.60.

A Text-book for Colleges and Academies.

Essays in Radical Empiricism

By WILLIAM JAMES. $1.25 net; by mail, $1.38.

Selected Addresses

By JAMES BURRILL ANGELL, President Emeritus of the University of Michigan. $1.60 net; by mail $1.70.

VOL. XCV—NO. 2464 THURSDAY, SEPTEMBER 19, 1912 Reg. U. S. Pat. Office. PRICE TEN CENTS

Courts, Criminals, and the Camorra

By Arthur Train

Formerly Assistant District Attorney, Author of "True Stories of Crime," etc.

$1.75 *net; postpaid* $1.83.

Questions of crime red hot under discussion form the basis of this book.

The workings of the Police Department and the District Attorney's office—of intense concern to all as the Rosenthal murder recalls—it explains.

"Why Do Men Kill?" "Preparing a Criminal Case," "Detectives and Others" are among its topics.

Even the fascinating "Camorra" chapters at the end are founded on long personal experience and study.

The Democratic Mistake

By Arthur George Sedgwick

$1.00 *net; postpaid* $1.10.

It forms a brilliant contribution to precisely the issues of the present Presidential campaign, conducted from a conservative standpoint that considers government a science; it differs from most other books suggesting remedies to prevent evils in this—the means it suggests are administrative, not legislative.

Anson Burlingame and the First Chinese Mission to Foreign Powers

By Frederick Wells Williams

Assistant Professor of Oriental History in Yale University.

$2.00 *net; postpaid* $2.18.

A sympathetic, luminous, and impartial narrative of one of the most striking episodes of modern history.

The International Mind

An Argument for the Judicial Settlement of International Disputes.

By Nicholas Murray Butler

President of Columbia University, President of the American Association for International Conciliation.

75 *cents net; postpaid* 83 *cents.*

This volume makes very clear what has been, is being, and may be accomplished toward the end of establishing arbitration as the recognized means of settling international disputes and insuring international justice.

Old Egyptian Librarians

By Ernest Cushing Richardson

Librarian of Princeton Univ.

75 *cents net*

That librarians were at work two thousand years before the Hebrew Exodus, that of the thousands living during that period two became Grand Viziers and another King:—these and many other interesting things are set forth in this little volume.

Plays

Plays by Anton Tchekoff.

Main Currents of Modern Thought

By Rudolph Eucken, Ph.D.

Professor of Philosophy in the University of Jena; Winner of the Nobel Prize for Literature of 1908; Exchange Professor to Harvard in 1912, and Author of "The Problem of Human Life," etc.

$4.00 *net.*

This book has a direct application to burning questions that gives it unusual popular interest. It is designed to counteract the spiritual and intellectual conflicts; to reconcile so far as possible contending ideas by freeing them from all that is fortuitous and unessential, by displaying those tasks common to all people and peoples of the age.

Development of Religion and Thought in Ancient Egypt

By James H. Breasted, Ph.D.

Professor of Egyptology and Semitic Languages, University of Chicago.

$1.50 *net; postage extra.*

An interesting and valuable work by the distinguished Egyptologist based on lectures delivered on the Morse Foundation in 1912, and founded on fresh, enlightening discoveries.

The Fourth Generation

Reminiscences by Janet Ross

Illustrated. $3.50 *net.*

About such shining characters as Carlyle, Mark Twain, George Meredith, J. A. Symonds, G. F. Watts, B. W. Kinglake, Richard Doyle, Tom Taylor, Rogers, Sir A. H. Layard, and Guizot.

BY THE AUTHOR OF "HEIDI"
HEIMATLOS
40 cents

Johanna Spyri, the Louisa M. Alcott of Switzerland, is almost as well-known and loved by American children as by their German cousins.

"Heimatlos" contains two of the best of her stories for children, the first about a little boy who finds his way alone from the rugged mountain home of an unkind relative in Switzerland to his former home on beautiful Lake Garda in Italy, and the other about a modest little girl living in poverty and hardship who passes into a happier life through the staunch and friendly efforts of a kind schoolmate.

—An Author Bibliography of Periodical Articles on Religion —1890-1899—

58,000 Titles by 21,000 Writers

By Ernest Cushing Richardson, *Ed.*
Periodical Articles on Religion—1890-1899. Author Index.

The Alphabetical Subject Index to Periodical Articles on Religion has been received by the reviewers as "an extremely welcome tool" (Harnack), "of the greatest significance" (Sauer), a "rich offering" to scholars (Bertholet), "deserving and helpful" (Lipsius), etc., etc.

Professor Adolf Harnack and Professor Arthur Adams, having strongly expressed the opinion that an author bibliography would greatly add to the value of the work, the editor took up the matter and the present volume is the result.

"This is certainly a bibliographical aid of extraordinary value . . . to have made also an author index to this monster catalog . . . would, to be sure, have taken a great amount of labor but would have doubled the value of the work."—Ad. Harnack in the *Zentralblatt f. Bibliotheksw.*

Ready September 21—The Novels of Ethel Sidgwick

Ethel Sidgwick is a new English novelist whose work has taken its place at once as distinguished. She comes of a literary family—the late Professor Henry Sidgwick was her uncle, and Mr. Arthur Christopher Benson, Mr. E. F. Benson, and the Rev. R. H. Benson are her cousins—and she possesses, as the London Times *says, "the true imaginative gift, as distinguished from the mere power of vivid reporting, which is the necessary qualification for continuing to produce work of permanent value in fiction.*

ETHEL SIDGWICK

PROMISE $1.35 net; by mail, $1.50

"Promise" deals with the fortunes of Antoine Edgell, a musical genius, half English, half French. The book traces his development and his difficulties, for he is not the conventional "prodigy"—his character is all of a piece, and it is the perfect balance of his mind that makes all those Philistines who think that as a genius he must be *directed* for his own good so hard for him to understand, for he has his eyes more open than the eyes of those about him.

LE GENTLEMAN

AN IDYLL OF THE QUARTER $1.25 net; by mail, $1.40

"A distinguished piece of work. It presents with humor and fidelity a Scotsman in Paris, and the penetration of his defences of arrogance and self-sufficiency."—*Manchester Guardian.*

"One is given a glimpse of the real Latin Quarter, a background against which the Scots 'gentleman' stands finely drawn, convincing and real. It is emphatically not a book in which pages may be skipped or glanced over."—*English Review.*

HERSELF

Frontispiece in color by Carton Moorepark $1.35 net; by mail, $1.50

"Harriet Clench, 'Herself,'" says an American critic who read the book in manuscript, "is one of the most charming figures in fiction. Considered from any point of view, the book is brimming with charm, the *motif* is uncommon and skillfully handled, the conception, the psychology, the dialogue, the description, the narrative—all are far above the level of current fiction."

"If any one neglects to make acquaintance with Harriet Clench ('Herself'), he is missing more than it is at all wise to miss."—*Punch.*

Frontispiece by Carton Moorepark for "Herself"

The Nation

NEW YORK, THURSDAY, SEPTEMBER 19, 1912.

The Week

The acclaim with which Gov. Wilson's utterances at Syracuse have been greeted shows how ripe the party is for revolt in the State of New York. It has been no satisfaction for men of conscience to feel that this is the most backward of all our States in throwing over the machines and breaking up the alliance between corrupt business and corrupt politics. Now, the feeling is everywhere that the time has come to strike. Even the most experienced Democratic politicians shake their heads when asked privately how Mr. Straus will run, and admit that he will run extremely well. Only three things keep thousands of independent Democrats from going over to Mr. Straus: Complete distrust of Theodore Roosevelt; dislike of the wild planks in the Progressive platform, and the hope of a Democratic candidate of the type of Mr. McAdoo or of George McAneny. If Murphy should dominate at Syracuse, thousands of men who are on the fence will go to Straus as the most effective way of punishing Murphy, while thousands of others will go to a Democratic ticket, if one is nominated by the Empire State Democracy. How Mr. Wilson's candidacy will suffer by this every one familiar with politics knows. How can Boss Murphy be permitted to jeopardize the national ticket by his stupid folly?

In Connecticut, there is no trouble about the Democratic situation. Gov. Baldwin has been renominated by unanimous consent, and the party is therefore in shape to go before the people of the State as standing for government of the best type. To say that Gov. Baldwin is not subject to boss rule in any shape would be absurdly superfluous; he represents and embodies the idea of public service by high-minded men, fully equipped for the performance of difficult duties, willing to devote to these their undivided energies, and beyond all suspicion of being influenced by any desire but that of promoting the welfare of the commonwealth. At the end of his two years' term of office, he finds himself confirmed in the confidence of the citizens of Connecticut, and his party can enter upon the campaign, both for its State ticket and the national ticket, in the spirit that leads to victory. It is by such candidacies in the several States that the cause of the Democratic party in the great contest for the Presidency can be strengthened.

In taking measures to weed out of the Republican National Committee any members who are not loyal to the party ticket, Chairman Hilles is merely carrying out the dictates of common sense. This is so, quite irrespective of any question concerning the fairness or unfairness, the validity or invalidity, of the action of the Chicago Convention which nominated Taft. As a matter of fact, the party of which the National Committee is the representative in this campaign is committed to Taft as its candidate; and another and quite distinct party has been formed which is likewise committed to the candidacy of the man who was Taft's rival in the Convention. Disgust at or condemnation of the action of the Republican Convention may very properly, in the case of any National Committeeman, take the shape of resignation of his post and affiliation with the new party; but to stay in the governing body of the old while sympathizing with or working for the new is preposterous.

Mr. Frank A. Munsey has bought the New York *Press*, according to his own formal announcement, with a double object in view. One is to further the election of Theodore Roosevelt to the Presidency. The other is to further the election to the Presidency of a man whose victory would mean "the continuation of a tariff that protects the American wage against the cheap wage abroad." Since there can be only one President of the United States at one time, it follows that Mr. Roosevelt is again the man wanted. But we are really not left to conjecture on the point. Mr. Munsey assures us that Roosevelt stands "for the economic policies for which this paper has always stood." The economic policies for which the *Press* has always stood are indicated by its history. It was founded as a Protective Tariff organ. It was owned for a time by a wealthy woollen manufacturer. It has been a consistent supporter of high protective duties. The entire tone of Mr. Munsey's salutatory carries one back twenty-five years to America's infant industries, the cheap man in a cheap coat, and the full dinner-pail. Is Mr. Roosevelt ready to accept this interpretation of his campaign as presented to the people of the first city in the land? Or is Mr. Munsey to be rebuked for venturing to draw the tariff red herring across the trail?

> It is said also that the policy of the Democratic party toward the negro has been brutal, and the policy of the Republican party hypocritical. I answer that the policy of the Progressive party is both brutal and hypocritical, and if there is a choice of one of two evils, I prefer one to both.

We take this extract from the speech of Mr. W. H. Lewis, the Assistant Attorney-General of the United States, because he speaks as one of the colored men of this country who have risen highest and made the most of themselves. If the Progressive straddle at Chicago should have appealed to any one, it might have appealed to Mr. Lewis, who attended the Bull Moose Convention, and saw that whole emotional proceeding which wound up for him with closing the "door of hope" for his people. But he will have none of it, and neither will thousands of others. For once the negro vote will be really divided. It is going to all three of the candidates, and there will be thousands of stay-at-homes besides—American citizens who feel that no party holds out any hope to them that their Constitutional rights will be assured, or that they may have the simplest justice in a large part of this land.

A careful study of the dispatches from Washington makes it clear that, in the belief of the capital at any rate, intervention by the United States is inevitable, but great uncertainty exists as to just where the United States ought to intervene. Last week Mexico seemed as good a field as any for American troops. On last Saturday the claims of Santo Domingo came in for respectful consideration. To-day Cuba has forged to the front. To-morrow the question of sending reinforcement to Nicaragua may help to pass a pleasant afternoon for the young men who are now directing the destinies of the nation at Washington. The interesting fact must have occurred to a great many people that the issues of peace and war are debated at Washington while the President of the United States is at Beverly, the Secretary of State is in Japan, and the Secretary of War is somewhere in California. The young men left in charge recognize that the opportunity is theirs, but, unlike Horace Greeley's young man, they are apparently perplexed as to whether they ought to go West, South, East, or North.

A press clipping bureau would seem to be entitled to an order from the Navy Department, for within ten days of the British Admiralty's announcement of a 25 knot battleship, we learn from Washington that our newest battleship is to be the fastest in the world, with a speed of 22 knots. Why our ships should always lag behind the British in the matter of speed we cannot understand. When they are put in service, we are convinced they are as well officered and manned and individually as smartly handled as those of any other nation. But is the designing department really as up-to-date? The press dispatches always assure us that the boat just being planned is to be the most efficient the world has ever seen—and then it appears that our destroyers are five knots behind those of England, our armored cruisers slower than those of Germany, while in heavy guns per ship we seem to be behind Japan's latest. But there is no doubt that the vessel just authorized by Congress will be extremely formidable in character, as well as in cost.

To regard the postponement of agitation for currency and banking reform until after the Presidential election as a blow to the cause is, we feel sure, a misapprehension of the facts. It is the best and most earnest friends of a solid and lasting improvement who have been most convinced of the inadvisability of forcing the issue into the excitement, confusion, and uncertainty of a Presidential campaign, and especially such a campaign as is now under way. Such postponement does not imply any relaxation of effort on the part of those who recognize the incalculable importance of the subject and who have devoted themselves to its study and to the consideration of the ways and means by which it may be hoped satisfactorily to attain the object in view.

On one subject which came up in the Bankers' Convention at Detroit, there is likelihood of something important being accomplished in the not distant future and without serious opposition. This is the development of agricultural credit facilities on a large scale, upon plans of organization suggested by the experience of European countries. The paper read by Mr. Charles A. Conant will doubtless do a great deal to stimulate knowledge of, and interest in, these plans among men whose influence in promoting them will be of the utmost value. Coöperative credit associations among farmers, unlike many other schemes for the wider dissemination of prosperity, present the advantage of being wholly free from the taint of patronage or paternalism. They are schemes for genuine self-help, under which responsibility and benefit go hand in hand.

The proposal of the director of the postal savings system, as outlined in his speech at the Bankers' Convention, that the limit of $100 per month for any single deposit account be removed, will need some discussion. The proviso was inserted in the law, if we remember rightly, not with a view to restricting the facilities of the system, but through doubt as to whether indefinitely large amounts could safely be redeposited by the postal savings office in private depository banks, under the stipulations of the law. In other words, the question was, to what extent the Government depository could be sure of earning the interest which it undertakes to pay to its own depositors. Mr. Weed's further suggestion that, with removal of restrictions on the amount of a given postal savings deposit, the Government office would be of high service in a panic, is interesting. At such a time, he thinks, frightened people who drew out their deposits from private banks would undoubtedly re-deposit in the postal savings institution, which would thereupon promptly place the money again with solvent private banks.

Such a sequence of events is entirely possible; it might conceivably put an end to "money-hoarding" such as that of the panic of 1907, when the Secretary of the Treasury estimated that no less than $296,000,000 currency had disappeared from sight in the whole United States. But whether or not all of that $296,000,000 cash, or any very essential part of it, would have gone into the postal savings, had such an institution been in the field in 1907, is at least debatable. A very great part of the hoarding of that season was the work of business and manufacturing concerns with large weekly pay-rolls, which they feared it might be impossible to meet if their banks suspended cash payment to depositors. A further part was taken out with a view to the probable premium which might be paid in checks for currency. Perhaps still more was withdrawn from sheer blind fright, which seized on whole communities and made them eager to get the actual cash in their own possession. All of these influences would be met by a proper centralization of the banking credit system, with a scientifically-ordered system of banknote issues. But whether the postal savings bank would meet them, may perhaps be doubted.

In the wild rush for great speed, and in the desire to amuse vast crowds of spectators with foolhardy "stunts" in the air, the most ordinary caution appears to have been thrown to the winds of late by aviators, and the death list has been appalling. So far as can be learned from the records, the monoplane is responsible for most of the trouble, and the action of the British War Office in barring its use in the service is most opportune and commendable. According to Orville Wright the monoplane can never be as safe as the biplane, since it lacks the structural strength of the older machine; but the public must be amused, and "records" are necessary in this age, so the lighter and more mobile flying machine, in which "circus" flights may be made, will be used until those willing to risk their lives have been killed, or laws have been enacted to regulate the navigation of the air.

M. Vedrines, the eminent French aviator, who made a flying visit to this country to carry off the Bennett cup for speed at Chicago, declared his astonishment that the United States, "the birthplace of aviation," should have done so little towards the development of the art. America was standing still, he said, and he was substantially right; but presumably he did not know that the chief reason for this apparent stagnation has been the patent suits brought by the Wrights to uphold their claim to the sole right to make aeroplanes in this country. So far as the biplane is concerned, France has done little, the energies of the aeroplanists there being directed towards the monoplane; and speed has been about the only progress shown. Vedrines also declared that French machines would soon be able to fly 200 miles an hour, and that the journey across the Atlantic between dawn and dark would be possible. It might be as well, however, for him to consider that the monoplanes have yet to make a distance-record approaching that of biplanes, and that no monoplane has yet been constructed with a fuel capacity for 2,800 miles, or anything approaching that distance. Even biplanes have yet to make a flight of 1,000 miles.

Coming after a series of bye-elections which have gone almost uniformly against the Liberals, the loss of Midlothian, Mr. Gladstone's old seat, constitutes a serious blow to the Asquith forces, both in fact and in prestige. The defeat can be explained, but not explained away. At the last election the coalition Liberal-Labor majority in the constituency was 3,157. In the present election the Laborites ran an independent candidate and polled above 2,400 votes. Had these been cast for the Liberal candidate, he would have won by a majority of 2,381, which might have been a good enough showing in an off year, but still would have been a net loss of nearly 800 votes. But the crucial question is now whether the Labor party is ready to carry the break with the Liberals into Parliament. It is easily conceivable how they might use their power outside of the Commons for the purpose of teaching their allies an object lesson. It is not so easy to imagine that the Labor people will unite with the Opposition to turn out the Government and thus sacrifice the many favors which they still have reason to expect from the Asquith Ministry. But while not probable, such a change is not impossible. The Irish have nothing to hope for from the Unionists; that party's position on Home Rule is too well defined to make bargaining possible. But the Labor people may obtain their price from the Opposition, which before this has known how to make concessions when necessary.

The conflict between the French Government and the teachers' unions seems destined to result in at least a temporary setback for the entire revolutionary movement in France. The growth of extremist ideas in the elementary schools has for some time constituted a serious problem. The movement began as part of the revolt against clerical influence which had its political expression in the war upon the religious schools and in the separation of Church and State. The conservative element protested that "secular" instruction in the schools was really assuming the form of anti-religious instruction. But in the short course of half a dozen years the movement has taken a still wider swing. From being merely atheistic, a state of affairs which the majority of the nation might have regarded with complacency, the character of the instruction and the public activity of the schoolmasters have become anti-patriotic and anti-social. The teachings of Gustave Hervé have entered the schools. Contempt for the army and the flag has been preached in the classrooms. The climax came last month when, at a congress of teachers' associations held in Northeastern France, near the Alsatian frontier, strong anti-militarist resolutions were adopted. The Ministry immediately ordered the dissolution of the teachers' associations.

The criticisms levelled by M. Pierre Mille against the duelling system as it flourishes in France carry weight not only as emanating from one who has fought a great many duels. M. Pierre Mille, as those who have been fortunate enough to make his acquaintance in the columns of the *Temps* can testify, is a ripe philosopher and a profound student of human traits and motives. He is competent in every way to speak on the subject. His main contention is that the duelling habit involves an enormous waste of time for the four men who must participate in the rôle of seconds. There is a great deal of running about in taxicabs involved, and telephoning to the newspapers, and making arrangements with photographers, and other indispensable details of a French affair of honor. This burden falls on the friends of the principals, whereas the latter may quietly attend to their business up to within half an hour before the combat and resume half an hour after. It is not detracting from the credit due M. Mille to point out that many years ago Mark Twain brought the same charge against the French duel. He showed that the only people who incurred danger in a French duel were the seconds, who were frequently borne violently to the ground by the fainting forms of the duellists. It is doubtful whether mere newspaper criticism will suffice to undermine this popular exercise. But some day a calamity will happen, one of the combatants will be seriously hurt, and the evil practice will be swept away in an outburst of general indignation and horror.

When the conqueror of Port Arthur chose to follow his Emperor to the grave, was it in simple, unquestioning compliance with the ancient code of Bushido, or was there also the intention to set his countrymen a lesson and a reminder? Gen. Nogi belonged in spirit and outlook to the old Japan, and there must have been many things in the Japan of to-day that he regarded with displeasure and apprehension. We must remember that the Mikado's people are not the superhumanly loyal, tractable, self-devoted race that became a legend after their extraordinary achievements in the war against Russia. Since then we have learned that under a sufficient provocation they will behave very much like other people. When crops fail and taxes grow unbearable, they will riot. When Cabinet Ministers displease them, even though these Ministers are supposed to embody the Emperor's will, they will have parliamentary protests and crises. There is a Socialist party in Japan, and there is an Anarchist movement, as was shown in the recent execution of more than a dozen conspirators against the life of the Emperor. Did Gen. Nogi deplore these manifestations of the modern spirit among his countrymen? Did he believe that by his dramatic act of sacrifice he could call the spirit of the nation back from its new vagaries to the old standards and loyalties?

DELUSIONS ABOUT THE CONSTITUTION.

With the political atmosphere in our own country charged with all manner of loose thinking, it is not surprising that there should be found in foreign discussion of our situation an abundance of confident and sweeping assertion based on anything but an accurate consideration of facts. And, inasmuch as the Federal Constitution is at once the most distinctive feature of our historic polity and the institution most notably exposed to criticism and attack on the part of sanguine reformers at home, it is natural that the place of that instrument in the past and future of American government should be a favorite topic of foreign commentators on our affairs. That the Constitution is, for all practical purposes, incapable of amendment is a notion which, unfortunately, was often maintained by American journalists, in former years, without much serious or logical thought, and without any particular purpose or bias. The notion was commonly expressed in connection with some proposal of minor significance, perhaps some proposal that had come up, in one shape or another, a score of times without attracting much public interest; and it rested almost entirely on the mere empirical fact that the Constitution had remained unamended since the early years of the Republic, except for the amendments which were brought about by the Civil War.

In recent years, however, a very different character has been given to the matter. The Constitution has been represented as embodying a cast-iron system, which, on the one hand, so long as it is unchanged, fatally trammels every effort at social and economic adjustment to changing conditions, and which, on the other hand, was designedly so intrenched in its position that it cannot itself be changed. Both of these notions are held with great earnestness, and expressed with great confidence, by persons who take little trouble to examine into the basis of either. Their state of mind is well reflected in this passage from an article in the London *Fortnightly Review* on "The New Political America":

> Think of a Constitution so wisely put together, so complete in every detail, that any meddling with it on the part of posterity is unnecessary. Somebody once said, not quite convincingly, that you cannot legislate for posterity. More certainly it is impossible to make a Constitution for the centuries to come after, because conditions change with progress. New discoveries like electricity mean new systems of life altogether, and their results have to be grafted into the body social and politic.

One might imagine, from the last sentence, that the Constitution of the United States contained a minute code of rules governing the relations of men in industry and commerce; rules framed to suit the primitive condition of the arts and of business which obtained a hundred years ago, but wholly antiquated through the introduction of the telegraph and the dynamo. In point of fact, the restraints imposed by the Constitution—apart from those relating to the division of powers between the States and the central Government—are of the broadest and simplest kind, and have reference only to the fundamental relations of man to man, and of the individual to the Government; the principles on which these restraints turn are unaffected by anything that has yet been done, or that is likely to be done, by the progress of physical science or mechanical invention. The application of these broad and simple provisions leaves plenty of room for variations in judicial interpretation, and the changing conditions of industrial organization should be reflected in corresponding changes in that interpretation; and this is precisely what is taking place. The provisions are designed to preserve certain fundamental rights; and if, in the course of time, what had once seemed an interpretation fitted to fulfil this object becomes an obstacle in the way of fulfilment, experience shows that we have ample reason to trust that the needed adjustment will be made in a reasonable time. The process may sometimes seem slow, but this is the price we pay for defence against evils far more serious.

The other notion—that we are living under a Constitution which cannot be changed by ordinary process—is largely responsible for the various forms of nullification talk which have recently become so familiar. Mr. Roosevelt's proposal for the reversal of judicial decisions by popular vote, though on its face aimed at State courts and at State Constitutions, really derives most of whatever force it has from feelings current among agitators against the Constitution of the United States. State Constitutions, as everybody knows, are easily changed; whatever the advocates of the "recall of decisions" may say, they are really at the heart thinking of the United States Constitution. But so inadequate and so nebulous is their thinking that they ignore the difference between the difficulty of amending the Federal Constitution and the ease of amending State Constitutions; nor is this all. Just while they are raising all this clamor, two important amendments to the Federal Constitution—both of them of a distinctly "progressive" character—are well on their way to adoption, after only a short period of really vigorous or general effort; this they conveniently forget. But the queerest thing about the whole propaganda is the defence repeatedly put forward against the charge that recall of decisions by popular vote would be a dangerous innovation. Why, say some of their foremost spokesmen—and Mr. Roosevelt first of all—we propose nothing but what has been done in the past, both by separate States and by the Union. When a court's interpretation of a Constitutional provision has been found objectionable, the Constitution has been changed; and is this not the recall of a judicial decision? With such mental confusion it is difficult to deal; when a man has an *idée fixe*, you can do little with him. But to persons whose minds are in ordinary working order, it must be plain that the fact that our Constitutions are already capable of being changed by an orderly and rational process is not an argument in favor of causing their provisions, as understood by the courts, to be subject to summary nullification by popular vote.

FEDERALISM AND CENTRALIZATION.

At a time when in this country the tendency has become pronounced to make the triumph of progressive ideas largely dependent upon, if not actually synonymous with, an important extension in the powers of the central government, it is interesting to note that in England the stress of events is quite in the opposite direction. The present Liberal Government may be guilty of counting its chickens before they are hatched, but for some time it has been known that Home Rule is held by many Liberals to be but the initial step in an elaborate programme of decentralization, under which Scotland and Wales are also to have their own Parliaments. Mr. Winston Churchill went much further than this in his speech of last Thursday at Dundee. There he outlined a scheme of federal home rule that called for the creation of ten or a dozen local legislatures for the United Kingdom, acting under the authority of the Imperial Parliament at Westminster. The fundamental reason for such a wholesale redistribution of legislative functions has long been familiar. The Imperial Parliament is cluttered up with business of a nature totally unsuited to the dignity of such an august assembly. To-day it legislates for the four hundred million people of India, and to-morrow it engages in solemn discussion of parish pump issues. And not infrequently it is on parish pump issues that party alliances are made and unmade and Ministries rise and fall.

The details of the British situation do not concern us now. The point is that where we have been taught to associate government efficiency with centralization, in England they are striving for government efficiency through decentralization. Moreover, the cause of federalism is advocated by the party many of whose ideals have been borrowed by the centralizing Progressives in our own country. Evidently, Mr. Winston Churchill and Mr. Lloyd George are convinced that the cause of social reconstruction is not endangered by setting up a large number of provincial assemblies corresponding to our State Legislatures. It is very probable that far-reaching legislative measures, in the line of the old-age pension law, the insurance law, and the minimum wage law, will not be entrusted to these local assemblies. It is precisely to leave the Imperial Parliament free to discuss such grave measures in full leisure, that the local assemblies are designed. Nevertheless, the fact remains that the English Radicals have no apprehension lest their programmes of social reform should be endangered by the opposition of local interests acting through the local legislatures. While we in this country are being taught that State's rights are as obsolete as the Constitution by which they were established, Mr. Winston Churchill, in defending the federalist scheme, "argued from the examples of the United States, Germany, Canada, and Australia to show the immense advantages of such a system."

Mr. Churchill includes Germany among his federalist states. Formally, of course, it is that. The Empire is a federal association comprising kingdoms, principalities, and city republics, each possessing large powers of self-government. And yet it is of Germany we think first of all when we speak of a highly centralized type of government. The point is, of course, that we use centralized in a double sense. Centralized may mean completely unified in the sense that all local liberties and distinctions cease to exist; in this sense Germany is not centralized. Or the word may mean the concentration of large powers in the hands of the Government. This, of course, is true of Germany in the sense that the Governments of the separate states play an enormous part in the regulation of the lives of their citizens. When we speak of the extraordinary efficiency of the German people as being due in very large measure to the centralized government system in Germany, it is well to ask one's self how much of this efficiency is due to Prussian predominance in the Empire, and how much to the great development of government functions that obtains in the separate states. Actually, the powers of the Imperial Parliament, the Reichstag, are far from unlimited. The separate parliaments, notably that of Bavaria, enjoy larger autonomous powers than any of our State Legislatures. Yet that fact has not kept the kingdom of Bavaria lagging behind the rest of the Empire.

The situation in the United States may be thus summed up: The radical reformers believe that such progressive measures as the protection of the working classes, the suppression of child labor, the establishment of a minimum wage, pensions of various kinds, and so on, demand a large increase in the functions of the Federal Government. They are conscious of the varying standards and ideals in the different States, and they feel that such steps in the right direction as one State will make are often nullified by the refusal of other States to coöperate. The diversity of our divorce laws is perhaps the most notable illustration of what many people regard as the essential vice of federalist government. But is not this diversity and clash of State standards and interests a condition actually favorable to progress by making legislative experimentation possible?

Centralization is no guarantee of increased efficiency or rapid progress in the direction of genuine reform. Cast child labor into Congress, and the influence of a dozen reactionary States may keep the entire country back for years, whereas to-day the enlightened majority in the separate States are in a position to deal with the child labor evil promptly and effectively. How, it may be asked, can a minority of a dozen reactionary States in Congress frustrate a majority of three dozen States? The answer is that, owing to the give and take method of conducting parliamentary business, a group of twelve States wields an enormous power. Log-rolling is one of the surest defences of evil causes, and log-rolling will increase as a legislative body gets cluttered up with more and more business.

THE THIRD PARTY AND THE TRUSTS.

Perhaps it is the public's underlying belief in the foredoomed failure of the Third Party campaign which explains the lack of aggressive controversy over its platform as a whole; perhaps it is the mere multifariousness of those proposals, and the virtual impossibility of grappling with them all at once. Whichever explanation be correct, the fact is that a budget of plans for sweeping innovation in fundamental public policies —enough in number to equip half a dozen electoral campaigns with topics for controversy—has scarcely been touched in the political debate. The recall of judicial decisions has, for special reasons, been a focus of animated discussion. The protective-tariff plank has been brought to closer public notice because of the extraordinary interpretation of its purposes by the candidate himself. But of the fifty or sixty other planks of the Chicago platform—including radical declarations on such intricate public questions as the currency, the enactment of a minimum-wage law, the initiative and referendum, and the insurance of workingmen against involuntary non-employment—few have as yet received anything but the most vague and general discussion on the stump, even from the Third Party's own orators.

One of its declarations, however, cannot safely be left to such neglect, because it involves an immediate issue in our public policy, and because, moreover, it marks a certain line of cleavage in opinion, extending beyond the bounds even of the Progressive party. We refer to the attitude of the party and its candidate towards the Trusts. Concerning this, the Convention declared for "a strong Federal administrative commission of high standing, which shall maintain permanent active supervision over industrial corporations engaged in interstate commerce," while Mr. Roosevelt himself has repeatedly asserted that the Anti-Trust law is a failure, that the concentration of given industries into single corporations, on the scale of our present Trusts, is absolutely essential to maintenance of the country's commercial prestige, that such organizations need not be interfered with except when guilty of wicked practices towards competitors, and that the proposed Federal commission should see to it that the prices of their goods are not raised too high.

This is in substance the plan proposed by the chairman of the United States Steel Corporation, in his testimony of last year before the Stanley Committee. It was evidently put forth then as a refuge from the awkward alternative of abandoning maintenance of an arbitrary price for steel, or submitting to Federal prosecution under the Anti-Trust law. Our own opinion on that expedient was plainly set forth at the time. We agreed with the chief author of the Anti-Trust statute of 1890, ex-Senator Edmunds, that such a commission, in the light of all human experience, "would be in danger of becoming the victim of political influences, if not the cause of them." The *Call*, the Socialist organ, publicly drew the inference at once that "if what Judge Gary described as Government regulation and supervision does not lead to Government ownership, it leads nowhere and changes nothing." Wall Street itself shrank from the contemplation of so enormous a stride in the direction of State Socialism.

In the current number of *Collier's*, Mr. Louis D. Brandeis, one of the highest practical authorities on the subject, dissects in masterly fashion the Third Party's Trust plank. First, he strikes at the commonest of all delusions in the matter—the red herring, skilfully drawn across the trail, which diverted into a bog of chaotic inference at least one United States judge, one Presidential candidate, and one of the three present parties. How can our economic expansion be pursued, they ask, if we prohibit "big business"? How can we compete with foreign manufacturers, if our Government forbids any but small and ill-equipped home concerns?

Mr. Brandeis answers thus:

> No argument could be more misleading. . . . Neither the Sherman act nor any of the proposed perfecting amendments contain any prohibition of mere size. Under them a business may *grow* as large as it will or can—without any restriction or without any presumption arising against it. It is only when a monopoly is attempted, or when a business, instead of being allowed to *grow* large, is *made* large by combining competing business in restraint of trade, that the Sherman Law and the proposed perfecting amendments can have any application.

Mr. Brandeis takes his stand upon the principle, perfectly well known to all practical business men, that "in America there is no line of business in which all or most concerns or plants must be concentrated in order to attain the size of greatest efficiency." Great size may be a handicap to efficiency. This is absolutely demonstrated, he holds, by four facts, established by the whole history of the American Trusts:

> First, no conspicuous American Trust owes its existence to the desire for increased efficiency. On the contrary, the purpose of combining has often been to curb efficiency or even to preserve inefficiency, thus frustrating the natural law of survival of the fittest. Second, no conspicuously profitable Trust owes its profits largely to superior efficiency. Conspicuous profits have been secured mainly through control of the market—through the power of monopoly to fix prices—through this exercise of the taxing power. Third, no conspicuous Trust has been efficient enough to maintain long as against the independents its proportion of the business of the country without continuing to buy up, from time to time, its successful competitors. Fourth, most of the Trusts which did not secure monopolistic position have failed to show marked success or efficiency, as compared with independent competing concerns.

We commend to every one interested in the problem, and to every voter in doubt upon this question, a careful reading of the pointed instances, expert testimony, and inexorable logic, with which Mr. Brandeis bulwarks these positions. When the reader knows the actual facts about the case, he will be considerably less apt, we imagine, to regard with patience a deliberate plan for licensing monopoly in production — something which the world has fought against since modern civilization began, and which is proposed to-day at the very moment when the country is crying out against "monopoly prices" for the necessaries of life.

ON GETTING AWAY WITH IT.

A Socialist orator can usually explain anything. But there was one puzzle which the Socialist State Senator from Wisconsin who several days ago unfurled the red flag under Mr. J. P. Morgan's office windows could not explain. He was discussing the character of various public men. Smith he could understand very well—Smith was only a tool of the interests, and not a very efficient tool at that. Jones was a good deal like Smith, only much more adroit. But Robinson defied classification. And here the orator rose to a pitch of eloquence strongly suggestive of the Authorized Version in its simple elegance, if in no other way. "Robinson is anything you please. Any old thing any old time. And he gets away with it. That's what gets my goat." Now, as we have already intimated, the capture of a Socialist stump speaker's goat is one of the most difficult zoölogical feats imaginable. When such a man declares himself nonplussed in the face of a certain situation, what shall be said of the plain, everyday citizen untrained in the Marxian analysis? And, actually, there are a great many plain citizens to-day who watch with growing amazement Robinson's extraordinary success in getting away with it. Robinson is one thing to-day and another thing to-morrow. He is one thing in Massachusetts and another thing in Oregon. He is one thing to white men and another thing to colored men. And in Massachusetts and in Oregon, by white men and by colored men, Robinson's gospel is received with equal ardor and confidence.

But the case of Robinson has passed beyond the point of his being able to get away with it with impunity. A large part of his popularity is founded upon admiration for the very facility with which he gets away with it. There are big Robinsons and little Robinsons, but the behavior of their worshippers is very much the same. They love Robinson for the unwarranted assertions he has made. They revel in his contradictions. They delight in the fine audacity of his *non sequiturs*. In his ability to confound black with white whenever necessary they detect a peculiar virtue of the superman. "Is it true," the reporter asks Robinson, "that in Minnesota last October you declared that the moon is made of green cheese and that any one who said it is not is a liar?" "It is true," says Robinson. "Is it also true," says the reporter, "that in Pennsylvania on Monday last you announced your firm belief that only the inmates of a home for the feeble-minded would dream of denying that the moon is made of honey and saltpetre?" "I did make such a statement," says Robinson. "How do you reconcile the two statements?" asks the reporter. "I don't reconcile them," says Robinson. "Both statements are equally true, one in Minnesota and the other in Pennsylvania." And a great many plain citizens, on reading the interview published next morning, smite the table emphatically and say, "That's the man for us. He is not like your ordinary politician. He is not afraid to speak out his own mind."

It is the dramatic contrast he presents to the ordinary politician that constitutes Robinson's chief stock in trade. The old-line politician has worked so uniformly under a mask of sweet reasonableness and virtue that he has brought these qualities under suspicion. We have been betrayed so often by statesmen who can always explain their every action that we have been driven into the belief that the only honest man is the one whose logic breaks down. There is a fine robustness about denying that two and two make four, which seems to qualify a man for the drastic work of social reconstruction demanded by the times. People feel that the man who can break a promise is the man to smash a Trust. The man who can look an inconsistency in the face without blinking is the man who will look a wicked plutocrat in the face and send him about his business. Thus, where the old-type politician employed "pussyfoot" methods, the new-type politician gets away with it. In revolt against the gum-shoe, we turn to the bull in the china shop. When the bull first entered the china shop there must have been people who admired the fine, honest clatter of it all. As Wedgewood dinner sets went crashing into Sèvres teapots, and Bohemian salad dishes became indistinguishably merged with German jardinières, people must have felt that whatever else the bull might be, he was not a hypocrite.

Robinson is not a new phenomenon. His popularity is founded on the ancient belief that a critical disease calls for a violent remedy; also that the men who do things cannot be particular about trifles. Before Danton it was recognized that there are emergencies which demand *de l'audace, de l'audace, et toujours de l'audace*. Only Robinson represents the perversion of a well-established truth. He typifies the unjustifiable converse that audacity always means sincerity and effectiveness. He also typifies the wrong kind of audacity. Real statesmen have always been audacious in dealing with matters where the small politician has practiced caution. The small politician lives in a land of ghosts that must constantly be placated. He spends most of his time propitiating the labor vote, the German vote, the Irish vote, the Catholic vote, the Jewish vote, the railway interests, the manufacturing interests, the 'longshoremen interests. The real statesman makes a clean sweep of all these shadows, and by an appeal to fundamental human principles and realities wins his victory. He, too, gets away with it, but in a perfectly legitimate way; in the only right way. Robinson's audacity is of a different kind. It consists in persuading the German vote, the labor vote, the 'longshoreman's vote, and the Wall Street vote that he is for all of them, and if their interests are conflicting he is still for all of them. How he does it is a marvel.

THE REVIVAL IN BUSINESS.

We believe the signs of the times to be unmistakable in their testimony that the country is moving rapidly into a period of great prosperity. Some sort of revival in trade and industry, from the depression which necessarily followed the panic of 1907, would have been fairly due by this time, under any circumstances. Five years have elapsed since the crisis of that year, and in our economic history that is abundant time for the process of liquidation and recuperation. The notable trade recovery which started in the autumn of 1897 and opened a new industrial era for the United States, occurred only four years after the panic of 1893. An interval of six years, after 1873, was sufficient to bring the country up to the great revival of 1879. The business community might reasonably, therefore, have looked now for the return of something like genuine good times, even under ordinary influences and conditions.

But the influences and conditions under which American industry is entering the autumn of 1912 are not ordinary. That the business horizon should have presented a picture of cautious retrenchment, careful economy, prudent use of credit, absence of speculation, and low stocks of every sort of merchandise, was to be expected. It is the lesson of panics like 1907 that the business world must resume such conservative policies before it can get on its feet again after its previous excesses, and the lesson is not thoroughly learned until our merchants and manufacturers have tried to get back to "boom times" without such preparation (as they did in 1909 and 1895) and have met with decisive failure. When they have taken the lesson to heart and have put their house properly in order, it has always heretofore been the case that something happened to bring the movement of real recovery to a head, and hasten beyond all expectations the return to prosperous times.

What has happened this season will bear comparison with most of the famous industrial windfalls of the country's history. During three or four years the United States had been losing ground in agriculture. Our cotton crops had not been large enough to keep the Fall River mills on full time; our wheat crops had left so small a surplus over home consumption that exports fell to an annual total hardly matched in thirty years. The experts told us (as they usually do on such occasions) that the fertility of the American cotton belt was beginning to be exhausted, and that we were reaching the period when the American wheat farms could not feed the people of America.

On top of this situation, with granaries and cotton storehouses as depleted as were merchants' shelves, there came in the first place a cotton crop 16 per cent. above the previous maximum, and now, as the grain harvest of 1912 approaches, the Government's estimates predict the largest crops of corn, oats, and spring-sown wheat in the country's history. The total wheat crop, notwithstanding the bad luck of the early harvest in the Central States, will probably exceed the 700,000,000-bushel yield which has heretofore been recorded only in the years of great agricultural abundance, 1906 and 1901. Much the same story comes from every other grain and fodder crop, nearly all of which ran disastrously short last autumn. In curious resemblance to the seasons which opened the last two genuine industrial revivals in this country, Nature seems this year to have been as unkind to the European grain producer as she has been propitious to our own. In England especially, the best foreign customer for our wheat, the London *Economist* estimates the wheat crop shortage as the most serious since 1879, and that means a large and profitable export trade, for which we shall have the grain to spare.

There is abundant testimony to the bearing of these conditions on American industry at large. Iron production is one "barometer of prosperity," and the country's output in the usually dull months of July and August has broken all records for the period, and, unlike such seasons of temporary expansion as 1909, this is being accompanied by rapidly decreasing unsold stocks. The steel trade, the *Iron Age* testifies, has not been as active as it is to-day since the panic of 1907. Even in the copper industry, which has long been halting, last week's report for August showed the largest production of any month in five years, yet with home consumption and exports absorbing nearly 3 per cent. more than the month's production. What business of all descriptions seems to be preparing for, may be judged from the fact that the freight-car facilities of the railways are so far pressed into immediate service that the side-tracked and idle cars are already at an abnormally low total figure, and railway men expect they will all have been put to active work before the end of the present month.

We have mentioned, without any effort at overcoloring the picture, the facts in the business situation which convince us that a genuine and far-reaching American trade revival is at hand. It will perhaps be answered, by people skeptically inclined, that the stock market, which is supposed to reflect such things, is not moving; that we have an exciting Presidential election on our hands, and that the social unrest of the day is enough to offset big crops or a profitable steel trade and make us unprosperous in spite of everything else. We do not profess to have penetrated the mysteries of the Stock Exchange, except to learn that that market sometimes "discounts" events and situations long in advance, and is also sometimes more concerned with the problem of money-market facilities for speculation than with the general argument for or against that speculation. In the matter of the Presidential contest, experience teaches that, as a rule, prosperity is more apt to affect the result of an election than electoral results are apt to affect prosperity. And even as to "social unrest," is it altogether unreasonable to suppose that at least some part of that trouble, and perhaps the most unpleasant part, was an outgrowth of business reaction and depression?

AUTOMOBILE PROGRESS.

The meeting of garage-keepers of this city to protest against their having to pay higher prices for gasolene than are charged almost everywhere else, brings out clearly one element of uncertainty in the development of the automobile. How can the cost of maintenance be reduced? The price of tires has dropped more than appreciably within the last year; if Dr. Carl Duisberg, the eminent German chemist, now in New York, is correct, his discovery of synthetic rubber will eventually, though not in the immediate future, solve the question of punctures and give to motor owners tires that will not show wear when a set of the present product would have worn out. But if gasolene is to remain the chief source of power, the question of supply becomes genuinely serious as the automobile displaces both the pleasure carriage and the business wagon. In Germany Prince Henry is leading a crusade against the domination of American gasolene, and begs Germans to use a variety of benzol, which is a native product. On this side, a combination of electric vehicle-makers is reported, which is to spread the knowledge of their product and the advantages in their rather limited field of electrically propelled cars.

It was Mr. Edison who promised years ago an electric touring car which should supersede the gasolene motor in every respect. But hope deferred has made the motorist heartsick when he looks in the direction of Orange for relief. Encouragement he may, however, find in the news that the first American yacht equipped with a Diesel oil-burning motor was launched last July. That the Diesel engine is a marine and land success has already been demonstrated. Large steamers and great stationary plants use these motors with complete satisfaction, and the day is near when either the British or the German Admiralty will build a battleship equipped with Diesel engines, because of their economy, their saving in space, and the ease of disposing of their fuel in double bottoms. So far as the new American yacht, the Idealia, is concerned, *Yachting* vouches for the statement that her fuel will cost just one-tenth as much as that of the ordinary gasolene yacht of the same size. In addition, fuel oil is non-inflammable and non-explosive, thus assuring an element of safety now lacking in gasolene boats, as the unusually large number destroyed this season by fire testifies.

The difficulty with the Diesel motor is, however, that it has not yet been worked out on a small scale, and that the first cost is now far heavier than that of the best gasolene engine. Its designer, and the various factories which produce these engines, have not yet concentrated on the small sizes, or, so far as we know, thought of the automobile. Yet it should seem natural that they should turn to that field as well. Meanwhile, the development of the gasolene car has gone on apace. The manufacturers are not responsible for the rise in price of gasolene; they are for the quality of their cars, and they have risen well to this responsibility. The improvement of the American car is nothing less than marvellous. For endurance, power, and comparative freedom from engine trouble our best automobiles rank with the best European, while our cheap cars are flooding England and the Continent. The old joke that the motor-owner spent half his time under his car and half in it went straight to the point in the early days of motoring; it carries no suggestion of truth to-day. One may motor for days and scarcely see a car stalled because of engine trouble; it is the tires which now cause nine-tenths of the automobilist's vexations.

Whether the six-cylinder motor is to retain its present vogue remains to be seen, but it is significant that it is now appearing in cheaper cars. While there are still evidences of a desire to produce cars with new features, the general drift is towards the standardization of type, towards producing a car which shall have the lasting qualities of the old-time Brewster carriage and shall not necessitate the purchase of new cars at frequent intervals. One device of 1912, the electric motor which cranks many makes of cars, has done much to popularize the automobile with the public. Thus women who desire to run their own cars have found one of the two chief obstacles removed; the heavy tires remain to plague. That so simple a device as a storage battery charged by the action of the car should have been so long in coming is certainly astonishing. Now that it is here, besides cranking the car it furnishes all the light necessary in a never-failing supply.

Moreover the companies no longer deliver an incomplete car. The purchaser does not now have to spend from $150 to $200 in putting on head-lights, a top, a speedometer, a horn, and other necessary equipment; the motor car of 1912 is as ready for instant service as was the high-class carriage. Finally, while the introduction of six-cylinders has sent up the price of certain types of the most expensive cars, there has been a decrease in cost in other directions. It still seems as if there should be developed a more durable car for from $600 to $750; but the cars now sold at that figure are by no means to be sneered at, as their success abroad shows.

The *Automobile* has recently printed some remarkable figures and facts, as, for instance, that every tenth family in Nebraska owns an automobile; that there is one car in this country for every 110 people; that the number of motor cars in Maine increased 67 per cent. in six months. Between January first and July first of this year 859,858 cars were registered, the percentage of increase over the year 1911 being 18.8 per cent. No less than 801 new automobile companies have been incorporated in 1912, with a total capitalization of $136,956,740, while automobile exports in the first five months of 1912 have been $11,139,125. Between July 1, 1911, and July 1, 1912, no less than 252,569 cars were produced in this country. New York State leads with 92,407 automobiles, and California is second with 78,603. Commercial vehicles have increased more slowly, as there were but 31,574 on July first last; but this is the branch of automobiling in which there is the greatest possibility for future expansion and development.

ENGLISH HISTORY IN ANECDOTE.

London, September 4.

One of the most interesting personalities among living English men of letters is the Rt. Hon. George William Erskine Russell, grandson of the sixth Duke of Rutland. He is of so modest a temperament that he would probably make no claim himself to be ranked among writers of the day; but his best-known book, "Collections and Recollections," will certainly outlive many productions which literary critics count of higher value. Indeed, while it is nowadays read and re-read mainly for the sheer interest of its stories, it will be highly prized by historians of the next generation for the light it casts on ways and manners of the Victorian era. Among the innumerable volumes of social and political gossip that have crowded the booksellers' shelves of late years, it stands out conspicuously for its first-hand authority in matters of fact, its skill in selection and grouping, its genial temper, and its unpretentious and attractive style. It derives a special piquancy from the blend of the author's radicalism of opinion and his intimate personal association with the most aristocratic of old Whig families.

The book owed its origin to an act of friendship. When James Payn, the novelist, was confined to his house by his last illness, Mr. Russell used to visit him once a week, and amuse him by relating curious incidents he had seen and heard of—mainly drawn from the diaries he had been in the habit of writing since he was a schoolboy at Harrow. The invalid found them a rare tonic, and suggested—as a practiced writer who had been for many years a publisher's reader could scarcely help doing—that there were makings of a book in these reminiscences. Mr. Russell at first thought that personal friendship must have biassed James Payn's judgment. He decided to see whether a newspaper would print them, and to let their publication in book form be determined by their reception as periodical contributions.

Accordingly, he sent them week by week to the *Manchester Guardian*, with which he already had a connection. Their popularity left no doubt as to the next thing to do. As a volume of "Collections and Recollections" they were an instant success. The newspaper editor wished more papers of the same sort, and Mr. Russell found himself engaged as regular contributor of a column and a half to each Saturday's issue. In due time there appeared a second series of "Collections and Recollections," and this has since been followed by "Seeing and Hearing," "A Pocketful of Sixpences," "Sketches and Snapshots," and other books of the same type. Of course, these articles have by no means been composed entirely of gossip or "good stories." Many of them are really essays discussing, in friendly fashion, problems of social and domestic life—a recent topic, for example, was "Fathers and Sons."

Only recently Mr. Russell happened to recall, in his Saturday article, that just twenty-five years had passed since the *Manchester Guardian* first published something from his pen. Thereupon a reader of that paper made the happy suggestion that, as it was customary to remember the silver weddings of one's friends, the anniversary should be commemorated by raising a testimonial fund in shilling subscriptions, the fund to be devoted by Mr. Russell to some object in which he was interested. There was an immediate and hearty response, and some of the letters that accompanied the gifts testified most enthusiastically not only to the pleasure, but to the helpful stimulus and guidance, of Mr. Russell's articles.

NEWS FOR BIBLIOPHILES.

It is fitting that a quaint book should have a quaint title-page—such is the case with William Lawrence's chief publication. It is engraved in seven compartments. The centre contains the title: "Marriage by the Morall Law of God Vindicated Against All Ceremonial Laws of Popes and Bishops Destructive to Filiation, Aliment, and Succession, and the Government of Familyes and Kingdomes." Then follows a verse from Mal. ii, 14, and the date 1680. Underneath this are the words, "Linea Recta Praefertur Transversali." At the top "The Morall Law" is symbolized by the two tables of the Decalogue. and the Ceremonial Law by a Church on which rest an owl, a raven, and a bat, surmounted by a rosary, a mitre, and a ring. On the left side are figures of Religion and Liberty: on the right of Justice and Property. On p. 422, at the end of the second book, the author remarks, "By the interruption of the press, I am compell'd to break off this book abruptly." When it was resumed the second part appeared with this title:

> The Rright of Primiogeniture, in succession to the Kingdoms of England, Scotland, and Ireland: as declared by the Statutes of 25 E. 3. Cap. 2. De Proditionibus, King of England, and of Kenneth the Third, and Malcolm Mackenneth the Second, Kings of Scotland. As likewise of 10 H. 7. made by a Parliament of Ireland; with all objections answered, and clear probation made, that to compass or imagine the death, exile, or disinheriting of the King's eldest son is High Treason. To which is added an answer to all objections against declaring him a Protestant Successor, with reasons showing the fatal dangers of neglecting the same. . . . London, Printed for the Author. 1681.

This is the third book, and at the end

is an index to the three books. There follows what may be styled an appendix:

> The two Great Questions whereon in this present juncture of affairs the Peace and Safety of his Majestie's Person, and of all his Protestant Subjects in his three Kingdoms next under God depend: stated, debated, and humbly submitted to the consideration of supreme authority, as resolved by Christ. . . . London. Printed for the Author, 1681.

After this tract of fourteen pages comes the table of errata. The three parts are not always found together—a fact of which the collector should take note. The question of primogeniture in these closing years of the reign of Charles II was mixed up with the possible pretensions to the throne of the Duke of Monmouth. It was asserted that the King had in reality been married to Lucy Walters, and a large party favored the exclusion of the Duke of York and the succession of Monmouth. But this is not the main thesis of the writer of whom a word or two may now be said.

William Lawrence was the eldest son of William Lawrence of Wraxhall, Dorset, and was born in 1611 or 1612. He entered Trinity College, Oxford, in 1631, as a gentleman commoner, and was called to the bar at the Middle Temple, and attained a good position in his profession. He was appointed in November, 1653, one of the commissioners for the administration of justice in Scotland. He was also a member of the English Parliament. At the Restoration he returned to London and resumed practice at the bar. He died March 18, 1680-1, aged sixty-nine, and was buried in Wraxhall Churchyard. In the church there is this inscription to his memory:

> Gulielmi Lawrence, armigeri, Scotiæ judicis infaustissimi belli tempore a 1654 ad 1660.
>
> Welcome, deare Death! let sweetest sleepe here take mee
> In thy coole shade, and never more awake me.
> Like a rich curtayne drawe thy darkness round.
> Like a close chamber make my grave profound.
> In it I'le couch secure, no dreames affright
> A silent lodger! here no cares dare bite,
> Making thy bed seeme hard, or long thy night.
> Let not thy armes, O Grave! yet still infold mee.
> Alas! Thinke not thou canst for ever hold mee.
> Wee'le break at length thy marble wombe asunder,
> Re-issue thence, and fill the world with wonder.
> Envy thou'lt then to see the power divine
> Newe digge his diamond saints from thy deep'st myne;
> Cleanse, cleare, and polish them: then shall by farre
> Each dust of their's outshine the morning starre.
>
> Obiit 18 Martii, anno { Dom. 1680
> ætatis suæ 69.

This epitaph probably came from the pen of William Lawrence, who freely mingles verse with his prose even when discussing technical points of law. His "Marriage by the Morall Law Vindicated," according to Anthony à Wood, was "written upon a discontent arising from his wife, a red-hair'd buxom woman, whom he esteem'd dishonest to him." For this suggestion there appears to be no foundation. Lawrence's thesis, which is debated with much curious learning, many digressions and much plain speaking, is that marriage consists of mutual consent and cohabitation, and that no ecclesiastical ceremonies, and no witnesses are necessary to constitute a moral and legal union. The English marriage law has often been held uncertain, and Lawrence's acquaintance with the different customs of Scotland may very likely have impressed him by their superiority to those of his own native country. In most lands the subsequent marriage of the parents has legitimized children born out of wedlock, but not in England. This has certainly produced many cases of great hardship.

Lawrence's digressions are numerous. In one we have the story of the martyrdom of George "Wichard" (Wishart); with all the articles of his indictment, his prophesy of his adversary's death, and the tragic end of Cardinal Beaton set forth. In another there is a note of a case in which a man sued for payment of a shoulder of mutton eaten in part by a wife, but the judges held that it could not be said to be converted to *her* use as husband and wife are one person! He mentions a Scottish lady who was married before she had reached her twelfth year (p. 92.) He mentions also a curious incident which he witnessed in that country. The wedding feast was prolonged until the following day when, after dinner, it was customary for the bridegroom to stand with a creile or basket on his back, "and the company used as they pleased to throw into the same as into a voider, so long till the bride in good nature took it off from him with her own hand, which the sooner she did, the better wife they judged she would be." His probation was so long that he said, "Sweetheart, will you not help me?" but she refused. The fact was there were two sisters so like each other they could not easily be distinguished, and it was the unmarried one who came down first to tease her new brother. At last when they had made sufficient sport about it the true bride was brought downstairs and took off his burden (p. 106.) A good portion of the second book is devoted to a discussion of all the Biblical terms referring to marriage. Many of these he contends are mistranslated in the English version. Indeed, it is difficult to say what there is not in Lawrence's book, for he is as ready to translate Horace (p. 232) as to discuss whether there is any English law by which a man can be compelled to stand in church in a white sheet (p. 235). He knows who excommunicated flies (p. 356), and when the Judges prohibited the Bishop of Chichester from excommunicating a churchwarden (p. 357).

William Lawrence was a fluent rhymer, but it may be the greater kindness not to quote his verses. Nor is his prose concise. His address, "To the Reader," consists of one sentence and contains four hundred words. The reader of these degenerate days can only gasp and pass on.

WILLIAM E. A. AXON.

Correspondence

COLLEGE TEACHING OF ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: Two statements about Carola Woerishoffer, in Miss Tarbell's account of her life in the July *American*, when put together, challenge the attention of teachers. She is said to have done "good work" in the college of which she was a graduate. Yet Mrs. Kelly is quoted as having said of her:

> She had not learned to write. She had written some notes about this work which she wanted published, and we went over them again and again. She was afraid they would not be accurate, afraid they might exaggerate, and when she finished they were so literal in their statement of facts that they did not present the picture at all.

From an unexpected angle we come by inference upon one of the old charges against academic training. It is not practical, it is not efficient. Here there was good material to work with. The girl knew her facts, had the power of clear thinking, the gift of sympathy, and willingness to work. Yet what ought to have been the simple task of writing down the truth that was in her that others also might know, was beyond her powers. In "Power to Think Straight" (*Nation*, October 13, 1910), the writer says, "Once a man can think straight, the chances are that what writing he needs to do will nearly take care of itself." Many of us have believed that, but it was not so in this case.

For twelve years I have been struggling in school and college with the inextricably mingled problems of teaching English and English literature. What now impresses me most is the waste of effort on the part both of those who are taught and those who teach. A case like that of Carola Woerishoffer seems to me conspicuously pitiful. But in their humble way those poor unknown students whose failure shows in bad grammar, unidiomatic English, and garbled mis-statements are equally pitiful.

No time of my life is so full of humiliation and self-abasement as the end of a semester, when I read the long papers and the examination books of those whom I myself have taught. I carry some of the answers seared into my brain. *Cucullus non facit monachum,* translated in class (for such elementary work is a measure of precaution even with college seniors) as "The cowl does not make the monk," returns thus: "The cow does not make the mud." It is the result of careless listening and utter indifference. Chaucer's squire has a "plaited nose," and his yeoman bears forever under his belt a bundle of twenty-four peacocks. Even the familiar line, "Thanne longen folk to gon on pilgrimages," is transformed into, "Thin, long people go on pilgrimages."

The statements about Miss Woerishoffer indicate one kind of failure on the part of the college. Such absurdities as those quoted above, the like of which are known to every examiner, indicate another. For the two kinds of fault two remedies are needed. One remedy is outside the power of the college, the other rests with it wholly.

As I have watched the work of my students I have become convinced that the primary school is largely to blame for their carelessness and inaccuracy. At the very beginning habits of obedience and accuracy should be inculcated. They are more important than mere information, or any æsthetic qualities that can be developed by the emotional teaching that is so common.

A simple illustration will serve to show what I mean by teaching for accuracy. In the old days we were taught to write the singular possessive case by writing the noun, then the apostrophe, and then the *s*. We were not allowed to join the *s* to the word, and put the apostrophe in afterward. It was therefore impossible to confuse the singular and the plural possessive cases. My pupils, on the other hand, have been allowed to join the *s* to the noun, and go back to put in the apostrophe. As a result, it fails before, after, or over the *s* as chance directs, so that I have to correct, each year, hundreds of errors in the writing of the possessive case.

I have often thought in this connection of the Japanese student who taught me to write the alphabet of his country. It was not enough that I should produce a letter that looked like his. I must make the strokes in a certain order, and I must begin always at that end of the stroke which was fixed by custom.

"What difference," I asked, with American carelessness, "so long as my work looks right?"

"It does make a difference," answered my Japanese instructor. "There is one way that is best, and in Japan the children all learn that way. It is the foundation of our national greatness."

To the carelessness that is allowed in the pupils of the lower schools I attribute the ignorance of English idiom which is so startling nowadays. Our American children write their own language as if they were foreigners. I get such English as the following from juniors and seniors in college: "His writing underwent a detriment," "his love to his sister," "to fight a conflict," "he cannot help from feeling," "the man's use of diction," "he had no difficulty to make her love him," "they were upon very intimate relations." My students have not been trained to know the exact significance of words, or to notice delicacies of idiom.

I believe that our results were better when we read and re-read our old reading books in school, committed poetry and orations to memory, and devoured the Waverley novels and "Tom Sawyer" out of school hours. If, at the beginning, we could teach less, but teach soundly, our superstructure of education would be better. I doubt if the college would then have to deal with students who would translate *cucullus non facit monachum* as "The cow does not make the mud."

The fault in such cases as that of Carola Woerishoffer is the fault of the colleges, and the remedy rests with them. Instruction in the actual writing of English should be, more than it is, in the hands of those who are themselves practitioners of the art, and who speak from experience, not from theory. A double advantage would result. The teaching would be more practical in itself, and the students would have more faith in it.

The best work of the present day is done in the professional and graduate schools. It is not merely because only the better students go on. I have seen very careless and indifferent undergraduates develop a new spirit in their postgraduate work, and I am sure that it is partly because those who then teach them are practicing what they teach—law, medicine, architecture, scientific research, or whatever it may be.

Harvard has been notably successful in putting in charge of its English work men of some creative power or practical experience. While Professor Wendell's early experiments in novel-writing are probably forgotten, they have undoubtedly helped even more than his later books of scholarship to give value to his teaching. And never was better work done than by Mr. Hammond Lamont, whose teaching was only an interlude to his newspaper career, but an interlude that benefited thousands of students who came under the influence of his unemotional, sensible, practical instruction.

Without question, there are some teachers who can help others, although they have not the power of accomplishment themselves. Often, too, an unsuccessful effort at creative work may have taught all that is necessary. On the whole, however, I am convinced that effective teaching of the technique of English composition will more certainly be got from those who have had some experience in writing for the outside world than from those who have had merely academic experience and success.

In addition to more practical and simple teaching, we need more time in which the student can actually study. This all colleges now recognize, and various reforms are being attempted. Relief from our present evil of an over-crowded college year and an idle summer will help us in our other troubles. Prof. Irving Babbitt, in his essay on "Academic Leisure," has aptly quoted from Ecclesiasticus, "The wisdom of a learned man cometh by opportunity of leisure, and he that hath little business shall become wise."

For the improvement of our college English, then, three needs at least are ours: Sounder elementary education; simpler, more technical, or professional instruction in college English courses, and more free time in college for intellectual development.

Mount Holyoke College, August 15.

Literature

EXPLORATIONS IN SYRIA.

Publications of the Princeton University Archæological Expeditions to Syria in 1904-1905 and 1909. Section A, Southern Syria. Part 2, Southern Hauran. Section B, Northern Syria. Part 4, Djebel Barisha. Princeton: The University.

Both of the regions covered by these latest volumes of the Princeton Expedition are thickly strewn with ruins. In the southern Hauran some seventy sites were visited. Of these about a dozen are now inhabited villages, a considerable number more are used at harvest time or as refuges for shepherds and the like. About twenty show no signs of modern use or habitation. Now both of these regions are almost deserted; once they were thickly inhabited, wealthy, and prosperous.

The period of greatest prosperity of the southern Hauran, included in the biblical Bashan, was that immediately preceding the Mohammedan conquest, from the end of the fourth to the beginning of the seventh century B. C. The ruins, as we see them to-day, are "essentially ruins of Christian towns of the sixth century," but through and under these Christian ruins are still visible remnants of the Roman and Nabatæan periods (the earliest Nabatæan document discovered is dated about 60 B. C.), and beneath these again some fragments of a still earlier period. The similarity of these earliest remains to the so-called Cyclopean work in Europe suggests to the mind of Dr. Howard Crosby Butler, leader of the expedition, who writes the division of each of these volumes dealing with the architecture, the Bible references to the time when there were "giants in the land." To these giant cities he refers the step pyramids, solid masses of stone, comparable in appearance, and probably in purpose, to the similar pyramids in Egypt and to the Ziggurats of Babylonia, and suggestive to that extent of a certain unity of civilization or religion. But of course excavation will be required before conclusions of any great value can be formed with regard to the older remains.

In the southern Hauran the buildings are the most lithic anywhere known. Even the doors are of stone, and the stone used is in general the very hard basalt, of which the whole country consists, with the exception of the extreme southern boundary, where limestone crops out. The impression produced upon the observer by these massive, clumsy, gloomy constructions is one of depression, and travellers have repeatedly called attention to the singularly ugly character of this Hauranic architecture, with its heavy shapes and dismal, monotonous color. But Dr. Butler's discoveries show that this was not the original appearance of these buildings. From the remnants of stucco which he found in place or on the ground he concludes that the rough walls were "always concealed from view," and that "all buildings of all periods and of all classes were stucco," smooth and rough surfaces alike. The stucco was regularly put on in three coats on the exterior walls, and within sometimes in three, sometimes in two, sometimes in one. Among the colors which he found still distinguishable on fragments of the plaster were grass greens, deep reds, pale blues, browns, and soft yellows. There was also abundant use of stucco mouldings, the ornamental designs in which, like wreaths and garlands, were picked out in still more brilliant colors.

In an appendix on Trajan's Road from Bosra to the Red Sea, Dr. Butler contributes a further piece of information of almost equal interest. The remains of the Roman roads in the East are, as is well known, nothing but blocks of stone, somewhat raised in the centre, sloping to the sides, with a slight combing of stones set on edge to separate them from the surrounding desert. Even where sections of such roads are fairly well preserved, they are absolutely unusable to-day. No caravan can travel on such surfaces; and yet so far as one can judge from the present appearance of these roads, they were not used, certainly to any large extent, for wagon traffic. Then, as now, the traffic of those regions was by beasts of burden—camels, donkeys, mules, and horses. But Dr. Butler found a section of Trajan's Road, between Bosra and Amman, on which the stone foundation of hard basalt blocks had been covered with ground cinders and these again with beaten earth, making a most beautiful, durable, and elastic surface for caravan traffic; which throws a new light on the whole question of Roman roads in those parts of the East.

Of the seventy places visited and studied by the expedition, Dr. Butler gives plans, drawings, or photographs to the number of about twenty-five, but it must be confessed that, outside of what has been mentioned, there is very little of general interest in this material.

The other volume, dealing with Djebel (why not Jebel?) Bārîsha, is much smaller, and, particularly in the inscriptional part, of even less interest. It is curious to note that the architecture of this region, which lies about thirty miles east of Antioch, is quite different from that of the adjacent Jebel-Rîḥā, described in a former publication of this series. The northern region is, relatively speaking, Oriental in its character, the southern classical and Grecian. For physical reasons the former had a closer connection with the countries lying east, which evidently affected its entire development. Jebel-Rîḥā, on the other hand, was in close touch with Antioch. It is rarely that one can find so striking a difference in so brief a space.

It is perhaps interesting to note that the inscriptions from this region (treated by Wm. Kelly Prentice), covering more than three centuries, show, in their phraseology, a primitive Christianity in that they are dedicated to "God and His Christ," sometimes with mention of the Holy Spirit or the Trinity, but without invocation of the saints or even of the Virgin Mary. In this region, as in the Ḥauran, there are almost no Mohammedan remains, the prosperity of both regions having evidently ended with the Mohammedan conquest.

These volumes show the same conscientious care and scrupulous attention to detail as the former volumes of the series. Considering that they represent entirely surface exploration, the results of the work of the expedition here presented are very remarkable.

CURRENT FICTION.

The Arm-Chair at the Inn. By F. Hopkinson Smith. New York: Charles Scribner's Sons.

"If," says Mr. Smith in his preface, "I have dared to veil under a thin disguise some of the men whose talk and adventures fill these pages it is because of my profound belief that truth is infinitely more strange and infinitely more interesting than fiction. The characters around the table are all my personal friends; the incidents, each and every one, absolutely true." A taking and characteristic advertisement. Mr. Smith has won a large audience by seeming to confide in it. His offer of a personal letter of introduction to the landlord of his delectable inn, if it were to be taken up by many of his readers, would, we fancy, prove embarrassing to at least one of the parties concerned. That audience will duly admire him for his boldness in this instance, not pausing to reflect that the really daring act would have been the presentation of his persons and scene *without* that thin disguise which makes them mildly palatable as fiction. As a chronicler of fact (which he appears to identify with truth) this clever raconteur has had, so far as we are aware, small experience. Like Dr. Henry van Dyke, he depends for his effect upon his skill in investing the materials of personal experience with the glamour of romance. The closer such a writer sticks to his actual persons and scenes, the more artificial his work is likely to be—as fiction. Imagination has little or no play: ornament does the trick. Fact is sacrificed, and truth—the truth which inheres in fiction of a high order—has small chance of emerging. These pages are as carefully and as self-consciously "composed" as one of Mr. Smith's Venetian watercolors.

Miss 318 and Mr. 37. By Rupert Hughes. Fleming H. Revell Co.

Whether as a figure of pathos or of humor, the "saleslady" has for some time been a favorite heroine with the short-story writers. Miss Lizzie Mooney, who dreams of herself as Madum'selle Lisette Monet, and is numbered 318 on the staff of the Mammoth Department Store, New York, is of the humorous class. Her view of life, and the strange lingo through which she utters it, are even more amusing than pathetic. But Mr. Hughes has not brought us into her company a second time for her own sake. He has made her the central figure in a highly-colored tract. His theme is the inhuman risk taken by big "selling" concerns like the Mammoth, within the letter of inadequate fire-laws. From the opening pages the red spectre of fire is seen hovering above Miss 318 and her four thousand fellow-employees. She herself is dimly aware of it, and the young fireman, who is Mr. 37, warns her in good set terms. The Mammoth is a perfect fire-trap, the dread of the Force. Why isn't something done, asks Miss 318. Because the Mammoth, "nothin' but a holler shell, chock-full of human bein's and a million dollars worth of the easiest burnin' stuff in God's world," is within the scanty regulations; because the newspapers cannot afford to lose its advertising; because it is not the American way to provide safeguards. "Ye're young and rich," growls Mr. 37, "and we got money to boin—and we like the smell of smoke." So the expected thing happens—the downfall of the Mammoth. What might not have been quite expected is the utterly preposterous series of incidents connecting Miss 318 and her fireman with it.

My Lady's Garter. By Jacques Futrelle. Chicago: Rand, McNally & Co.

That the author of this story went down with the Titanic is a fact not lost sight of by its publisher. He seems to have been a brave man and a skilful maker of magazine fiction. But when the "Literary Note" obligingly pasted on the fly-leaf of this work speaks of it as "final evidence of an author's consummate art," and alleges that "his coronet of fame will be brightened by another jewel in the publication of this masterpiece," we feel that complaisance is being carried rather too far. The "Note" in question will be printed as a review in hundreds of rural newspapers—and some others. Its obvious inanity will add its mite towards stultifying the work of the real reviewer, in such relatively few and strangely lavish periodicals as employ him.

The idea of weaving a mystery story about a theft from the British Museum of the original garter which became the emblem of the Order of the Garter is good. The plot evolved is ingenious, and the style of its telling jaunty and according to the magazine mode of the hour. But the thing as a whole is a flimsy trifle.

Halcyone. By Elinor Glyn. New York: D. Appleton & Co.

Halcyone was a little English girl who lived with two maiden aunts on the ancestral acres. She had governesses, and she read Kingsley's "Heroes," and she discovered a secret staircase and a wonderful Greek sculptured head. When she was twelve years old there came to live in a cottage at her gates an old Oxford professor, who instructed her deeply and was her guide and friend through her life. An Oxford graduate, his former pupil, comes to see him and has a glimpse of the young student. The young man is an ambitious politician, for whom women are "not even to be considered a factor in the scheme of things." He thinks, however, that it will further his aims to marry a rich American divorcée who has rented an estate near Halcyone's—and the inevitable begins. The destinies fight for control of this gentleman, though it is never made clear why they or any one should want him. Perches a bad Pittsburgh angel over one shoulder and a good Greek angel, Halcyone, over the other. Halcyone is even more than Greek. She is a worshipper of Nature in every form except thunder, an undoubting theist, and a believer in the efficacy of thought currents. It would be a hardened case of error indeed that could withstand the pressure of these forces for good. The story is not without its pretty moments of sylvan presences and Greek lore, and the teachings of the night winds; of a white bearded sage inspiring his pupil, and of the pupil's constant faith in things unseen. But the impression left is of a note forced; of mythology just a little too ready to the hand and of the incongruity of New Thought as her handmaiden.

THE LYRIC.

English Lyrical Poetry: From its Origins to the Present Time. By Edward Bliss Reed. New Haven: Yale University Press. $2.25 net.

Professor Reed would have done better not to attempt, as a preliminary to his study, a sharp definition of the lyric. The term has grown vague, yet the old, easy-going categories, which accepted for lyric the greater number of short poems, will continue to be more serviceable than those which he prescribes. "All songs," he says, "all poems following classic lyric forms; all short poems expressing the writer's moods and feelings in rhythm that suggests music, are to be considered lyrics." It is clear that Mr. Reed desires to revive the Greek standard, and the spirit which fostered a perfect understanding between verse and music. But can this be done? The author includes in his definition the various sonnets, because some of them have been set to music. The test is not convincing. What of Shakespeare's sonnet beginning

> When to the sessions of sweet silent thought?

Does its rhythm suggest music to a greater degree than many a passage not usually classed as lyric in the plays?

This brings up a very interesting point which Mr. Reed leaves untouched—the striking similarity of such short passages in Shakespeare to his sonnets. The kinship between them can be shown to be so close that if the sonnets are to be called lyrics, then the other lines should be, too. Macbeth's words spoken after he has been told of his wife's death may serve as illustration:

> She should have died hereafter;
> There would have been a time for such a word.
> To-morrow, and to-morrow, and to-morrow,
> Creeps in this petty pace from day to day,
> To the last syllable of recorded time;
> And all our yesterdays have lighted fools
> The way to dusty death. Out, out, brief candle;
> Life's but a walking shadow, a poor player
> That struts and frets his hour upon the stage
> And then is heard no more; it is a tale
> Told by an idiot, full of sound and fury,
> Signifying nothing.

These lines deal with a "special instant"—Shakespeare's own definition of what a sonnet should embrace—and light up its various facets in a way that is almost indistinguishable from the manner of the sonnets. The plays furnish dozens of other like instances. "To be or not to be," etc. "We have scotched the snake, not killed it," etc. "Put out the light, and then put out the light," etc., prove upon analysis to have the characteristics of short poems expressing emotion. The fact that they are within a larger structure of drama and so get an intensity which standing by themselves they would not have, does not entirely remove them from discussion. The same might be said, though to a less degree, of the songs in the plays, particularly in "The Tempest."

While not wishing to commit ourselves to any one definition, we have tried to indicate that lyric poetry is not to be classified to-day by the musical test, and that the test of length, though sound, involves wider considerations than our author intimates. It is very possible that the lyric, from first being something pretty definite, has broadened, to all intents and purposes, into merely a quality of poetry. At the present day, for one to insist upon a Greek point of view is bound to seem futile.

Mr. Reed's method, when once he gets fairly started, is partly historical and partly æsthetic, and naturally is chronological. But nowhere is it very effective or consistent. For one thing, he is evidently embarrassed by the amount of his material, even after the restrictions which his definition has imposed. As he thinks it necessary to mention every one who contributed to the type, his study soon becomes a pageant of names with scraps of illustration and comment, and a few of the underlying tendencies roughly sketched. His book is sadly in need of a few striking generalizations. It would have been wiser, we think, to devote most of the volume to the leading lyrists, and also for certain periods to select a few of the more usual poetic themes and to study their treatment at various hands. This could have been done to advantage with the lyrics of Elizabeth's day, with which Mr. Reed finds himself hopelessly swamped. He deals half heartedly with the Petrarchan impulse, neglecting several of its important phases, and because he has not carefully calculated the illustrations, makes a poor comparison of Shakespeare as a sonneteer with Sidney and Spenser. The more's the pity, since a number of special investigations of their work had prepared the way for some keen general statements.

Milton, as great a lyrist as our language ever saw, is referred to countlessly, yet receives but a few pages of concentrated attention. We are told what Sir Henry Wotten said of "Comus"; the well-known blemish in the "Ode on the Morning of Christ's Nativity" is pointed out, and we turn to Dr. Johnson's condemnation of "Lycidas," and shortly arrive at the conclusion of the whole matter:

> The art of the poem is as great as the inspiration; we are carried on and on by the sweep of the verse until the elegy reads as though it had been struck off in the white heat of the poet's emotion, yet Milton's manuscript shows how patiently he revised word and phrase. Familiarity with "Lycidas" but deepens admiration; its music haunts the ear, its phrases the memory. It is the most truly inspired lyric that England had yet produced.

Exit Milton. Not a word about the breadth of his indebtedness, even in the lyric, and of his amazing power of assimilation. The author neglects also the nice question of Milton's kinship with Shakespeare on the lyric side; nor does he sufficiently work out the genesis and later influence of "L'Allegro" and "Il Penseroso."

"The genius of Wordsworth," it is stated, "was not lyrical." This is startling until it is seen that here the writer is strictly enforcing the musical test. The sentence continues, "he has not left us a single song, for though lyrical feeling surges through his verse, the gift of Burns was denied him." Then why, it may be asked, did the author call "Lycidas" an excellent lyric? Is it because its irregular verse structure was taken to be an imitation of the Greek lyric—which is one of Mr. Reed's tests? Arbitrary division likewise excludes "The Blessed Damozel" from consideration, and though "The House of Life" is taken into account, we learn nothing about Rossetti's technique, more especially his peculiarly Continental symbolism.

It is needless to cite other instances. Our quarrel is with the author's method, which seems to us fundamentally untrue.

Waterways Versus Railways. By Harold G. Moulton. Boston: Houghton Mifflin Company.

This well-written book must be reckoned with by the champions of waterways, for it is a straightforward discussion of the entire problem, and lets in light upon the many weaknesses in their arguments. Much stress has been laid recently upon the success of waterways in Europe, and upon our neglect to take similar advantage of our opportunities. The author, by personal investigation, finds a decline in the amount of traffic carried on inland water routes in Europe proceeding side by side with the development of railways. This declining movement has continued unchecked in England to the present time. It has been stayed on the Continent only by active Government intervention. The states of Europe have been obliged to assume virtually all the fixed charges connected with water transportation, and to turn the water routes over free of toll to the water carriers. Not infrequently the Governments have been compelled to fix railway rates from 20 to 50 per cent. higher than the bare charge for boat carriage in order that the waterways might not be idle.

Passing to the United States, the author follows the same painstaking methods in the examination of the projects that have been most vigorously advocated here. It is estimated that the visionary lakes-to-gulf ship canal would probably cost a billion dollars, that a traffic nearly double that of ports like Philadelphia, Boston, and New Orleans would be necessary to effect savings over rail transportation sufficient to meet merely the annual outlays, and that it is almost certain that no considerable number of ocean vessels could be induced to use such a waterway even if free of tolls. "Fourteen feet through the Valley" would be of no service to lake or ocean vessels, and would be deeper than is necessary for barges. "Eight feet from lakes to gulf" is possible from the engineering standpoint, but traffic contiguous to the waterway is not sufficient to warrant construction, and trans-shipment costs from rail to water would be prohibitive.

Although traffic conditions are more favorable on the Ohio River, the author's exhaustive examination of cost of improvement and maintenance of the channel results in the conclusion that from the standpoint of the nation the expenditure is not economically justifiable. For the Erie Canal the gist of his position is contained in the following quotation (p. 438):

> By the way of summary, it should be restated that this project was authorized through the influence of sectional interests hoping to benefit at the expense of the state as a whole; that no adequate investigation of the possibilities of increased traffic was ever made; that it was decided upon before the vital question of terminals was apparently conceived of; and that absolutely no computation was made of the inclusive cost of transport on the enlarged canal, as compared with the cost by rail.

In short, the fundamental thesis of the book is that the cost of water transportation has not been accurately determined until all the factors entering into *total cost* have been taken into account—the costs, that is, of construction and maintenance, met commonly by taxation, as well as the mere charges for carriage. Such cost is just as truly a burden on the people when disbursed through Government channels as when included in the rate charged. The author places the canal alongside the hand-loom and the spinning jenny of an earlier generation, and insists that to return to this antiquated form of transportation is to turn backward the clock of time.

Notes

Frederick A. Stokes Co. announces the following publications for next month: "The Lighter Side of Irish Life," by George A. Birmingham: "The Sea Shore," by F. Martin Duncan; "The English Fairy Book," by Ernest Rhys; "The Magic Book," by G. A. and C. A. Williams, and "A Chronicle of Friendship," by Luther Munday.

The publications of Putnams this week include "Shenandoah," by Henry Tyrrell, based upon the play by Bronson Howard; "With the Merry Austrians," by Amy McLaren; "The Romance of Leonardo da Vinci," by Dmitri Merejkowski, translated from the Russian by Herbert French; "The Fascination of Books," by Joseph Shaylor, and "Washington and Lincoln," by R. W. McLaughlin.

E. P. Dutton & Co. publish this week a novel by Edward Mott Woolley, entitled "The Junior Partner," and "Woman Adrift: The Menace of Suffragism," by Harold Owen. The latter is announced as "the most complete, temperate, and reasoned criticism of suffragism and allied movements which has yet appeared."

Scribners will publish in their South American series the translation of F. Garcia Calderon's "Les Démocraties latines de l'Amérique," to which the French Premier, M. Poincaré has contributed an introduction. The translation is to be made by Bernard Miall.

The autumn list of Houghton Mifflin Co. includes the following titles in literature: "In the Hands of a Receiver," by Samuel M. Crothers; "The Provincial American," by Meredith Nicholson; "The American Mind," by Bliss Perry; "Time and Change," by John Burroughs; "Americans and Others," by Agnes Repplier; "Masters of Modern French Criticism," by Irving Babbitt; "Emerson's Journals"; "Intimations of Immortality in the Sonnets of Shakespeare," by George H. Palmer; "Charles Eliot Norton," by E. W. Emerson and W. F. Harris; "A Doctor's Table Talk," by James G. Mumford, and "The New Light on the Old Truth," by Charles A. Dinsmore.—In history: "Italy in the 13th Century," by Henry D. Sedgwick; "The Holy Christian Church," by R. M. Johnston; "Pilgrim Life in the Middle Ages," by Sidney Heath; "Belgium," by William Elliot Griffis; "A History of the Presidency from 1897 to 1909," by Edward Stanwood; "Merchant Ventures of Old Salem," by Robert E. Peabody, and "History of Plymouth Plantation," by William Bradford.—In biography: "The Three Brontës," by May Sinclair; "The Autobiography of an Individualist," by James O. Fagan; "When I was Young," by Yoshio Markino; "Lafcadio Hearn," by Edward Thomas; "J. M. Synge," by Francis Bickley, and "Life and Letters of John Rickman," by Orlo Williams.—In travel: "Egyptian Days," by Philip S. Marden; "Around the Clock in Europe," by Charles F. Howell; "The Path of the Conquistadores," by Lindon Bates, jr.; "Through the Heart of Africa," by Frank H. Melland and Edward H. Cholmeley; "Gallant Little Wales," by Jeannette Marks; "The Gateway of Scotland," by A. G. Bradley, and "The Loss of the SS. Titanic," by Lawrence Beesley.

There are several volumes of verse on the autumn list of Houghton Mifflin Company. Not the least welcome of these will be "The Poems and Plays of William Vaughn Moody," in two volumes.

John Murray will publish in October the fourth volume of Gomperz's "Greek Thinkers," the proof of which had been entirely read by the author before his death.

"Ants and Their Resemblance to Man" is the subject of an interesting article by Prof. William M. Wheeler, of Harvard University, in the *National Geographic Magazine* for August. He shows the various methods by which, as social insects, ants have solved the problems of nutrition, reproduction, and protection. Rear-Admiral John E. Pillsbury gives some valuable information in regard to that "grandest and most mighty terrestrial phenomenon," the Gulf Stream, largely taken from his own observations while in command of the Coast Survey steamer Blake. According to calculations the average volume of water passing in one hour through the Straits of Florida is 90 billion tons, and if it could be evaporated "the remaining salts would require many times more than all the ships in the world to carry it." Attention is also called to the fact that its influence on the colonization of America was great. A description of elephant hunting in Equatorial Africa is given by Mr. C. E. Akeley, of the American Museum of Natural History, and there are also accounts of Zanzibar and the recent volcanic eruptions in Alaska.

News has come from Cairo that a number of large rolls of historical papyri have been discovered by Mr. Robert de Rustafjaell. The manuscripts were unearthed by a fellah while sinking the foundations of his mud hut, near a temple of the Ptolemies in Upper Egypt, and belong to the best Græco-Egyptian period. They are about twelve inches wide, all closely rolled, some of the rolls reaching to four inches in diameter. They are in a good state of preservation so far as the writing is concerned, but much discolored, and, owing to their dry and fragile condition, have to be handled with the utmost delicacy. It is believed that the contents will prove to be of great archæological value.

An anthology of "The White Hills in Poetry" has been collected and edited by Eugene R. Musgrove, and Dr. Samuel M. Crothers, himself of "the cult of Chocorua," has contributed a brief and happy introduction. It is not all great poetry, or even good poetry, and some of the poets are men and women of straw; but those who pass their summers in the White Mountains, and those who are fortunate enough to have spent their youth there, will care more for the general atmosphere of the book than for the editor's standard of taste. The volume is well illustrated, and comes from Houghton Mifflin Co.

Richard H. Thornton's "American Glossary," which, in our review of July 4 was accredited to the London publisher, has since been brought out by the J. B. Lippincott Co. of Philadelphia.

Beneath the alien name of Yoï Pawlowska a sentimentalist offers sketches of travel in "A Year of Strangers" (Duffield). Among the strangers who brought solace to a weary spirit yearning for fellowship are grave children, young women with saddened hearts, a lonely Irishman in far-off Tihran, and a dog by whom the sojourner sat upon the floor, put his head upon the dumb friend's coat, and cried. There are many glimpses of scenery, occasionally lighted up by a pale gleam of imagination. The style, of extreme simplicity, evermore takes on a melancholy cadence. Characteristic is the following reminiscence of Persia:

> I stood by a steep cliff above a wide river. . . . The wind shrieked and blew a dust-storm which seemed impenetrable; the frogs croaked all the time: their song, like the wind's song, is the same in all countries, their music was born in the land of despair, and they sing their song to those who have traversed that land.

V. Leuliette's "French Prose Writers of the XIXth Century and After" (London: Isaac Pitman & Sons) is one of the best prose anthologies for the use of somewhat advanced students of French which have appeared in recent years. Mme. de Staël, Chateaubriand, Courier, Lamennais, Stendhal, Thierry, Vinet, de Tocqueville, Quinet, Taine, Rambaud, Hanotaux, and Guyau are among the twenty-five authors represented. Short biographical and critical notices, in French, of the writers are prefixed to the extracts; and the literary and bibliographical notes, in English, are valuable and interesting.

H. W. Boynton contributes the volume on "The World's Leading Poets" to the new series of biographies called The World's Leaders (Holt), issued under the general editorship of W. P. Trent. The book contains about what one should expect under the conditions imposed, and little more. It contains chapters on the first six poets in the world—Homer, Virgil, Dante, Shakespeare, Milton, and Goethe—a list which might be acceptable to every one, barring, perhaps, the countrymen of Molière. But unfortunately the plan of the series demands that the treatment shall be biographical rather than critical or philosophical; it proposes to present the world's great men in their habit as they lived. Obviously this puts the poets who flourished before Boswell at a disadvantage as compared with the men of action, and it almost as obviously precludes the author from saying anything new or interesting even though he is engaged with objects of perpetual novelty and interest.

It is awkward, moreover, for a biographer with a modern conscience to construct a plausible life-history of a poet who possibly never existed. Though Mr. Boynton throws Wolf overboard and preserves Homer, he can spin out for the father of all poets only eight pages of "biography." (It is a slip, by the way, to say that Wolf denied Homer's existence "with Gamp-like directness"; the direct, incredulous lady was not Sairey but her friend Betsey Prig.) Virgil he links rather skilfully with the men and events of the Augustan age, yet he leaves the man himself only a slightly less shadowy figure than the author of the "Iliad." About all that he can do for Dante is to set him somewhat obscurely among the bickering factions of Florence. His Shakespeare the man, like every other biographer's Shakespeare, is a thing of legal shreds and patches, except for a glimpse of him here and there through the works; and Mr. Boynton has in general avoided divination. The fact is that only Milton and Goethe left behind them the materials for anything like an adequate or important biographical record, and even in these cases the biographical facts look pretty small beside the exploits of Cæsar and Napoleon unless they are brought into close relationship with the poetry. Seventy-two pages here are apportioned to the life of Milton, but "Paradise Regained" and "Samson Agonistes" are disposed of in a single sentence. Each chapter curiously fails to rise to the height of its great argument; Hamlet has been left out. If at the conclusion of the book, one feels that Mr. Boynton has performed an appointed rather than an elected task, one's dissatisfaction is to be charged rather to the limitations of the series than to the shortcomings of the author.

Stoddard Dewey's "Four French Adventurers" (Edinburgh: Thomas Nelson & Sons) gives us true stories of swift lives, of timely interest to-day, when the exploits of Paris bandits fill the columns of newspapers on two continents. But these impostors and convicts achieved notoriety in a less spectacular way than their recent emulators. Pierre Coignard, for example, returning to Paris as lieutenant-colonel in the Peninsular army of France and relapsing into his first profession of burglary, was captured after the briefest struggle by the famous ex-convict detective Vidocq and sent to the penitentiary for life. The ingenious Monsieur Collet, too, gathered thousands of francs from churchmen, bankers, and generals by the simple expedient of a succession of disguises, such as could be done with credit by any lightning-change artist now on the vaudeville stage. More mysterious are the touching, instructive, and grotesque adventures of Charles of Navarre, who claimed to be the "lost dauphin," and as Mathurin Bruneau was therefor sentenced to a seven-year imprisonment during which he disappeared in a manner as baffling as his own childhood. Later still, after the Revolution of 1830, there is offered in the fortunes of Louis and Anna de Marsilly a whole thrilling historical romance.

The lives of these convicts, once so celebrated, now so thoroughly forgotten, are for the first time in English recounted with a scrupulous fidelity to historical record. Even the speeches put into the mouths of the characters are taken from contemporary sources, chiefly the proceedings of sensational trials known as the *causes célèbres*. The four chapters make a very interesting excursion into the byways of history. The true place of Charles of Navarre has not been known heretofore, since the documents in the case were brought to light only last year. An understanding of Napoleon's problem in Spain is deepened on reading of the steps by which a convicted burglar became a high officer in the French army. An illuminating picture of the state and difficulty of colonial life and administration under Louis Philippe is presented in the adventures of Louis de Marsilly in Algiers. The topsy-turvy condition of France in 1812 is vividly shown in the exploit of Collet, who collected, as a pretended Inspector-General Borromeo, some four hundred thousand francs from the military funds. But, aside from all historical considerations, these four adventures engage attention by the human interest of their careers as told in Mr. Dewey's simple, direct, and unembroidered narrative.

Forty years ago, when Mr. Edmund Gosse was young, poetical, and impressionable, he made a visit to Denmark—then smarting from the second war with Germany—to learn the language and explore the comparatively unsunned culture of the country. Two years later, in 1874, he returned to renew and extend his acquaintance with the art and letters of the ancient little nation. From the house of Dr. Brunn Juul Fog, later primate of the Danish Church, he sallied out upon all the lions of Denmark—theologians, booksellers, painters, librarians, philologists, poets, and critics. The record of these adventures, long preserved in his private journals, Mr. Gosse now gives to the world in a volume of 372 pages, entitled "Two Visits to Denmark" (Dutton). In his preface, which sounds decidedly like an afterthought, he tells us that the timeliness of this belated publication is due to the present neglect in the Empire of the "function and value of the small nations in the civilization of the world." The reader will be impressed with the fact that most of the celebrities here portrayed are as little known to the general public to-day as they were half a century ago. Who has read Paludan-Müller, "the greatest living poet of Denmark," or Andreas Munch, till Björnson and Ibsen appeared, "undoubtedly the favorite poet of Norway"?—or Ludvig Bödtcher, "the veteran of the living Danish poets"? Who can persuade any but Scandinavian enthusiasts that it is necessary to read them? The modern Danish literature to which Mr. Gosse and others have long been inviting attention is just enough off the track to be a little difficult of approach, but not sufficiently distinct from the main European movement greatly to pique curiosity. The three really conspicuous figures in this book are Hans Christian Andersen, who wrote in the universal dialect of children; Thorwaldsen, in whom, as Mr. Gosse says, "there is not a trace of the North"; and Georg Brandes, the brilliant cosmopolitan Jew. Students with special Danish interests will doubtless find much to enjoy in Mr. Gosse's personal sketches of literary society in Denmark in its own provincial "Victorian" period, but the general reader will probably find the narrative rather heavy and irrelevant to his business, up to the point where Georg Brandes appears and attempts to lead the "small nation" into the world movement.

In spite of its apparent frivolity, there is other than sentimental justification for the title of Frank Hamel's book about Agnes Sorel, "The Lady of Beauty" (Brentano's). "La Dame de Beauté"—such is the way in which the famous mistress of Charles VII is referred to in more than one contemporary account, the amorous King having bestowed upon her the domain of Beauté, or Beaulté. Agnes Sorel was the first royal mistress of France to be maintained openly in a separate establishment on a scale equalling, if not surpassing, that of the Queen and the other ladies of the royal household. This fact is the more extraordinary in that Charles's reign was notable for its impoverishment, owing to the English wars. This brings up the whole question of the date of Agnes Sorel's connection with the King, and, consequently, of the measure of her influence over him and upon the affairs of his reign. All is vague here, and even the date of her birth, which has been variously set as 1409, 1405, and 1422, is unknown. The earlier historians, following the legend, have assumed a long secret *liaison* before her open acknowledgment about 1444, during which she took up the work of Joan of Arc, and inspired Charles with the whole work of national revival. The chief objection to this assumption is that it would make Agnes forty years old at the time of her death, whereas she is spoken of by all the chroniclers as having been in the flower of her youth at that time. Later authorities, accepting, or, rather, inventing, the latest date to meet this difficulty—which does not seem insuperable in view of the tone of flattery which then obtained—have had to break with this gracious legend; and in making Agnes forfeit the fine rôle which it bestowed upon her, they have limited her influence, for the most part, to minor affairs of the realm and of the royal household—especially in connection with the quarrels between Charles and the Dauphin, Louis. There remains, however, tolerably certain the part she played in encouraging the King to carry out his campaign of reconquest in Normandy. Mr. Hamel states this problem, but does not attempt to resolve it; nor does he forego any of the advantages that accrue to the literary biographer from a free use of legendary material, and even of the acknowledged imaginative inventions of quite recent writers. He carefully gathers together all references to Agnes wherever he finds them, and is principally concerned with reconstituting the charming personality of the most sympathetic, because most disinterested, of French royal mistresses, save Louise de la Vallière, with whom he compares her constantly.

T. T. Geer's "Fifty Years in Oregon" (Neale Pub. Co.) is the autobiography of a native Oregonian, whose life, from 1851 to 1911, has been coeval with the development of a great community. Mr. Geer, the son of an Ohio pioneer, endured hard things in childhood, but fighting his way under the frontier conditions, showed tact and strength in places private and public, and attained at last to the position of Governor. Though the appeal of the book is for the most part local, it is by no means without general interest. It is breezy and informal in manner, abounding in good stories and vivid pictures of men and events. Though dealing mainly with worthies of the Pacific slope, glimpses are given of notabilities of wider significance, as, for instance, of the Presidents Hayes, Cleveland, Harrison, and McKinley. It is the record of a strenuous American life, the hand now grasping the plough-handle, now the speaker's gavel in a stormy Legislature, now the pen of the Chief Magistrate giving validity to laws, the hand returning ever and again to the plough-handle. It is a record of turmoil. Carlyle says in his "Frederick the Great," of the strivers who made a way for Prussia, they did not wear "especially speckless Sunday pumps," as they trampled their path. No more did the pioneers of Oregon. Indeed the company was very rough shod Delicate things went to wreck before an advance that was often ruthless, even unscrupulous. But in the main the advance was wholesome and virile, and the outcome is noble, a State four-square in Anglo-Saxon massiveness, awaking to knowledge of its defects and disposed to make them good.

Guy de Maupassant shares with Napoleon the distinction of having his daily life recorded in intimate detail by his valet, and to his man, François, author of "Recollections of Guy de Maupassant" (John Lane), the French writer is a veritable hero. Entering his service in 1883, François served his master ten years, or until within a few months of the sad end of Maupassant's life in the private asylum of Dr. Blanche at Passy. They were years of wandering, mostly, for Maupassant could never remain long in one place; and the scene shifts rapidly from Paris to Etretat, to Cannes, to Marseilles, to Aix-les-Bains, and back again to the capital, where the writer had a new apartment nearly every year. The reader wonders how work was possible under such conditions. Yet articles, tales, and even novels continued to flow from Maupassant's pen all this time, and his valet's testimony is valuable concerning his habits and methods of composition. Maupassant was one of those writers who think everything out in advance and who have all the elements of their stories in order when they begin to write. His advice to young authors, by whom François tells us he was besieged, was based upon his own experience in this respect. At the same time his magnificent memory enabled him to forego one very useful practice for young authors, namely, the making of notes. François tells how his master would study a landscape in minute detail, drink it all in, then, turning away, would remark, tapping his forehead: "Now it is all imprinted there!" Afterwards he would reproduce what he had seen, with absolute fidelity. Evidently he appreciated the similar powers of his valet, for he would often employ him for the gathering of material and impressions, sending him to the gaming-halls of the resorts he frequented, and encouraging him to form an intimacy with the servants of some Russian princess whom he was studying with a view to introducing her into a future work of fiction.

Maupassant also talked with much freedom and frankness with this faithful and intelligent servitor about his family affairs, his friendships, his literary plans and projects, and his admiration for Flaubert. He finds that François, whom he discovered reading "Salammbô" in the kitchen, had once waited at table on its author, and greatly preferred "Madame Bovary," lent him by the butler, to the novels of Zola's Rougon-Macquart series. Encouraged to explain his dislike for these works, François said:

> M. Zola exaggerates terribly when talking about servants; he puts all sorts of horrors in the mouths of the maids; in "Pot-Bouille," he makes them scream the nastiest expressions out of the courtyard windows. I repeat, sir, all this is exaggerated. Twenty-five years have I been a servant, and I have never heard speeches bordering in any way on those M. Zola puts into the mouths of his characters. Then that fellow Trublot, I dare say, such people exist, but they are exceedingly rare. I don't say maids and cooks have not their feelings, like other women. . . . No, but to state they are all of them ready to hide Trublots in their kitchens while awaiting the instant when they can have them up to their garrets—no, sir, no!

Maupassant explained to François that it was to make money Zola wrote as he did, and compared him unfavorably with Flaubert in this respect. Later, while living near Zola's residence at Médan, he invited that writer, with his friend, Pessard, to lunch with him. The luncheon was not a success. There was little merriment and little talk on literary topics. After the departure of his guests, Maupassant remarked to François: "I consider that Zola . . . is a great writer. His literary value is very considerable!" Then he added, "with bitterness and repulsion": "As to himself, personally, . . . I don't like him at all!"

The history of the Königliche und Universitäts-Bibliothek in Breslau, written in 1911 by its librarian, Dr. Fritz Milkau, when the university of that town celebrated its first centenary, has now been published separately in a handsome volume (Breslau: F. Hirt). The first part of the book contains the history of the various libraries that were brought together to form the library of the new university. Among these is the Silesian central library, which had been assembled from the monastery libraries of the province, much in the manner of what was then being done in Bavaria, where all the libraries of the various religious orders were brought to Munich to form the magnificent Hof-und Staats-Bibliothek. How the work in Breslau failed, in spite of the youthful enthusiasm of the originator of the idea, J. G. G. Büsching, is vividly related. Then follows the account of the development of the library under the administrations of successive professor-librarians, who directed the library "im Nebenamt." It is a pitiful story of incompetency, mismanagement, and shifting of responsibility. This was the condition then in all the German university libraries. A new epoch began for Breslau in 1872, with the appointment of Karl Dziatzko as librarian. "For the first time in the existence of the institution," says Milkau, "a man was at its head who had nothing else on his heart but its welfare." Dziatzko took office on the 1st of October; on the 7th of November he sent to the Ministry in Berlin a complete plan for alteration of the old library building, and on the 14th the plan for the recataloguing of the library. From this beginning dates the movement which has now culminated in the Prussian cataloguing rules and the printing of cards for the Royal Library in Berlin.

Prof. Eugen Kühnemann of the University of Breslau, the first Carl Schurz Memorial Professor at the University of Wisconsin for the winter semester of 1912-13, will begin his lectures at the University of Wisconsin on September 27. In addition to two regular courses, one on Goethe's "Faust" and one on Modern German Drama, he will conduct exercises in literary criticism for advanced students in connection with the dramas of Schiller.

The Rev. Matthew Russell, a distinguished Jesuit, has died in Dublin, at the age of seventy-eight. He was born in 1834. He was a writer on religious subjects, and had edited from its beginning in 1873 the *Irish Monthly*, a Dublin magazine.

The Rev. Henry Arthur Morgan, D.D., Master of Jesus College, Oxford, and author of several books of travel and mathematics, is dead at the age of eighty-two.

Science

Interior Ballistics. By James M. Ingalls, Colonel U. S. Army, Retired. Third edition. Pp. ix, 221. New York: John Wiley & Sons. $3 net.

This book is the outgrowth of the author's experience as head for many years of the department of ballistics at the Artillery School. The first edition we may here ignore; the second was printed, though not published, as it was limited to the small classes of officers of the school. The third, in the volume before us, is sent forth to the public. The phenomena of the subject of interior ballistics are obscure and complicated; the circumstances under which they occur preclude direct and primary observation, and as yet baffle continuity of observation. Perhaps only two elements admit of direct measurement. Under such conditions, it is not too much to say that interior ballistics is hardly yet a science. There is no body of rational doctrine, eternally true, making inevitable the accurate prediction of results.

After a brief historical introduction, Col. Ingalls gives us a chapter on the properties of perfect gases, his point of view being mechanical rather than chemical, and sums up Noble and Abel's now classic researches on explosives (*i. e.*, black powder). The chapter on Combustion under Constant Pressure treats chiefly the form of the grain, and being thus geometric in its essence, is generally applicable. The remaining chapters, three in number, deal, the first with the combustion of a charge of powder in a gun, which involves, of course, the great question that interior ballistics is called upon to answer; the second with applications; and the third with the rifling of cannon.

Too much must not be expected from Col. Ingalls's book, for the fact is to be noted that he is limited by preferences. Setting out from the domain surveyed by Noble and Abel, he takes Sarrau for his first sign-post, and then proceeds, perhaps unconsciously, under the guidance of Siacci. We are almost of the belief that his course is thus laid because of its convenience. To illustrate: the law of the velocity of combustion in a gun is unknown, but as it must be reckoned with, various approximations have been made.

> Sebert and Hugoniot [says Colonel Ingalls], from observations of the recoil of a ten-cm. gun, mounted on a free-recoil carriage, deduced a law of burning directly proportional to the pressure. This law is the most simple of all, and allows an easy and complete integration of the equations entering into the problem. But, simple as is this law of Sebert and Hugoniot, we prefer to make use of Sarrau's law of the square root of the pressure, because the resulting formulas are easily worked, and give results which agree very well with facts, as stated by Sarrau, etc.

Passing over this point, we cannot but admire the elegance of Col. Ingalls's processes, the simplicity and symmetry of his resulting formulæ. Given his premises, his work is characterized by the logical arrangement which we have grown to expect from him, and his text must be regarded as a contribution to the subject. His applications, the test of all working ballisticians, show suitable agreement, the differences between observation and computation falling well within allowable limits of error. His methods give results in accord with our firings, where some foreign methods fail. This is all that can be expected until a Newton of ballistics shall arise, and brushing aside all paring and whittling of constants, shall sweep into one infallible law the gropings and approximations of the present day.

We observe a serious misstatement on page 11: our powders contain no nitroglycerine. The book is handsomely printed.

In science Frederick A. Stokes Co. announces the following titles for October: "The Curtiss Aviation Book," by Glenn H. Curtiss, and two volumes, "Chrysanthemums" and "Tulips," in their series of Garden Flowers in Color.

"British Trees, Including the Finer Shrubs for Garden and Woodland" (Dutton), by the late Rev. C. A. Johns, F.L.S., edited by E. T. Cook, is the enlarged second edition of a charming treatise written by an ardent lover of trees. It is a volume suggestive of Evelyn's "Sylva" brought up to date. Mr. Johns had always at hand the treasury of facts known as Loudon's "Aboretum," and has rightly made use of good material wherever he found it. The result is, that the volume is a wise and cheerful companion for a summer lounge in any forest, and is even better for a fireside where forest wood is blazing. The Oak begins the book. Its history and its myths receive nearly as much attention as the natural history. The author cites from the writings of an entomologist the surprising statement that nearly half of the British insects which feed on vegetables inhabit the oak. "The total of insects which, during some period of their existence, derive their support either from the tree itself or from their fellow-colonists in it, will amount to scarcely less than two thousand." After this comes an account of the galls and gall-insects of the oak, not as precise as might be, but good enough for all practical purposes, so that one catches more than a glimpse of the mysterious altruism by which the wounded twig or leaf strives to care for the young of the inects that wound it. The general directions for the planting and care of woody plants are safe for England and are fairly applicable here, but the value of the book for Americans lies chiefly in the pleasant style in which woodcraft is described. The volume is fully illustrated, but the black and white drawings are hardly up to the average of good recent work, while the colored pictures are too impressionistic to be of any real use. At first sight, it seems as if some of the plates had been misnamed, but this is not really the case: the artist has allowed a little too much freedom to his brush and has not chosen characteristic subjects. But the text and the editing leave little to be desired.

Edward A. Calahan, inventor, died September 12, in Brooklyn. He was born at Boston in 1838. In 1867 he invented the gold and stock ticker, and organized the Gold and Stock Telegraph Company. In 1871 he organized the American District Telegraph Company. In 1872 he went to London, where he organized the Exchange Telegraph Company, Limited. In 1873 he invented the American District automatic messenger call-box. His last invention was the multiplex telegraph system, by which it was made possible to transmit seventy-two different messages over the same wire.

Drama and Music

To his translations of the plays of August Strindberg, Edwin Björkman has added, in a small volume, "Miss Julia" and "The Stronger" (Scribner). Both pieces have already been noticed in these columns, having been put into English by other hands. But Mr. Björkman's work deserves special attention from the fact that it is an authorized translation, and furnishes, in the case of the somewhat notorious "Miss Julia," the author's elaborate preface. This important document helps to explain a certain indefiniteness observable in many of Strindberg's dramas, and especially in the work which it introduces. Julia, a count's headstrong daughter, who, in a rash moment, gives herself to her father's valet, is supposed to embody a complex of human nature. The great Swede had a dread of overediting a character for the stage, and of creating merely a type. He discovers such a tendency in Molière:

> *Harpagon* is nothing but miserly, although *Harpagon* might as well have been at once miserly and a financial genius, a fine father, and a public-spirited citizen. What is worse yet, his "defect" is of distinct advantage to his son-in-law and daughter, who are his heirs, and for that reason, should not find fault with him, even if they have to wait a little for their wedding. I do not believe, therefore, in simple characters on the stage.

So, if Julia appears to the reader vacillating and possessed of no great single passion, such as the situation might seem to require, the author has a reason. She is a modern representative of the man-hating half-woman. She is likewise "a victim of the discord which a mother's 'crime' produces in a family, and also a victim of the day's delusions, and of the circumstances, of her defective constitution—all of which may be held equivalent to the old-fashioned fate or universal law." The author finds it easy to point out the places in the play where these characteristics make their appearance. With such an authentic guide, the play makes good reading, but considered independently, it lacks precision and motive. Mr. Björkman's translation is thoroughly idiomatic, and in certain instances shows an unusual capacity for finding accurate renderings of peculiar Swedish usage.

The probability is that "The Governor's Lady," just produced here in the Republic Theatre, will prove highly remunerative. As drama, literature, or a study of actual life, it can establish no claim to serious attention, but it is a noteworthy specimen of a modern play constructed upon commercial principles. It is understood that it was written by David Belasco, the most artful of stage managers, around a central idea furnished by Alice Bradley, a novice in theatrical work. And the piece supplies abundant internal evidence of the truth of this report. The basic idea, if not particularly fresh, is a good one for dramatic purposes. It conceives the case of a miner, who, after years of poverty and hard labor, suddenly becomes enormously rich and begins to entertain political ambitions. With wealth he has acquired knowledge of the world and social polish. But his wife, to whom he is deeply attached, remains the simple workingman's mate she was before. She will not ape fashionable ways, wear fine clothes, take part in social festivities, or aid him to realize his aspirations. So they drift apart until, at last, he resolves to get a separation, make her a magnificent allowance, and go his own way. To this plan she is disposed to consent, until she discovers that he contemplates divorce and remarriage with a younger and more brilliant woman. Then she fights determinedly for the preservation of her good name, and, having beaten him in decisive fashion, finally gets a divorce on her own account, feeling that the barrier between them is insuperable.

Now, this, in outline, is an effective, coherent, and human story. But in the telling it is so distorted and complicated by the accumulation of obviously theatrical details—political, sensational, and ultra-sentimental—that it becomes absolutely incredible. In the beginning the man and the woman are natural living entities, and the probable reaction upon them of unforeseen circumstances would offer valuable opportunity to a psychological dramatist; but Mr. Belasco, who is only a clever stage manager, with an eye blind to everything but momentary stage effect, has converted them into monstrosities, the one of sentimental silliness, and the other of a repulsive selfishness which must have been fatal to his success in love, politics, or anything else. Yet he makes him triumphant, and caps the climax of dramatic absurdity by a "happy ending," which completely stultifies the whole argument of the play. In his mimicry of the actual he is as successful as ever. Many of his isolated scenes are as realistic and—apart from their context—as truthful as could be desired, but in the aggregate they are utterly, sometimes ridiculously, false to human nature and to art. But the public appetite for clap-trap is insatiable.

It is not amazing, perhaps, that "Fanny's First Play," Bernard Shaw's latest theatrical invention, should have had great popularity in London, for it is packed with comic incident and broad humors—often as disingenuous as they are obvious—well calculated to please the great, uncultivated, and unreflecting mass of theatregoers. But it is amazing that the piece should have been treated so respectfully by responsible critics. Unquestionably it contains a fair measure of the mocking wit, the keen observation, the paradoxical turns, and the felicitous, if often misguiding, illustrations, which characterize nearly everything that Mr. Shaw writes; but it traverses very old ground, and, so far as it has any substantial meaning at all, is but a reiteration of his impatience with principles some of which lie at the foundation of all civilized modern society. In the induction and the epilogue, when he contrasts the ancient romantic with the modern materialistic spirit, touches on the old and new drama, and castigates some of his critics, he is heard at his best, and it is easy to admire the sparkling cleverness of his dialogue, even when disagreeing with his argument. Here the display is, at least, intellectual. But the play is childish enough to be the work of the school-girl to whom it is ascribed. Unfortunately, this result is not due to any sense of artistic illusion or propriety on his part, but to his inability to divorce himself or his notions from the character he is depicting. His Bobby and Margaret, the youthful engaged couple, who, to the horror of their respectable parents, fall into dangerous company and are sent to jail, are presented as typical illustrations of the evils attending the exercise of home discipline and the inculcation of religious principles. Actually they show nothing but the dramatist's lack of all sense of proportion and his inability to discriminate between salutary and foolish discipline, between liberty and license. His assaults upon all sorts of religious conviction are evidences of bad taste as well as of his own illiberality, while his exhibitions of parental humiliation as choice food for laughter indicate a most deplorable cynicism. Social snobbery and hypocrisy are always fair game for the satirist, but virtue can never be served by an open disregard of it. "Fanny's First Play" is a product of pure commercialism, and it is discouraging to meet with it under the sponsorship of Granville Barker.

Granville Barker has been talking to a London reporter about his projected Shakespearean season at the Savoy Theatre. He said:

> Do I propose to introduce at the Savoy any feature of a specially revolutionary character? Well, that depends on what one calls revolutionary. But among the things I want the members of the company to do is to realize the full force and meaning of the rhetorical method employed by Shakespeare, and to adapt themselves to its use. As to scenery, there will be merely enough for all decorative purposes. What we have to remember is that Shakespeare's plays were written to be acted without realistic scenery. Forget this circumstance and sooner or later you find yourself tumbling into some trap or pitfall. Walk howsoever warily you may, you are bound to be tripped up by some unexpected passage in the text. The result is that the discrepancy between the efforts of the scenic artist and the picture painted by Shakespeare generally becomes horribly apparent. There is one point upon which I am absolutely and obstinately set. In producing Shakespeare you must neither cut nor alter a single word as an excuse for creating a scenic effect. And in no case is the transposition of a scene, or even a sentence, permissible. I lay special stress upon these things, because it seems to me Shakespeare's plays are, in point of construction, marvellously perfect; his technique, particularly in the later plays, really wonderful.

Ere long Venetians and those who visit their romantic city will have an opportunity to go directly into the vestibule of a grand new opera house in their gondolas. This opera house is to be built on the Lido. It will be under the management of Cavalieri Rosetti, formerly of the Roman Costanzi Theatre, who intends to make of it a sort of Italian Bayreuth—a theatre in which model performances are to be given every year with the aid of the greatest singers and conductors. The repertory will include the best Italian operas of the past and present. Puccini, Mascagni, Leoncavallo, and other composers have promised their cordial coöperation, and so have leading singers like Darclée, Pasini-Vitale, Caprile, Garbin, Titta Ruffo, Palet. The *Corriere della Sera* of Milan says that the plans for the theatre, which will hold 2,000 persons, are already sketched out.

The late Jules Massenet was not only the most popular French opera composer of the last two decades, but he also exerted a wide influence on most of his contemporaries. Debussy and Ravel, to be sure, are his antipodes; they scorn melody, whereas, he revels in it. But most of the others—among them Bruneau, Pierné, Vidal, Leroux, Bloch, Malherbe, and Charpentier—were affected in their style and thought and ideals by Massenet. He was, in fact, their teacher at the Conservatoire.

Charpentier's "Louise" was one of the greatest successes of Hammerstein's Manhattan Opera seasons. It was announced that the composer was at work on a sequel reintroducing its heroine. This opera is not yet written, but the Paris *Gaulois* declares that he completed another work three years ago—a fairy opera, entitled "Vie du Poète." For this he wrote his own libretto. Paul Dukas, whose "Ariane et Barbe Bleue" has been in the repertory of the Metropolitan for two seasons, has also written his own libretto for a new opera entitled "The Doge of Venice." Xavier Leroux has in hand an opera based on a story by Catulle Mendès; it will go by the name of "Grand Maguet." The director of the Conservatoire, Gabriel Fauré, is using the last file on his "Penelope," which is to be staged at Monte Carlo next February, and a month later in Paris. Camille Erlanger's "Sorcière" is already in rehearsal at the Opéra-Comique.

Concerning his latest opera, "Ariadne auf Naxos," Strauss has given some further characteristic information to a Viennese journalist. This opera, he said, is the most difficult of all his works. While the orchestra is made up of only thirty-five players, each one of them has to be a soloist. There is no doubling up of parts; each player has something different from all others. The score thus virtually becomes like chamber music, which is perhaps the most difficult branch of the art.

Besides the strings, there will be flutes, clarinets, bassoons, horns, a trumpet, a trombone, a kettledrum, a celesta, a newly invented harmonium, a piano, and two American harps. To show how much value he attaches to sensuous beauty of sounds, Strauss, at the original Stuttgart performance, is going to have all the parts that are assigned to members of the violin family played on old Italian instruments which have been brought together from many cities at considerable cost of money and time. All of which will make talk.

Art

JOHN RUSKIN.

Logical analysis of the deeds and words of John Ruskin must end disconcertingly in paradox. He protested all his life against the slightest alteration of works of art, yet actually dismembered to distribute to his friends and classes a lovely psalter that had been pictured for St. Louis. John Ruskin was the most ornate writer of his century, and again the simplest. He was capable of the most just thinking on the troubled border line of morals and economics, and in the same breath of falling into the most obvious fallacy. Through reckless benevolence he dissipated a large inherited fortune, only to replace it by another gained through a novel and brilliant experiment as author-publisher. So all his doings reflect the oddest jumble of genius and sheer incapacity. He was the first fully to grasp the sublime tenderness of Tintoretto, yet he declared Rembrandt, in every way a kindred soul of the mighty Venetian, a vulgarian. Probably no writer of the century quickened so many readers to positive enthusiasm for art, and none surely has created so many æsthetic prigs to whom all genial apprehension of art is closed. Let us try to find the solution of these antinomies is Mr. E. T. Cook's "Life of Ruskin,"* a dignified, perceptive, and ample work—a model of official biography.

The author, a friend and former student of Ruskin's at Oxford, has chosen a self-effacing part, playing rather the editor than the biographer. None of Ruskin's multiform activities is neglected; his obvious shortcomings are neither glozed nor over-emphasized. In the main, it is Ruskin himself who speaks, and from almost confusingly full materials, though admirably ordered, we must try to follow the main strands of activities singularly deep and ardent, yet seldom quite free from caprice.

To survey such a personality as John Ruskin's is inevitably to be dazzled by the Ariel quality of iridescence that envelops him. At times I think of him as an amplified Mrs. Browning transferred to the neuter gender and to prose. That he regarded "Don Quixote" as the most mischievous of books and thought "Aurora Leigh" finer than Shakespeare, bears out the analogy. And then I recall how Ruskin drew and held such essentially masculine men as Furnivall, Norton, Thackeray, Carlyle; and reflect that he possibly had no more of the androgynous temperament than is proper to all genius of poetic type. The verdict of contemporaries, which is often wrong but unfailingly instructive, may profitably be consulted in his case. They thought him a supreme critic of art. Though, in "Seven Lamps" and Stones of Venice," he left two lasting works upon architecture, and furthered a handful of worthy enthusiasms—Turner, Giotto, Tintoretto, Luini, Carpaccio, Botticelli owed to him a kind of resurrection—yet his art criticism was almost devoid of historic insight. What art had actually signified to the men who demanded it and supplied it he never really knew, substituting instead the forms of his own enthusiasms and the limitations of his own experience. The solid residuum of a merely judicious work like Sir Joshua's "Discourses" is infinitely greater than that of all of Ruskin's writing on art. It is a true document of a period, whereas Ruskin's essays on art are chiefly documents of an extraordinarily interesting personality otherwise well represented.

His authority as an arbiter of the beautiful rested first upon the abject condition of art criticism in England in his time. There simply was no one who thought well on the subject after Hazlitt and Haydon were gone. Then his constant endeavor to harmonize the good, the beautiful, and the true was sympathetic to Victorian syncretism. It was the period of reconciling adventure across the void between science and revealed religion. His romantic mediævalism, too, was akin to such sentimental reactions as the High Church Movement, and Pre-Raphaelitism. Above all, his fervor made him the approved successor of those poets and thinkers who had thrown off the yoke of eighteenth-century rationalism. No English writer is more nearly akin to the Continental Romantics. In fact, if we extract the purely contemporaneous part of his art criticism and except his architectural treatises, rather little is left but a lofty mood and a splendid rhetoric. All the enthusiasms he created have had to be regrounded more comprehensively. And his aversions, including Claude, Rembrandt, Leonardo, Raphael, Michelangelo, which were potent in their day, few would now be foolish enough to adopt. His art criticism has reached the stage where it is esteemed much, read little, and believed not at all, which may seem a tolerable definition of a literary classic.

His contemporaries unanimously acclaimed his power and charm as a recorder of natural beauty, and here they were right. At this point, indeed, there was a preëstablished harmony between the man and his public. Nothing has been more characteristic of British feeling for two centuries past than a fairly religious enthusiasm for Nature. Their poets are the first moderns to take Nature in a mystical sense, their painters developed in aquarelle the freshest and swiftest method of catching landscape effects. Wordsworth, Byron, Shelley, and Keats had familiarized almost every aspect of natural beauty, from pietistic to pagan. And science was bringing into these familiar experiences a sense of awe and of immemorial years. It was the moment when landscape beauty had its fullest content of associations, and Ruskin expressed in the beautiful prose of "Modern Painters," IV and V, the full and definitive emotions of his race as regards Nature—conveyed these emotions not merely with eloquence, but with the most scrupulous accuracy. He "collected skies," he used to say, and the elaborately lovely and apparently ornate descriptions in "Modern Painters" were literally made with the eye on the object. Moreover, the undercurrent of devoutness towards Nature's God and of compassion towards all men gives to a very particularized work a universal bearing. It may be doubted if a volume like that on the mountains could have been written at any other time. Ten years later Ruskin himself could hardly have written anything so massively fine. The advance of scientific discovery was bewildering him, as all the world, and he was taking refuge in petulance and whimsicality. Much beauty, both Alpine and British, which he had captured in its virginal estate, had been smirched or had actually perished. If the purpose of art be, as John La Farge loved to insist, commemoration, Ruskin's writings on Nature have the surest title to immortality. He transferred to prose and immeasurably enriched a form of art that had been largely confined to poetry. In that vein he has seldom been successfully imitated and never surpassed.

In regarding John Ruskin as a wretched political economist his contemporaries judged themselves most severely. His counsels of perfection, which were alternately dismissed as negligible or revolting, have become quite the staple of modern political thought; and large portions of the seemingly fanciful programme of "Unto this Last" is now written into the world's statute books. "The economic man" may still exist, but he is no longer held up as exemplary. The old automatic theories of ex-

***The Life of Ruskin.* By E. T. Cook; in two volumes, with portraits. London: George Allen & Co., Ltd.; New York: The Macmillan Co. $7 net.

change have quietly gone by the board. Ruskin no longer appears as a dangerous and irresponsible Radical, but as a remote and quite respectably pious precursor of Matthew Arnold, in "Arminius Letters," and of the sociological speculations of H. G. Wells and George Bernard Shaw. He wrote in the blackest period of political thickheadedness in his land. The rule of hands off and muddle through when you must was still unchallenged. Ruskin's appeal to morality and reason seemed quite stridently ridiculous. It was true, as he once wrote to his father, that any M. P. would more bitterly resent the stopping of his partridge shooting by the Czar than the massacre of all the Russians. And Ruskin was one of the powerful influences that have changed all that, giving us a strangely perturbed and almost unrecognizable Britain faced towards new and uncertain destinies—destinies that one dreads to forecast, yet surely less ignoble in the worst event than was the old materialistic complacency.

In fairness to Ruskin's contemporaries it should be said that he committed the quite unpardonable indiscretion of holding them up to the Christianity they professed. From Savonarola to Tolstoy this has been an intolerable attitude. And with all the sobriety and cogency of his main argument, Ruskin often left himself pitifully weak in details. Where his illustrations were palpably absurd, it was easy to ignore the justness of his general principles. For instance, in "Queen of the Air" he urges that all heavy, imperishable freight should be dragged in barges in order to reduce employment in the dangerous and unsanitary work of the railways. A moment's reflection will show that the recommendation has nothing for it but its picturesqueness. It needs but slight acquaintance with workingmen to perceive that the return to barge freighting would swell a vicious and ignorant class while diminishing a sober and intelligent *élite*. Yet the nobility and general rightness of his political theories should have appealed to a generation that devoured both its Tupper and Tennyson. That it left them cold indicates barriers in the Mid-Victorian mind that have since happily been removed. But to-day we still suffer from the fetish that inordinate production is the highest economic good, while consumption relatively takes care of itself. Ruskin's moral analysis of trade precisely reverses this relation, and in its broader lines his argument should constantly gain force with the progress of politico-moral education. Nor can his general doctrine, that every economic transaction is necessarily tinged with morality, be safely gainsaid. Our complete responsibility for all the effects of our getting and spending is the central point of his social ethics. And here the growth of a more sensitive economic conscience will constantly add to his fame as a prophet.

What most discredited him as a reformer was surely a certain whimsical levity. This amiable personal trait rightly diminished his authority as a prophet. The gravity proper to the rôle he never could sustain. He was wafted about by the sheer richness of his mental associations, so that the deeper analogies of the imagination are constantly diluted into merely fanciful by-play. In fact, Ruskin indulged a Puck-like secondary personality. Like all true romantics, he was an object of amusement to himself. Fundamentally, the most passionately serious of men, he kept something of a spoiled child's interest in his own humors. I think he never deliberately mystified a reader, but he often dallied with an opinion until it looked confusedly like a conviction or dissipated itself in an iridescent whim. Until we perceive the radiant Ariel-streak that runs through the heroic thews of the prophet, we shall study the prophet in vain. And I am not sure but that a rather important document with which to approach Ruskin is his description of Cardinal Manning's hospitality duly rendered to a spinster neighbor at Coniston, Miss Beever: "He gave me lovely soup, roast beef, hare, and currant jelly, puff pastry like Papal pretensions—you had but to breathe on it and it was nowhere—raisins and almonds, and those lovely preserved cherries like kisses kept in amber." Such was Ruskin at sixty in the intervals when the prophet was put aside. Evidently, no prophet may indulge this vein too often with impunity. If space permitted, it would be interesting to contrast the brilliant fancy of Ruskin with the sardonic humor of Carlyle and the unexpected mother wit of Emerson, both of which are compatible enough with spiritual leadership. Instead, let us recall that true touch in Charles Morrice's striking novel, "Il est ressuscité." Christ returned to modern Paris is greeted with an invitation to chat. The response is, "On ne cause pas avec moi." Ruskin was at most times willing to chat, and it seriously impairs his impressiveness as a sage.

To have written so much on Ruskin without specific analysis of his prose style may require apology. Yet its qualities of aerial eloquence are those of the man we have been considering, and its qualities we may assume to be familiar to all readers. Ruskin himself wrote that he had three styles: first, when he wished to be understood; secondly, when he wished to please himself; thirdly, when he tossed the reins to his invention.

Of the first manner "Unto this Last" is the best example; of the second, perhaps "Stones of Venice," "Sesame and Lilies," or "Queen of the Air"; of the third, "Modern Painters," I, or "Cestus of Aglaia," with large portions of "Fors Clavigera." Since the ornate style of the man, both in its more torrential and more disciplined beauties, is familiar to all readers, let me cite instead from "Unto this Last" a central passage in which Ruskin strove to be understood by plain men:

> The idea that directions can be given for the gaining of wealth, irrespective of the consideration of its moral sources, or that any general and technical law of purchase and gain can be set down for national practice, is perhaps the most insolently futile of all that ever beguiled men through their vices. So far as I know, there is not in history record of anything so disgraceful to the human intellect as the modern idea that the commercial text, "Buy in the cheapest market and sell in the dearest" represents, or under any circumstances could represent, an available principle of national economy. Buy in the cheapest market?—yes, but what made your market cheap? Charcoal may be cheap among your roof timbers after a fire, and bricks may be cheap in your streets after an earthquake; but fire and earthquake may not therefore be national benefits. Sell in the dearest?—yes, truly, but what made your market dear? You sold your bread well to-day, was it to a dying man who gave his last coin for it, and will never need bread more, or to a rich man who to-morrow will buy your farm over your head, or to a soldier on his way to pillage the bank in which you have put your fortune?

This admirable passage is thoroughly characteristic of Ruskin's argumentative style at all periods. Its qualities of rhythm and just emphasis, of ready and rich allusion, are obvious. Less apparent, possibly, is the defect of being unvarying in the superlative mood. Carlyle would have done the thing with fewer adjectives, and his more direct bludgeoning would have bruised more sorely. Ruskin, with all his energy, remains more volatile, at once more persuasive and more subject to misinterpretation. Such a passage as we have chosen seemed to a Saturday Reviewer of the time merely the preachment of "a mad governess"; to-day it heartens like a trumpet blast wherever men turn the light of their better natures upon problems of trade and the state. It is first-class Ruskin of the plainer sort.

It was ever a grief to Ruskin that his style was more often mentioned than his opinions. To whatever conviction, however just and universal, his eloquence lent the tinge of idiosyncracy. It is an interesting speculation what Ruskin's influence might have been could he have written with the energetic simplicity of Mill or Taine, or with the massive and essentially social eloquence of Carlyle or Michelet. As it was, his influence was great, but he carried his readers only half way, and was taken most rhetorically when he was most serious. There is no more pathetic recollection than the aged and baffled prophet vainly pouring out his soul for working folk in the tracts called "Fors Clavigera." To write with his heart's blood and be read for the turn of a phrase—this was his constant experience. And probably the few workingmen who did read "Fors" concurred in Browning's feeling about "Modern Painters," Vol. I, that he "could agree with him [Ruskin] only by snatches."

As to the origins of his ampler style, much ingenuity has been expended. The matter really seems rather simple. Ruskin was brought up on the English Bible, and his father always carried along in the family coach a miniature set of Dr. Johnson's works. This was the boy's reading as they journeyed through the shires. Now Dr. Johnson's periodic and Latinized diction relates him spiritually to the Mermaid Tavern. He represents amid the simplicity of eighteenth-century prose an authentic continuity, through the great divines, of the Elizabethan tradition. Burke and De Quincey more imperfectly belong to the same strain. Ruskin, as the consummate and conscious representative of the tradition, naturally reinforced himself from the great exemplars, Hooker, Sir Thomas Browne, Jeremy Taylor, but without such reading his style would have been much what it is—rhythmically eloquent and sustained, various, capricious, teasing—eminently beautiful, and completely unmodern. The irony and curious allusiveness of the manner Mr. Cook plausibly refers to Ruskin's lifelong reading of the Dialogues of Plato. If so, the essential temperateness underlying the Platonic ideality was strangely missed.

After all, it is the man in John Ruskin, multiform and perplexing, which is paradoxically attractive. Of the great romantic temperaments he is the purest type, with the possible exception of Shelley, that England has produced. His affinity with Rousseau and Swift, Ruskin himself asserted. And, in fact, he shared the expansive humanitarianism and cult of simplicity of the Genevan philanthropist with a strong dose of the stern indignation against human folly and ignorance which tortured the Dean of St. Patrick's. Nor are the episodes of Vanessa and of Rose La Touche without their pathetic analogies; while it may seem worthy of note that, during the first separation from his wife, Ruskin took the pains to visit the scene of Rousseau's idyl at Les Charmettes. All of John Ruskin's unqualifiedly great work falls within about nine marvellous years, beginning with 1851 and ending in 1860 with the *Cornhill* essays on political economy. The interval saw the completion of "Stones of Venice" and of the deathless part of "Modern Painters." Only in these years, from his thirty-second to his fortieth, and under especial circumstances of the discipline of mispraise, he seems to have been fully captain of his soul. Such a life is replete with charm, with warning, and with example. A great disordered spirit—magnanimous even in disorder, unfailingly beautiful in self-expression, uniquely alive to the hope of social justice and to the consoling reality of natural loveliness—such is the final impression I retain of John Ruskin. From the smaller defects of his romanticism he was quite free. No one has acknowledged more humbly the supremacy of the serenely poised geniuses—Plato, Dante, Titian, Shakespeare—with whom he never presumed to associate himself. In whatever paradise his soul may have attained, his place should be near his beloved Turner. Both shared a similar reverence for ordinary nature, oddly contradicted by the need of wreaking in the lambent void of pure fancy a tumultuously creative mood. Alike they are great personalities, and, if well short of the greatest, very great artists withal—appealing through a delicate gorgeousness, almost persuasive in a kind of dæmonic irresponsibility.

FRANK JEWETT MATHER, JR.

Scribners are preparing to publish in two sumptuous volumes a book on "Colonial Furniture in America," by Luke Vincent Lockwood. This is technically a second edition of a work of the same name by Mr. Lockwood, but in effect it is a new production more than twice as large as the earlier book and much more fully illustrated.

Frederick A. Stokes Co. will publish in October six new volumes in their Great Masters Series, viz.: "Three French Painters of the Eighteenth Century," "Great English Portrait Painters," "Leaders of English Pre-Raphaelites," "Three Great Florentine Painters," "Three Great Portrait Painters," and "Three Great Modern Painters." The same house is bringing out Flora Klickmann's "Home Art Crochet Book," and "Meissonier" and "Rossetti" in Nineteenth Century Art Books.

One of the most interesting books in the autumn list of Small, Maynard & Co. is a translation by Mrs. Romilly Fedden of Paul Gsell's "Art, by Auguste Rodin." This is to be a large quarto volume, with something like 100 illustrations in photogravure and half-tone.

The Bruno Hessling Co. is bringing out a new edition of Blunck's "Lessons on Form."

By reducing the lecture amphitheatre of the Fogg Museum, thus improving its acoustic qualities, a new semi-circular corridor will be gained in which the casts will be installed. This will do away with the present confusing juxtaposition of casts and originals, leaving the main entrance hall free for the exhibition of the Museum's larger original sculptures.

Ogden Wood, the dean of the American artists in Paris, died there last Friday at the age of sixty-five. For forty-five years he had lived in an attic near the church of the Sacred Heart.

The death is announced of George Hay, the artist. He was born in Edinburgh, and was elected secretary of the Royal Scottish Academy in 1881. His best-known work was done in illustration of Scotch history and fiction.

Finance

THE GREAT HARVESTS OF 1912.

Nearly 1,000,000,000 bushels more of grain have been raised this year in the United States than in 1911, and 379,000,000 bushels more than in the previous high-record season, 1906. These figures are no longer "trade guesswork." The aggregate of the Government estimate of a week ago is 5,219,000,000 bushels, all of which is safe, with the exception of part of the corn, the potatoes, and buckwheat. As the Government report puts it, the indications are for a total production of all cereals amounting to 133,016,000 tons, about 20.3 per cent. more than last year, 6.1 per cent. more than in 1910, and 16.2 per cent. more than in 1909.

Even the small grains, fodder crops, and vegetables have this year fallen in line. The potato crop's prospect is for 36 per cent. more than last year, 14 per cent. in excess of 1910, and 2 per cent. more than in 1909. It has never been equalled in this country, the estimated yield being 9,000,000 bushels over the previous high record of 1904. Last week's Government estimate on the crop of hay is not only 31 per cent. above last year's, but exceeds by a million and a quarter of tons the largest previous yield on record. It will go far towards replenishing the greatly depleted home reserves, which have followed the very short hay crop of last year and the heavy consumption due to the severe winter.

Furthermore, the present outlook is that when the October returns of threshings of wheat, oats, and barley are in, they will swell the present estimates materially; for the spring wheat yields have been extraordinarily large, and the oats crop has been big everywhere. Last week's Government estimate on the total wheat yield, 690,000,000 bushels, was below what the trade expects, for the mere condition figures this year do not fully represent the remarkable yields that have been made in the Northwest and in Montana.

There is therefore little doubt entertained in the grain trade that the spring wheat crop has been underestimated—just as the Government's July returns underestimated the winter wheat, making increase in the indicated outcome necessary when the actual yields were in evidence. The estimates on oats, according to the grain market's general impression, will probably be raised about five bushels per acre in the final returns; for in that crop also, yields have run so heavy as to exceed all private estimates. Where forty bushels per acre has been considered good in past years, the outturn has risen to forty-five and fifty bushels this season, and a count of many of the leading points in Illinois by private parties shows an average of fifty-five bushels, and some run above 75 to 100 bushels, with returns of even larger size occasionally reported. An average of even forty bushels oats per acre for the country would mean more than 1,500,000,000 bushels for the crop, or 110,000,000 bushels above the recent Government figures.

The corn crop, which has long been the point of doubt, because it went into the ground so late this year and because of the danger of serious damage from premature September frosts, has made unusual autumn progress. The prolonged hot, forcing weather of this month has already largely overcome the handicap of the belated planting, and while there has been some loss in the Southwest by extreme heat, there were more bushels made in other sections by the high temperatures, so that losses appear trivial. Two weeks more will see a great percentage of the crop out of danger of frost, and, in fact, much of it is now already past that stage. All allowances made, a crop of 3,000,000,000 bushels is promised, barring serious damage from killing frosts before the middle of October, and this would set a new record.

In view of the intimations that the home wheat crops, in some European countries which habitually buy from us to supply their needs, are running exceptionally short, it is a highly interesting question how much the United States can spare for such purposes from its crop of 1912. On that will largely depend the volume of our export trade this coming season, the course of foreign exchange, and our command over Europe's gold. What the trade now figures out is that a surplus of 200,000,000 bushels will be possessed by the United States this year, on the basis of a 690,000,000-bushel wheat crop, and, should the estimate of yield be raised in the final returns, that will enlarge correspondingly the available surplus.

This would permit of exports of 100,000,000 bushels, as against something like 79,000,000 in the crop year ending last June, and would still leave a sufficient reserve for carrying over, on July 1, 1913. The indications, therefore, are that the United States is to have an excellent export trade with Europe for some months to come; its actual volume, however, depending upon the supply of ocean freight-room, rates for which (partly in consequence of the impending heavy shipments from America) are now at the highest point in years.

In view of all these circumstances together, the season immediately ahead of us in American agriculture, commerce, and industry bids fair to open a new and exceedingly interesting chapter in the country's financial history.

AUDI ALTERAM PARTEM

THE NATION:—"It is artificial, badly written, and eminently dull."

THE DIAL:—"A richly human and whimsically humorous story of the most delightful interest, reminding us in many ways of the best work of Mr. W. J. Locke, and inviting quite as close an attention to its details. . . . The characters are all real and the happenings are all significant."

NEW YORK TRIBUNE:—"This admirable novel. . . . Has genuine literary quality, and the quality of the understanding of men and women."

BOSTON TRANSCRIPT:—"Told with marked distinction of style and diction. How the body can be the prison of the soul was never more convincingly, more poignantly shown."

CHICAGO TRIBUNE:—"A novel rich yet pensive in quality. . . . Most unusual in its atmosphere, in its flowing and capable style, and in the impression it leaves upon the mind. True lovers of life and of fiction will rate it highly."

AMERICAN LIBRARY ASSOCIATION BOOKLIST:—"A novel of exceptional quality and charm."

THE OUTLOOK:—"A most engrossing story, in which events and persons fit together with artistic precision."

NEW YORK SUN:—"The author writes with distinction."

CHICAGO POST:—"This remarkable and artistic novel."

PROVIDENCE JOURNAL:—"Instinct with the quality of charm. The genuine beauty of the telling makes the book so unusually attractive. . . . Emphatically one of the finest examples of the art of fiction that have been put forth in a long time."

An Introduction to Metaphysics

By HENRI BERGSON, Member of the Institute
Professor at the College de France.
Authorized Translation by T. E. HULME
Cr. 8vo, 75 cts. net. By mail 85 cts.

This pithy little volume forms the best introduction to M. Bergson's philosophy. In it the author explains with a thoroughness not attempted in his other books the precise meaning he wishes to convey by the word "intuition." A reading of this book is, therefore, indispensable to a proper understanding of Bergson's position. German, Italian, Hungarian, Swedish, and Russian translations of it have already appeared, testifying to its intrinsic importance and indicating the scope of its appeal.

The present translation has been prepared under the supervision of M. Bergson and contains additions made by him.

G. STANLEY HALL'S
The GENETIC PHILOSOPHY OF EDUCATION

By G. E. PARTRIDGE, Ph.D.
WITH AN INTRODUCTION BY
G. STANLEY HALL, Ph.D., LL.D.

This is the only ordered and comprehensive epitome of G. Stanley Hall's educational philosophy—the essence of many volumes, and written with President Hall's sanction. It summarizes the advanced educational movement, and the ideas it assembles constitute the most important contribution of all time to education. An invaluable book for every teacher, for normal schools, and for libraries. (12*mo.* $1.50 *net, postpaid* $1.63.)

Some Noteworthy Books of the Season

OLD PARIS

ITS SOCIAL, HISTORICAL AND LITERARY ASSOCIATIONS

A companion volume to "Inns and Taverns of Old London." **By HENRY C. SHELLEY**

"The author's skill in selection and his delicate literary style are delightful. He uses the characteristic, the pleasing and the human, and there is a laugh or a tear or a charming appreciative touch on every page."—*Chicago Eve. Post.*

With many illustrations. Net $3.00; *postpaid,* $3.20.

Two new volumes in the popular SPELL SERIES.

THE SPELL OF FRANCE

By CAROLINE ATWATER MASON

"The particular charm of this volume is in its treatment of the attractive features of Old France."—*Edwin L. Shuman, in the Chicago Record-Herald.*

THE SPELL OF ENGLAND

By JULIA DE W. ADDISON

"A book which makes one feel that peculiar spell of legend, history and modern progress inextricably blended, which is charactertistic of England."—*Boston Herald.*

Each, illustrated, boxed. Net $2.50; *postpaid,* $2.70.

NEW AND REVISED EDITIONS, BROUGHT UP TO DATE, OF

From Page's List

MEXICO and Her People of Today

By NEVIN O. WINTER

"A thoroughly up-to-date description of Mexico, territorially, politically, economically and racially," says the *Review of Reviews.*

PANAMA and the Canal Today

By FORBES LINDSAY

"A story about the country, its people and the vast undertaking in which all Americans are so interested."—*Boston Globe.*

Each in the Series of the Latin American Republics. Illustrated, in a box, $3.00.

THE ART OF THE BERLIN GALLERIES

By DAVID C. PREYER

"This is an interesting contribution to the series on the art galleries of Europe and is the third from the pen of the author. It can be read by art lovers who have seen all the works of art described with as much interest as by the prospective visitors to the galleries who seek, in condensed form, just the information necessary for a reasonable enjoyment of the art. Mr. Preyer's keen discriminating judgment is a delight to the art lover."—*Boston Transcript.*

Illustrated, boxed. Net $2.00; *postpaid,* $2.20.

THREE WONDERLANDS OF THE AMERICAN WEST

By THOMAS D. MURPHY

"The author has caught the atmosphere of the 'Wonderlands' and has the rare gift of being able to make the reader see with *his* eyes; to produce pen pictures second only to the marvelous illustrations themselves," *writes Mr. Charles L. Bowman, president of the Union Library Association. With 16 reproductions in full color from paintings by Thomas Moran and 32 duogravure plates.*

In a box. Net $3.00; *postpaid,* $3.30.

CHILE AND HER PEOPLE OF TODAY

By NEVIN O. WINTER

A New Volume in the SERIES OF THE LATIN AMERICAN REPUBLICS.

"A comprehensive narrative covering every phase of life and history which one would wish to know about his country."—*Boston Herald.*

Profusely illustrated, in a box, $3.00.

Special Editions of Grant Allen's five popular works on the Principal Cities of the Old World

PARIS
VENICE
FLORENCE
BELGIUM: ITS CITIES
CITIES OF NORTHERN ITALY

Previously published in two volume sets. Now issued each one volume, with sixty-five full page plates, in a box. Net $1.75; postpaid, $1.95

Published by L. C. PAGE & COMPANY 53 Beacon St. Boston

The Nation

A WEEKLY JOURNAL.

FOUNDED IN 1865.

[*Entered at the New York City Post Office as second-class mail matter.*]

The Nation is published and owned by the New York Evening Post Co. Oswald Garrison Villard, President; William J. Pattison, Treasurer; Paul Elmer More, Editor; Harold deWolf Fuller, Assistant Editor.

Three dollars per year in advance, postpaid, in any part of the United States or Mexico; to Canada $3.50 *and to foreign countries comprised in the Postal Union* $4.00.

Address THE NATION, Box 794, New York.

Publication Office, 20 *Vesey Street.*

Gesell's Normal Child and Primary Education $1.25

A REVIEW

"This volume is distinctly not of the ephemeral type. Because it deals with the eternal verities of child-life and educational method, and in language which is at once simple, direct, incisive and picturesque, the volume will remain for many years a classic of its kind, comparable in this respect to Ellen Key's THE CENTURY OF THE CHILD, Jane Addams's THE SPIRIT OF YOUTH or Dewey's SCHOOL AND SOCIETY."—LEWIS M. TERMAN, Leland Stanford University, in *The Educator-Journal.*

GINN AND COMPANY
29 BEACON STREET, BOSTON

Just Published

Hart & Feldman's Plane and Solid Geometry

$1.25

Written by experienced secondary school teachers, and thoroughly progressive in presentation. The indirect method of proof is consistently applied, and practical problems are plentiful.

Letters and Memorials
OF
Wendell Phillips Garrison

Editor of THE NATION 1865–1906

In one volume, crown 8vo, 300 pages, with photogravure portrait

During the forty-one years in which he edited the *Nation,* with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

Plays by Anton Tchekoff

"Uncle Vanya," "Ivanoff," "The Sea-Gull," and "The Swan Song." Translated from the Russian by MARIAN FELL.

Frontispiece. 12*mo.* $1.50 *net; postpaid* $1.65.

These four plays, by one of the greatest of modern Russians, whom Tolstoi declared to be comparable only to Maupassant, show not only the range and depth of his astonishing genius, but they give a picture of Russian life unequalled since Turgenieff. Three of the plays are here translated for the first time into English.

By AUGUST STRINDBERG.

Translated by **EDWIN BJÖRKMAN.**

Miss Julia—The Stronger

75 *cents net; postpaid* 83 *cents.*

"Miss Julia" is more often acted on the German and Scandinavian stage than any other Strindberg play. Masterful construction and gripping theme make it intensely dramatic; whether you like it or hate it you can't leave it. Strindberg's Preface to it, a sort of dramatic creed, given here for the first time in English, is almost as famous abroad as the play.

You could read "The Stronger" in eighteen minutes and you would comprehend the life stories of three people. The play has almost no action in the ordinary sense, but has the effect of fierce, continuous action—it makes a mental conflict as vivid as if a physical conflict.

There Are Crimes and Crimes

The most widely known and acted of the longer plays by Strindberg. A drama of life to-day in Paris, profound and of tremendous power, and more optimistic in its conclusions than most of his work.

Plays by Strindberg

$1.50 *net; postpaid* $1.65.

Strindberg is represented in this volume by three of his best and most characteristic plays—"The Dream Play," a symbolic drama of fairy-like quality; "The Link," a tragedy of modern married life, in one act; and "The Dance of Death," Parts I and II, a sombre, symbolic drama of tremendous power, generally considered to be his masterpiece.

By JOHN GALSWORTHY.

The Pigeon

A FANTASY IN THREE ACTS. 60*c. net; postpaid* 70*c.*

"What cannot be made clear in such a fragmentary recital of the story is the charm of the thing itself. Deplore Christopher's super-sentimentality, if you will, it is, nevertheless, a very heart-warming thing, and its humor is irresistible. Admit the worthlessness of the wastrels. They are still mighty human."—*New York Times.*

Causes and Effects in American History

The Story of the Origin and Development of the Nation.

By Edwin W. Morse

With illustrations, fac-similes, and maps, $1.25 *net; postpaid* $1.35.

Mr. Morse writes from a novel viewpoint. Aiming to convey a sense, unconfused by detail, of such deep currents of thought, economic, political, moral, as have shaped our national destiny, he deals rather with forces than with incidents. In order not to obscure the essential and significant, he avoids crowding his page with the small facts and emphasizes the truly salient. In this way he gives a lively sense of the relative values of the main facts of our history.

Anson Burlingame and the First Chinese Mission to Foreign Powers

By Frederick Wells Williams

Assistant Professor of Oriental History in Yale University.

$2.00 *net; postpaid* $2.18.

A sympathetic, luminous, and impartial narrative of one of the most striking episodes of modern history.

Gateways to Literature and Other Essays

By Brander Matthews

12*mo.* $1.25 *net; postpaid* $1.36.

His eminence as thinker and writer is reaffirmed in the essays of this volume, "Gateways to Literature," "The Economic Interpretation of Literary History," "In Behalf of the General Reader," "The Duty of Imitation," "The Devil's Advocate," "Literary Criticism and Book-Reviewing," "American Familiar Verse," "French Poetry and English Readers," "A Note on Anatole France," "Poe's Cosmopolitan Fame," "Fenimore Cooper," "Bronson Howard," "The Art of Acting."

Youth and the Race

By Edgar James Swift

Professor of Psychology and Pedagogy in Washington University, St. Louis.

$1.50 *net; postpaid* $1.65.

A plea for the more intelligent study of the real boy, with a view to better adapting the school to his needs.

The Wilderness of the North Pacific Coast Islands

By Charles Sheldon

Author of "The Wilderness of the Upper Yukon."

With illustrations from photographs and five photogravures from drawings. By CARL RUNGIUS.

$2.00 *net; postpaid* $2.20.

The vivid narrative of Mr. Sheldon's experiences while exploring and hunting for wapiti, bear, and caribou on Vancouver, Queen Charlotte, Montague, and Admiralty Islands, off the coast of British Columbia and Alaska. His adventures, especially that with the big bear of Montague Island, are as thrilling as they are novel.

CHARLES SCRIBNER'S SONS FIFTH AVENUE, NEW YORK

The Nation

NEW YORK, THURSDAY, SEPTEMBER 26, 1912.

The Week

Mr. Taft may or may not be a "dead cock in the pit," so far as the electoral campaign is concerned; but his letter to the Secretary of the Treasury on the budget shows that he is still President of the United States, and expects to take his duties in that capacity seriously until his term of office expires. He has set his heart upon effecting a thorough reform in the Government's fiscal administration, and he is not deterred by indifference or opposition in Congress, nor by the absorption of popular interest at this time in more alluring topics. The emphasis he is putting at this moment on a matter so commonplace as the mere systematization of the nation's control over its financial ways and means, the adjustment of outgo to income, is, to us, decidedly refreshing, if only as a bit of variety in the political landscape. It is a reminder, too, of the fact that in the introduction of administrative economies, and in the curbing of the general tendency to unlimited expenditure, Mr. Taft has achieved a notable degree of success.

Few things that Gov. Wilson said or did, in his tour last week, evoked more immediate and positive comment among those who read the newspaper reports of his speeches than his references to President Taft. Mr. Wilson, speaking at Minneapolis, in a part of the country where Mr. Taft is confessedly unpopular, had criticised the policies of the Republican Administration. But he added:

> I want to pay my tribute of respect to the President of the United States. I do not believe that any man in the United States who knows his facts can question the patriotism or the integrity or the public purpose of the man who now presides at the executive office in Washington.

We doubt if there was a single listener to that utterance, or a single reader of it the following morning, who did not say to himself: This is a magnanimous campaigner, and a gentleman.

On Monday of this week another comment was made on the President of the United States by another opposing Presidential candidate. Observing, from his platform at Springfield, Mo., a campaign banner bearing the name of the President of the United States, Mr. Roosevelt said (we quote from the report in his New York organ):

> Any man who supports the receiver of stolen goods stands on a level with the receiver of the stolen goods. He is a dishonest man, and is unfit to associate with honest men.

We wonder how many readers of this remark said to themselves, when they laid their paper down: This may be an energetic public man, but is he a magnanimous campaigner, and is he quite a gentleman?

That it should have fallen to the lot of Senator Henry Cabot Lodge, Mr. Roosevelt's long-time friend, admirer, and political associate, to shatter in an indignant public speech Roosevelt's claim to be the reincarnated Lincoln, must surely be classed as a dramatic episode. Mr. Lodge's speech of last Saturday evening was delivered at Columbus—the very scene of Roosevelt's declaration, on the 21st of last February, for the recall of judicial decisions. The fact that the speech should have been delivered at all is in itself a sign of the way events are moving; for when the reporters asked Mr. Lodge, on the day after Roosevelt's Columbus declaration, what his own attitude would be, he replied, "I am out of this campaign." It was said at Washington, indeed, that Senator Lodge had been invited by Mr. Roosevelt to read over the Columbus speech before it was delivered; that he had criticised as too radical what was then its position on the judiciary; that this part of the speech had thereupon been modified to a conservative declaration, and that Mr. Lodge never learned of the subsequent change to the ultra-radicalism of the speech as it was actually delivered, until he read the report of it in the morning papers. Be this as it may, it is manifest now that the Senator's first purpose of keeping silence on the issue had, six or seven months later, become impossible.

And now the Progressives of Kansas have come to realize that to cry "Thou shalt not steal," and to profit by the receivership of stolen goods, is a pretty unsafe game to play even under the rules of the new morality. It is announced that the Roosevelt electors in Kansas will be placed in the independent column, instead of occupying the place in the regular Republican column which morally belongs to the Taft men. When we say stolen goods, we are not speaking with contumely of the courts whose decisions have been in favor of the Kansas Progressives' claim to the possession of the Republican column; we are merely employing Progressive phraseology. The courts have rendered their decisions on a technicality; and even the most ardent Progressive will admit that, technically, Mr. Taft was nominated at Chicago. To what extent the Bull Moose of Kansas have been influenced by moral reasons and to what extent by prudential reasons, it is hard to say. But Mr. William Allen White is no fool, and it must have been borne in upon him that a genuine third party which places in the field a candidate of high character, as the case of New York and Mr. Straus has shown, will make a stronger impression than a third party which does not hesitate to seize upon the machinery and capital of the party whose iniquities have driven all good men into revolt.

Mayor Blankenburg's first annual message to the Philadelphia City Councils is a document bristling with proposals both of new taxes and of new undertakings for municipal progress. And, remarkably enough, it does not seem to be greeted with a storm of protest, but, on the contrary, is apparently going to be quietly considered on its merits. To what extent the proposed increase of taxation is due to the need resting on the new administration of bringing the city's affairs, fiscal and material, into sound conditions, and to what extent it is to be ascribed to the undertaking of improvements hitherto unattempted, we cannot at this distance undertake to judge. But it seems plain enough that a considerable part of the financial stress with which Mr. Blankenburg proposes manfully to grapple is due to the objectionable methods that have obtained in the past—methods under which a clean showing may appear so far as mere bookkeeping is concerned, but which cover up defects that are bound to be reckoned with sooner or later. As the Philadelphia *Bulletin* says, in commenting on the report of the Mayor's able advisory committee, "there is no financial legerdemain by which a municipality can go on year after year exceeding its revenues by its normal running expenditures, and deftly negotiating a loan by which a deficit is turned into a surplus before the very eyes of the people." That is the kind of inheritance that reform administrations in any of our cities habitually have to shoulder, and that helps to make their task onerous and to endanger their hold on popularity.

Two unrelated facts which daily figure in the industrial news are additional proof that a period of marked prosperity is before us. The first is the threatened railway car shortage, which bids fair to be record-breaking; the other is the growing scarcity of labor. For the first, the official figures of the rapidly dwindling supply are the proof; to the second more than one head of railway or industrial company bears witness. Thus, President Ripley, of the Atchison, reports that "the demand for labor already far exceeds the supply." An official of the Lehigh Valley declares that it is "harder to get men for work on tracks than for many years past." Similar reports come from other railway heads, and it is understood that important development work on the Erie and New York Central lines has had to be postponed for lack of men to carry it on. In the steel and iron business similar conditions exist. The Baldwin Locomotive Works are reported to have nearly doubled their employees since January 1 and to be still in need of workers.

These facts may serve to remind us how fortunate the country has been to escape the limitation of immigration which was so warmly urged in the last session of Congress, and still threatens. There could be no greater folly from the industrial point of view than to require, as does this bill, that every one shall be excluded who cannot pass a literacy test and show some knowledge of English. For certain lines of work no American-born laborers are available —particularly is this true of unskilled labor in the iron and steel trades. In them such a restriction would speedily become crippling. It is no answer to this that conditions of work should be made so attractive as to bring to it a higher class of men. Much can be done, indubitably, in this direction. But American labor will enter certain lines of work on no terms. Foreign labor will; why should it be compelled to master a new tongue before entering? The United States needs immigration more than any other country because here men rise rapidly in the social scale as they cannot elsewhere.

The desperate necessity under which our manufacturers labor, of a tariff to cover the difference of cost between this country and abroad, was strikingly illustrated in two cable dispatches published in this country on the same day. One tells of the arrival at Hamburg of a party of engineers from the Bethlehem Steel Company to arrange for the installation of fourteen-inch guns, armor, and projectiles on the new Greek armored cruiser, the hull of which is to be built at the Vulkan shipbuilding yards at Stettin, and of the mortification of the German steel firms over the fact that this important contract should have been captured by Americans. The other is a London dispatch, giving an account of a meeting of British motor-car manufacturers to take measures for meeting the competition of cheap American cars. But of course it would never do to lower the tariff on iron or steel or manufactures thereof, until the "difference in cost of production" between America and foreign countries had been "scientifically" determined by an expert commission. The mere fact that our manufacturers can undersell the Germans or the British on their own soil should not be allowed to influence the views of our lawmakers in the least.

In the midst of all the hubbub of politics, a little thing like the killing of a high-school boy by hazers cannot be expected to make much commotion. Still, there are some twenty million families in this country in which the opening of the schools a few days ago was an event of some interest, and therefore it may not be out of place to direct attention to an item of news—not the first of its kind—which tells of a "freshman" in the Middletown (O.) High School who is dying as the result, it is charged, of having been compelled to push a pencil across the floor of the school gymnasium with his nose, being urged along in his task by kicks. We hear a great deal nowadays of the beautiful possibilities both of schools as such and of school buildings, in the promotion of good citizenship; but it may be doubted whether, in the long run, anything the schools may do to this end can equal in value what can be done by them in the enforcement of the plain requirements of wholesome discipline. The atrocities of hazing—that is, hazing carried to barbarous and dangerous extremes—are peculiar to the schools of our country; and it is not by any means a mere accident that the other criticism most frequently levelled against them is that of lack of accuracy in the pupils' knowledge. The idea of discipline, of subjection of the youngster's own notions of what is worth while, or what is permissible, to the control of his teachers or his elders, plays an extremely minor part in our schools; and the barbarous lawlessness of hazing is only the most grotesque of the manifestations of this.

What makes the physician play so prominent a rôle in contemporary revolutionary politics? asks the *Medical Review of Reviews*. It cites the example of China and Portugal. The case of China involves, of course, Sun Yat-Sen, who, as we showed the other day, was a busy medical practitioner before he gave himself to the task of liberating his country from the yoke of the Manchus. In Portugal, the *Review of Reviews* points out, Dr. Affonso Costa is leader of the Democratic party, Dr. Antonio José d'Almeida is leader of the Conservatives, and Dr. Brito Camacho is leader of the moderate Unionist faction. We wonder if the *Review* is sure of its facts with regard to Portugal. The doctoral title is very common among public men in Spain, Portugal, and Latin America. It does not refer to medicine at all, but describes men who have pursued the higher university studies and who are probably doctors of law or letters. The explanation that "the physician's experience with the ills of humanity has given him a peculiar fitness for larger services to the state," strikes one as somewhat fantastic. The truth would rather seem to be that in backward countries the medical student is the first one to be brought into touch with the exact sciences and the first to be imbued with a materialistic philosophy.

The proposed celebration of the centenary of the birth of Sir Isaac Pitman will not commemorate the man who invented shorthand, but the man who invented the system of shorthand which the world has found most practicable. The inventor of abbreviated writing is as completely lost in the mists of antiquity as the inventor of books. The Greeks and Romans had more or less imperfect systems of shorthand, which were known as late as the tenth century. It was the nineteenth century that witnessed the triumph of making the human hand as fast as the human tongue, and, as a consequence, of adding immensely to the visible supply of words. What the postal systems of all countries owe to the ability of the least literary to get his ideas on paper, is simply beyond calculation. Even the printing press is outdone by a combination of stenographer and typewriter that turns out personal communications in a flood.

In a memorandum on the Panama Canal issued by the Pan-American Union, Director John Barrett lays emphasis on the elaborate preparations that are being made by commercial and shipping interests all over the world for taking advantage of the Canal a year and a half from now. European shipbuilding yards are busy constructing fleets of ocean-going merchant vessels. European Governments are instructing their diplomatic representatives to make a complete study of new conditions created by the Canal. In Japan new steamship companies are being organized. China plans a line of steamships to Central and South America. Australian commercial organizations are sending representatives to South America to develop trade. The Latin republics are astir. Chili is building a fifteen-million-dollar harbor at Valparaiso. Bolivia is building railways. Peru and Ecuador and Brazil and Argentina are improving their ports. But if Mr. Barrett's implications are that the United States has been idle in the meantime, he is incorrectly informed. We, too, have been busy. We have been sending troops and ultimatums to Nicaragua. We have been keeping the Mexican Government on the razor edge of anxiety. We have dropped hints to Santo Domingo. Everywhere we have been preparing the way for the upbuilding of our Latin American commerce by making it plain that bluster, threats, and intervention follow the commercial flag of the United States.

The Ulster Unionists have hitherto deprecated the injection of the religious question into their campaign against Home Rule. It is not so much the oppression of the Protestant minority by the Catholic majority that they have feared as the economic exploitation of Belfast and the prosperous industrial North by the agricultural majorities from the Southern counties. But in the solemn pact and covenant which has been issued by the Unionist leaders and which is to be signed by former Cabinet Ministers, present members of Parliament, and other men high in public affairs, the pretence of nonsectarianism is cast aside. The Covenant, according to a dispatch, is to be signed in the various Protestant places of worship "after the most impressive religious service." Irishmen are thus called upon to rally round the banner of religious intolerance; the hatreds inherited from times when religious passions ran riot are to be fanned into flame in this, the twentieth, century. It remains to be seen whether such an anachronism can really prove effective. The Liberal Government, in weighing the chances of actual resistance on the part of Ulster, must now take into account the fact that if the enactment of Home Rule will arouse evil passions in the North of Ireland, the failure to satisfy Ireland's claims will leave behind it a spirit of embittered religious partisanship exceeding in virulence anything the island has known for generations.

When the commercial treaty between this country and Russia was abrogated last year, directly by Mr. Taft but indirectly through the action of Congress, the state of resentment aroused in Russia was said to be such as to make any overtures on the part of the Czar's Government for a renewal of the treaty highly improbable. Now there seems to be little doubt that Russia's attitude has changed and that tentative proposals for a renewal of the treaty are discussed in St. Petersburg. That, as a matter of fact, is the only way the old status could be restored. People who wished to see our commercial relations with Russia unchanged argued, last year, that American business interests stood to lose more than Russian business interests by the quarrel, and that the first attempts at a reconciliation would have to come from us. But we need only recall to what degree public opinion in this country was aroused on the subject, the virtually unanimous action of Congress, and the fact that the issue was made one affecting our national dignity, to see that we could not take the first step towards a new treaty. It is true that Russia, too, made the matter one of national honor. But the important difference is that, whereas with us any change of opinion on the subject would have to make itself felt throughout the country, in Russia the Czar's Government is unhampered by public opinion and can easily execute a faceabout if its interests so demand.

The financial world is now busy with a new Chinese puzzle. Nobody as yet has professed to be able to offer a complete explanation of the mysterious Mr. Jackson and his loan. Meanwhile, Chinese Treasury bonds, in comparatively small amounts, have begun to make their way into the London market. While the financial machinery employed by the Peking Government in floating these loans remains obscure, the motives behind them should not be so very difficult to get at. China has not necessarily broken with the six Powers from whom she was to obtain a loan of $300,000,000. Negotiations have been suspended. But instead of waiting resignedly for the good will of the Powers to assert itself, the Chinese Government has evidently decided to apply a touch of moral compulsion. The needs of the new Republic are great, and it seems highly improbable that the elaborate schemes of economic and financial reconstruction which have been formulated can ever be carried out by means of such petty loans as the Government may obtain from unofficial European sources. Yet these loans serve the purpose of a warning against excessive pretensions on the part of the Powers. If the latter believed that the fortunes of new China would be entrusted to their management, they must be undeceived. Having won their liberty from the Manchus, the people of China are now in the mood to issue a declaration of independence against foreign domination.

THE EMANCIPATION PROCLAMATION.

Last Sunday marked the fiftieth anniversary of Lincoln's first Emancipation Proclamation. To it he came but slowly; yet no other act so clearly entitles him to the plaudits of mankind. In June of 1862, to a delegation of Quakers, he expressed doubt whether a decree of emancipation would affect the South, since the Constitution itself could not be enforced there. To this the delegation answered in the language of the Scripture: "For if thou altogether holdest thy peace at this time, then shall there enlargement and deliverance arise to the Jews from another place; but thou and thy father's house shall be destroyed." Mr. Lincoln answered that he was deeply sensible of his need of Divine guidance; he was most willing to be an instrument in God's hands for achieving a great work. Yet he hesitated and temporized; he tried to induce the Border States to join him in a plan for either gradual or immediate emancipation—1900 was to be the date of the former!—and he still hoped to remove and colonize the freed people, then as now an impossible undertaking, not to speak of its moral aspects. Reimbursing the States which had inflicted such frightful losses in lives and property upon the Union was still another idea which lingered in his mind, and was urged publicly and privately. Finally, going, as he told his Cabinet, "to fulfil the promise I made to myself and to my God," he issued the Proclamation now celebrated, conferring emancipation in the rebellious States, giving them one hundred days of grace, and providing gradual emancipation for the Border States. Not until January 1, 1863, was the task of liberation completed by the second Proclamation, and during the interval Mr. Lincoln's mind recurred to gradual emancipation by means of a Constitutional amendment.

With the immediate effect of emancipation upon both the slaves and the military operations, we are less concerned to-day than with its larger aspects. No one has yet, it seems to us, adequately measured the services of the colored troops, the recruitment of which, already begun, went rapidly forward as soon as the Proclamation came into being, Massachusetts leading. Nothing in all history was ever more fitting, however, than that the first troops to enter Richmond should have been Gen. Godfrey Weitzel's black men; it was a direct corollary of emancipation, in which it is hard not to see the hand of Providence. Nor have we yet had a complete study of Reconstruction from a master hand—that extraordinary period in which, as Carl Schurz said, the problems were not to be solved in any way without erring and some grave injustice. But the great fact remains that all the efforts to preserve or extend slavery, or to pretend that the issue of emancipation was unrelated to that of preserving the Union, were swept away by the inexorable march of events. Lincoln himself found the public pressure irresistible in 1862; the mills of the gods were grinding exceeding fine that year the hopes both of the slaveholders in the South and of those men in the North who would have compromised.

To-day, however men of the North and the South may differ as to the treatment of the negro, however much they may differ as to their reading of the historic past, no one is to be found anywhere who would reëstablish the curse of unpaid, chattel labor. The most pessimistic of cotton-growers to-day, he who can say no good word for his negro laborers, would not urge a return to the old days. For he knows that those prophets of evil who declared in and out of Congress that cotton could never be made to pay with a wage-cost added have long since been refuted, and that free labor at its worst is vastly better than that driven by the lash. So, too, have those been refuted who were typified by the man who asked Wendell Phillips if he did not know that emancipation would make the entire South impossible as a residence for white men, and particularly women. To him Phillips replied that he "intrenched himself upon the principle of human freedom, and left the working out to God." Never was faith better justified; for, despite many cases of lawlessness—which was not unknown in slavery days—the colored people are to-day among the most law-abiding of human beings, when due allowance is made for the condition of degradation and ignorance, of deprivation of the protection of the law and rights of citizenship, under which millions are compelled to live.

As for the colored people themselves, despite all the injustice under which they still stagger, they have every reason both to venerate the name of Lincoln and to take heart as they look back fifty years. From a chattel to a human being—that is the measure of the effect of Lincoln's pen. To own one's body and one's soul; to know no longer the anguish of seeing wife and child sold to meet a creditor's demand or an executor's order—surely the burdens of to-day are but slight compared with those of half a century ago. And the future is still theirs. How can they falter or fail to have faith and hope when they think not only of the change since 1862, but of the story of the fifty years which preceded the Proclamation? Their weakness to-day is chiefly their inability to organize to defend their rights. United they would stand far better; divided they fall before oppression. Can anything else be expected when one reflects on the conditions of their servitude? Or is there an innate race-weakness such as the Jews have never known in the darkest days of their age-long battle against prejudice and injustice? Time alone will show—not a year, nor a decade or two; Mr. Washington's powerful business league may even now be blazing the way. But even if the colored people should always need help and protection, the glory, the majesty, and the wisdom of the Emancipation Proclamation remain undimmed as the first great step to right the most fearful wrong the Western Hemisphere has ever known.

LET THE PEOPLE RULE!

When Mr. Roosevelt at Denver, in the course of a reply to some questions put by Mr. Bryan, declared that he "should be glad to have the recall for the President," he was not speaking on the impulse of the moment. In a speech at Phœnix, Arizona, two days before, he had said: "I would go even farther than the Progressive platform. I should like to have the recall applied to everybody, including the President." Now this development of Mr. Roosevelt's programme is not interesting chiefly as a practical proposition, or even in relation to its theoretical merits. The real concern to Americans in Mr. Roosevelt's whole agitation and, above all, in the way it is accepted by people of intelligence, is the underlying spirit upon which he depends for giving it irresistible popularity. With whatever qualifications he may begin, along any of the lines that he is pursuing, it appears very soon that those qualifications are purely formal or tentative, and that he really stands upon the bald doctrine of unrestricted majority rule. "Let the people rule" is a fine catchword; but when translated into intelligible fact it turns out to mean simply "let the majority at any given time have its way in everything." "The people" includes the minority as well as the majority; it is not the people in this sense, however, for whose rule Mr. Roosevelt clamors—it is the majority for the time being. But it is just against the dangers threatened by such majority rule, in those crises which try the temper of nations, that the safeguard of constitutional government as the outgrowth of ages of experience has been erected.

"My own experience," says Mr. Roosevelt, "was that I could do nothing as President except when the people were heartily with me." Throughout a wide range of public questions and national contingencies, what Mr. Roosevelt here says must be true of any President. But no mistake could be more fatal than to forget that there are cases of a wholly different kind. There have been Presidents who could do, when the time required it, what Mr. Roosevelt confesses he could not do. The people were not "heartily with" Grover Cleveland when, throughout one of the most critical periods of our history in time of peace, he stood like a wall of iron against the debasement of the national currency. He had enjoyed unbounded popularity in his own party, and extraordinary esteem throughout the Union without regard to party; but there came dark days in which, by a mere count of noses, he was probably the most unpopular man in the country. The plague of low prices was then desolating the masses, and he would not stir hand or foot to relieve them of it. On the contrary, he used all his personal energies, and all the official influence at his command, to put an end, for the time being, to the coinage of silver, and thus to strengthen the hands of those who were preparing for the life-and-death struggle between sound money and currency debasement which was to take place two years later. But where does that divine majority stand now which Mr. Cleveland then defied? How many persons in these United States to-day wish that we had gone to a silver basis in 1894? Time has recalled not the President's decision, but that of "the people"; and nobody approves time's verdict more thoroughly than that same "people" itself.

Yet the essential matter here is not that President Cleveland was right and "the people" wrong. It might have been the other way; the wisest and truest of men may err, as well as the majority. The point is that here was a momentous question in the policy of the nation and in the affairs of all its people, which, upon the principle of unrestricted majority rule, would have been decided by learning whether on a certain given day, in the then excited condition of the public mind, the people who wanted the change made were not more numerous than those who were opposed to it. Now, that change would have been irreversible. The fundamental objection to the silver proposition—the objection alongside which all others must be regarded as minor—was that it altered the monetary standard. Whatever moral wrong, and whatever economic disturbance, might have been caused by this act would have been done once for all and could never be undone. Is it not preposterous to say that a matter of this kind should be passed upon with the same ease, with the same absence of personal responsibility, and by the same crude apparatus of a mere count of noses, as is the temporary filling of an office or the approval of a paving loan? Yet to precisely such negation of the functions of responsible government is the whole of this sudden agitation to "let the people rule" unmistakably committed.

What will happen after the 5th of November we shall not be so rash as to attempt to forecast. But for the present we cannot forbear to say that to our mind the most depressing aspect of the Rooseveltian craze is the evidence it furnishes of a want of serious political thought, or political conviction, in quarters where these things might have been confidently supposed to exist. Projects of the most far-reaching character, changes which would go to the very root of our political being and our national character, are greeted with smiling nonchalance, as though they were mere minor incidents in the accomplishment of certain specific reforms. That many of the followers of Mr. Roosevelt are animated by the purest and highest desire for the improvement of the condition of the masses, is unquestionable; but apparently there is not one of them that has taken the pains to examine into either the necessity or the desirability of the means by which it is proposed to advance those ends; to consider what consequences in the long run may be brought about by the innovations which they welcome as a short cut to their immediate objects; or even in a general way to ask themselves what really is the range and scope of these innovations, to what extent they would amount to a wiping out of our whole national tradition. They enter light-heartedly upon a voyage of which they seem to take no trouble to find out either the probable course or the destined end; they put unquestioning trust in a pilot who is fired with a consuming zeal for every new scheme that occurs to him as attractive, and whose devotion to the project is manifestly grounded primarily upon an unbounded confidence in his own ability to bring to success any undertaking to which he may have committed himself. Such a combination of readiness for rash innovation and of blind following of a plausible leader, on the part of persons of education and intelligence, is a new and far from encouraging phenomenon in American political history.

THE BANKERS' CONVENTION AND CURRENCY REFORM.

The action or inaction—it is described in both ways—of the recent bankers' convention at Detroit, regarding currency reform, has evoked conflicting comment. That the convention neither renewed its endorsement of the Aldrich banking and currency plan, nor appointed a committee to urge the enactment of that plan or any other, was assumed in many quarters to mean that the American Bankers' Association had openly professed indifference to the movement, and that the prospect for reform legislation was seriously blighted. This does not, in our judgment, necessarily follow.

The dispatches from Detroit told of a widespread disagreement among the delegates, first as to undertaking any such propaganda at the present political juncture; secondly, as to the wisdom of declaring themselves specifically for the Aldrich plan. The second consideration was recognized a little late in the day. At New Orleans, in last year's annual convention, the bankers unanimously voted that the Association gave "its unqualified approval to the revised plan proposed by Hon. Nelson W. Aldrich, chairman of the National Monetary Commission."

That action was taken without debate on the plan, either as a whole or in its separate provisions; and in view of the fact that even the banking community was not in agreement as to all those details, the vote was pretty sure to cause embarrassment in the future. In endeavoring, at the Detroit convention, to harmonize the difference of opinion which had developed during the year, the bankers voted the following resolution:

> In order that the position of the American Bankers' Association as to a reformation of our financial and banking system may be fairly understood, and correctly placed before the public,
>
> Be it resolved, That this Association will coöperate with any and all people in devising a financial system for this country which shall place us on a par with the other great commercial and competing nations; a system which shall give to the American people, of all classes and conditions, the financial facilities and industrial advantages to which they are entitled.

We cannot honestly say that the convention made a great success of its compromise resolution—"coöperate with any and all people" is a little like invitation for the host of amateur currency reformers of 1907 and 1908 to appear again on the scene—but the convention faced a difficult problem, and perhaps there was for the present no other way out than indulgence in generalities.

It will naturally be asked what effect this negative action of the Detroit convention will have on the general movement. In the first place, existing conditions have made it both necessary and advisable that the currency reform discussion should for the time be allowed to rest in abeyance. It is not a factor in the Presidential contest, and it could hardly be made so without injuring the prospects of legitimate reform.

The attitude of the parties towards currency reform in general, and towards the Aldrich plan in particular, is peculiar. The Republican platform did not mention the Aldrich plan; the essential parts of its declaration on the currency were as follows:

> Our banking arrangements to-day need further revision to meet the requirements of current conditions. We need measures which will prevent the recurrence of money panics and financial disturbances, and which will promote the prosperity of this country by producing constant employment.
>
> We need better currency facilities for the movement of crops in the West and South. . . . In attaining these ends, the investments of individual banks, whether organized under national or State charters, must be carefully protected and our banking and currency system must be safeguarded from any possibility of domination by sectional, financial, or political interests.

This was discreetly vague. So is the Democratic platform's currency plank, which declares as follows:

> We believe the people of the country will be largely freed from panics and consequent unemployment and business depression by such a systematic revision of our banking laws as will render temporary relief in localities where such relief is needed, with protection from control or dominion by what is known as the Money Trust.
>
> Banks exist for the accommodation of the public, and not for the control of business. All legislation on the subject of banking and currency should have for its purpose the securing of these accommodations on terms of absolute security to the public, and of complete protection from the misuse of the power that wealth gives to those who possess it.

This profession of faith is preceded by a statement of the party's "opposition to the Aldrich bill or the establishment of a central bank."

As for the Third Party, its "money plank," along with a statement of hostility to the Aldrich plan, of belief in currency reform, and of the need for protection from Wall Street domination, has this to say:

> We believe the present method of issuing notes through private agencies is harmful and unscientific. The issue of currency is fundamentally a Government function, and the system should have as basic principles soundness and elasticity.

We are ourselves in some doubt as to what this means, and perhaps its authors were not sure about it. Mr. Victor Berger, the one Socialist Representative in Congress, alluding no doubt to the currency plank's denunciation of all but Government-issued money, says that it "smacks of greenbackism." In form, it certainly bears an odd resemblance to parts of the currency plank with which the Populist party entered the field in 1892—"We demand a national currency, safe, sound, and flexible; issued by the general Government only." But this is one of the Third Party's declarations to which no one paid any serious attention.

The point which we wish to emphasize, however, is that nothing could be more futile, to the advocates of the Aldrich bill especially, than to force a disputed currency reform plan into this political arena. If it gained one party's approval, it would probably draw the fire of the other. The Bankers' Convention was entirely wise in refusing to help towards doing so. The country is perfectly well aware that it has several other political matters to settle before it gives up its mind to currency reform. When it has at length reached the time to attend to this matter, the two great parties will, at all events, have declared for conservative measures of reform, and the many unquestionably good points of the Aldrich plan will still be in the field for consideration.

"PRACTICAL" EDUCATION.

The cry for immediate utility as the chief end of education swells in volume every day. In the report of a committee of the National Educational Association, at the annual meeting in Chicago, we read: "High school education is generally bookish, scholastic, abstract, and inadequate to meet the practical problems of life"; and the whole system is just where it was thirty years ago. The cause of the failure is laid bare: "The whole trouble with our high-school education is that it is regarded too much as merely a preparation for the university. Instead of dealing with the problems of life to-day the students are taught to deal with the language, politics, and customs of fifteen centuries ago." The remedy is "a change in high-school teaching, a look in the direction of the farm, shop, and home."

Only about 12 per cent. of the pupils of high schools are preparing for college; and high-school teachers are right in believing that the 88 per cent. whose education ends with the high-school diploma, or even earlier, must be first considered. Moreover, the colleges and universities have led the way in establishing this view. In all of them except four or five endowed universities of the East entrance to college may be through certificate from the secondary school; and within eighteen months Harvard has adopted an examination system based on subjects which are always taught in all good high schools. Thus the need of adapting the high-school course to the demands of the colleges has been done away with by the colleges themselves. The high schools are already free to work out a reasonable curriculum for their pupils as a whole.

The freedom has by no means produced peace, however. Teachers and authorities of the secondary schools are divided over the theory on which the curriculum of those schools shall be constructed. There has been much display of "facts" discovered; but questionnaires on such subjects mostly lead back to the truth that there are two types of human nature, and that teachers divide in about the same way as other people. Prof. William James denominated the two types the tough-minded and the tender-minded. In philosophy they are the pragmatists and the idealists; among the theorists on education they appear as the believers in the practical and the believers in pure culture. At present, the educational pragmatists, the tough-minded believers in the practical, have the floor; and the tender-minded believers in culture are as sheep without a shepherd.

We may admit that the public high schools must regard first of all the 88 per cent. of their pupils who will get no further education. Their business as schools is to do their share in raising the standards of living throughout the nation, and all gains in this direction must be built on economic efficiency. Therefore the schools must think of efficiency. But they must also remember that ultimate efficiency is not necessarily the same thing as the immediately practical.

The difficulty with too many of the present-day reformers of education is that they forget this; and they confuse the inquiry, "Does high-school education pay?" by assuming that it means, "Does the high-school graduate get better pay as soon as he leaves the high school?" As a result, the commercial courses in high schools are cumbered with elaborate methods of computing interest and of keeping books that are never heard of in business, and pupils are loaded up with facts and drilled in set methods that do more harm than good. The boy whose mind closes early on a fixed body of facts and a single, invariable method of doing things makes the man who settles down permanently to the dull monotony of a clerk's desk. The boy who keeps his curiosity and his zest for exploring is the boy who breaks loose from the shackles of routine and becomes manager or partner.

Now, to produce the latter kind of boy, training of the mind is more important than acquisition of facts and drill in methods. Professor Woodbridge of Columbia had a sound article in the *Columbia University Quarterly* on the doctrine that the college exists first and foremost for the increase of intelligence. The high school, as well as the college, should exist first and foremost for the increase of intelligence. But this is not the storing of facts which can be put to immediate use in the shop, the home, and on the farm, nor is it finished expertness in the processes of manufacture or trade. It is rather the capacity to see new facts, to discriminate their significance, and to reason out the general conclusions of principle or action to which they lead. On the whole, this capacity is better developed by the old education than by the new, so-called practical, subjects. It takes not only patience but intelligence to grapple with facts whose significance lies in the mass and below the surface; and the classical languages and mathematics have never been surpassed as gymnasium work for the mind. The fact that Mr. J. P. Morgan might have been to-day a professor of mathematics in a German university is brimming with light for the apostles of the practical.

We have said nothing of the duty of high schools to open new horizons for those of its pupils whose fortune it is to have no further education, nor of their duty to justify and transmit the ideals on which this country was founded and on which it has grown. If these ideals are to live in the nation, its sons and its daughters must know what it is to see visions and what is meant by the prophesying of the spirit; and the high schools, which for so large a part of the select youth of the nation mean the only higher education, must not lose their privilege of being to some degree schools of the prophets.

CIRCUS LEMONADE.

Middle-aged city men at their desks, when they read of the death of H. E. Allott, who first gave pink lemonade to the world, will lay down their fountain pens and gaze out at Broadway through a blur of wistful reminiscence and faded romance. Beyond the skyscrapers and the crowds they will see the circus making its triumphal entry into town. Its way had been prepared. One morning the town awoke to find its available blank walls and fences plastered with visions from an enchanted land. Elephants transcending in size the wildest dreams of the zoölogist, ferocious beasts leaping at their bars with unmistakable intentions upon the surrounding small boys, cavaliers straight from the Field of the Cloth of Gold, beautiful damsels on Arabian steeds smiling simultaneously in all directions, gymnasts riding the high trapeze in defiance of prudence and the law of gravitation, clowns, fat ladies, india-rubber men, untamed denizens of the jungle, infant prodigies—well, what profit is there in recalling all the details of a dream that has vanished? The real circus always fell far short of specifications, but what boy then saw a circus except through the haze of his own imaginings? When the day of the procession arrived, a series of unparalleled disasters fell upon a large part of the school population and its immediate relatives. Grandmothers died in astounding numbers. Ravaging toothaches developed overnight and necessitated an immediate visit to the dentist. Overworked mothers suddenly collapsed under the strain of duty, and so required the imperative presence of their boys at home. Society shifted from its moorings.

The number of small boys who effected a surreptitious entrance under the canvas tent or earned their way by performing valeting service in the menagerie was, after all, not very large. The great majority came in by the front door, openly, even ostentatiously. To make this possible, there was a raid upon hoarded treasure. Tin savings banks were unlocked ceremoniously in the presence of, and with the sanction of, the heads of the family, or were broken open in the dead of night with a hatchet. Sleds, rubber-boots, a set of carpenter's tools, a bicycle, all these became remote ideals in the face of the living present. Where such accumulated treasure did not exist, there was a sudden rise in the moral tone of the school population during the week immediately preceding the advent of the circus. Lessons were mastered with a devotion and facility that was almost alarming. Chores found themselves done without orders from superiors. Cleanliness of face and clothes became the rule. Boys clamored to be allowed to do their home lessons after supper, and these were interrupted only by anxious inquiries addressed to bewildered parents whether it wasn't time for children to go to bed. We firmly believe that the influence of the circus as a moral force in the community has been greatly misjudged. For every boy who ran away to be an acrobat or played truant to be a spectator, a dozen boys experienced an extraordinary spiritual regeneration. It is true that the awakening began the day the circus posters appeared on the fences and vanished the day after the departure of the show, but then what would you ask of poor human nature?

Our children who go to the circus nowadays are fearfully blasé. To them the circus is not an event, but an incident. Its features have been appropriated and familiarized and cheapened by the vaudeville houses, and the roof gardens, and the summer parks. The gift of illusion is waning among fathers and children alike. But in the circus that used to come to town when Garfield was President, illusion prevailed, and in the circuses that come to those happy places that are still towns and not vast acreages of brick and mortar, illusion still prevails. When a magnificent, unparalleled, and totally unprecedented prize of five dollars was offered to any one in the audience who could ride the recalcitrant donkey, the effect of dramatic suspense was perfect. The young soul knew what was coming, but it had not seen the thing happen often enough to lose the capacity for surprise. First a comic Irishman would try to ride the donkey and be thrown off at the first attempt, amidst vast hilarity. Then a Dutchman would try; he lasted a little longer than the Irishman, but he, too, met his fate. Then a clown would enter the lists. He held on long enough to raise the highest hopes, but he also succumbed at the apparent moment of victory. And all this time the young soul knew that somewhere in the audience was the man of destiny who would cling to the donkey's tail with one hand and the donkey's head with the other, and conquer him. The man will make his appearance in the guise of a country bumpkin whose ungainly appearance arouses shrieks of laughter. His ride will be a series of ridiculous contortions and apparent hair-breadth escapes from death. But once he is declared the victor, he will cast his rural garments from him and, revealing himself in the splendor of pink tights and spangles, ride out from the ring amidst the clamorous applause of the multitude.

And now we have three-ring circuses, and glorious Eastern pageants, and revolving stages, and huge tanks of real water, and complicated mechanical daredevil exploits. But where is the zest of other days, when the soul fastened its breathless attention upon one ring instead of scattering it wearily over three? Three rings instead of one; and sanitary ginger-pop in individual bottles drawn through a straw instead of the pink lemonade showing a quota of microbes to the cubic millimetre that would make Dr. Wiley shudder! Where is the tang of intimacy and participation which brought the small boy and the clown and the elephant and the donkey into one bond of sympathy? Will not some Winthrop Ames of the arena give us a Little Circus? Or must we be told by George W. Perkins that the day of the small circus is gone forever, and that only the Big Circus can flourish amidst conditions unforeseen by the Fathers who made the Constitution? Happy those rural portions of the nation where the old ideas still prevail. For us in the city it only remains to remember and regret. The pink lemonade is gone, the steam calliope is gone, the freaks are going; even the advance agent's alliteration is dying out.

AN ISHMAEL OF SCIENCE IN HISTORY.

Paris, September 14.

"La Révolution française et la psychologie des révolutions" (E. Flammarion, 3.50 francs), by Dr. Gustave Le Bon, will, as usual when this author speaks his mind, cause a fluttering in official dovecotes. In his own land of science, he is a wild man; and now that he enters the field of history, his hand is still against every man. His Introduction he entitles "the revisions of history," as it were a succession of Dreyfus cases:

> The modern age is an epoch, not of discoveries only, but of revision of the divers elements of knowledge as well. . . . Science has seen its old principles vanish one by one. . . . Notwithstanding its conjectural side withholding it somewhat from too severe criticism, history has not escaped this universal revision. . . . Among events of which the study seemed finished, there figures the French Revolution, . . . and behold, its most convinced defenders are beginning to hesitate in their judgments. . . . Several causes have brought about the revision of this tragic period. Time has calmed passions, numerous documents have slowly issued forth from archives, and men have learned to interpret them with independence. But it is modern psychology, perhaps, which will act most on our ideas by enabling us to penetrate better into men and the motives of their conduct.
>
> Among its discoveries which may already be applied to history, there should be mentioned chiefly: a more thorough acquaintance with ancestral action; the laws which govern crowds; experiments relating to the disaggregation of personalities; mental contagion; the unconscious formation of beliefs; the distinction of the different forms of logic.

Here, from the start, the author flings in our faces the formulas of the New Knowledge. To some they will seem little but variations of the technical slang that wrappeth up counsel in unskilful words; to others they will prove a darkening of counsel by words without meaning. In reality, Dr. Gustave Le Bon is an author who exceeds his natural right of having one new idea to a page. Perhaps a scientific certificate may be found for him in the respect shown him by Henri Poincaré. What he has to say is really useful, and so is the mental effort which he forces us to make to adjust old thought to new forms of speech. For example, in history the disaggregation of a personality can mean little else but what we used to call the weakening and going to pieces of a character under new strain; for character is the sum of a man's habits of will, and, though habits constitute a second nature for the person, they can evidently do their work only in things habitual. Also, ages before the French Revolution, it had been observed that men who sow the wind reap the whirlwind in themselves and plunge into actions for which there is no precedent in their previous lives. The mere attribution of this to individuals and masses of men who form their beliefs unconsciously and act, not with consistency of reasoning, but by "affective" or "mystical" or "collective" logic, is not new knowledge. Pascal summed it in a sentence: "The heart has reasons which reason does not know." Gustave Le Bon attaches a quite special importance to the "mystic spirit which consists in the attribution of a mysterious power to superior beings or forces, taken concretely as idols, fetishes, words, and formulas. It is the foundation . . . of the greater part of political beliefs."

We may, indeed, look askance at this new labelling of known facts of history, and not admit some of the underlying hypotheses. Yet we must acknowledge our author's searching analysis of the facts; and no reader of his book who exercises the logic of reason can afford to pass lightly over his more or less new interpretation of them. One-third of his book is given to a general first part on the psychological elements of revolutionary movements, scientific, political, and religious, and on the different parts played in them by governments and the people:

> Although a revolution has sometimes a rational origin, we must not forget that the reasons invoked to prepare it act on crowds only after their transformation into feelings, . . . Whatever its origin, a revolution is productive of consequences only after it has descended into the soul of the multitude. . . . A revolution therefore reaches down to the multitude, but it has not there its starting point. The crowd represents an amorphous being which can do nothing and wills nothing without a head to guide it. Very quickly it outstrips the impulse received, but it creates the impulse never.
>
> . . . Lower, and very far from the scientific revolutions which generate the progress of civilizations, there figure the religious and political revolutions; and these are without relation with the scientific revolutions. While the latter derive solely from rational elements, political and religious beliefs have their support almost exclusively in affective and mystical factors. . . . From the single fact that it is considered absolute truth, belief necessarily becomes intolerant. Thus are explained the violence and hatred and persecution which form the habitual train of political and religious revolutions, notably of the Reformation and the French Revolution.
>
> . . . Political revolutions may result from beliefs which have become settled in souls, but there are many other causes to produce them. The synthesis of the causes is represented by the term of discontent. . . . Unless it becomes universal and excessive, discontent is not sufficient to make revolutions. It is easy to lead a handful of men to pillage and destroy or massacre; but to make a whole people rise, or at least a great part of a people, the repeated action of agitators is necessary. . . . In this way were prepared the Christian revolution and the French Revolution. The reason why the latter took but few years while the former needed many is that our Revolution had quickly for itself armed force, whereas Christianity was very late in winning material power. . . . When the triumph follows violent struggles, as in the French Revolution, the conquerors will reject in a lump the whole arsenal of old law. The partisans of the fallen rule will be persecuted and expelled or exterminated. The maximum of violence in persecutions is reached when the triumphant party defends, over and above its material interests, a belief. Then the conquered can expect no pity. Thus are explained the expulsion of the Moors by Spaniards, the auto-da-fes of the Inquisition, and (in France) the executions of the Convention and the recent laws against religious communities.

This sequence of propositions from our author's opening chapter is needed to indicate the fundamental principles of his treatment of the French Revolution, which our grandfathers watched without understanding and which we study multifariously with little more intelligence. There are still too many enthusiasms, too many hatreds, and far too many personal interests involved to expect Gustave Le Bon's particular conclusions to be accepted by every one. Possibly his own ruthless use of scientific methods and theories, and his personal satisfaction in applying them to burning questions of to-day, will stir prejudice against him in many intellectual quarters. It is not given to every historian as to Tocqueville to write a fundamental book on the French Revolution in which, as Lord Acton remarked, later study has found nothing to change. But it may be asserted confidently that no future critic of history already written and no future historian can legitimately write as if Gustave Le Bon's book were not written.

The preliminary chapter on the religious revolution of the Reformation (in France), on account of its "importance for the understanding of great political revolutions," is sure to displease those who persist in realizing their conceptions abstracted from a mid-Victorian Gladstone in a Coligny under the expiring Valois rule. Our author's idea of religious toleration in practice is not essentially different from John Stuart Mill's, that it is possible only in the direct ratio of religious indifference:

> In the ancient world, it was attained only by polytheists. In modern times, nations that practice it may equally be qualified as polytheists, since, as in England and America, they are divided into numberless religious sects. Under identical names, they adore in reality gods sufficiently diverse. . . . Thus we are brought to face a psychological problem not yet resolved—How to possess a belief that shall be at once strong and tolerant.

On this truly crucial question, our author insists whenever he touches on the intolerance of the French Revolution, of recent Radicalism, of Socialism when it is turned into a religion, and of Anarchy which is already so. The answer is vital to Americans, for the legislators of our liberties and the people after them thought an answer could be found by a law-abiding people in an explicit limitation of the powers of government. The keen understanding of Professor Esmein, in his learned work on Constitutional Law, recognizes such limitation of government as an American innovation; but even he fails to see the underlying principle in the minds of all American generations, except perhaps the latest. In the practice of French revolutions, Gustave Le Bon is quite alive to another and physical limitation of all governments:

> If you know only the overturns of France for more than a century, you will suppose that she has been living in profound anarchy. Just the contrary, for in her economic and industrial, and even in her political, life there is manifested a continuity which seems independent of all overturns and all régimes. Beside the great events with which history is occupied, there are the little facts of daily life not related in books and dominated by imperious needs which do not wait. The sum of them forms the real web and woof of a people's life. . . . To make revolutions is easy, to modify a people's soul is very hard.

This leads straight to the study of the part played by the real people in revolutions and of "the entity People and its constitutive elements"; and of the "forms of mentality predominant during revolutions." Here we have characteristic chapters on the mystic and the Jacobin, the revolutionary and the criminal minds, and on the psychology of revolutionary crowds and assemblies.

The second and longer part of the book applies these scientific results as so many general principles of judgment to the French Revolution in particular. First, the opinions of historians are sifted, their old theories of fatalism and their new uncertainties and their impartiality. Then there is a psychological study of the old régime, of the mental anarchy at the moment of the Revolution, and of the part in it attributed to eighteenth-century philosophers. For present utility, the most important of these chapters should be that of the "psychological illusions of the French Revolution" concerning primitive man and the state of nature and the people's soul; illusions of the possibility of separating men from their past and of the transforming power of laws, and of the theoretic value of the great principles of the Revolution.

From the Revolution in its destructive triumph, we are led to consider the inevitably reactionary "struggle between ancestral influences and Revolutionary principles." This gives us the "last convulsions of anarchy" under the Directory, the coming of Bonaparte, the reestablishment of order, and the Consular Republic. With the causes of the duration of the Revolution and the psychological elements which determined the success of the Consulate's work, our revision of history comes to an end; but a necessary chapter traces summarily the "political consequences of the conflict between traditions and Revolutionary principles during a century."

A third part, in which each paragraph might be a page or even a chapter, follows up the modern evolution of the principles of the French Revolution in the slow progress of democratic ideas and the inordinate development of equality at the expense of liberty and fraternity. The consequences of such evolution and the present form of the Jacobin spirit created by democratic beliefs; the new forms of such beliefs in the struggle between labor and capital; and the laboring class organizing itself in syndicalism, while democratic governments transform themselves into administrative castes of state functionaries, are objects of present experience in other countries as well as in France:

> In this book, I in no wise refuse to acknowledge the importance of certain acquisitions of the Revolution for the people's

rights. But, with many historians, I have had to admit that the gain harvested at the cost of so many ruins would have been obtained later, without effort, by the simple onward march of civilization. For a little time gained, what material disasters were accumulated, what moral disintegration from which we are still suffering! Such brutal cutting of the chain of history is mended but slowly—it has not been mended yet.

From his Arabia of science, Dr. Gustave Le Bon addresses a final warning to "the youth of to-day who seem to prefer action to thought":

> If we continue breaking up our cohesion by intestine strife, party rivalry, low religious persecution, and laws to hamper industrial development, the part we play in the world will soon have an end.

THE VIOLENCE OF ENGLISH SUFFRAGETTES.

TO THE EDITOR OF THE NATION:

SIR: All Americans who are interested in English politics must feel mortified at the unenlightened attitude of certain American periodicals towards the movement for woman suffrage in England. I refer especially to an editorial in the *Outlook* for August 31, entitled, "Murder Is Murder Still." The first thing that Americans must try to understand is not only that the Englishman takes his politics more violently than the American does, but also that his campaign tactics are very different. Certain sorts of fundamentally harmless attack on public persons, and annoying but not really serious damages to property, have become politically conventional in England, and have accompanied every political upheaval of any moment. "The first thing a discontented Englishman does to show his discontent is to smash a few of the Hyde Park railings"; and the window-smashing of the suffragettes belongs strictly in this category. Nor need I recall to any student of history the more serious rioting and destruction of property on the part of men which has preceded every advance in the liberties of which England is so proud. The male agitation for the "Great Reform bill," for example, expressed itself, in Bristol alone, by the burning of the Mansion House, the Custom House, the Bishop's palace, the excise office, three prisons, four toll-houses, and forty-two private dwellings and warehouses; not to speak of more serious occurrences in other parts of England.

If then a certain organization of Englishwomen (and a very large and wealthy one) has embarked upon a definite policy of window-smashing, and of "pestering" public ministers, in order to gain certain political ends, these women are merely doing what they have seen their fathers and brothers do, and what the history of their country teaches them that citizens who consider themselves aggrieved have always done. To say that this extraordinary campaign—so carefully organized and so lavishly financed by people in every walk of life—is "the work of hysterical, crazy, and therefore irresponsible, women," is in the highest degree an untrue as well as an ignorant statement. The "militant" campaign, deliberately begun in 1905, and systematically continued up to the present time, with ever-increasing enthusiasm and a constant gain of recruits, might be described by almost any other adjective than "hysterical."

Perhaps few Americans realize how large and powerful an organization the Women's Social and Political Union is. The central offices at Clement's Inn, Strand, London, occupy twenty-three rooms and employ a salaried staff of 110 persons. Here also there is a shop; and another shop and thirteen rooms are situated on Charing Cross Road. The Woman's Press is here, where the suffrage newspaper, *Votes for Women*, is published once a week. According to the report published last year, there were then also 105 local centres of the Union. The income of the central organization of the Women's Social and Political Union during 1910 was $172,500, exclusive of $45,000 made by the Woman's Press, and large sums collected by local unions. By the close of 1910 the $500,000 campaign fund was complete; and the Union is now engaged in increasing this fund to a million dollars. This enormous fund is an accumulation of small contributions; and upon it rests not the smallest taint of corporation or vested interests.

It is true that the acts committed recently in Dublin by Mrs. Leigh and Miss Gladys Evans are by far the gravest yet undertaken by the suffragettes. They themselves are the last persons to underrate the gravity or to seek to avoid the punishment. Both offenders pleaded guilty instantly. The whole object indeed of these protests is of course to advertise the situation as much as possible, until public opinion forces a reluctant ministry to grant the Parliamentary franchise to women.

Do not understand me to be defending such methods as such. To the average American they are as reprehensible as they are perplexing. But although, happily, American politics follow, and probably always will follow, conventions quite different from those under discussion, intelligent Americans will do well in trying to understand before they deprecate what these Englishwomen are doing.

FRANCES BERKELEY YOUNG.

Madison, Wis., September 7.

[Intelligent men, even in England, do not commonly in cold blood justify a course of deliberate violence for the attainment of a political end.—ED. NATION.]

THE LATE GEN. OTIS.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me to utter a word of comment on your appreciative editorial upon the career of the late Lieut.-Gen. Arthur MacArthur, and incidentally to pay a slight tribute to Major-Gen. E. S. Otis, also deceased? I yield to no one in my friendship for and admiration of Gen. MacArthur, a soldier of unusually high standards, who deserved well of his country. But I feel impelled to protest against the slur you appear to cast upon his predecessor in the command-in-chief in the Philippine Islands. That Gen. Otis exercised this command which would have taxed to the utmost the powers of our highest and best officers, with consummate skill and, on the whole, with great success, few officers acquainted with the circumstances will question. Also it may be asserted without fear of contradiction that none such will fail to resent the imputation that the record of our troops in the archipelago was "disgraceful" prior to MacArthur's succession to the supreme command. Quite to the contrary, those who understood the situation will maintain that under the general guidance of Otis both volunteers and regulars displayed soldierly qualities of the highest type in the exhausting operations which fell to their lot. It should be remembered that when Gen. Otis quitted the Islands organized resistance to the authority of the United States had been well-nigh crushed, that the chief and the leaders of the insurrectionary movement, at least those of the latter who had not surrendered or been captured, were dispersed and in hiding—in short, that the backbone of the uprising had been broken. Furthermore, it should not be forgotten that in the pacified provinces of the Island of Luzon the foundation had been laid (much to the satisfaction of the Filipinos) for the establishment of schools on a modern basis, and that methods had been devised, and to a great extent put into operation, for the restoration of civil government.

How highly Gen. Otis's performance, both as general-in-chief and as military Governor, was prized by President McKinley is evidenced by a message the writer carried to Otis in the summer of 1899. "Tell Gen. Otis," said the lamented McKinley, "that he has borne himself magnificently throughout this most trying period, and that he has my full confidence and shall have my unwavering support." Well did Otis merit this encomium. A man of sterling integrity and high purpose, inflexibly intolerant of graft under whatever guise, his face set like flint against depredation upon or undue oppression of the inhabitants on the part of his troops, Gen. Otis never ceased to manifest a lively and sympathetic interest in the Filipino people, and, so far as his mission would permit, to promote their welfare by every means in his power. Though a constant sufferer from a gunshot wound in the head, received in the Civil War, and in hourly danger of assassination (of which warning came to him frequently), he bore for two years the brunt of an awful situation with a courage and serenity of mind which challenge admiration.

As for himself, he was the very opposite of the self-seeker. Uncomplainingly did he witness, after his retirement, the elevation above him in rank of officers who had always been his subordinates, in some cases not even his immediate subordinates. Any future history of the American campaigns in the Philippines, if impartially and painstakingly composed from the abundant materials at hand, must needs do that full justice to the memory of Elwell S. Otis which the remoteness of the scene of his toil and the busy life of the American people, so absorbed in present-day affairs as to give little heed to the past, have thus far withheld from him.

THEODORE SCHWAN,
Brigadier-General, Retired.

Atlantic City, N. J., September 14.

WOODROW WILSON AND THE LABORING MAN.

TO THE EDITOR OF THE NATION:

SIR: An editorial in the *Nation* of August 1 complains that "a few editors of foreign birth" have spoken of Dr. Woodrow Wilson as "the foe of the laboring man." Why "foreign birth" should be offered as an objection to an editor criticising a Presidential candidate I do not know; certainly the sneer seems to me unworthy of a journal of the reputation of the *Nation*. What, however, I am convinced is an error lies in the use of the term "laboring man." I th that the charge of the "editors of foreign birth," whatever its wording, was based on the presumption that Dr. Wilson is a foe of *union* labor.

This charge is based upon statements alleged to have been made by Dr. Wilson in public. He is quoted as saying in a lecture before the People's Forum of New Rochelle, N. Y., on the 26th February, 1905: "The labor unions reward the shiftless and incompetent at the expense of the able and industrious." And shortly after his nomination to the Governorship of New Jersey (the clipping from which I now quote is unfortunately undated) he is reported to have said: "We shall not act justly or wisely if we attack established interests."

These quotations are taken from accounts published as ordinary news immediately after the delivery of the speeches in which they were said to have had a place, and so far as I know their accuracy has never been denied. If they are incorrect, Dr. Wilson ought to deny them; if they are correct, then at least the former of them certainly furnishes even "a few editors of foreign birth" with reasons for believing that Dr. Wilson is an enemy of union labor.

REGINALD WRIGHT KAUFFMAN.

Cloughton-Newlands, Cloughton, England, September 2.

[No sneer was intended in the phrase "editors of foreign birth." We merely stated a fact.—ED. NATION.]

THE HEAD OF WINDERMERE.

TO THE EDITOR OF THE NATION:

SIR: In your paper of the 29th of August, you have a paragraph about the attempt to procure a piece of land at the north end of Windermere. It is strange that you have failed to mention the chief reason why the protection of this land is desired, which is, that it is the site of a large Roman camp, which has never yet been excavated. As a resident of the neighborhood, I have contributed to the sum required, but the money comes in so slowly that I fear the needed amount may not be collected in time to prevent the destruction of this camp.

I. A. BRIGHT.

Bowness-on-Windermere, September 9.

A NEW KIND OF IMMORTALITY.

TO THE EDITOR OF THE NATION:

SIR: I discovered it a few years since in Missouri, where things unique and picturesque grow in all their native luxuriance. Down below Jefferson City, where the Osage River cuts a gorge of respectable proportions through the limestone country, the village of Tuscumbia lies partly on the bluff and partly on the bottom-land, while a church stands half-way between, as one of the ways of keeping the peace.

A lawyer lived on the bluff, who took me out for a walk one evening and pointed across to the perpendicular face of the limestone cliff on the opposite side of the river, observing to me that those holes in the face of it were caves. Some of these caves were above high-water mark, for I should state that the narrowness of the gorge often raises the river to unusual heights, and consequently some caves can only be entered in times of high water, unless they have an opening back inland.

"That high cave you see over there with some artificial masonry on one side," said the lawyer, handing me his glass, "has a very curious history. You know, this is an old settled country, and one of the first white settlers to come was a man named Wilson, an original character, who came up here in a boat before the War of 1812, for he took part in the battle of New Orleans, going down and returning in his canoe. When he arrived, however, he discovered that cave and determined to winter in it and settle on the bottoms in the spring.

"In the winter he discovered a small cave, about as large as an ordinary tomb, which had a small opening in the face of the cliff, near the large one he occupied. That artificial masonry you see fills it and makes the cave air-tight, so to speak. The large cave opened inland also, in such a way that he could fortify it against the Indians if necessary.

"Wilson was an educated man, and was one of those followers of 'Tom' Paine, who hailed him as the 'Bob' Ingersoll of those days. He was very thoughtful during that winter, and there it was he conceived the idea of using that smaller cave as a tomb when he came to die. He didn't believe in the old-fashioned immortality of the soul, and then and there determined to impress upon the future community a new kind of immortality of his own invention.

"In due time a family grew up around him on the farm, and as years went on he made known to the family his plans for burial in the cave. In the first place, he wanted no mourning, but ordered instead that there should be a big barbecue with all the people for miles around to enjoy it. Then his remains should be relieved of the viscera, filled with salt, put in that little cave up in the cliff above high-water, with a big demijohn of applejack whiskey, and the entrance closed solidly with masonry. This done, the day was to be concluded with the usual frolic and fun of a holiday. Furthermore, at the end of seven years, the people were to be called together to open his tomb, take out the applejack whiskey, refill the demijohn with new whiskey, and replace it, and, closing up with masonry as before, have another gala day. This was to be repeated every seven years.

"When he came to die, 'Cave' Wilson—for that became his nickname—was buried according to his plans, with one exception, that his wife's earnest plea for the ordinary burial of his heart was respected.

"At the end of seven years, as the anniversary day came near, the opening of the cave and the sampling of the old applejack became subjects of keen interest for miles around. Crowds came to the barbecue, larger even than at the original one. Preparations were on a great scale, and the fun of the day was equal in every respect to 'Cave' Wilson's desires. The time came to open the cave and the crowd started, but at the mouth of the tomb it soon became evident that no one had the nerve to open it. Waiting and suggestions were of no avail; no one would do it. Finally it was decided that they should let that part go until the next time, and the day closed.

"Seven years later the day was celebrated in the same way, with the same lack of nerve to open the tomb. So it has been ever since, until 'Cave' Wilson's barbecue is a regular seven-year anniversary, and big crowds always come to see the opening of the tomb and taste the applejack, but no man's craving for old Missouri whiskey gives him enough nerve to open it. I reckon we'd better go to the house."

The swiftly flowing Osage in the darkening shadows along the base of the cliff, and the glow of the setting sun tipping its crest, made a beautiful scene that summer night, as I thought of "Cave" Wilson's world-old longing and his novel means of meeting it. BURTON ALVA KONKLE.

Swarthmore, Pa., September 17.

Literature

THE NEW REALISM.

Present Philosophical Tendencies. By Ralph Barton Perry. New York: Longmans, Green & Co. $2.60 net.

This book is, as the sub-title announces, "a critical study of naturalism, idealism, pragmatism, and realism, together with a synopsis of the philosophy of William James." Whoever wishes to gain a real acquaintance with the problems of present-day philosophy and with the solutions suggested for them by contemporary schools of thought may well give this book a serious and careful reading. He will find no other so useful for his purpose.

Professor Perry begins his presentation by showing how the present tendencies in philosophy have developed out of the age-long conflict between religion and science. Religion and science agree in desiring the truth, and in desiring it for practical purposes. But they differ both in subject-matter and in motive. Religion is interested in the ultimate, science in the proximate. Religion is prompted by hope and despair and by longings for personal well-being; science is indifferent to personal interests and seeks the purely theoretical truth. So long as science was subject to religion, as in the Middle Ages, the philosopher was not compelled to choose between them; but when, towards the close of the eighteenth century, science had quite won her independence and the two had parted company, a corresponding division inevitably resulted among the philosophers, according as the motive of science or the subject-matter of religion made the greater appeal. Thus it came about that the two great philosophical schools of the nineteenth century—and, indeed, of the present as well—were naturalism and idealism. The two younger schools, pragmatism and the "new realism," have sprung up quite recently as revolts against the narrowness and extravagance of their seniors. Every movement of importance in the philosophical world of our time (at least, in metaphysics and epistemology) can be set down as belonging to one or another of these four schools, which our author now proceeds to examine in detail.

"By naturalism is meant the philosophical generalization of science—the application of the theories of science to the problems of philosophy." "It is the assertion that scientific knowledge is final, leaving no room for extra-scientific or philosophical knowledge." And it is in this last clause that its weakness is expressed. On its positive side naturalism is quite justified. It is a mistake, according to our author, to attack natural science as failing to deal with reality—a course so popular in many quarters. The object of science is genuine reality, and its results are genuinely true so far as they go. But, on the other hand, naturalism is at fault in failing to recognize that there are other kinds of reality besides the physical, and that, in fact, the entities of logic and mathematics are even more fundamental than its own:

> There is no sense in which physics can be regarded as the fundamental science; nor is there any sense in which the facts which are determined by physical hypotheses can be regarded as ultimate facts. And this conclusion is fatal to naturalism. It gives to being, *in the last analysis*, a logical, rather than a physical, character; and reduces the experimental method of physics to the position of being a special instance of logical method.

The religious motive is at the basis of idealism, but its cardinal principle is a theory of knowledge—the assertion, namely, that "being is dependent on the knowing of it." It is thus an epistemological rather than a metaphysical idealism that Professor Perry has in mind, and this must be remembered when considering his critique of it. The real essence of idealism our author rightly insists is to be found in Berkeley's identification of all reality with some form of consciousness; but it is questionable whether the essential thing in idealism—even in Berkeley's idealism—can be expressed by the assertion that "being is dependent on the knowing of it."

Idealism (thus understood) our author insists rests upon two specious arguments, which he entitles "the assumption of exclusive particularity," and "the ego-centric predicament." An example of the former is Berkeley's assertion that it is contradictory to suppose that our sensuous objects should exist independently of all minds. It is a matter of common experience, Professor Perry points out, that things can exist in several groups at the same time. "It does not occur to Berkeley, apparently, that a natural body like a tulip can belong both to the order of ideas and *also* to another and independent order." Hence we cannot conclude that because sensuous objects are sensuous they cannot exist also independently of sense and in other relations. Quite similar to this fallacious argument of idealism is the appeal to the "ego-centric predicament" on which Berkeley so often relies. This predicament consists in the fact that "no thinker to whom one may appeal is able to mention a thing that is not idea, for the obvious reason that in mentioning it he makes it an idea." It is put by Mr. Bradley thus: "Find any piece of existence, take up anything that any one could possibly call a fact, and then judge if it does not consist in sentient experience." Professor Perry regards this argument also as quite specious. The fact that only experience can be experienced fails to prove that only experience exists:

> The ego-centric predicament itself prevents the observation of negative cases. It is impossible to observe cases of unobserved things even if there be any. . . . The assertion that an idea is an idea conveys no knowledge even about ideas. But what the idealist requires is a proposition to the effect that *everything is an idea*, or that *only ideas exist*. And to derive this proposition directly from the redundancy just formulated, is simply to take advantage of the confusion of mind by which a redundancy is commonly attended.

This is the essence of our author's critique of Berkeleyan idealism. And it will be observed that very little has been said to prove idealism false, the whole force of the argument being of a negative kind and calculated to show that idealism has not made good its claims as the *only* tenable view. Professor Perry, however, seems to regard his critique as quite conclusive; and after thus annihilating Berkeley he moves upon Kant, Hegel, Royce, Joachim, and the whole army of "objective" and "absolute" idealists. These all prove to be much weaker than their reputations would lead one to suppose, for (though they often deny it) they all stand or fall with Berkeley; and Berkeley has now been laid low. The two chapters on these later idealists are rather dreary reading, but that is not the fault of our author—consider his subject! And his exposition of the half-dozen different kinds of objective idealism will be of value to any one who wishes to familiarize himself with some of the most abstruse developments of modern thought.

Pragmatism fares better with Professor Perry than idealism. Bergson's anti-intellectualism (which is classed with pragmatism) is, to be sure, severely and admirably criticised, and the repeated ambiguities and dangerous subjectivism of American and British pragmatism are pointed out. But, on the whole, our author regards the pragmatic movement, especially that represented by James, as on the right path. With a little modification it would lead on to the true philosophical gospel, which is the "new realism."

Realism is an old doctrine, but in its traditional and dualistic form it succumbed under the attacks of the idealists. In our own day, however, the essential realistic view of nature as independent of experience has taken a new lease of life. In England Bertrand Russell and G. E. Moore are among the leaders of the movement, and in the summer of 1910 six American philosophers constructed a realistic platform which they published in the *Journal of Philosophy* and prepared to defend against all comers. Professor Perry is one of these "platform realists" (as they are styled in philosophical circles), and the book under review is intended largely as an exposition and defence of the "new realism."

The new realism repudiates dualism and regards reality as made up of elements of one kind only which may or may not, at any given moment, form part of the content of mind. This obviously necessitates a new view of mind, and it is to this realistic theory of consciousness that Professor Perry first turns. If the individual consciousness is as private and unique a thing as it is commonly held to be, its content cannot be regarded as common to the rest of the world; hence the realist's first task is to break down this traditional view. Professor Perry points out that mind is known in two ways, by introspection and by observation; and he insists that though the latter method is in a sense less direct than the former, knowledge of mind once attained through it is no less knowledge than that obtained by introspection. It is quite possible for me to find out what your present sensations and ideas are, and when I have done so I may genuinely share them with you. These common objects of our minds, moreover, are also parts of the environment. Do we not both see the same rose that is blossoming in the garden? The one identical rose, therefore (unless we return to an impossible dualism or an untenable idealism), is at the same time a member of at least three separate groups—namely, those that we know as your mind, my mind, and the garden. This view of perception as a participation in the external world, Professor Perry borrows from Bergson. Unlike Bergson, however, he does not stop with the perception, but carries the same principle through the entire range of mental states. The content of mind is thus a collection of objects which are at the same time parts of the surrounding environment, and which are selected out by the physical organism according to the principle of utility or biological interest.

Thus we are brought to an "epistemological monism." "Ideas are only things in a certain relation; or things, in respect of being known, are ideas." This proposition, however, as our author admits, "not only fails to establish realism, but appears even to disprove it by bringing the transcendent directly into mind." The real argument for realism must, therefore, now be taken up. In expounding it, Professor Perry first refers us to his critique of idealism—which, it will be remembered, was purely negative in effect. He then tells us that "the most general argument for realism is an application of the theory of the *external* character of relations." But to apply this to the present argument it is necessary to assume the whole realistic contention, namely, that things are external to consciousness and are connected with it by purely extrinsic relations. Possibly Professor Perry sees this himself; at any rate, he admits that "the theory of the externality of relations is not sufficient in itself to establish the case for realism." His next recourse is an appeal to a dogmatic assertion of Mr. Moore's, to the effect that yellow and the sensation of yellow are distinct. Neither Mr. Moore nor Professory Perry seems to see that this again, in effect, begs the very question at issue; but Professor Perry at least admits that it falls far short of proving realism. The reader who for the last fifty pages has been in a state of eager attention, expecting at every moment the sudden appearance of the long-promised proof of realism, now turns the page and finds, with a shock of disappointment, that there are only two short paragraphs left in which the proof must, if at all, be found. The longer of these is purely explanatory. The real core of the argument narrows down to the shorter of the paragraphs, which is here appended entire. It is now or never!

> We need to forsake dialectics, and observe what actually transpires. We then find that consciousness is a species of function, exercised by an organism. The organism is correlated with an environment, from which it evolved, and on which it acts. Consciousness is a selective response to a preëxisting and independently existing environment. There must be something to be responded to, if there is to be any response. The spacial and temporal distribution of bodies in its field of action, and the more abstract logical and mathematical relationships which this field contains, determine the possible objects of consciousness. The actual objects of consciousness are selected from this manifold of possibilities in obedience to the various exigencies of life.

There could hardly be a better illustration than this of the inability of the realist to get at his conclusions without begging the whole question. The "independently existing environment"—independent, be it remembered, not only of your mind and mine, but of all mind, and essentially non-psychical—has to be assumed, or dogmatically asserted, if it is to be had at all. Doubtless these "neutral entities," as Professor Perry calls the things in this unexperienced environment, may exist. But we have as yet been offered not a single reason for supposing that they do. And until some such reason is suggested, it would seem that these "neutral entities" belong rather to fancy than to philosophy.

It is fair to Professor Perry, however, to add that his proof of realism is the only weak portion of his book. For the rest, he has given us admirable exposition, keen criticism, and suggestive construction, all couched in a style that makes a difficult subject pleasant reading. His book is as excellent and important as the length of this review would indicate.

CURRENT FICTION.

[TALES OF SENTIMENT.]

The Raid of the Guerilla. By Charles Egbert Craddock. Philadelphia: J. B. Lippincott Co.

The White Shield. By Myrtle Reed. New York: G. P. Putnam's Sons.

The Red Cross Girl. By Richard Harding Davis. New York: Charles Scribner's Sons.

It is a good many years now since Miss Murfree began to write her tales of the Great Smoky Mountains. At that time there were not a few corners of America which were yet to find their places on the literary chart. The pursuit of local color had hardly more than begun. Nobody had undertaken to put the Southern mountaineer into black and white; and Miss Murfree's first success was no doubt due in part to the fact that she had a clear field. Since then John Fox, jr., and others have made the Southern mountain region familiar as a literary setting. Fashions in story-telling have changed in the meanwhile. The popular magazines (after Kipling) have established a brisk and matter-of-fact style as the standard. In consequence the manner of "Charles Egbert Craddock," which is exactly what it was twenty years ago, sounds a trifle formal and self-conscious to-day. Now and then it is almost ludicrous in its elaboration. For instance, instead of saying that one of her people saw there was going to be a row and did the only thing possible to prevent it, she says that he, "discriminating the elements of an uncontrollable fracas, seized on the alternative." Not yet is the shade of the Great Cham forgotten! In substance these tales are undisguisedly tales of sentiment, in the respectable sense of the word. If Miss Murfree sees life through a rosy glass, it is a glass, after all, and not a mere film of pink jelly.

As much as that cannot fairly be said of the late Myrtle Reed. She displayed no fear of mawkishness for the reason that she did not dream of its existence. Banality was her native air, and she appealed with absolute confidence and invariable success to that large audience which does not suspect that there is any other atmosphere worth breathing. She has all the sentimentality of that master of her school, "The Duchess," without her saving touch of humor. The editor of the present series of stories has caught the note with perfect success. Myrtle Reed's writings, we learn, "are rich with sympathy and hope which have poured the oil of gladness into many a wounded spirit. . . . "Pathos is not sadness, but it is rather the sunshine gleaming through a passing cloud, and hence the writings of Myrtle Reed are illumined with the gladsome light of unfailing love." In other and ruder words, she has an inexhaustible vein of sentimentality. To a writer with this asset, little else is necessary. Ingenuity of plot is uncalled for; the merest outline of situation is enough. For instance, a youth thinks of enlisting in the Spanish War. His sweetheart hesitates, but lets him go, for the sake of the Flag. He is reported missing after the charge at Santiago, but turns out to be only slightly wounded; and presently "a bronzed and bearded soldier was holding his sweetheart close, and a woman was sobbing out of more happiness than one heart could hold, on the shoulder of her volunteer." Or, again, a maiden refuses her lover because she is determined to become a great novelist. She cannot get her novel published, burns it, and (the lover entering) "gave her lips to his in that kiss of full surrender which a woman gives but once in her life." There is obviously no limit to the variations which may be safely played on this simple theme. Curiosity has led us to note that out of the twenty stories here collected, a round dozen end with what theatrical people call "a kiss curtain." Three of the rest end with scenes of death-bed pathos.

With Richard Harding Davis, sentiment assumes a masculine (or should we say mannish?) garb, but there is no doubt of its importance to him. Van

Bibber will be recalled as a creature of sentiment pure and simple—beneath his fashionable raiment; and the later heroes, Ramson and the rest, however dashing and bachelorish, are really mere slaves of sensibility. These stories are in the familiar vein. In all but one of them the action turns upon some consideration of sentiment. The "Red Cross" girl is really an heiress in disguise. A poor reporter falls in love with her for her own sake, wherefore she throws over the English peer for him. In "The Grand Cross of the Crescent," an American college boy sacrifices his own prospects for the sake of winning happiness for the educationally good-for-nothing old professor who has plucked him. And so on. Throughout is maintained that clubmanly air which is so irresistible to the lay public—a phantom cocktail always at one's elbow, a shadowy cigar-tray always in the act of proffer by an irreproachable ghost of a waiter. And yet our story-teller is human; he has a heart, he is even capable of crediting one of his heroines, in a yielding moment, with "the look that never was on land or sea." We suspect that a stern and unbiassed critic, an observer who had not been, as it were, brought up with Mr. Davis and his heroes, might be unkind enough to docket him as a Myrtle Reed of the smoking-room.

An American Wooing. By Florence Drummond. Boston: Houghton Mifflin Co.

When Elspeth and Moira Menzies came from Scotland to America to visit their aunt, they entered upon the adventure with the zest of the young, the curiosity of the untried, and the metaphysical and analytical bias of the Scot. And a curious group of Americans helped their researches! They lived in "the Newtons" and numbered among their friends some of "Boston's keenest faddists." One was a leader among transcendentalists, combining soulfulness with slang and defective grammar. Another "had no more respect for people who chanced to be dead than for people who chanced to be old. . . . 'I can't kowtow to chronology.'" Another is deftly marked as an American curio by a middle initial. One keeps her guests busy with little house duties on "the principle of non-separateness." One is "the most elegant woman in the States." Another—one of the two prevailing young men—asks Elspeth, "If I have a thought may I not tell it and share it till it is blunted by materialization?" "Don't think you have seen the whole of America," he says, "until you have looked into the soul of each man and woman that belongs to it." Each and all had "dramatic conceptions of themselves" and almost justify Elspeth's conclusion that the American note is the sense of "the dramatic value of being part of an effective whole."

From Boston they go to Bar Harbor, to Gloucester, to a "Mary Wilkins village," to Concord. And everywhere the Scottish microscope is applied to emotions and afternoon teas, while weird souls speak strange tongues. All the Americans say "like I did" and talk of "The States." Elspeth, approaching Boston, thinks of "Philip Brookes." Of the American Revolution she says, "Surely it is one of the strangest of its results that all the resentment should remain on the winning side." If the dramatic quality of America impresses her in social matters, what she feels in a wider sense is "the great, great difference between the old, supporting, influential life of inheritance and the passionate, lonely, experimental individualism that has sprung up so compellingly all over America." Of course, lovers arise and woo; strange, drawling, didactic lovers. Never were suitors so intent on comfortable cushions and soul advancement for their fair ones, sparing neither persiflage nor philosophic counsel. Now and then a shrewdly original comment or a bit of fun or a half-mystical interpretation detaches itself from the queer hodge-podge to the encouragement of the reader.

TWO LADIES OF QUALITY.

The Diary of Frances, Lady Shelley (1787-1817). Edited by her Grandson, Richard Edgcumbe. With illustrations. New York: Charles Scribner's Sons. $3.50 net.

The Fourth Generation: Reminiscences. By Janet Ross. The same. $3.50 net.

Good birth, high spirits, beauty, a disposition for adventure, and an unfailing consciousness of special privilege, are common attributes of the two great ladies who speak intimately in these volumes. They were born a little more than half a century apart. But Lady Shelley's diaries—the present instalment of them, at least—bring us only to 1817, when she was in her thirtieth year, while Mrs. Ross is still living and has brought her narrative up to the hour. The second narrative was thus actually written a century later than the first, and differences in manner are consequently more marked than any difference of content.

But the half-century which separated Georgian England from Mid-Victorian England was a period of striking change. Young Lady Shelley is a daughter of the eighteenth century—a niece, as it were, to Miss Burney, and a sister to Miss Austen. She accepts the predominance of the male creature as a matter of course, does not expect overmuch of him in the way of the domestic virtues, and regards his foibles with affectionate indulgence. Frances Winckley was the only child of an odd marriage. Her father, Thomas Winckley, a younger son of confirmed bachelor habits, married a widow with seven children, settled her in his country home at Preston in Lancashire, and went back to his gay life in the Temple. On his rare visits to Preston he commonly brought two or three of his boon companions. His fondness for his only child manifested itself in true eighteenth-century fashion by making her the companion of his carouses. She learned to "toss off her bumper of port" with the rest. When her father had drunk his two or three bottles "he played all sorts of mad pranks, and on one occasion insisted on taking me out of my bed in the middle of the night, and carried me in his coach, with four black horses, his servants in tawny orange liveries, to Blackpool. . . . My mother, who was greatly alarmed, dared not at such moments oppose any of my father's whims." At the age of four was thus given an object-lesson in the first duty of woman—to submit.

At the age of six Frances Winckley was made an heiress by her father's death, and reared thereafter as became her station. She was of romantic temperament, and was early pursued for her wealth, but "no one fulfilled her beau ideal of friendship" until, at eighteen, she met Sir John Shelley. He was a gambler and a rake, and twice her age. Certain friends of his wished to promote the marriage for his sake; her own connections naturally wished to prevent it. But the mischief had been done at first meeting. She knew his character and habits, and the risks she was taking, but (so runs her diary):

> I loved his gen'rous nature,
> Bold, soft, sincere and gay,
> Which shone in every feature
> And stole my heart away——

a valuable bit of loot for handsome Sir Thomas, and not so fatal a loss, after all, for the poor little heiress.

In the bride's first season in London unkind gossip did its best to persuade her of her lord's worthlessness. The only result was to make her more determined to hold him against all comers. "I exerted every power with which nature and study had endowed me, to fascinate him as a mistress, and to enchain his affections as a wife." She further established a rule, from which she boasts in the diary that she has never deviated. "I made it a point never to interfere in any way with my husband's mode of life; and I never kept him from the society even of persons whose conduct I could not admire." A dinner was not then, she says, naïvely, "a jumble of pairs like the animals entering the ark; dinners were then arranged with care and thought, so as to secure the most agreeable conversation." And how was this procured? Partly by prearranged contests of wit between professional diners-out like Moore, Rogers, and Sydney Smith; partly by seating not more than three or four women among eight or ten men. Sir Thomas was evidently in frequent demand *quâ* bachelor. The reward of Lady Shelley's magnanimity seems to have been that her husband did actually remain devoted to her.

But Lady Shelley was not merely a dutiful and unexacting wife. She was a great lady and an ardent friend. A large part of the present volume, the part which is of most absolute value, concerns her friendship with the Duke of Wellington, and her recollections of the man himself. She regarded him with something very much like worship, as a creature far above herself—or her husband: "the finest character that any age has produced." His dress, manner, conversation, his whole bearing in private life, are set forth with surprising vividness. His fondness for Lady Shelley made her his confidante in an exceptional sense. He talked to her with obliging readiness and ingenuousness. Her interpretation of his confidences is often open to query, as in the following remarkable passage:

> In ordinary conversation the Duke often spoke of the Battle of Waterloo abstractedly—as if he were Posterity sitting in judgment on his own conduct—not as if he had had any share in the glories of that day. That is the only way in which I can describe the singular manner in which Wellington, without a trace of egoism, or fanfaronnade, spoke of himself. He was always perfectly frank and natural. He said one day:
>
> "It is experience that gives me the advantage over every other officer. Nothing new can happen to me, and I always feel confident that I shall succeed. The troops feel the same confidence in me. For that reason I firmly believe that if anything had happened to me at Waterloo the battle was lost. I told Lord Uxbridge so—an odd thing to say to the second in command, was it not? But I'll tell you how it happened. We were riding together into rather too hot a fire. I stopped him, and said, 'I must not go there, for, should anything happen to me, the battle is lost!' Uxbridge said: 'By the way, should anything happen to you, what is best to be done?' I gave him my instructions for a retreat—as a legacy! Soon after a ball hit him! It must have passed over me, or my horse. But the finger of God was upon me."

Mrs. Ross's book of reminiscences is a sequel to "Three Generations of English Women," which appeared a quarter of a century ago, and found many readers. Her own generation is here delightfully chronicled. Her father was Alexander Duff Gordon, a cousin to Lord Aberdeen, who got him the court post of Gentleman Usher to the Queen, and to Sir George Cornewall Lewis, who, when Chancellor of the Exchequer, made him his private secretary, and when Minister for War, gave him a royal commissionership which he held till his death.

Lady Duff Gordon, like her mother before her (Mrs. John Austin, whose career is fully given in "Three Generations of English Women"), was a beautiful and accomplished woman. The only child, Janet's earliest playmates were among the most distinguished people of the day. The guests at her fifth birthday party were the Honorable Mrs. North, Lord Lansdowne, Tom Taylor, Bayley (the "Thunderer" of the *Times*), Richard Doyle, and Thackeray. Among her other intimates were Rogers, "Eothen" Kinglake, and George Meredith. With Meredith (whom she always speaks of as "My Poet") she remained to the end on terms of closest friendship, and many interesting letters from him are here printed. She was confessedly his model for Rose Jocelyn in "Evan Harrington."

But her precocious friendships were not merely with the literary great, nor was she to become a blue-stocking. She was extremely fond of hunting, and grew to be (like Lady Shelley) a famous horsewoman. None of her memories is dwelt upon with greater gusto than her success in mastering, with the third pummel missing from her side-saddle, a vicious Arab lent her by a malicious sheik; and her later victory over another sheik, and his favorite barb, with an English mount which she had picked up for a song in Egypt. The account of her meeting with her future husband, and their courtship, is in amusing contrast with that of Lady Shelley—the reticence of the twentieth century contrasted with the exuberance of the eighteenth. They meet at dinner, and he tells her stories "about pig-sticking." She is pleased with him, and asks him to call. He looks her up in the country, whereupon "I took Mr. Ross out with the Duc d'Aumale's harriers, and was much impressed with his admirable riding, his pleasant conversation, and his kindly ways. The result was that I promised to marry him, to the dismay of many of my friends, who did not at all approve of my going to live in Egypt." Mr. Ross was a banker, with headquarters at Alexandria. That his wife did not become an exile in the narrow sense is shown by her record of many returns to England and ramblings about the Continent. She kept fast hold upon her English friendships, and became intimate abroad with men of such distinction as Cousin, St. Hilaire, and Guizot. A full and happy life, well worthy of this charming record.

Power of Federal Judiciary Over Legislation. By J. H. Dougherty. New York: G. P. Putnam's Sons. $1 net.

Mr. Dougherty here undertakes to prove that the power of the Federal judiciary to declare legislative acts void rests not merely upon inference, but upon the express text of the Constitution. Such power has been exercised by judges in other jurisdictions, and the framers of the Constitution were well aware of that fact. It has, indeed, often been contended that a proposition to give the judges such power was repeatedly voted down in the Convention; but Mr. Dougherty's examination of the debates shows that nothing of the kind took place. The rejected proposition was one to establish a council of revision, composed of the judges and the executive, which should have the right to veto not only legislation which it held to be unconstitutional, but also laws which it thought dangerous and destructive. The quotations from the debates in the ratifying Conventions given by the author also tend to show that the existence of such power was assumed and recognized both by the advocates and opponents of ratification.

Of course, the question whether such power could be used to protect the individual against the state was not in the minds of the framers of the Constitution. That document contained no Bill of Rights, and the "due process of law" clause, in so far as it restricts the power of the States (which has aroused such opposition against the exercise of the judicial power to declare laws unconstitutional), was still in the far future. Mr. Dougherty assumes, without discussing the point, that the power exists in such cases. According to the political philosophy which prevailed at the time the Constitution was adopted, it was undoubtedly supposed that the power of the state was limited to the protection of individual rights, which, it was assumed, existed prior to and independent of the state, and that, save in exceptional cases, such reserved rights could not be infringed upon. The question, therefore, whether a statute fell within such prohibition was a question of law and the proper subject of judicial inquiry, and it will remain such so long as this theory is adhered to.

The author admits that the power so conferred should be sparingly exercised and that a law should be held unconstitutional only when the decision is unanimous, or nearly so. He wishes to give the state a right to a re-hearing through its Attorney-General. And he also thinks the Federal Judiciary Law or the Constitution of the United States should be so amended that every case in any court, in which due process of law is invoked against the statute designed to ameliorate human conditions, may be carried to the Supreme Court of the United States. This suggestion, although much may be said in its favor, will not conciliate those who deny the right of the judiciary to declare such a statute unconstitutional. Their contention is based on a system of political philosophy totally different from the one prevailing at the time that the Constitution was adopted. If, as they believe, the state is supreme, every act of the state is due process of law, and the question whether individual rights shall be recognized or not becomes one of expediency and not a question of law. The difference is fundamental and cannot be bridged over by any change of procedure or by the cautious exercise of such powers by the judiciary.

The Drama of Love and Death, a Study of Human Evolution. By Edward Carpenter. Mitchell Kennerley. $1.50 net.

That there is a morbid reticence about the subject of love, and too little consideration of death, is Mr. Carpenter's reason for undertaking this book. Both points may be conceded. Love means that complex human relationship which comes about through a perfect sexual life. It is valuable not, as the biologist asserts, chiefly for purposes of generation, but as providing a higher life for the two persons involved. The sexual relation implies a very complete mutual transference of physical and mental traits, a fortifying and completing of each individual from the other. So far we are in the realm of generally admitted experience, though a physiologist would cavil at the extended physical interchange imagined by the author. Mr. Carpenter constantly writes as if a predestined and single male seed were fused with the ovum, whereas in every fertilization thousands of spermatazoa, each a potential individual, perish, and the choice of the one that actually fertilizes the ovum rests on the sheer hazard of a central collision. In fact, this principle of chance and waste in generation is quite as remarkable as the beautiful suggestions of design upon which our author exclusively dwells. And this cavalier and disingenuous fashion of interpreting scientific phenomena is highly characteristic of the entire book.

Death is the disintegration and redistribution of a complex of four parts. For the body, Mr. Carpenter accepts the ordinary view. What Christian theology calls the soul, he divides into three parts, of which the lowest is chiefly related to the body, while the intermediate soul is chiefly involved in the ultimate individual soul, which is in direct relation to the All Soul. A happy death consists in having the body and lowest soul in such subordination that the upper souls may detach themselves with the least embarrassment. Upon death follows a period of repose after which the purified soul is ready to enter into a fertilized ovum, and, thus reincarnated, resume palpable existence. The soul is both spiritual and material, but soul stuff is extremely thin and minute, being "ultra-microscopic and fourth dimensional." It readily draws other matter to itself, and so becomes the wraith of mediumistic demonstrations. Being fourth dimensional, there is no reason why a soul should not be in several places simultaneously, controlling, for example, several bodies.

We have tried to give quite objectively the substance of an argument in which the student of recent religious aberrations will already have recognized the main outlines of Vedantism. No further comment is really necessary, but we must remark the extreme cloudiness of the plea. In one breath we read that the perfection of two individuals rests on an ideal sexual union, and then that no single partner can generally supply all the needs of one's nature. Thus a variety of liaisons is often right and necessary. One must be prepared to show "a frank understanding and tolerance of such person's other loves." . . . "Two such loves," we read, "are often perfectly compatible and reconcilable." But why thus limit the scope of connubial sympathy? A really complex person could surely not get along with so few soul partners. And the principle of "bilocation" would conveniently permit one to leave the astral body decorously at home while the substantial body was dallying abroad. All of which would make it easier eventually to achieve what Mr. Carpenter elegantly calls "a really big and satisfactory love affair."

Since Mr. Carpenter enjoys a considerable reputation in "psychic" circles, it may be in order to examine the ground of his influence. It rests primarily upon the habit of flaunting as axiomatic such terms as the All Soul, the All Self, Supra- and eke Subliminal, fourth dimensional, radio-activity. Its persuasiveness rests upon a superficial agility in drawing cheap and defective analogies between spiritual and scientific phenomena. Next the vaporousness of the argument is a source of strength. "Love" may be interpreted, so far as this book goes, either as honest marriage or as skilfully calculated libertinism. An easy slurring of all difficulties is an important trait. Individual perfection, for instance, depends upon the ecstatic union of the male and female principle, but childless relations, where there is no such union, apparently, serve quite as well. Finally, add a modicum of the frothy eloquence of the lecture platform, and the recipe for successful "psychic" charlatanism is complete.

Yet this false, mischievous, and confused book is not quite ridiculous. It is at least a pathetic witness to the desire for spiritual leading. The wonder is that anybody should prefer such shoddy improvisations to the dignity of any historic religion, however irrational. One very serious aspect this book has. Any one who assiduously follows Mr. Carpenter's advice about liberating the subliminal self is setting a course towards that home of complete subliminal liberty, the lunatic asylum.

Victor Hugo, His Life and Work. By A. F. Davidson. Philadelphia: J. B. Lippincott Co. $4 net.

Mr. Davidson, whose study of Victor Hugo appears in a posthumous volume, undertook a venturesome task. Frenchmen nearly always resent unfavorable criticism of the poet, and even those who indulge in it themselves are indignant when it comes from a foreign writer.

Yet probably no author in French literary history lays himself more open to ridicule, both by his private life and, unfortunately for his fame, by his written words. Victor Hugo was utterly without a sense of the ridiculous, yet he was a leader of the school to which that sense would have been the most valuable safeguard. It is now fashionable in France, at any rate among those modern "classicists" such as Charles Maurras and Pierre Lasserre, to attack the romantic writers indiscriminately, though unfortunately their classicism is not free from politics.

Thus readers have been entertained of late with amusing books on the follies and exaggerations, intentional or not, of the young men of 1830. Victor Hugo differed from many of his followers, in that their eccentricities were often a pose, whereas he sincerely thought himself a genius above the law. He also had to an extraordinary degree the peculiarity of some great literary men, an imaginative unveracity in which they themselves perhaps come to believe. Edmond Biré was the first iconoclast of the Hugo legend and of the fairy-tales of "Victor Hugo raconté par un témoin de sa vie." Similarly, Mr. Davidson's book would not have been welcome reading for the great writer whose ghost, as the old anecdote tells, wanders on the steps of the Pantheon, distressed at the plural in the inscription, "Aux grands hommes la patrie reconnaissante." Yet it is an impartial account of Hugo's life and work, even though it does not add anything new to the French biographies. As is frequent with English and American critics, it emphasizes the biography. But Hugo's qualities and defects as a poet and novelist are intelligently brought out.

The resultant impression of the book helps one to understand why Hugo has remained the idol of the average-minded Frenchman. He decked out in Olympian rhetoric or resounding verse those chauvinistic commonplaces about liberty and martial glory which delight the heirs to traditions of the Revolution and the First Empire; he reiterated sentimental commonplaces, without the mawkishness of the pedestrian verse of, for instance, François Coppée; he enunciated humanitarian truisms, now commonplaces, but novel in the glow of social liberation in the nineteenth century. Above all, Hugo flattered the national conceit or spreadeagleism of the French as the leaders of civilization, and the creators of Paris, the *ville lumière:*

> Dithyrambic would be a mild word to apply to those prefatory pages [on the exhibition of 1867] with all their gush about the "supremacy of Paris," the "functions of Paris," etc. It is Chauvinism grafted on to humanitarianism, for we are still to have this famous "United States of Europe," but France is to be their centre, and France means Paris. And so Hugo begs his country to "resign herself to a greatness she cannot avoid," and to accept the predestined expansion by which she becomes the world! Nay, she will "no longer be France but Humanity, no longer a Nation but Ubiquity!"

Mr. Davidson has much to say about Victor Hugo's private life, and relates many details which must have found favor with Francis Gribble, who contributes a preface to the book. The story of Hugo's loves, especially with Mme. Drouet, is not always pleasant reading to those who may sympathize with Mme. Hugo; but the material has its place in the "histoire naturelle des esprits" of the new school.

Mr. Davidson's biography, since such we find it in the main to be, is written in a clear and interesting style, and the text is free from the mistakes and misprints of French which mar so many popular works in English on French literature.

Notes

The editorial papers, "Through the Outlooking Glass with T. R.," contributed to the *Nation* by Simeon Strunsky, have been reprinted in a pamphlet of twenty-four pages. This can be procured by sending eleven cents to the office of the *Nation*.

A welcome announcement is a posthumous volume from the pen of the late John La Farge. The text has been made up from a diary kept by La Farge, and is called "Reminiscences of the South Seas." It is to be illustrated with reproductions of many of the author's paintings of the islands and their people. Doubleday, Page & Co. promise the book for this autumn.

David Graham Phillips bids fair to become the most voluminous posthumous author on record. A new political novel of his, called "George Helm," is coming from D. Appleton & Co.

The third volume of Professor Channing's "History of the United States" is about to be published by the Macmillan Co. It embraces the Revolutionary epoch, extending from 1760 to the election of Washington as President.

Early in October Henry Holt & Co. will issue the following books: "The Soul of a Tenor," by W. J. Henderson; "Phœbe, Ernest, and Cupid," by Inez Haynes Gillmore; "Why Women Are So," by Mary Roberts Coolidge; an edition of "Gulliver's Voyages to Liliput and Brobdingnag," illustrated and decorated by P. A. Staynes; "The Boy Scouts of Bob's Hill," by Charles Pierce Burton, illustrated by Gordon Grant; "The Cities of Belgium," in the new series of Grant Allen's Historical Guides, and "Village Life in America," by Caroline Cowles Richards.

From A. C. McClurg & Co. is to come "Our Country Life," by Mrs. Charles L. Hutchinson. The book tells the story of ten years spent on an estate on Lake Geneva.

We are to have a volume of "The Note-Books of Samuel Butler," edited by Festing Jones, with a photogravure portrait of 1898 and various other material. It is presumed that this welcome book will be published in this country by E. P. Dutton & Co., who import the other works of the author of "Erewhon."

The Neale Publishing Co. has the following titles on its autumn list—in literature: "The Collected Works of Ambrose Bierce," Vol. XI; "Masterpieces of Southern Poets," by Walter Neale; "The Poetical Works of Rose Hartwick Thorpe"; "Desultory Verse," by La Touche Hancock, and "Idylls of the South," by Mrs. Bettie Keyes Chambers. —In politics, biography, and history: "Our Presidents and Their Office," by William Estabrook Chancellor; "Essays and Addresses," by Roger A. Pryor; "The Soldier-Bishop, Ellison Capers," by the Rev. Walter B. Capers; "The Attack and the Defense of Little Round Top, Gettysburg, July 2, 1863," by Oliver Wilcox Norton; "The Numerical Strength of the Confederate Army," by Randolph H. McKim; "Antietam and the Maryland and Virginia Campaigns of 1862," by Isaac W. Heysinger; "One of Jackson's Foot Cavalry," by John H. Worsham; "Fighting by Southern Federals," by Charles C. Anderson; "Dr. William LeRoy Broun," by Major Thomas L. Broun; and "Mrs. Fiske," by Frank Carlos Griffith.

The second annual meeting of the National Council of Teachers of English will be held in Chicago November 28.

Volume V of the "Homeri Opera" has now been reached in the Oxford Library of Classical Authors. This is edited by Thomas W. Allen, and contains the Hymns, Cyclic Fragments. Margites, Batrachomyomachia, and the Lives.

Longmans, Green & Co. have added Morris's "News from Nowhere" to their Pocket Library.

The Century Co. has brought out a second edition of Jesse Macy's "Party Organization and Machinery," with new chapters explaining the change from the old convention to the direct primary.

In conformity with the volumes on Dickens, Thackeray, Scott, Meredith, and Hardy, we now have from E. P. Dutton & Co. "A Zola Dictionary," compiled by J. G. Patterson. The characters of the Rougon-Macquart novels are here indexed, and various other material is given, such as synopses of plots, map, genealogy, etc.

A dainty gift for the lover of Northern woods and waters is Bert Leston Taylor's "The Pipesmoke Carry" (Reilly & Britton). The devotees of Lady Nicotine will linger over graceful sketches of carries through "sun-drenched opens where the choric popples sway and sing," or while the smoke curls upward they may drift silently in a canoe where the moon's light, thickened by a mist, falls upon the middle of a pool till on a bridge of moonbeams they cross the centuries and stand with Arthur and Merlin by "a fair water." Literary allusions, indeed, mingle everywhere in the rhythmic flow of the style. The black-and-white decorations by C. B. Falls have the rare virtue of supplementing the mood of revery.

Ben Jonson's "Cynthia's Revels" (Yale Studies in English, XLV; Holt & Co.), edited with Introduction, Notes, and Glossary by Alexander Corbin Judson, is the latest volume in the edition of the plays of this dramatist which we owe to the students of Prof. A. S. Cook. Notwithstanding its attractive title, this particular play is notoriously dull. A French critic has said of it: "il n'existe pas, du moins à ma connaissance, une pièce aussi mortellement vide." Nevertheless, it was written with great care, as a comparison of the revised folio text with that of the quarto shows; it contains some vigorous satirical passages, such as Crites's arraignment of folly and vice at the end of the first act, and the court-ladies' wishes in the fourth, besides two lovely lyrics, Echo's lament and the famous hymn to Cynthia, "Queen and huntress, chaste and fair," of which the latter outweighs all the rest of the play in value. And finally it has an interest on account of its connection with the stage quarrel between the boy-companies and the grown-up actors at the end of the sixteenth century. Mr. Judson properly adopts the text of the first folio edition (1616) of Jonson's Plays, but gives the quarto (1601) variants in his footnotes along with suggested emendations and other matters.

Mr. Judson's introduction, which shows good judgment, deals with the questions of date, sources, and the relations of the play to non-dramatic satire and character-writing. The poet's obligations to Aristophanes, Lucian, and Lyly are obvious. Mr. Judson is right, no doubt, in accepting Ward's identification of Actæon with the Earl of Essex and his own suggestion that Niobe stands for Mary, Queen of Scots, rather than Arabella Stuart, is plausible. For the rest we approve of his views concerning the relation of this play to the stage quarrel. Obviously, it was not composed primarily with reference to that affair, and it is not well to push too far the identification of Hedon and Analdes with Marston and Dekker. Indeed, egotistic though Jonson was, we cannot believe that even Crites was intended altogether as a picture of the poet himself, although the speeches of the character often have the note of moral indignation which Jonson caught from the Roman satirists, and besides contain occasional unmistakable hits at his personal enemies. The editor's Explanatory Notes elucidate the text in all essential matters. Since Professor Feuillerat's recent discoveries, however, it is incorrect to begin the history of Blackfriars Theatre with 1596. Plays were performed there as far back as 1577. For the sake of completeness, too, it would have been well if Mr. Judson had mentioned the traces (slight, to be sure) of the influence of "Cynthia's Revels" on the later drama. The two or three instances are noted by Koeppel in his work, "Ben Jonson's Wirkung auf zeitgenössische Dramatiker" (1906).

A thorough and careful discussion of the debate between the extreme radical and the liberal critical schools on the question whether Jesus is an historical personality or a myth is presented in "The Historicity of Jesus," by Shirley Jackson Case of Chicago (University of Chicago Press). In America some interest has been awakened in this controversy by the writings of Prof. William B. Smith of Tulane University, whose "Der vorchristliche Jesus" (1906) and "Ecce Deus" (1911) sought to establish the belief that Christianity arose out of a Jesus cult which existed as early as 100 B. C. In Germany no serious attention was paid to these monographs, nor to the similar productions of Kalthoff, Jensen, and Lublinski; but the appearance in 1909 of "Die Christusmythe," by Arthur Drews, professor of philosophy in the Karlsruhe Technical High School, was the signal for a controversy among New Testament critics like that incited by Delitzsch's "Babel und Bibel" a half dozen years ago. The leading writers of the liberal school entered the fray, among them Von Soden, Jülicher, Weinel, Johannes Weiss, and Clemen. Their contentions, as well as the radical views which they combat, are carefully and fairly presented by Mr. Case. His estimate of the negative argument is eminently fair. He concludes that the evidence brought against Jesus' historical existence is entirely lacking in force and cogency, and that the arguments for a pre-Christian Jesus lack any substantial basis; and these are the results at which most open-minded students of Drews and his school are compelled to arrive. The principles of free criticism of the New Testament documents were bound, sooner or later, to be pressed to this extreme conclusion, and now that the radical views have been advanced with great earnestness and cleverness, and met with success, the positions of the modern historical critics are more firmly established than ever. One of the most valuable chapters in the present volume is on Jesus' Significance for Modern Religion, in which it is urged that "He has for men to-day the same essential value that he had for the primitive disciples, in so far as history permits acquaintance with Him, and He answers modern needs." It is creditable to American scholarship that the first survey of the entire debate should have been made by a representative of an American divinity school, and that the treatment of the question is adequate and fair in the presentation of the arguments on both sides, and marked by discernment both of the underlying principles and the consequences involved for the religious life.

The thirteenth volume of the Catholic Encyclopædia, *Revelation—Simon Stork* (Robt. Appleton), edited by Charles G. Herbermann, contains the usual number of important articles. Among them may be mentioned "The English and French Revolutions," both written in an excellent spirit; "Rites," full of interesting information and curious lore; "Roman Colleges and Congregations"; "Sacraments"; "Schools"—all very valuable; "Rome, Russia, and Scotland," profusely illustrated. The massacre of St. Bartholomew's is naturally dealt with from the Catholic point of view, and extenuating circumstances are urged for the unedifying conduct of Pope Gregory XIII, but on the whole the treatment is not unfair. The article on Ritschlianism, an unexpected subject for such a publication, contains the following attack on Modernism:

> Since recent Modernism, with its Agnosticism and Immanentism, adopts the same attitude, it is, whether avowedly or not, the death-knell not only of Christianity, but of every objective religion. Consequently, the regulations of Pius X against Modernism represent a contest in which the vital interests of the Catholic religion are at stake. As the foremost champion of the powers and rights of reason in its relations with faith, Catholicism is the defender of the law of causality which leads to the knowledge of metaphysical and divine truths, the guardian of a constant, eternal, and unalterable truth, and the outspoken foe of every form of Skepticism, Criticism, Relativism, and Pragmatism—always in the interests of Christianity itself, since, without a rational foundation and substructure, Revelation and faith would hang unsupported in the air.

The successive volumes of this great work have appeared with unfailing regularity, and with the publication of the fourteenth volume (*Simony—Tournély*), now at hand the end is in sight. The following articles are worthy of especial mention: "Society of Jesus," "Spain," "States of the Church," "Syndicalism," "Theology," "Third Orders," "Thirty Years' War," and "Toleration." In the section on Toleration are these stalwart words:

> Nowhere is dogmatic intolerance so necessary a rule of life as in the domain of religious belief, since for each individual his eternal salvation is at stake. Just as there can be no alternative multiplication tables, so there can be but a single true religion, which, by the very fact of its existence, protests against all other religions as false.

At the same time the author defends civil toleration:

> Wherever separate religious parties live in the same land, they must work together in harmony for the public weal. But this would be impossible if the state, instead of remaining above party, were to prefer or oppress one denomination as compared with the others. Consequently, freedom of religion and conscience is an indispensable necessity for the state.

Nevertheless, the freedom advocated is far from complete, for the author continues: "From the standpoint of natural law and Christian public law, however, this political tolerance is subject to a three-fold limitation, since neither the completely unreligious character of the state nor the unbridled liberty of all imaginable cults may be set up as a principle of government, nor finally may the separation of state and church be lauded to the skies as the perfect state-ideal." In spite of this last statement, the attitude of the United States receives handsome recognition. After remarking that Leo XIII, in an encyclical of November, 1885, "had declared the harmonious union of the two highest powers the ideal situation," the author goes on to say: "If the United States forms the sole honorable exception to the rule, this is due partly to the fact that the state neglects neither the religious factor at large nor Christianity, as is shown by the strict laws concerning Sunday observance, Christian monogamy, and the celebration of Thanksgiving Day."

Few men would be willing to gather into a volume addresses prepared forty years ago, and few volumes so compiled would convey the impression of freshness and timeliness which one receives from the pages of George Lansing Raymond's "Suggestions for the Spiritual Life" (Funk & Wagnalls). It will not be expected that such a collection should constitute an important contribution to present religious discussion, but it may furnish counsels of wisdom for those who live quietly and who desire to penetrate beneath the superficial questions involved in most current controversy. Life is an old problem, and how to do justly, to love mercy, and to walk humbly before God is a matter which varies with successive generations only in unessential details. The reason why few sermons outlive their decade is that few are concerned with the real essentials of the spiritual life. Dr. Raymond's chapel talks at Williams and at Princeton may have made no startling impression at the time, but that one may read them now with interest and profit is proof that they deal with the truth in which the quiet souls of all generations are at one.

In his "Life and Times of Rodrigo Borgia" (Brentano's), the Most Rev. Arnold H. Mathew, D.D., Archbishop of the Old Roman Catholic Church in Great Britain and Ireland, gives a straightforward and well-written account of Pope Alexander VI. It is not an easy story to tell, because, in order to explain the events of his reign and the complicated policies of his statecraft, it is necessary to enter upon that tangle of intrigues and alliances among the Italian powers which facilitated and culminated in the invasion of the peninsula by Charles VIII of France. That the chapters devoted to these political events make hard reading is not the fault of the Archbishop, who displays considerable dexterity in his ordonnance of a difficult narrative. He, moreover, manages to keep clearly in view all the secondary members of the Borgia family, and the parts they played. The marriages of Lucrezia, the pageants, assassinations, and military exploits of Cesare—these appear in vivid personal relief against the more purely political ambitions of Alexander. Deserted by all but the undertaker's assistants, who crammed him into his ill-fitting coffin, and lowered him with indecent haste into his grave, Alexander shocks us at the end by contrast with his former state. But this easy-going sensualist of excellent constitution, who had also a side of singular piety, who advanced the work of the Church abroad, who was a sincere patron of the fine arts, and who, as "husband" and father, had many good traits—he was essentially a *bourgeois*, this Borgia. He seems to have lived in a state of complacent self-satisfaction with himself and the world. Yet, with his death, his house crumbled about him. Cesare, his son, whom he had helped to raise to so brilliant a pinnacle, fell fighting, after prison and dispossession of all his wealth, a mere gentleman adventurer, on an obscure battlefield; and Lucrezia, alone of the more conspicuous members of the family, was left, as the pious and retired Duchess of Ferrara, to remind the world of a past that must soon have seemed like a dream. It is strange that out of such a gilded dunghill breed as the Borgias should have arisen in after years a saint. But so it happened. Francisco, great-grandson of Alexander VI, and fourth Duke of Gandia, played an important part in the Society of Jesus in the sixteenth century, and in 1565 was elected general of that order. A man of much religious humility and fervor, and a militant hero of the faith, he was greatly respected and loved during his life, and finally received the honors of canonization from the Church.

The five years covered in William Foster's latest calendar of Anglo-Indian documents, "The English Factories in India, 1637-1641" (Frowde), are notable for the account of the building of Fort St. George at Madras. This station superseded Masulipatam as the headquarters of the English on the eastern coast of India, and eventually became one of the three great centres from which they pushed their trade and their political control inland over the great peninsula. During these five years also a new trade was opened up from Surat to Basra, a town at the head of the Persian Gulf, which is now the proposed terminus of the Baghdad Railway. There were increasing dealings in Deccan pepper, indigo, certain cotton and silk fabrics, and sugar; one English vessel even made a successful trip to Canton in China, and more friendly relations were entered into with the Portuguese who were glad to side with the English against the more prosperous and enterprising Dutch monopolists. But the dangers and tribulations of the English in these years were many: French pirates from Europe and native pirates on the Malabar coast plundered their vessels; Courteen's rival association, to which Charles I had faithlessly given great privileges, lowered the profits of the older East India Company in England and caused political difficulties in the East; and capricious native princes exacted exorbitant tolls. It was also often difficult to get enough English sailors out to India, and keep them alive there, to man the company's vessels; for lack of sufficient English seamen, so the President at Swally complained, he had to pay enormous wages to Lascars, who gave away trade secrets, and "who does not halfe the service good seamen would doe, nor are able in the least to resist an enemy when assaulted."

The publishing firm Albert Bonnier in Stockholm, which shortly before August Strindberg's death acquired the copyright of his works, has begun the issue of a complete edition under the editorship of Dr. John Landquist. Of the forty volumes which are planned more than half will be given to prose fiction, including the autobiographical novels. In this edition "En dåres bikt" will be published for the first time in an authorized Swedish version; Strindberg's work on the relations of France to Sweden, originally written in French and published in Paris in 1891, will also be included, in a Swedish translation. "Kvarstadsresan," printed in a Stockholm paper after Strindberg's acquittal from the charge of heresy on account of the first volume of "Giftas," will now for the first time appear in book form, and one hitherto unpublished manuscript, entitled "Han och hon," and apparently belonging to the autobiographical series, is scheduled for an early volume. The works will be published in chronological order, beginning with the dramas from the author's youth, among them "Fritänkaren," his very first production, which was never played; it was printed without the author's knowledge or sanction by one of his friends, in 1869, and was never republished. The play is, naturally enough, immature, but already shows the spirit of revolt. Each volume will contain bibliographical and biographical notes by the editor. In the notes to the first volume the editor says that "Den fredlöso" was published for the first time in the collection "I vårbrytningen," 1881; as a matter of fact it had been printed already in 1876, in the monthly journal *Nu*.

We regret to announce the death of Alfred Marks, a banking expert of London who was also a learned antiquarian. His published books are "Who Killed Sir Edmund Berry Godfrey?" "Hubert and John van Eyck: the Question of their Collaboration Considered," and "Tyburn Tree: Its History and Annals." He contributed many valuable reviews to the *Nation*.

The death is announced of Mrs. Robert Stuart de Courcy Laffan, of London, who published a number of novels under the name of Mrs. Leith-Adams. The titles of her books are: "Winstowe" (1877), "Madelon Lemoine" (1879), "My Land of Beulah" (1880), "Aunt Hepsey's Foundling," "George's Wooer," "Geoffrey Sterling" (1883), "Louis Draycott" (1891), "Bonnie Kate" (1892), "Color-Sergeant No. 1 Company" (1894), "The Peyton Romance" (1894), "The Old Pastures" (1895), "Accessory After the Fact" (1898), "The Prince's Feathers" (1899), "Song, Good-bye, Daddy" (1900), "The Vicar of Dale End" (1906), and "Dreams Made Verity" (1910).

Science

The Horse and Its Relatives. By R. Lydekker, F. R. S. New York: The Macmillan Co. $2.60 net.

The Training and Breaking of Horses. By Merritt W. Harper. The same. $1.75 net.

While there is little new material available for original research in regard to the horse, Mr. Lydekker gives an acceptable account of the origin and dispersal of the species in all ages. Whether the small fox-like animals whose remains have been discovered in various parts of the world belonged to the horse or to the tapir families is a question for the scientists. The layman is more concerned with the preservation of the modern types. On almost every page the author evidences wide reading and scientific study and brings together in a single volume a pleasing review of the horse and allied animals of the kiang, onager, quagga, and zebra families. The book is singularly free from the dogmatic brevity so often encountered in efforts to embrace so wide a field.

Attempts to identify the original members of which the "chestnuts" or callosities on the legs of the horse are the sole remaining indications furnish food for thought for scientists, but such discussions are not so practical in results or so interesting as the question of inheritance of color, both of the horse's skin and coat. In the development of the modern thoroughbred, stamina and speed were the objects sought by the most far-sighted breeders, and it has remained for the scientist to announce that "evidence is gradually accumulating to suggest that in certain strains there may be a partial coupling of coat-color and racing power." For instance, the chestnut grandchildren of St. Simon have so far proved inferior in racing to their bay and brown brothers and sisters. In the get of this particular stallion the brown fillies have shown themselves superior racers to the bay fillies and colts and to the brown colts, notwithstanding colts are usually supposed to have some advantages over the fillies. The statement is interesting that bays, being of a dominant color, are capable of producing offspring of a color different from their own, while animals of chestnut color are recessive, and the result of their mating will be habitually chestnut. Should these theories prove of general and practical application, the problem of the Government in restoring and maintaining the useful breeds of horses in this country will be simplified.

The volume is exceptionally pleasing in its size, type, and arrangement.

"The Training and Breaking of Horses" is one of the Rural Science series, and embraces so wide a field that it constitutes a popular encyclopædia of its subject. The horse of whatever type is what his trainer makes him. The initial cause of all the bad habits of a horse may be traced to careless or bad management at some stage of the animal's training. The horse, like all animals, is possessed of instinct, but seems devoid of reasoning powers. His trainer therefore should aim to fix habits upon him, while avoiding, as far as possible, the chance of resistance arising from fatigue or fear. The importance of orderly procedure cannot be over-estimated. The colt from birth should become accustomed to man's friendly contact. From the very beginning one should teach a colt useful things, employing always the same terms and the same tone of voice for any particular movement or action expected of him. To lose one's temper is almost certain to invite resistance. Rewarding the young animal with kindness is a more certain way to rapid progress in training than the infliction of punishment.

Much may be accomplished by the student who follows Professor Harper's directions, whether in training the saddle horse or the driver. The field of training embraces a wide range of endeavors, but the increased value and usefulness of the horse justify the expenditure of time and labor. And as the owner who superintends the development of his colts will surely become attached to them, he will wish to know how to correct bad habits and to care for injuries. Many abrasions and seemingly innocent swellings may soon become deep-seated and chronic injuries if the causes be not found and remedied. Herein lies much of the value of books of the popular science type, which, like this one on the horse, furnish the student with carefully expressed explanations of cause and effect. The Government has awakened to the need for concentrated effort to preserve and improve the valuable types of horses in this country, and the dissemination of popular literature on the subject should help to encourage breeders and owners of man's most useful animal friend.

Doubleday, Page & Co. will bring out a new book this autumn by Ernest Thompson Seton, under the title of "The Book of Woodcraft and Indian Lore."

The International Map of the World received much attention at the meeting of the Geographical Section of the British Association at Dundee. Considerable progress has been made during the past year, and five sheets covering parts of France, Scotland, Turkey, and South Africa are on sale. Other sheets are in course of preparation by the authorities of Hungary, Italy, Spain, Great Britain, and the United States. To cover the whole world, including the oceans, would require 2,084 sheets, but if the oceans are omitted, the number of "full" sheets, *i. e.*, sheets entirely representing land, would be about five hundred.

The *Geographical Journal* for September contains an account by Dr. A. M. Kellas of a remarkable mountaineering tour in the Himalayas, the highest altitude reached being 23,180 feet. Among the scientific results was the discovery that the glacier area of the region explored is much greater than is indicated on the survey maps. Some useful observations are made on mountain sickness and its prevention. Ellsworth Huntington described the ruins of the ancient Hohokam Indians in the Santa Cruz valley in Southern Arizona with a view to showing the fluctuations of the climate of North America. It certainly seems as if the "valley once had at least twice as many people as it could now support, and half of these lived where the white man cannot now get a living from agriculture."

Short cuts to the accepted names of plants are much like short cuts across lots anywhere. Sometimes the path is easy, but often it is disappointingly hard to the foot, and even treacherous. This is particularly true of the many aids to plant-recognition which are based upon the distinctions of color, because not only do different people describe colors differently, but plants do not always keep true to the colors assigned to them in the books. "Harper's Guide to Wild Flowers," by Mrs. Caroline A. Creevey (Harper & Bros.), is one of the most satisfactory handbooks of this class, although it could have been rendered much more useful by the preparation of simple keys under each of the groups of color. The author has been judicious in her notes of localities and in her nomenclature.

Drama and Music

The "Milestones" of Arnold Bennett and Edward Knoblauch, which has enjoyed great popularity in London and is now running in the Liberty Theatre in this city, is not the masterpiece it has been proclaimed by some over-enthusiastic critics, as it is not remarkable for literary brilliancy or dramatic significance, but it is a genuine comedy of substantial merit. If not a very profound or original social study, it is true to life in its personages and incidents, deals logically with the interaction of character and circumstance, mingles humor with pathos, is wholesome in sentiment, and illustrates effectively, although not very subtly, the march of modern ideas. In construction it is fresh and ingenious. There is nothing new, of course, in the imaginary lapse of years between the fall and rise of the curtain, but the employment of this device to show the domestic history of a single family throughout three generations was a happy stroke of invention. It enabled the dramatists to exhibit the mischief wrought by a dominant personality—the embodiment of old-fashioned conventions and prejudices—among his kinsfolk, and incidentally to exemplify the evils of mercenary marriage and the process of degeneracy. The play is consistent in design and sound in purpose, but the outcome is too plainly the result of predestination to be deeply impressive.

The plot of the play is, briefly, this: In 1860 John Rhead, an able and masterful man, dissolves his partnership with his prospective brother-in-law, Sam Sibley, because the latter does not believe in the possibility of iron ships. His sister, Gertrude Rhead, strong-minded as himself, takes his side and breaks her engagement with Sam when the latter declines to admit her right, being a woman, to interfere. Thereupon Sam peremptorily revokes the consent which he had previously given to the marriage of John Rhead with his sister, Rose, a submissive creature, who has already declared that her idea of happiness is to be her husband's slave. So ends the first act. Twenty-five years later John, who has driven Sam out of business and married the unrevolting Rose in spite of him, is the biggest ship-builder in England, and more masterful than ever. His wife, who worships him, cannot call her soul her own, but his daughter, Emily, has a dash of his own independent spirit and wishes to marry Arthur Preece, a brilliant young engineer. John, however, who has political ambitions and the promise of a baronetcy, overrides the feeble opposition of his wife and the outspoken protest of his sister Gertrude—ever the champion of woman's freedom—and virtually compels Emily to marry a silly, middle-aged peer, Lord Monkhurst. In 1912 Emily is a widow, with two children. Her son, the new peer, is a degenerate young wastrel, and her daughter, Muriel, who is somehow strong in spite of her pedigree, has engaged herself to Richard Sibley, the clever son of old Sam Sibley, who had married a vulgar but highly capable Yorkshire woman. Once more old John Rhead—again deaf to Gertrude—puts his veto on a love match which he pronounces disgraceful. But he is broken by age and largely dependent upon Arthur Preece, now a prominent statesman and labor leader, who stands between him and his rebellious workingmen. So he is induced to yield, while he pathetically bemoans the ways of modern labor and the new woman. The curtain falls upon the union of Preece and Emily, and a touching scene of reconciliation between the grandsire and the revolting Muriel.

Evidently, in this intimate domestic drama the element of dramatic suspense is slight, but the three episodes are connected by a continuous vein of human interest. The characters are lifelike, but are all drawn along conventional lines, with the exception of Gertrude, the representative of the new woman, who is a fresh, striking, and pathetic figure. As a whole, the play is an exceedingly creditable piece of work. It has been published in book form by George H. Doran Company.

"The Attack" of Henry Bernstein, of which an English version by "George Egerton" has just been produced in the Garrick Theatre, is a machine-made emotional melodrama of second-rate quality. Like other stage works of the same author, it exhibits constructive skill, and contains several effective theatrical situations, but it lacks sincerity and consistency, depending mainly for success upon exaggerated sentiment and cheap sensationalism. The hero, Merital, is an eminent French politician, whose reputation for flawless integrity has brought him within easy reach of the Presidency. Although of mature years, he has won the love of a young girl, Renée, of ideal loveliness and purity, who, in the opening scene—and a clever scene it is—offers herself to him in marriage. At this moment he hears from Frepeau, a journalist, that his political foes, through the agency of one Labelle, have published the charge that in his youth he was guilty of theft. The charge is true—although the offence had long been expiated and forgiven—and would, he knows, be fatal to his career. So he denies it and sues Labelle for libel. But before the case comes up for trial he discovers proof not only that Frepeau is at the bottom of the plot against him, but also that he is a hypocritical, swindling scoundrel. Thereupon he sends for Frepeau, and, in a scene full of melodramatic thrills, orders him to silence Labelle, by whatever means he chooses, under penalty of instant exposure and ruin. Merital in due course is triumphantly acquitted, but his tender conscience will not permit him to deceive the guileless Renée, to whom, in another effective scene, he makes full confession. She, of course, condones his offence, and the curtain falls upon the desired happy ending. The whole play is unreal and full of cheap and sentimental claptrap, but it does provide opportunities for much delicate, finished, and forcible acting on the part of John Mason, the best of American comedians, whose performance of Merital is the one feature of artistic and dramatic value in the representation.

Mme. Simone will be seen in New York before long in a new play written for her by D. Devere Stackpole and L. N. Parker. It is a French romance of the time of Louis XIV.

It is announced that William A. Brady, early in November, will present here the "Hindle Wakes" of Stanley Houghton, a play that has caused some commotion on the other side of the Atlantic. Moreover, he has arranged that Miss Horniman's London company, the original producers, shall come over here to play it. This makes a capable representation virtually certain. Of the value of the piece itself nothing can be said until after its performance. It tells the story of a girl who, having surrendered herself in a moment of intoxication to a casual lover, refuses, after she has become a mother and provoked great scandal thereby, to marry the father—although he is willing—on the ground that he is not of her station and that she will not enter into an alliance which would mean life-long misery for both.

Granville Barker's play, "The Voysey Inheritance," has been revived in the Kingsway Theatre, London, with several members of the original cast. In reviewing the performance the London *Times* says:

> "The Voysey Inheritance" stands high among our modern English plays. The scrupulous veracity of the thing is only a shade less rare now than it was half a dozen years ago, though many young playwrights have followed Mr. Barker in exhibiting the seamy side of midddle-class respectability.

The Adelphi Play Society announces for its next London season Gorky's "Vassa Zhelizynova," Schnitzler's "The Green Cockatoo," Mr. Clifford Bax's "The Caliph Talisman," "Adolescence," by James Littlewood, and a play by a Russian decadent, Sologub.

Léon Gandillot, playwright, died at his home in Paris, Saturday, at the age of fifty. Among his dramas was "L'Ex," in which he directed attention to the French system of educating young girls. Besides this he wrote "Les Femmes collantes," "La Mariée récalcitrante," "Ferdinand le noceur," "La Tournée Ernestin," "La Tortue," and "Le Sous-Préfet de Château-Buzard."

In his memoirs which appeared a few days after his death, Massenet modestly expressed his belief that he should soon be forgotten. It is now announced that his native town, St. Etienne, will give his name to a high school of music, and also to a street. In Paris steps are being taken to erect a monument to his memory. But he has a *monumentum ære perennius* in his operas, particularly his "Jongleur de Notre Dame," which will grow more and more famous as time passes, like Bizet's "Carmen." And until a new Bizet is born in France, others of Massenet's operas will live, because there is melody in them.

Hans Richter began his brilliant career, so far as his world-wide fame is concerned, as the conductor chosen by Wagner for the Bayreuth Festival in 1876. A few weeks ago he declared that the final "Meistersinger" performance at this summer's Bayreuth festival would be the last occasion when he should ever wield a bâton. His retirement calls attention to the fact that Bayreuth, like the great German cities, is confronted by a serious question of conductorship. The late Gustav Mahler never took part in these festivals, nor has Nikisch ever done so, for reasons which it would be interesting to know. Strauss has not been seen in Bayreuth for twenty years, and Mottl is dead. There remain only Muck, Ballinger, and Siegfried Wagner; but Siegfried is so busy with general managerial matters that he cannot be counted on much for rehearsals and performances. The opinion is gaining ground that he attaches relatively more importance to the scenic side of the performances than Richard Wagner would have done.

Ballinger, who has been chosen as the successor of Hans Richter in Manchester, seems to be one of the coming men—indeed, judging by the critical reports from Bayreuth, he has already arrived. The critic of the Hamburg *Fremdenblatt* is quite enthusiastic over his conducting, declaring that he is exceptionally eloquent and poetic in his readings, that his tempi are dramatically aggressive, and that, although he likes to indulge in bold *al fresco* painting, he does not overlook subtle symphonic details in the orchestral score. It is said of him that since he became a conductor he has taken the pains to learn how to play every instrument in the orchestra.

Since Josef Stransky left Berlin to become the conductor of the New York Philharmonic, the Blüthner Orchestra, in that city, for which he had so rapidly won popularity, has been conducted by Von Hausegger. Like his predecessor, Hausegger believes in trying novelties. Among those selected by him for the coming season are Paul Juen's "Wächterweise," Hausegger's "Natursymphonie," a violin concerto by Leopold van der Pals, a piano concerto by Halfdan Cleve; "L'Hiver," by Ernest Bloch; "Aubade," by Cyril Scott, and an "Orchestral Poem" by Walter Lampe. These are mostly names little known.

Weingartner is lucky in having procured Fritz Kreisler to be the first to play his violin concerto. It will be heard in Vienna, and subsequently Kreisler will play it in London, Paris, Boston, and probably in New York.

Verdi conceived most of his melodies while he was taking a walk, either in the city or in the country. On such occasions he was usually bareheaded, with his hands at his back. In this attitude the sculptor, Enrico Butti, has chiselled the great composer in the monument (eleven metres in height), which is to be placed in Milan next year. Other cities, among them Rome, Parma, and his birthplace, Busseto, will celebrate the centenary of his birth by erecting statues.

Chopin, according to his biographers, was so averse to letter-writing that rather than take his pen in hand he would hire a cab and drive miles in Paris to deliver a message personally. Nevertheless, the number of his letters, written mostly in French or Polish, is considerable. A complete edition in a German version has just been issued by Breitkopf & Härtel. Among them are some that had not been printed heretofore. They give a vivid picture of the great composer's state of mind during the last period of his life, when he was too ill to compose, too tired to play without utter exhaustion. They show how the minor professionals, then as now and always, were the enemies of genius; how the Scotch women lionized and bored him; how he found it difficult to get $100 for playing in private houses in London, where to-day Chopin II, alias Paderewski, gets $5,000 per evening; and how, in consequence of his inability to earn enough by his playing, or the sale of his compositions, or by giving lessons, he could not think of marrying.

Paris is building theatres at a rate to arouse the envy of Oscar Hammerstein. The season now opening will witness three entirely new theatres and two of the older ones rebuilt. There are already open to the public twenty-one large and sixteen smaller theatres, in addition to about two dozen variety shows and music halls. One of the new structures, which Gabriel Astruc is having built in the Avenue Montaigne, will also be available for operas and grand concerts.

Art

Curator Guiffrey's summer tour in Europe has resulted in the purchase of four interesting pictures for the Boston Museum. Of these perhaps the most important is Gainsborough's full-length portrait of John Eld, painted about 1772. It represents him attired in red before a landscape background. For one hundred and forty years it hung in the Staffordshire General Infirmary, of which Eld was a founder. An even rarer acquisition is Parnassus, by Claude Lorrain, painted for the Constable Colonna of Rome, signed and dated 1680. A cassone-front, Stories of Psyche, by Filippino Lippi, is the first mythological piece of the early Renaissance to enter the Boston collections. Chiefly of curious interest is a nude, Judith, signed and dated by Jan Matsys, of Antwerp, in 1545. These acquisitions represent a thoughtful and commendable endeavor to fill gaps in the collection.

"Memories of James McNeill Whistler, the Artist" (Lane), by T. R. Way, is chiefly interesting for the illustrations lithographed by the author. For many years Mr. Way had the run of Whistler's studios, and he had the habit of making thumbnail sketches of Whistler's work. Many of these have been drawn on the stone for the present book. Here, for example, are thumbnail sketches in colors of the fifty-three Venetian pastels which Whistler exhibited on his triumphal return to London. These notes are charming in themselves, and will help to identify scattered members of the series. Whether it was worth while to copy so many of Whistler's slighter composition sketches may be questioned. This kind of scrawl often has a distressing lack of quality. Whistler's energy was clearly not native, but achieved by much taking thought. On the literary side, not much is to be said for Mr. Way's reminiscences. Some notion of the pertinacity with which Whistler went at lithography may be got, and there are a few new facts and anecdotes, but any valuable residue would have gone into a short magazine article. The author is heavy-handed, and perhaps the severest criticism of his book is that Whistler emerges from it diminished both personally and as an artist. A couple of slight lithographic sketches from Whistler's original stone are among the illustrations, and will commend the book to collectors. On the whole, it is a regrettable book. On Whistler's better activities it sheds little new light, and, quite unintentionally, we believe, it exposes rather crudely certain personal foibles and infirmities sufficiently well known already and needing no further emphasis.

In Miss Helen Marshall Pratt's "Cathedral Churches of England" (Duffield) there is something of the patient and contented spirit of the old-time scholarship, as rare as it is refreshing in an age of machine-made books, when twelve months of research after the data of any projected topic is considered an excess of conscientiousness. To the composition of her book Miss Pratt has devoted eight years of study, and the result repays her labor. A less conscientious writer, with such a subject, might have been tempted to essay a more pretentious work, and would not have produced anything half as useful. Miss Pratt aims merely "to set forth in concise, orderly, and convenient fashion the most interesting features of the history, architecture, and antiquities of the two-and-thirty cathedrals of England, for the use of intelligent travellers and students." These opening words of the author's preface might serve as a review of her book. Throughout it is "concise and orderly," for Miss Pratt has a tidy, methodical mind, which pigeonholes facts and arranges them in their proper sequence. The four preliminary chapters are models of clear exposition, and the subsequent accounts of the individual cathedrals (characteristically marshalled in alphabetical order) are admirably lucid in style and arrangement. There is enthusiasm displayed for a fascinating theme, but it finds expression in thoroughness of treatment instead of in the lyric outbursts of exaggerated sentiment with which descriptive writers too commonly bespatter their pages. By her volume Miss Pratt will have placed in her debt many "intelligent travellers and students" visiting the cathedrals of England.

"Rambles in the Pyrenees and the Adjacent Districts" (Dutton) is something less and something more than a guide book. The author, Hamilton Jackson, has limited his record to the French side of the Pyrenees, even there making no attempt to go over the whole ground. On the other hand he gives us something more of the history of the places he visits than one usually finds in books of this character. Being an architect with special archæological interests, he dwells upon the archæological rather than the æsthetic value of the objects observed, and embellishes his book with many of his original drawings and some excellent photographs of constructional details which a less observant architect might easily overlook. Any book is to be welcomed that draws the attention of the tourist to the intensely interesting and extraordinarily beautiful country the author traverses; but he appears not to have written for the general public, if we may judge from his meagre enthusiasm over the glorious mountain scenery which must always remain the principal reason for visiting this region. The book is evidently a compilation of notes made by the author, partly on the ground and partly in his study; and its parts thus appear to lack connection. This lack of connection is increased by the interjection from time to time of paltry incidents which can only be of interest to him or his travelling companions as reminders of special episodes of the journey. For instance, he closes his brief reference to Pau with the remark (p. 101): "At the hotel at which I stayed the waitresses, one of whom was a married woman, were most efficient, and kept a roomful of customers well supplied." Apparently the author must have had in the past some unusually unsatisfactory experience with married waitresses.

Howard C. Levis, whose "Bibliography of American Books Relating to Prints" we have previously noticed (July 14, 1910), has now issued his long-expected "Descriptive Bibliography of the Most Important Books in the English Language Relating to the Art and History of Engraving and the Collecting of Prints" (London: Ellis), in an edition of 350 copies. The mass of information in this large volume is presented, not in the form of a one-alphabet list of titles, but in regular chapters on specific subjects. Some of the chapter headings are: Books of Secrets and Mysteries, Dictionaries of Engravers, The Literature of Colored Prints, The Various Processes (etching, lithography, etc.), Publications of Clubs and Societies, Water-Marks, Book-Plates, Nielli, Bank-notes. This arrangement, and the plentiful notes and illustrations, emphasize the personal nature of the book. It is not only a book to refer to, but one in which to browse in order to bring back to mind the pleasure in books read or prints seen, long since, perhaps. It is a book to delight the print collector.

Finance

THE SEQUENCE OF EVENTS.

There was published in the early stages of the panic of 1907 an article under the above head, whose purpose was to point out what, in the light of past experience, was the series of events that must accompany and follow that great financial panic, as it had accompanied and followed others. Briefly summed up, the sequence as outlined was:

First, the failure of an important bank. Second, a run of depositors on all the banks. Third, a day of outright and hopeless panic, notably in the banks and the Stock Exchange. Fourth, partial or complete suspension of cash payments by the banks. Fifth, hoarding of cash in large amounts, leading to a premium on currency. Sixth, very large import of foreign gold, bought at a premium and paid for in securities and commodities. Seventh, demand on the Government to "do something," with the result that something futile and foolish is usually done. Eighth, a sudden improvement in the situation, due to receipt of foreign gold and to waning panic. Ninth, a flood of propositions from everybody to reform the currency. Tenth, realization by the whole community that an era had been closed in American finance, and that a long period of reaction must be undergone in preparing for the process of reconstruction.

How exactly all this familiar sequence of events and after-events was carried out, it is hardly necessary now to recall. They have led invariably, in our financial history, to what may be called an intermediate period in the cycle of prosperity. That included, in every chapter of our after-panic history, an attempt by Wall Street and the business community to persuade itself that nothing very serious had really happened; then a sudden and determined effort to return to "boom times"; next, discovery that all this was hopelessly premature and that general liquidation must be resumed; after that, a year of profound discouragement and despondency (with the Wall Street oracles telling us that politics alone was to blame), and at last, the beginnings of real recovery. This sums up the characteristic incidents of 1908, 1909, 1910, and 1911, as accurately as it does those of 1894, 1895, 1896, and the first half of 1897—or, for that matter, the series of years from 1874 to 1879, inclusive. Every great panic on our records—perhaps excepting that of 1857, when the course of after-panic finance, though its history began as it did after 1873 and 1893, was necessarily altered by the Civil War—has had the same immediate sequel.

Since, then, the history both of our recent panic period and of the after-panic period is seen to have conformed thus closely to precedent of all similar periods in the past, and since we are now admittedly entering on the period of revival, it should be interesting to sum up, in the light of the same past history, the sequence of events which marks that economic chapter. The governing circumstances, in such recovery from panic and from after-panic depression, will naturally be less identical than those which prescribe the incidents of the panic collapse itself. They are in some measure accidental. Yet, in American financial history, there has been a rather remarkable uniformity. These are the usual successive chapters:

First, discovery that, as a consequence of enforced economies, stocks of all sorts of goods in merchants' hands are abnormally low—a subject of reiterated comment in 1878, 1897, and 1911.

Second, sudden and heavy increase in our manufactured export trade—due to low prices and slack home demand, and greatly helped by the fact that European trade recovery had been rather more rapid than our own. In 1878, this caused what was then an absolutely record-breaking export trade and an excess of exports $100,000,000 above all precedent; in 1897, it led to Europe's outcry over the "American invasion"; in 1911 it again swelled our manufactured export trade beyond all records.

Third, and as a consequence of this, an abnormally large foreign credit balance, whereby our markets paid off a heavy debt in 1879, underwrote British Government war loans in 1900, and financed the Berlin money market at the close of 1911.

Fourth, a stroke of economic luck in this country's favor—the famous European harvest failures of 1879 and 1897, coming along with bumper harvests here, and leading to enormous home transportation business, car shortage, increased railway earnings, and exports so exceptionally heavy as to cause actual scarcity of ocean freight room. The great crops of the present season, coinciding with England's threatened shortage, are presenting a picture not wholly unlike this.

Fifth, as a natural consequence, larger imports of gold, on a strict commercial basis, than in many years—our excess of such imports was $76,000,000 in the twelve months beginning with July, 1879, and $105,000,000 in the same period after midsummer, 1897. This year the movement has at least begun, with the $3,500,000 gold now on the way to us from London.

Sixth, a great expansion in American business enterprise and in the market's financial plans—notably a factor in 1880 and in the period 1898-99, but scarcely in sight as yet to-day.

Seventh, a prolonged and vigorous rise on the Stock Exchange; usually helped along by the waning of political agitation and by some consequent highly favorable turn in public affairs—the success of specie resumption in 1879 and 1880, with the Republican victory of the latter year, and the successful enactment of the Gold Standard law in 1900, with the second defeat of Bryan. Nothing of the sort is yet in evidence at the present stage of this year's recovery; but there are some factors in the economic and political situation which may conceivably have to do with producing it, later on.

Eighth, unanimous recognition, at home and abroad, that America had definitely entered upon a new and interesting era of financial, commercial, and industrial expansion. In this, however, so far as concerns the present situation, we are dealing with the unfolded future. It was a full year after 1879, and three or four years after 1897, before that stage of the economic cycle had been reached. Whether it is to be reached again on any such scale, in the present sequence of events, depends on other facts and influences than are visible to-day. Many of the particular causes for the astonishing climax to which the movement of financial excitement rose in 1901 were such as can never return in American finance, and undoubtedly it is best that they should not.

BOOKS OF THE WEEK.

HERTWIG'S MANUAL OF ZOOLOGY

Translated by PROFESSOR J. S. KINGSLEY. $3.00

The revision, which is thorogoing, is based on the last German edition of this standard work, which is still considered, by many good judges, the best treatment of the subject in a single volume.

Henry Holt and Company 34 W. 33d St. New York

The Moonlight Sonata

By JOHAN NORDLING

The love of Beethoven for the beautiful Countess, Julia Guicciardi, is the theme of this story, which has just scored a success abroad in three countries. A moving novel of fine artistry that is also a faithful picture of the master, of his fair inamorata, and of the social and artistic life of Old Vienna. *Cloth, 12mo. Color frontispiece and other illustrations. $1.25 net.*

The Cahusac Mystery

By K. and HESKETH PRICHARD
Authors of "Don Q," Etc., Etc.

A tale of London and Paris, presenting the reader to vivid and interesting men and charming women. A son's desire to clear his murdered father's memory from disgrace and offer it untarnished to the lady of his choice is the motive of the story. *Cloth, 12mo. Illustrated with colored frontispiece,* $1.25 *net.*

STURGIS & WALTON CO.
31-33 East 27th Street, New York.

THE INDIANS OF THE TERRACED HOUSES

By CHARLES FRANCIS SAUNDERS
Author of "A Window in Arcady," Etc.

8vo. With nearly 50 illustrations. $2.50 *net; by mail,* $2.70.

The author describes, from a personal observation extending over several years, the present-day life of the Pueblo Indians of New Mexico and Arizona. The book contains valuable information on Pueblo arts, especially pottery, for which the race is noted, and is illustrated with many striking photographs.

HOUGHTON MIFFLIN COMPANY'S IMPORTANT NEW BOOKS

BIOGRAPHY

The Three Brontës By MAY SINCLAIR

A biography of the Brontë family by the author of "The Divine Fire," showing singular intellectual and temperamental understanding. "Nowhere, not even in the book by Mrs. Gaskell, has so fine a novelist made so fine a biographer."—*N.Y. Times.* With photogravure illustrations and facsimiles. $3.00 *net.* Postage 18c.

Life and Letters of John Rickman By ORLO WILLIAMS

"A book that should prove a valuable addition to our knowledge of Charles Lamb and his circle, apart from the individual interest attaching to its subject."—*Westminster Gazette.* "Altogether this is a most interesting and informing collection of letters."—*London Morning Post.* With 9 illustrations. $3.50 *net.* Postage 15 cents.

J. M. Synge: and the Irish Dramatic Movement
By FRANCIS BICKLEY

In this brief biography, Mr. Bickley, one of the ablest of the younger English critics, tells the story of Synge's brief but picturesque career and analyzes his work in a convincing and instructive way. With portrait. 75 cents *net.* Postage 5 cents.

Lafcadio Hearn By EDWARD THOMAS

A brief biographical and critical study of the life and work of Lafcadio Hearn. The little book will be most helpful to readers wishing to obtain in a small compass a compact account of Hearn with a critical summary of his work. With portrait. 75 cents *net.* Postage 5 cents.

HISTORY AND TRAVEL

A History of the Presidency, from 1897 to 1909
By EDWARD STANWOOD

Gives authoritatively and with full detail a history of the Presidential elections in this country from 1897 to 1909. The book will be indispensable to every student of our history, government and politics, while in this current presidential year it is of course of special timeliness. $1.75 *net.* Postage extra.

Pilgrim Life in the Middle Ages By SIDNEY HEATH

"Mr. Heath has brought together a vast amount of curious and interesting lore bearing on his subject. It is a very entertaining and informing volume, and one that should prove popular." —*London Daily Telegraph.* With 43 illustrations. $4.00 *net.* Postage 19 cents.

Egyptian Days By PHILIP S. MARDEN

This timely successor to Mr. Marden's successful travel books on Greece and Spain is like them in being an indispensable volume for the intending traveller, and even richer in entertainment and humor. With more than two score excellent illustrations from photographs and numerous maps. $3.00 *net.* Postage 19 cents.

Through the Heart of Africa By F. H. MELLAND and E. H. CHOLMELEY

This story of the adventures of two British explorers makes fascinating reading, while it throws important light upon many geographical, ethnological, and political problems. With 80 illustrations from photographs. $4.00 *net.* Postage 20 cents.

Belgium: the Land of Art By WILLIAM E. GRIFFIS

A clear and lucid account of Belgian history and of the development of its fine arts. The book has 16 carefully chosen illustrations, and should prove of distinct service to the increasing number of travellers who are visiting Belgium every year as well as to home students and club members. $1.25 *net.* Postage 12 cents.

Gallant Little Wales By JEANNETTE MARKS

Miss Marks, who has acquired fame for her intimate knowledge of Wales and Welsh history, here deals with the most picturesque regions of that country as well as with some of the more interesting phases of its present day life. The illustrations, from old prints in the possession of the author, add to the interest and value of the book. $1.25 *net.* Postage 10 cents.

The Holy Christian Church By R. M. JOHNSTON

This able and brilliant book by the author of "The Corsican" tells of the history of the Church from the beginning to the present day in a most compact, lucid and informing manner. $1.50 *net.* Postage 13 cents.

OF WIDE PUBLIC APPEAL

The Task of Social Hygiene By HAVELOCK ELLIS

This timely and important book deals in a most instructive and authoritative fashion with some of the most pressing and momentous questions of the day. "A singularly powerful book, the whole argument deserves careful study. It will supply much food for thought."—*London Daily Graphic.* $2.50 *net.* Postage 15 cents.

THE LATEST FICTION

The Preliminaries By CORNELIA A. P. COMER

"The three short stories which make up this little volume are worth reading for the wholesomeness of their true sense and their true feeling."—*Chicago Inter-Ocean.* $1.00 *net.* Postage 7 cents.

Concerning Sally By WILLIAM J. HOPKINS

An absorbing story of the development of an unusual girl. Mr. Hopkins will be remembered as the author of that charming idyl, "The Clammer." $1.35 *net.* Postage 11 cents.

THREE NEW EDITIONS

NEW BOOKS

THE UNIVERSITY OF CHICAGO PRESS

The Courts, The Constitution, and Parties

Studies in Constitutional History and Politics. By ANDREW C. MCLAUGHLIN, Professor of History in the University of Chicago.

The work consists of five papers, the first of which discusses the power of a court to declare a law unconstitutional. Two deal with the growth and essential character of political parties, and are followed by one on the history of differing theories of the Federal Union. The work fittingly concludes with a discussion of the written constitution in some of its historical aspects. 308 *pages,* 12*mo, cloth, postpaid,* $1.63.

American Poems

Selected and edited with illustrative and explanatory notes and bibliographies. By WALTER C. BRONSON, Professor of English Literature, Brown University.

The book offers a most carefully chosen and well-balanced presentation of the poetic works of Americans, covering the entire period of our history. For the teacher as well as the student the value of the work is greatly enhanced by the comprehensive Notes, Bibliography, Glossary, and Index. It is believed that the book will have the wide popularity of Mr. Bronson's earlier collection, English Poems, which has been adopted by all leading American colleges. 680 *pages,* 12*mo, cloth, postpaid,* $1.68.

The Minister and the Boy

By ALLAN HOBEN, Associate Professor of Homiletics in the Divinity School of the University of Chicago.

From the first chapter on "The Call of Boyhood," through one on "The Approach to Boyhood," the author leads us by suggestion and informing principles to realize the enormous opportunity afforded by the raw material, "boy," on which the minister may work. Later chapters on play and vocational choice show how to train the boy for citizenship, how responsive he is to the right sort of impetus, and how his religious life may indirectly, and even unconsciously, be stimulated by the proper appeal to his manly instincts, while furnishing him with a normal outlet for his natural enthusiasm.

Illustrated, 180 *pages,* 12*mo, cloth, postpaid,* $1.10.

The Nation

NEW YORK, THURSDAY, OCTOBER 3, 1912.

The Week

The President deserves great praise for extending the classified service over the 36,000 fourth-class postmasters still outside of it. The history of civil service reform is as odd a series of spasmodic steps as could well be imagined. The idea has long been accepted by all parties, and has come to be singled out for especial notice from Presidential candidates. And yet, from the manner in which successive steps are taken, one ignorant of its successful working might suppose that in every fresh extension of the classified service there was a grave doubt whether it was a safe thing to break away from the spoils system. As a matter of fact, it may be doubted whether all the new devices for purifying our politics, such as Presidential primaries and corrupt practices acts, equal in importance this taking of myriads of offices out of the hands of those who would continue to make them the medium of political exchange.

The New Jersey Senatorial preference primaries constitute another milestone successfully passed by Gov. Wilson in his political progress. For an academic dabbler in public affairs, he seems to be doing pretty well. Indeed, in his own State he has turned the trick so completely that the difficulty is to remember that there ever was in New Jersey the condition that he has overthrown. In fact, when he met with uncompromising defiance the ex-boss's announcement of a desire to return to the United States Senate, the point was conspicuously raised against Gov. Wilson that he was simply fighting a dead man and deserved no credit for the performance. Well, for one thing, the man didn't know then that he was dead; and, for another, if he really was so dead that there was no merit in fighting him, that shows a clearness and completeness of performance on the part of Mr. Wilson that it would be hard to match in our political records. For it was not the killing of one boss, and letting another take his place; it was the uprooting of a system—and a bi-partisan system at that—which had been so impregnably intrenched in the State for many years that it had come to seem as much a part of the order of nature as the Jersey mosquito.

The obstinate refusal of the Republican party to die is well-nigh like a flying in the face of Providence. Besides, it is a flat defiance of the highest medical authority. Good Dr. Roosevelt on Saturday pronounced the Republican party dead, *secundum artem*. He listened for its heart-beats, held a mirror to its lips, and then turned to his Southern audience with the verdict: "The Republican party is dead." But the party itself persists in saying that, like the Irishman, it may be dead but is not conscious of it. It has a will to live which, after Dr. Roosevelt's sentence of death, is positively wicked. Why can it not be "resigned" and give up the struggle? Instead, we see it acting as if it were very much alive—holding conventions, making nominations, raising money, working like beavers, even pretending to be cheerful. President Taft actually has the impudence to assert that it is the Third Party which is dying, and that the Republicans are getting more vigorous and hopeful every day. Such effrontery naturally troubles good Dr. Roosevelt, who announces that he is again to sit on the corpse and prove by many infallible signs that life is extinct.

Mr. Taft carries his audacity even beyond the point of denying that he is a dead cock in the pit. He declares that he is going to be elected, and this largely on the very issue which the Third Party has sought to make so much of—that is, "passing prosperity round." This is what Roosevelt promises to do; but Taft asserts that his Administration has already done it. And he cites figures of railway earnings and manufacturing output and crop values in a way to enrage every true Progressive. For pledges of prosperity are those which are oftenest on Roosevelt's lips. He has whooped it up against the ruinous Democratic tariff policy in the finest standpat fashion, and has explained how his own unspecified revision of the tariff will make each section of the country that he visits rich and happy. Hence the peculiar turpitude of President Taft in now coming forward to claim the political benefits of prosperity as all his own. It is enough to make the Colonel swear that there is no such thing as loyalty to old friendship.

The singing of "Onward, Christian Soldiers" at the Republican State Convention plainly indicates that Mr. Barnes and his associates regard their own cause, too, as essentially a religious movement. Upon the two fundamental issues of the campaign Mr. Roosevelt and the old-line Republicans are therefore in harmony. Both parties are marching under Divine guidance to the defence of the protective system. There is no reason why the entire resources of the hymn-book should not be called into play. To the subdued strains of "Lead, Kindly Light" Mr. Hilles might expound the principles underlying Schedule K. Mr. Roosevelt himself could doubtless explain the precise difference between the cost of production in this country and abroad to the tune of "Jerusalem, the Golden." A diligent search of the hymnal will undoubtedly reveal other appropriate selections bearing upon the assurance of prosperity, the peril of foreign pauper competition, and the happy conditions prevailing in the Pittsburgh steel mills and the Lawrence woollen mills. Against such a formidable combination of psalmody and standpatism, piety and profits, how shall the Democrats hope to prevail?

There is a difference between laughing with a man and laughing at him. This distinction is the vital one to make in the case of Mr. Job Hedges, for years known as almost a professional humorist, but now the Republican candidate for the Governorship in New York. A long tradition has it that such a man labors under a handicap. His audiences will look for quips and quirks even when he is most seriously discussing grave affairs of state. Moreover, it is said that a democracy does not take kindly to the idea of putting a fellow of infinite jest into a position of great power. This they think is carrying the joke too far. Melancholy instances are cited of aspiring politicians who have lived to regret that they had ever tried in public to be as funny as they could. And there can be no doubt that in this regard Mr. Hedges has something to repent of and to try to live down.

Yet while Mr. Hedges has often provoked laughter—not invariably: some of his sallies have fallen very flat—the laughter has not been at his expense. People have not laughed *at* him. He has not made himself ridiculous. And along with his weakness for humorous turns in his speeches, he has shown real ability and decided force of character. It is by virtue of these qualities that he won the nomination at Saratoga, and it is by dint of them that he will attain whatever success comes to him in the campaign. We may be very sure that his speeches during the next month will be as sober and weighty as he can make them. He is not such a fool as to be deluded into thinking that the people want a flippant man for Governor, or that he can be floated into office on a wave of merriment. Lincoln was in private a renowned story-teller and a man of whimsical humor, but in his speeches he never made jokes.

In his strong and well-weighed declaration for a "free and unbossed" Convention at Syracuse, Gov. Wilson reaches the heart of his message when he says:

> The Democracy of New York is at a critical turning point in its history. The whole country awaits its action at Syracuse with deep attention and concern. Democrats everywhere look to it to set an example and vindicate the fair name of the party. They will feel the chill and discouragement very keenly if it should fail them, and will be stirred by added hope and enthusiasm if it should accomplish what is expected of it.

This is something very different from mere opposition to a particular candidate for the nomination. Nor can the requirement it sets forth as the just demand of "the whole country," as the object of "deep attention and concern" on the part of "Democrats everywhere," be met by the mere outward show of a "free and unbossed" Convention. The sentiment, now so thoroughly aroused, of uncompromising resistance to Tammany rule in this State, cannot be conciliated by putting forward any candidate whom the public regards as fundamentally identified with Tammany politics and whose nomination will have been the result of a pleasant understanding with Murphy.

Gov. Hadley's long-awaited statement of what he is going to do on November 5 shows him still valiantly uncertain. Roosevelt he seems to have dismissed from the possibilities, but he is not sure that he will vote for Taft either. If the President will only come out for Presidential primaries and a new basis for Southern representation in National Republican Conventions, then he will vote for him. The rather ridiculous position in which such an announcement would now leave Mr. Taft does not appear to have occurred to the Missouri Governor. But—and here is the serious portion of the Hadley explanation—if Mr. Taft does not come out for these things, then Mr. Hadley will not vote for anybody for the next President of the United States. Such an ultimatum must force a prompt and unconditional surrender, for who could contemplate the awful alternative thus threatened?

Here is President George F. Baer of the Reading System—widely known as "Divine Right Baer"—taking ten whole years to set the public right on a matter which, one would have supposed, it was decidedly to the interest of himself and his class to have set right promptly. Thus Sir Isaac Newton acted about the publication of the Principia, the enunciation of his great discovery of the law of gravitation; he would not give it to the world until he had completely cleared up the one apparent inconsistency which seemed to stand in the way of its unqualified acceptance. Probably if we knew more about the ways of the Seven Wise Men of Greece, or of still more ancient sages, we should find a willingness on their part to wait half a lifetime for the sake of giving out the result of their cogitations in the most perfect form of which it was capable. But that these leisurely habits have survived into our time, and especially in railway and mining circles, we should never have supposed. It would be interesting to know what have been the pros and cons in Mr. Baer's mind, during the past decade, as to the question of giving to the public, or withholding from it, the explanation he now presents of the alleged declaration at the time of the coal strike of 1902 that in his guardianship of the coal trade he was the representative of Divine Providence. For the explanation itself is simple to the last degree. He was replying, he says, to a minister who wished him to let Divine Providence settle the labor trouble, and was simply passing back to the well-intentioned clergyman the language he himself had used.

Senator Warren's reply to the charges of *Collier's* fills nine columns of the *Wyoming Tribune.* Parts of it are specific and convincing, but on other points, and these some of the gravest, he will have to say more before he can clear himself in the eyes of the impartial. His defence against the accusation that he had his son-in-law, Capt. John J. Pershing, jumped over the heads of 862 officers into a brigadier-generalship, seems to be complete. He declares that neither he nor any member of his family knew that such a person as Capt. Pershing existed until after Pershing and his friends had the promise of President Roosevelt that he should have the appointment. This statement is accompanied by a typical letter from the Colonel, dated November 18, 1910, in which the former President "cannot remember" whether Pershing was married or engaged to the Senator's daughter "at the time he won the victory because of which I promoted him," and cautiously remarks that "unless I am mistaken, you never spoke to me on the subject until I had announced that he was to be promoted." In any case, of course, he was promoted "strictly on his own merits." It is obvious that this letter, with its qualifying words, adds nothing to the Senator's defence, but on the contrary tends to weaken it. Senator Warren, too, should have known better than to talk about a man and his friends having "had the promise of President Roosevelt that he should be made a brigadier-general"; such language smacks of favoritism, and is far less categorical than the Colonel's smashing phrases of "purely on the merits" and "tissue of malicious falsehoods."

Upon the charges of having obtained Government land in Wyoming and Colorado by illegal methods, the Senator is less convincing. He quotes from reports of Federal officers who investigated these charges in 1889 and 1907, but these reports are as significant for what they do not say as for what they do. The first and more favorable report says:

> That he did reside on said land and probably for the period required by law, and used said land as a ranch and was also frequently in Cheyenne, I believe can be established by claimant.

But the second report apparently pays no attention to the complaint, which it quotes, "that the Warren Live Stock Company had for a number of years been maintaining an unlawful enclosure of public lands," contenting itself with finding that

> in August, 1907, the date when final investigation had been completed, no unlawful enclosure was being maintained by said company either in the State of Colorado or in the State of Wyoming.

And so the case was closed. The fact that, while the complaint was officially made in 1905, the report appeared two years later, and confined itself with notable exactness to the condition of things in August, 1907, seems to deserve some comment from the Senator.

Dismissals of students at a Southern university for a hazing which culminated in the death of a freshman should not be unthinkingly accepted as signifying a reaction in our colleges toward the anæmic ideals of other days. The faculties of the most red-blooded universities are compelled to take some action when relatives and friends of a slain student raise a clamor, but even if hazing should be seriously interfered with for a while here and there as a result, the fortunate opening of the football season just at this time will prevent any real retrogression in the direction of nervelessness and excessive devotion to mere study. We must ever be on our guard against the menace of the academic in our halls of learning, and especially this year, when the excitement of a Presidential campaign is likely to give a certain amount of stimulus to debating societies, if not, indeed, to courses in history and government. Luckily, the campaign is characterized in one party at least by vigorous epithet and pugnacious metaphor, which cannot be entirely without effect upon the English of undergraduate arguments. Next in educational value to fighting is making a fighting speech.

King William and the Battle of the Boyne were enlisted on the side of Ulster the other night in its fight against Home Rule. Despite the undoubted enthusiasm of the immense meeting at Belfast, however, the significant thing was the comparative absence of talk about armed resistance. Even Mr. Bonar Law wrote merely to assure the people of Ulster that they did not stand alone, but could rely upon the support of the whole Unionist party. This is hardly in the nature of news, and is certainly mildness itself beside some utterances which the Conservative leader has permitted himself. More sternly defiant was the announcement of Sir Edward Carson that the signing of the covenant "may be either the end or the beginning of drastic action." The net result of all this tumult and shouting is to leave the situation unchanged. Ulster is prepared to resist the "dissolution of the Union" to the last ounce of her supply of oratory and resolutions, and she likes to think and to be told that she is going to resort to more martial weapons when the right moment comes. But it is as certain as anything can be that if her hot-heads attempt any violence, they will promptly suffer a great disappointment in the attitude of no less a personage than Mr. Bonar Law himself and his Unionists. These men may be willing to encourage wild and whirling words about armed resistance, but they will be among the first to discourage its practice. Such conduct may not be altogether ingenuous, but its ultimate effect will not be on the side of the Ulster last-ditchers.

The Irish farmers are suffering heavily from the embargo put on the exportation of cattle by the British Government in consequence of the recent outbreaks of foot and mouth disease. This has been in effect now for several months, and is likely to last for a considerable time longer, as the disease is not yet completely under control. They usually supply England with quantities of sheep and pigs, and not a few goats. All this trade is now cut off, but it is in the cattle trade that they are the chief sufferers. This amounts annually to $50,000,000, in ordinary circumstances, and represents the sale of store stock raised specially for shipment to England and Scotland. The unlucky farmers have all this stock upon their hands, with no prospect of a market in the near future and no provision made for feed in the winter. The unusually wet summer has helped them somewhat, by supplying them with plenty of grass. But this relief is only temporary, and the time is rapidly approaching when they will find themselves loaded up with animals which are not fit to be killed and which can only be fed at a ruinous cost.

Spring has always been the open season for Balkan eruptions. The present unrest in the peninsula is directly traceable to the war in Tripoli. The seizure by Italy of several islands in the Ægean has raised the hope among the Panhellenists that the Turkish flag may never be raised again over the occupied territory, and that Greece will succeed to the inheritance. This possibility in turn has stirred patriotic aspirations in Bulgaria, and naturally when Bulgaria begins to make preparations, its traditional rival, Servia, commences to display symptoms of high fever. So far as Turkey is concerned, there is something in the suggestion that the Porte would not be averse to a trial of strength with Bulgaria, under cover of which the inevitable surrender of Tripoli to Italy might be accomplished. In case of a Turko-Bulgarian war, the chances are by no means all against the Turks. The Bulgarian army may be a very efficient instrument, but the fighting qualities of the Turkish soldier are well recognized.

Chinese political parties have been reduced at a stroke from six to two, the stroke being the combination of five of them into one. This one, which calls itself the Kuo Ming Tang, is evidently determined to make a strong bid for popular support. Not only its name, but its platform, indicates an ambition to be "The People's Very Own." It stands for the consolidation of the Republic, local self-government, the assimilation of the races, and international peace. All these, as the Shanghai *Mercury* remarks, are so extremely desirable, and so generally accepted as such, that the whole world might welcome them. This only shows, however, that the Chinese are getting on rapidly. More specifically, the new party seems to be opposed to Yuan Shi-Kai, an attitude that is regarded by the *Mercury* as satisfactorily definite, since this journal believes that there are in reality just two parties among the Chinese people, a pro-Yuan party and an anti-Yuan party.

WILSON IN CONNECTICUT.

It is an interesting fact that Gov. Wilson should have chosen what used to be known as "the land of steady habits" as the place in which to give fuller expression to his views on the programme of political radicals than he has done in any previous part of his campaign. The tone in which he addressed his Connecticut audiences was that of a radical speaking to conservatives. So far as regards the initiative, referendum, and recall he made no qualification of opinions favorable to these innovations that he has expressed elsewhere. He reaffirmed his opposition to the recall as applied to the judiciary, but apart from this he gave what looks like a blanket endorsement to the whole programme. With this position we cannot pretend to be in anything like entire agreement; furthermore, on a particular—and a very important—aspect of the initiative and referendum question, to which we shall refer in detail presently, we conceive that the Governor's statement of the case will prove misleading. Nevertheless, the speech stands out in marked and most favorable contrast with most of the current utterances in the Progressive campaign, and above all with the whole tone and temper of Mr. Roosevelt's agitation. We believe Mr. Wilson to be sincere when he makes such a declaration as this:

> We ought to go very slowly and very carefully about the task of altering the institutions we have been a long time in building up. I believe that the ancient traditions of a people are its ballast. You must knit the new into the old. If I did not believe that to be progressive is to preserve the essentials of our institutions, I, for one, could not be a Progressive.

We believe that, if entrusted with the powers and charged with the responsibilities of the office of President of the United States, both his official acts and the influence which he would exert by his addresses to Congress and the people would be in keeping with the sentiments here so emphatically expressed. Of these sentiments one finds little or no trace, either in the words or the acts of those who represent Rooseveltism, and certainly none at all in the conduct of the Colonel himself. This more than anything else makes us look upon the Progressiveness of Wilson and the Democratic party as a thing wide asunder from the Progressiveness of the Rooseveltians.

Mr. Wilson bases his support of the new political schemes upon the failure of our existing instrumentalities of government in many of the States to work out reasonably satisfactory results, or to reflect with reasonable correctness the deliberate desires of the communities they are supposed to represent. He states these things with emphasis, and we do not see how any one can sincerely deny that the emphasis is warranted. It is this fact which gives to the movement for the initiative and referendum such force as it has among sober and thinking people; and to some extent the same thing is true of the recall. But when it comes to the recall of judges, Mr. Wilson finds a permanent consideration bearing on the question which outweighs all that may be said about the evils for which it is proposed as a remedy. In order to justify his opposition to the recall of judges, he does not find it necessary to deny that there have been gross and flagrant abuses in judicial office. But he says, first, that the recall of judges is not the right way to remedy these evils, being a treatment of symptoms instead of the disease; and, secondly, that "the judiciary process is the last ultimate safeguard of the things that we want to hold stable in the country." In his speech at Kansas City on May 5, 1911, Mr. Wilson said:

> Their [the judges'] independence, their sense of dignity and of freedom, is of the first consequence to the stability of the State. To apply to them the principle of the recall is to set up the idea that determinations of what the law is must respond to popular impulse and to popular judgment.

And we may conclude from the Connecticut speeches that his position on this subject is now what it was then.

We come now to the passage above referred to concerning the initiative and referendum. "Let no man deceive himself," said Mr. Wilson, "by the fallacy that anybody proposes to substitute direct legislation by the people, or the direct reference of laws voted in the Legislature to the vote of the people, for representative government." As may be seen by the context, the Governor meant in saying this that Constitutional provisions instituting the processes of initiative and referendum had been resorted to only in States in which the people "had become convinced that they did not have representative government"; but even if this context be born in mind, the assertion is almost sure to mislead. The latest event in this domain is the recasting of the Constitution of one of the greatest States in the Union, Ohio. The initiative, as now embodied in that instrument, permits the enactment of any amendment whatever to the Constitution itself, upon petition by one-tenth of the electorate and approval, at the next general election, by a majority of those actually voting on the proposal; and the enactment by popular majority of any law for which a petition has been sent to the Legislature by three per cent. of the electorate, upon the reinforcement of that petition by another three per cent. in the event of its rejection by the Legislature. All this may be wise, or it may be unwise; it may be necessary, or it may be unnecessary; but certainly few persons who stop to reflect on the compass of the Ohio innovation will be able to reconcile the facts with Mr. Wilson's assertion that whoever believes "that anybody proposes to substitute direct legislation by the people for representative government" is deceiving himself by a fallacy.

A PROGRESSIVE ILLUSION.

It seems worth while to enter a mild protest against the rapidly growing tendency to imagine that until there grew up a movement that called itself Progressive—with a big P—no progress was being made in the matters to which the Progressive label is now attached. Men and women who have labored for workmen's compensation acts, for limitation of women's working hours, for child-labor laws, for tenement and factory laws, and have achieved great results in a comparatively short time, have not been shouting from the housetops that they are Progressives, and have accomplished much progress in many States without attacking in any way the foundations of our system of government.

A curious minor instance of the tendency to which we refer is the widely prevailing belief—for which Judge Lindsey, we hasten to say, is not in the least responsible—that the idea of the juvenile court originated at Denver, whereas this institution had been in operation on a large scale in Chicago before it was introduced in the Colorado city. The commission form of government is a bold experiment, which was put into motion at Galveston under the stress of a practical exigency, and which rapidly spread to scores of other cities, without any stimulus from rhapsodical Progressivism. Public service commissions have been instituted in State after State, either under the pressure of general public sentiment or through the energetic labors of able and high-minded leaders like Gov. Hughes, who have not at all worn the label of the professional Progressive. That the Progressive movement, dating back to such agitations as that of La Follette in Wisconsin, has been an important factor in some or all of these things, we would not deny; but there is all the difference in the world between recognizing this influence and imagining that without it we should all have stood still or gone backward. And there is a practical difference between seeing the thing as it is and viewing it through a magnifying and distorting haze. In the one case we shall walk carefully and firmly, whereas in the other we are in danger of rushing into all sorts of follies under the impression that only so can we make any advance.

That our governmental machinery in State and nation has fallen far short of the ideal requirements of representative government is, unfortunately, only too true. Nevertheless, the degree of its shortcoming in relation to the great questions of public welfare with which the Progressive programme is concerned may easily be exaggerated; and, furthermore, there exists a widespread confusion of thought concerning the nature and the origin of its defects. A parliamentary system may fail to be representative either because it is hopelessly dominated by a ruling class, or because it is permeated by corruption. In our own country, in so far as representative institutions have failed, this has been chiefly because of the corrupting influence of machine politics and the boss system; and it would be a strange confession of ineradicable national weakness to suppose that this state of things is incapable of remedy. It is true that powerful interests have here and there controlled machines and bosses in order to block legislation demanded by the welfare of the masses; but it is far from true that the wealthy or prosperous classes as a whole, or in any great part, have taken their stand with these forces. The most that can be alleged as against these classes is indifference or inertia; which may, indeed, be reprehensible, but is so far from being invincible that it yields readily to any genuine and earnest effort for humane and beneficent legislation or administrative improvement.

It would be easy to cite innumerable examples of this, some of them very striking. One of the most recent is the enactment by the Maryland Legislature of a law limiting the hours of labor of women, which was carried to success in a short and spirited campaign, conducted chiefly by a few women, and in large measure by the enthusiastic efforts of a young girl hardly out of college. In Louisiana a few years ago one woman got the credit of having procured the enactment of a child-labor law by a Legislature which, at the beginning of its session, was regarded as immovably opposed to it. These, to be sure, are piecemeal achievements; but it has been the way of reforms in this country, to the need of which the public mind has been thoroughly awakened, to make rapid though piecemeal progress until they have, in a short time, covered the whole extent of the Union. This was the case, for example, with the Australian ballot, which has effected a fundamental and essential, though simple, reform in our whole political machinery; and workmen's compensation, the regulation of public service corporations, direct primaries, control of campaign expenditures, are now going through the same history.

Imperfect as may be the representative character of our legislative systems, they do respond infallibly, though doubtless with some unnecessary delay, to the clearly and deliberately adopted desires of the community. And if legislation by direct vote of the people would expedite the process, it would, on the other hand, make possible conditions which cannot be viewed by sober-minded people without serious solicitude. There are proposals of a wholly different nature from any of those which we have mentioned—grave proposals which should not be adopted until it is known that they have the unmistakable approval of a deliberate, well-considered, and permanent public sentiment. When this is the case, they are sure, with more or less delay—delay essential to the establishment of this certainty—to be adopted under our present machinery. Our Government may respond slowly, but it responds surely, to any demand truly bottomed on a sincere and solid public sentiment, truly representative of the settled desire of the community. But it does not permit the sweeping away of old institutions, or the establishment of fundamental and irreversible innovations, by a mere count of noses at a single popular election. It compels these new things to show their credentials. If they have the staying power necessary to overcome the natural resistance with which they are met at first, a second, and perhaps a third and fourth time, they will be adopted; if they have not, they fail because they have failed to prove their title in a manner befitting the gravity of the issues involved.

FROM HIS "PRACTICAL" PAST.

Little that is absolutely new, but much that is overwhelmingly confirmatory, was brought out Monday by the Senate committee inquiring into the relations of E. H. Harriman and Theodore Roosevelt from 1901 to 1906. We see the then President on the most friendly and even intimate terms with the railway magnate whom he afterwards denounced as an "undesirable citizen." He showered attentions upon Harriman. He rained invitations upon him. Wouldn't he be in Washington soon? Couldn't he come to luncheon? How would Monday at 1:30 do? If not then, what did he say to dinner on Wednesday or Thursday? President Roosevelt sent Harriman copies of his messages and addresses. He consulted him about appointments to office. From him he accepted with thanks congratulations on his renomination by the Republican Convention in which, Mr. Harriman wrote, "I was only too glad to have been able to take part." And Roosevelt did not demur when Harriman expressed his readiness to "exercise my influence" in the campaign for the President's reëlection. On the contrary, he wrote that "as soon as you come home I shall want to see you." The whole picture is of two souls with but a single political thought.

Now, it is said that all this relates to far-off unhappy things. That was 1904; we are in 1912. Yes, but we cannot rightly get our bearings in 1912 till we know exactly what the man of this year was doing eight years ago. Moreover, in this very year of 1912 Col. Roosevelt has put forth again a version of his connection with Harriman which is broken down by the fresh material now brought to light. For example, in his letter to Sherman, re-published by himself with approval just a month ago, he declared, after quoting certain of the letters that passed between him and Harriman, that they were "incompatible with any theory that I was asking Mr. Harriman to come down to see me in my own interests or intended to make any requests of any kind for help from him." The view which Mr. Roosevelt wished to be accepted was that he had seen Mr. Harriman purely on that gentleman's initiative, just as he felt it his duty to receive at the White House labor leaders or cowboys or prizefighters. But this convenient gloss upon his intercourse with Harriman is completely swept away by the President's cordial notes to the wicked financier, now first published.

Fully as awkward for Roosevelt is the evidence submitted in respect to Harriman's contribution of 1904. The ex-President has repeatedly denied, in the first place, that he asked Mr. Harriman for money, and has asserted, secondly, that whatever he gave was not to the National Republican Committee, but to the New York State campaign fund. Against this we now have both oral testimony and documentary evidence. Two men now make oath that Mr. Harriman told them at the time that President Roosevelt had sent for him to help finance his campaign. These are Mr. Harriman's private secretary and his personal counsel. It is first-hand testimony that they give, and the best that is attainable, since Mr. Harriman is no longer living. It will be noted that it confirms absolutely the statement of ex-Gov. Odell before the committee. Harriman may have been mistaken, but there can be no doubt that he thought Roosevelt wanted him to make a large contribution. And the fact that he did it is certain. At last we have Treasurer Bliss's receipt for $50,000, given to Mr. Harriman on November 2, 1904. There was no Higgins or Odell string to this; it was money given directly to Roosevelt's Treasurer, just as Mr. Harriman said. On that point there is an end of controversy.

The whole case, however, is one in which the separate details, no matter how important, do not count so much as the entire mass. What we have is a general revelation of the sort of thing that was going on. We get the very atmosphere of the time. That a sordid and bargaining spirit was then regnant in our politics is put by the evidence beyond dispute. Roosevelt was terribly nervous and worried about his election—unduly so, as everybody can now see. Large financial interests had been chilled by some things he had done, and he set himself the task of warming them in his support. His letters to Harriman show how he went about the job. Personal invitations, flattery, cajolery, the desire to "talk things over"—all these means, and doubtless many others, were used to bring about what we know to be the fact, namely, that the leading corporate managers finally decided, only late in the campaign, and more or less reluctantly, to finance Roosevelt. This was made known to Judge Parker, and was really the basis of his belated attacks upon Roosevelt. Little by little the tell-tale facts have come out. The insurance investigation of 1906 made a beginning, with the revelation of the way in which Perkins had diverted the funds of the New York Life—a way which the Chief Justice of the Court of Appeals declared to be criminal—to the service of Roosevelt. From that down to this year's Senate inquiry, the uncovering of the truth has been going on, until now the wayfaring man knows where Roosevelt got his campaign funds in 1904.

Upon only one point will we add a comment. It is said that Roosevelt made no promises. There was no bargain. But by the men with whom he was dealing this was not thought necessary. Their understandings in such affairs were always tacit. If a man took their money, they expected him to act accordingly. And this must have been perfectly well known to Roosevelt. Yet he took the money and then did not live up to the implied agreement. He sought their help and then sold them out. This is what they have consistently said ever since, and it is an interpretation which the ugly facts bear with ease.

PROFESSING LITERATURE.

The vague but persistent feeling on the part of students and the general public that the teaching of literature at the present time is no better than it should be has found voice again in an address of Sir Gilbert Parker before the Imperial Conference of Teachers' Associations. Possibly out of courtesy to his audience, the speaker conceded that modern methods of instruction have improved, but the burden of his message was a somewhat bitter charge that the prevailing system is hostile to the originality and independence of the student. When the professor of literature and the literary man fall out, as not infrequently happens, the public, which has its own grievances, is likely to side with the man of letters as probably the more valuable, and certainly the more entertaining, member of the commonwealth. Commenting sympathetically upon the speech of the novelist, the Manchester *Guardian* gave this diagnosis of the case:

> The trouble is that a sort of mandarin learning tends to settle on English literature when it is badly taught, and turns it into a subject about as stimulating to the mind as the collection of postage stamps or cigarette pictures. Badly taught, it accumulates a minute lore of small facts and allusions, and worse still, it has settled exactly the relationship of every writer to every other writer, his indebtedness to every influence, and exactly what the student ought to think of him. The whole thing could be learned by heart by any one with a good memory without reading a single line of English except the illustrative quotations.

This is doubtless crediting the professor of literature with considerably more than he claims for himself; this perfect science of literary history is not his present state, but the far-off divine event towards which his whole creation moves. If he were actually there, he would probably confront Sir Gilbert Parker and the *Guardian* with the bewildered question, "What else do you expect of me and what more do you want?" And they, exactly as dissatisfied as before, would pause and grope for a reply, as most of us are doing in advance. They might hastily retort that he had defrauded them, that they had come to study with him the great monuments of English literature, and that he had lured and enticed them into the pursuit of a purely academic and antiquarian science of his own. They might—more prudently—admit that accumulated small facts and allusions and relations and influences constitute a considerable part of the subject matter of literature which is directly teachable. And yet they would protest with deep earnestness that the one thing needful was forgot.

Precisely what the great teacher gives to his students which cannot be gained from a text-book or even from the "Cambridge History of English Literature" is not so clear. If you interrogate men who have read "Don Quixote" with Lowell, or Dante with the late Professor Norton, you are likely to be put off with obscure phrases: it was something in their "brilliant digressions"; it was the "amenity of their personal atmosphere"; it was an indefinable "illumination." Most witnesses testify to a certain inner commotion and change which helped them to find themselves. The gift that we are seeking is what the ingenuous Boswell found in himself after a talk at the Mitre with Johnson. It is the virtue that William Hazlitt discovered in his own breast when he touched the hem of the mystical robes of Coleridge. It is the quickened drum-beat that Froude heard in his own pulses when the river of Carlyle's talk flowed over him. To return to the class-room, it is the gift that the young woman sought when she said to her teacher of Shakespeare, "This is all very interesting, but when do we come to the *deep* things?"

The mere professor in the teacher's chair regards such a question as an indication of most culpable callousness, and he seeks to draw the questioner's attention to more wholesome topics, such as the authenticity of the signatures or the chronology of the three parts of "Henry VI." But the anointed teacher, with a right reverence for the personality of his students, looks upon such a query as a token of spiritual grace and a hint of the improvable greatness in our natures. He knows that the simple-hearted hunger of these young and plastic souls for the magnificent and consolatory things with which he is presumably conversant is his appointed opportunity. Himself primarily concerned with the "deep things," he conceives highly of the function of literature and its interpreters, and presses constantly forward through grammars and lexicons and libraries towards a clearer apprehension of those profound currents of feeling and those master ideas which produce world-literature, and from generation to generation shape the destinies of men. He does not meet his students always with a philological journal in his hands, but sometimes with a fine idea in his head. For your true teacher, as distinguished from your popular trifler and your cataloguer and your antiquarian and your descriptive historian, is by necessity what Carlyle called a "believing soul," and he does not shirk the responsibilities of leadership. His colleagues live in a desperate and ill-grounded fear of turning the beam by throwing into the scale the weight of their own judgment; they do not wish to "bias" the minds of their pupils. He, on the other hand, believes that the first step towards intellectual independence is the recognition of intellectual constraint. He believes in giving his pupils something to react against. He is aware that most are intellectually shapeless and inarticulate, incoherent and purposeless. They are full of miscellaneous information and vague appetites and undirected potentialities. They cannot understand why the French and the Russians quarrel about their literary gospels as seriously as they quarrel about their politics and their religion. They are in need of what the leader of a literary movement gives to his followers and what a timid professorial ethics proscribes—a definite point of view and the rudiments of a literary platform. He leads them to a position from which they can see for themselves the natural links and alliances between literature and the other living issues of the day and age. He gives, in short, the one thing needful that was not in the text-book: the kindling touch to the judgment and the will, which persuades a man that literature contains important ideas of truth and beauty that concern *him*. The teacher of literature who has not this gift, though he chart the course from Cædmon to Corelli, is a failure. He will kindle no torch.

BOOKS FOR THE BUSY MAN.

What books shall a man read who has but little time for reading? There are thousands of men in business life and in the professions to whom the question is very real. On the one hand there is the desire to keep one's self from being completely absorbed in the daily struggle for existence. The longing for the printed word can never be quite extinguished where once the appetite has been indulged. The memory persists of those spacious realms of human thought into which one just caught a distant glimpse during the pleasant, idle days at college, and cheerfully passed by. On the other hand there is the discouraging reflection that such reading as one undertakes must be necessarily carried on by fits and starts, prolonged over ridiculous periods of time, and without assurance that the book begun will ever be finished. Under such circumstances the proper answer would seem to be that if the busy man of the world is to do any serious reading at all, he must read little books, or else bigger books condensed for the purpose of rapid consumption. Such at least is the belief of the publishers in this country and in England, as appears from the present profusion of literary handbooks, scientific handbooks, historical primers, and the like. The presumption is that the tired business man will pluck up the necessary courage when confronted by a thin, small volume which can be disposed of in a few half-hours.

Experience, however, by no means justifies such a conclusion. It is no paradox to state that, for the man who has little time for reading, the only proper book is the very big book; and if the book consists of half-a-dozen volumes, so much the better. In this connection we may quote a bit of sound advice administered the other day by President Butler of Columbia to an audience made up of men who, like the busy man of the world, seem to find little time for reading—namely, our college undergraduates. "Resolve to pass the year," said Dr. Butler, "in company with some one high and noble character." And he went on:

> Let the year be made noteworthy by passing it in company with the poetry of Alfred Tennyson. Or, if in another mood, pass the year in close and familiar company with the essays of Emerson, or with that masterpiece of biography, Lord Morley's "Life of Gladstone." The nineteenth century left no nobler or more inspiring life than that of Pasteur. Perhaps you may prefer to pass the year in company with that life as told by Vallery-Radot.

The point is that a man should choose a big book for companionship, and, having made his choice, should be content to spend a year in its company. The speaker had in mind the moral influence of such an exercise. But it has also educational and recreative value. With the same amount of time and attention to invest, the casual reader will derive a higher profit by making his investment in one solid piece of work than in a dozen scattered volumes.

We may take specific examples. Smith

confesses that, with a great fondness for historical reading and with little time to indulge his passion, he chances upon Bryce's "Holy Roman Empire." As it turns out, the press of business compels Smith to spend several months even over that admirable example of compact historical writing. Under such circumstances what use is there in trying? But perhaps we shall find another reason for Smith's slow progress with Mr. Bryce's book if we compare his case with that of Robinson, a business man like Smith, laboring under approximately the same disadvantages. Robinson's choice fell upon the six volumes of Carlyle's "Frederick the Great." It was a stupendous task, but Robinson set himself no daily stint and no time limit. He simply made Frederick the Great his principal intellectual concern for an indefinite future. He read little at first, but gathered impetus as he went on. It resulted in Frederick the Great and Thomas Carlyle and Robinson being brought together in an intimate companionship that constituted one of the deepest sources of pleasure to the least celebrated man of the three. It may be confessed that Robinson was at times in danger of becoming a nuisance to his friends. His anecdotes were no longer about his latest-born but about the man who laid the foundations of modern Germany. Robinson seemed also in danger of losing all sense of proportion between present and past. Mr. Bryan or Mr. Roosevelt interested him chiefly because they reminded him of something in those six heavy volumes by Carlyle.

We have spoken of history because that is a field which, for obvious reasons, exercises a broader appeal than any other form of literature outside of fiction. Robinson chose Carlyle's "Frederick the Great" as much, undoubtedly, for the sake of Carlyle as for the sake of Frederick. This is proved by the fact that after he had finished with Frederick, Robinson passed on—we are discussing an authentic case—to Carlyle's Cromwell. Robinson would have chosen well if he had taken Macaulay's England in five volumes. He would probably have fared well with Gibbon's Rome. He might have done well with Grote's Greece. For Robinson had this great advantage over Smith who began with Mr. Bryce's "Holy Roman Empire": he found in the array of volumes a breadth of horizon, a dramatic sweep of narrative, a world of human action and human character and human motive which the most perfect handbook on history can never hope to provide. In other words, once Robinson had conquered his initial awe of the vast stretch of pages before him, their very amplitude became an attraction. He had made acquaintance not with a book, but with a world. His half-hour's reading at night speedily ceased to be an exercise, and became a habit.

So much for the ultimate ease with which big books can be read. Of their value there can, of course, be no question. No man can spend half a year with Gibbon or Macaulay or Carlyle without finding his mental stature expanding in that high company. Even if Robinson had not passed on from Frederick to Cromwell, he would have gained a great deal. For he would have accomplished what the best type of thinker and writer tries to achieve, he would have attained, in degree, the ideal of the true scholar; namely, the mastery of one small field of human knowledge. With a mind trained in that one field, Robinson, in his humble way, is the better prepared to approach life, men—and other books.

INTERNATIONAL CONGRESS FOR THE HISTORY OF RELIGIONS.

LEIDEN, September 14.

The choice of Leiden for this fourth meeting, September 9-13, was particularly appropriate. Next to France, no other country has done so much to advance the historical study of religion as Holland. More than thirty years ago chairs for the subject were established at her four universities in Leiden, Amsterdam, Utrecht, and Groningen. These were the first chairs of the kind, and the work done at Leiden acquired special prominence through the international reputation achieved by the first occupant, the late Prof. C. P. Tiele.

About 300 scholars from all parts of the world gathered on Tuesday morning at the Stadszaal, for the opening ceremonies. The Governments of Belgium, Denmark, the United States, France, Italy, Japan, Holland, Norway, Russia, and Sweden had sent official delegates, as did the leading universities of Europe and America and a number of learned societies. The United States was officially represented by Prof. T. C. Hall of Union Theological Seminary, Prof. B. W. Bacon of Yale University, and Prof. Morris Jastrow, jr., of the University of Pennsylvania. In addition, the American Philological Association was represented by Prof. J. B. Carter, the director of the American School of Art and Archæology at Rome, the American Historical Association by Prof. H. V. Ames of the University of Pennsylvania, the American Philosophical Society, and the American Oriental Society by Professor Jastrow. The American Government's delegates also acted as representatives of the institutions with which they are connected.

The sessions of the eight sections into which the Congress was divided were held in the lecture-halls of the University—a venerable structure, rendered still more impressive by the long array of distinguished scholars whose portraits adorn the walls of the senate-room. Some seventy papers were presented, embracing the entire range of the history of religions—primitive cults, the religions of China and Japan, the older Semitic religions, Islamism, the religions of India and Persia, of the Greeks and Romans, of the Celts and Teutons, and finally Christianity.

In the first section, devoted to the general and comparative aspects of the subject and to questions of method, the three most important contributions were by Goblet d'Alviella on the manner in which the historical and comparative methods are to complement each other in the science of religion; by Prof. A. Bertholet of Basel on the Atonement Idea in Religion, and by Prof. D. Titius on the origin of the belief in God.

Count d'Alviella defined the historical method as a study of the facts of religion from the point of view of time, while the comparative method looked at them from the point of view of space. In the interpretation of the facts ethnography can be of limited service only because, more particularly in the case of advanced peoples, the social and cultural conditions are factors that constantly vary and bring about divergent results.

Professor Bertholet's paper was an endeavor to show by means of the conception of Atonement how we are to proceed from a merely analytical presentation of religious phenomena to a synthetical view, so as to pave the way for a history of Religion as the goal lying beyond a mere history of religions. The Atonement Idea, traced analytically through all religions, may be defined as the restoration of a favorable relationship between man and God. In its earlier, more materialistic, phases, the Idea assumes, or is at all events compatible with the view that the gods are evilly disposed or subject to whims, but when it becomes religious these qualities are transferred from the gods (or from God) to man; and the anger of the Deity involved in the endeavor to bring about a reconciliation is ascribed to guilt on the part of man—a guilt conceived at first in its physical aspects but advancing to an ethical point of view.

Considerable discussion was aroused by Professor Titius's paper on the origin of the belief in God. The belief—however varied its manifestations—has an historical background and an historical origin, even though we must pass for its origin to what we term prehistoric conditions. The two chief and oldest factors leading to the belief in gods, according to Professor Titius, were the worship or respect paid to departed souls, and the adoration of the great forces of nature, but even the belief in "high gods" as found in Australia, Africa, etc., not associated directly with powers of nature, must be regarded as very old. This belief, however, leading eventually to the conception of a highest God, must not be placed at the beginning of a spiritual religious development, but represents a result of such development in one of its early phases. In the course of the discussion on this paper, Prof. T. C. Hall made the interesting suggestion that the attitude of the child towards its parents, and more particularly towards its mother, must be regarded as a factor in leading man to a belief in God.

Mention should also be made of the suggestive paper of Dr. K. Th. Preuss of Berlin, on the religious basis of exogamy, in which he opposed the rationalistic theory which would ascribe the prohibition of marriage within a certain group to accidental circumstances. Social conditions, and more particularly the abhorrence of incest, represent the two factors involved. The nearest relations as the members of a group were regarded as a magic unity, corresponding to the tendency to regard groups of external objects, such as the starry heavens, the clouds, the various forms of fire, an animal or a plant species, as a magic unity—of which at the same time each specimen represents that unity. Applying this idea to social relations, we are led by a natural process to exogamy; and the institution was further reinforced by the dread of incestuous relations within the group—regarded as a unity—which is so very pronounced among primitive peoples.

Passing to the section of the Greek and Roman religions, first mention should be made of a paper by L. H. Farnell of Oxford, the author of the well-known work on "Greek Cults in Greek States." Mr. Farnell maintained as a general thesis that hero cults are not so ancient as has been supposed, and that so far from inspiring the epic poetry of Greece, it is the Greek epic that gave rise to the cult. He illustrated this by taking up the Hercules cult which, he showed by a detailed examination, rested upon the Homeric poems. A valuable paper was read by Dr. K. H. E. de Jong of The Hague, on the doctrine of astral bodies in neo-Platonism. Tracing the theory back to the materialistic view of the soul in Greek philosophy which still prevails in the systems of Plato and Aristotle, Dr. de Jong set forth the gradual transformation of this conception of the soul into an intangible substance capable of diffusing light and heat and variously pictured by neo-Platonic philosophers, like Plotinus and Porphyrius, as formed of the ether or of a substance akin to the sun or to the planetary spheres. It is not, however, till the time of Damascius that the soul is spoken of as an "astroid," by which was meant what we should call an "astral body"—belonging to the light substance of the heavens which entered the body at the time of birth. The popular vision of the soul ascending to heaven when it leaves the body is merely another phase of the neo-Platonic conception. A paper by Prof. W. N. Bates of the University of Pennsylvania, dealt with Ægean survivals in Greek religion as seen in vase-painting.

Professor Jastrow's paper on Babylonian, Etruscan, and Chinese Divination was an attempt to trace the spread of divination methods developed in the Euphrates Valley to the west and east. The general thesis was maintained that we are justified in seeking for direct connections between ancient civilizations in what may be termed the lower strata of culture—in fables, myths, folk-lore, and in rites of a distinctly popular origin such as are involved in endeavors to forecast the future.

In the Islamic section the two most notable papers were by Professor Littmann of the University of Strassburg and C. H. Becker of the Colonial Institute at Hamburg—two of the younger Arabists of Germany, who have already achieved an international reputation. Professor Littmann's contribution was an account of the life and exploits of Ahmed el-Bedawi, the most popular of the Mohammedan saints of Egypt, whose tomb at Tantar, between Alexandria and Cairo, has been a great gathering-place for Moslems from all parts of Egypt, ever since the death of Ahmed about 600 years ago. The usual marvellous stories are told about him: that he was born with all his teeth, and talked from the moment of his birth, and performed miracles of all kinds. His particular function was to recover lost property and to release prisoners from their captors; and to this day those who have incurred losses or who languish in prisons appeal to the saint. The interesting feature of the tales told about him in epic form by professional story-tellers is the attachment to him of myths and legends associated with great figures of the past. Even Joseph and Jesus contribute to the result.

Professor Becker's paper was on the development of the Islamic cult. He showed how closely in many respects the Catholic ritual was followed in the Friday service of the mosques, and how, also, the introduction of the pulpit in mosques and the attachment of the minaret or tower to the "house" or temple proper were due to Christian influences, just as the Mohammedan festivals are virtually Christian institutions, transferred and adapted to Islamism. The result of this influence was to change the mosque from a communal clubhouse—originally Mohammed's own house in Medina—in which the faithful gathered for all kinds of purposes, to a place set aside for worship and religious instruction.

A paper with direct bearings on present-day conditions was that of Dr. M. Hartmann of Berlin, who showed how Islamism had been combined in China with Confucianism; and he gave an interesting account of the spread of Islamism throughout the Chinese Empire. The Mohammedan theologians of China themselves recognize Confucianism as the "garment" of this religion, of which Islam represents the "nourishment."

Unusual interest was aroused in the section devoted to Christianity by a number of papers that marked a pronounced tendency among New Testament scholars away from the theory that early Christianity was developed largely under the influence of the mystic cults of Asia Minor. Such eminent authorities as Professors von Dobschütz of Heidelberg, Clemen of Bonn, Lincke of Jena, and K. Lake of Leiden appeared to be in accord in the view that we must seek for the explanation of the mystic elements in Christianity in movements of Jewish thought within Palestine.

Perhaps the most strikingly original paper was that by F. C. Burkitt of Cambridge, on the famous passage in Josephus's History in which Jesus is spoken of and which has been generally regarded as an interpolation by a Christian who felt offended by Josephus's silence. Mr. Burkitt put in a strong plea for the genuineness of the passage, on the ground that it is entirely in keeping with the style of Josephus and fits in well where it stands; he contended that a Christian would have made the reference to Jesus as the Messiah much stronger, and would have emphasized the significance of the crucifixion. The only words in the passage that might be regarded as pointing to a Christian author were those at the close, "This was the Christ"; but if we place the words "the Christ" in quotation marks as a reference to the view taken of Jesus by his followers, and not Josephus's own opinion, the objection that they could not have been penned by a believing Jew falls to the ground. In the discussion on the paper it was urged by Professor von Dobschütz that the interpolation was purposely put in such a form as to give the impression that it was written by Josephus, to which Professor Burkitt replied that, to assume such a subtle forgery, was virtually to admit that the passage could be genuine.

At the closing session on Friday morning, September 13, the announcement was made that invitations had been received from Heidelberg, Rome, and San Francisco to hold the next Congress—a gratifying indication of the interest taken in these gatherings of scholars devoted to the historical study of religions. The ultimate decision was left in the hands of the International Committee. The indications are that Heidelberg will be chosen, but a hope was expressed by many of the delegates that it might be possible to have the Congress meet at some time in the United States, perhaps in combination with the International Congress of Orientalists, the Congress of Archæologists, and the International Congress of Anthropologists.

The scientific meetings passed off without a jarring note. Despite the delicacy of some of the subjects presented, the discussions were entirely courteous, and the proof was once more furnished that it is possible to hold a congress of this kind without introducing "questions of religious belief," which the laws of the Congress distinctly exclude from consideration. M. J., JR.

NEWS FOR BIBLIOPHILES.

George Meredith was once guilty of a crime against his art. He permitted one of his greatest novels to appear in an incomplete and mutilated form. And poetic justice has ruled that an appropriate and, it may be, eternal punishment should be visited upon him. It has been his doom that thousands of readers should make their sole acquaintance with him through this pitiful, mutilated story. "Diana of the Crossways" was originally one of those "three-deckers" celebrated by Kipling. And it now appears, in authorized editions, a substantial book of forty-three fúll-bodied chapters. But many an unwary reader has taken home from the bookstall an attenuated volume whose twenty-six lean chapters will scarce more than provide an evening's entertainment. The story of Diana, in its complete form, leads to the happy marriage of the adventurous heroine with a wealthy railway magnate, the faithful servant of love marked from the first for the happy man. But in one flourishing form of the novel, the reader is barely assured of Diana's recovery from the shock of desertion, and is left to provide for her future out of his own poor fancy. And more than that, he has been cheated out of full ten chapters from the account of her career up to this point; for the twenty-six chapters of which this fragment consists correspond to the first thirty-six chapters of the complete novel. Several chapters are omitted altogether; and in some cases two or more chapters are "telescoped" into one. Thus chapter xx of the short form, entitled "A Woman's Reputation," presents all that is retained of chapters xxvii, xxviii, and xxix.

Whether this form of the novel has circulated in England I cannot say. In America it is possible that it has been more widely read than the regular form. For it is this form that prevails in the paper-cover and other cheap editions which are properly described as popular. It is this form that appears in the Seaside Library[*] of George Munro, in the Acme Library of Rand, McNally & Co., and in the Cornell Series of A. L. Burt Co. This last issue (not mentioned in the "Memorial" bibliography) is an exact likeness of that in the Acme Library, even to pagination and printer's errors, save that the poor paper and careless inking make it appear much cheaper. In such a form and in such a soil the delicate flower of Meredith's genius has much the effect of "Bouncing Betty" escaped from the fenced garden and flourishing weedlike along the New England roadside.

And the question arises, how did she make her escape? This is the point at which the guilt of Meredith appears. When the novel was first printed serially in the *Fortnightly Review* in 1884, the convenience of the publishers dictated that it should be cut down sufficiently to be included in the numbers from June to December. So Meredith set to work to cut out whatever could be sacrificed. In the first six numbers he managed to convey the substance of twenty-five chapters in eighteen, printing an average of three chapters a number. In the December number were huddled together eight chapters, representing eleven of the original number. But eight skimping chapters were all they could manage in the ultimate number for 1884, and the remaining seven chapters were simply left in the air. The early American issues of "Diana" were evidently based upon the *Fortnightly* version. The novel proved a success. The plates had a money value. Issue after issue was printed from them by various publishers, according to whatever arrangement or want of arrangement proved feasible; and the novel is still currently sold in a form in which the legend announcing "the end" is printed at the conclusion of the chapter illustrating "the heartlessness of women with brains." This explicit announcement of the end is the most graceless thing about the whole performance. For, in the *Fortnightly* version, Meredith did make announcement that the end was not yet, and did even suggest that the present story was a condensation. "Thus," he informs the reader, "was the erratic woman stricken; and those who care for more of Diana of the Crossways will find it in the extended chronicle."

The "extended chronicle" was perhaps being printed, or was already in print, when Meredith wrote these words, for it was made public almost at once, early in 1885. It bore on the title page the misleading description, "considerably enlarged from the *Fortnightly Review.*" Misleading, unless I am wrong in my assumption that the briefer form is a condensation of the more extended original. That my assumption is correct I shall show in the sequel.

JOSEPH WARREN BEACH.

Correspondence

THE PENDULUM SWINGS BACK.

TO THE EDITOR OF THE NATION:

SIR: When Chief Justice Marshall evolved for our courts of last resort the power to annul legislation as inconsistent with Constitutions, it was recognized by courts that the power was one which should be used with care. The rule was early established, and never in theory has been changed, that legislation should be annulled only when it is plainly in contravention of the fundamental law, and that in construction all doubts should be resolved in favor of the act under consideration.

For many years this wise attitude was maintained by the courts. But during the last generation a change in actual practice came about. Courts became more and more ready to hold laws invalid, and to do so by bare majorities. If a court is sharply divided, it can hardly be asserted that the case against the law is plain, or that all doubts have been resolved in its favor.

The decisions which were most conspicuous and caused the greatest protest annulled legislation intended to better the condition of laboring men and women as to their health and conditions of work, and did so in many cases on the ground of protecting their liberty. The statutes were based on the police power, and upon the Legislature's theory of public policy. But the courts refused to hold that the police power was broad enough to include these regulatory acts, and in some cases even frankly challenged their policy—the function of the legislator, not the judge.

The protest against the decisions grew steadily in depth and breadth, including not only the class immediately affected and social workers, but also constitutional students. Beginning as mere protest, it has developed radical plans for reform. But the courts themselves are now swinging back to their earlier and sounder principles, one of the best examples being a recent decision of the Supreme Court of Washington in upholding an eight-hour law for women.

Speaking of police power, the court says:

> Circumstances and occasons calling for its exercise have multiplied with marvellous rapidity in recent years, by reason of the well-recognized fact that modern social and economic conditions have called into existence agencies previously unknown, many of which so vitally affect the health and physical condition of laborers, and especially female laborers, that legislation of the character here involved has been sustained with greater liberality than was formerly evinced under less exacting conditions.

On the public policy phase of the law it declares:

> We have before us then the question whether in this particular act the Legislature has so far exceeded the necessary and reasonable exercise of the police power in fixing the maximum daily labor at eight hours, as to render the act invalid. Any legislative enactment must be regarded as valid unless it unquestionably and palpably violates some right secured by fundamental law. All doubts as to its validity must be resolved in favor of the statute. Courts are not concerned with questions of propriety, advisability, or wisdom of any statute. Those questions are for the exclusive consideration of the Legislature. Legislative functions are not to be usurped by the

---

[*] In the later pocket edition, the Seaside Library has, I am informed, the more extended version. The shorter version is that, I presume, of Harper's Franklin Square Library, whose "Diana" was published in 1885 under the same conditions as that of the Seaside Library. The "Memorial" Bibliography also lists one edition in the Globe Library of Rand, McNally.

courts. After we have given the statute a careful consideration in all of its bearings, if we are not clearly convinced that it is unconstitutional we should resolve all doubts in its favor and sustain it.

This is in noteworthy contrast to the reasoning of the long line of decisions annulling social legislation as contrary to liberty of contract. It would have been better for the courts and better for the country if the reasoning of the Washington court had been applied to constitutional interpretation a quarter of a century ago.

The decision of the Supreme Court of Illinois approving the extension of the ten-hour law for women is welcome evidence of the new willingness of courts of review to uphold well-considered social legislation as valid exercise of police power.

Springfield, Ill., September 25.

A CENTRAL PARLIAMENT FOR EUROPE.

To the Editor of The Nation:

Sir: Speaking at Dundee, Scotland, Mr. Churchill (English First Lord of the Admiralty) has advocated an American system of government for England, with four separate parliaments for that small country. If we add the parliaments for Ireland, Scotland, and Wales, which we presume are also parts of Mr. Churchill's scheme, we have a total of seven parliaments for Great Britain. This is laughable. Mr. Churchill (although half American) does not appear to have informed himself with regard to the United States. He does not seem even to realize that virtually every individual State in the Union is as large as a European kingdom.

If Mr. Churchill really proposes to copy accurately the government of the United States, he should advocate, not seven separate parliaments for Great Britain, but one Central Parliament for the whole of Europe. In such a confederation of Europe, each country would, of course, retain its own individual parliament, while sending representatives to the Central European Parliament.

Bertrand Shadwell.

Chicago, Ill., September 24.

COLLEGE ATHLETICS IN THE NORTHWEST.

To the Editor of The Nation:

Sir: The following clipping from the issue of the *Spokesman-Review*, of Spokane, Wash., of September 12, will furnish some proof of the low level upon which intercollegiate athletics are conducted in the Pacific Northwest:

> When Bill Hayward, the veteran coach of the University of Oregon, left Monday for Eugene he took with him Cook and Fred Purdy, Cœur d'Alene High School football stars. There probably never was a better all-round High School athlete developed in the Inland Empire than Cook. His bulk and speed combine to make him an ideal backfield man who would be a welcome addition to any college in the Northwest.
>
> The wily Hayward was in Spokane and Cœur d'Alene for a week before he finally persuaded the two stars to attend Oregon, and once he had them in the notion he packed their trunks and hurried them off to Eugene before they had a chance to change their minds.

It should be understood that the town of Cœur d'Alene, Idaho, is more than six hundred miles away from Eugene, Ore., the seat of the University of Oregon. The "wily" Mr. Hayward, therefore, made a trip of above twelve hundred miles to procure the two young football "stars" to add to the Oregon constellation. One wonders what the president of the State University of Oregon thinks of this, and how it is regarded by the faculty and alumni and undergraduates. If the action is approved it would be interesting and perhaps instructive to learn the grounds upon which the approbation is based. If, on the other hand, the action is disapproved what will be done about it? Are they going to allow those two boys to stay at their institution under the conditions upon which they were brought there? Are they going to permit the "wily" trainer to stay there and continue his notorious career (for this is by no means his first offence of the kind) in the moral debauching of youth?

Onlooker.

Moscow, Idaho, September 13.

PRESIDENTIAL EXPERIENCE.

To the Editor of The Nation:

Sir: We still hear often the assertion that Woodrow Wilson is inexperienced in public life. The same statement has been made of some of our greatest Presidents before their election. As James Russell Lowell pointed out in 1860, Lincoln "has proved both his ability and his integrity: he has had experience enough in public affairs to make him a statesman, and not enough to make him a politician. That he has not had more will be no objection to him in the eye of those who have seen the Administration of the experienced public functionary whose term of office is just drawing to a close."—(Lowell, "The Election in November," in his "Political Essays," p. 43.)

Hinsdale, Ill., September 24.

GENTLEMEN AT THE WICKET.

To the Editor of The Nation:

Sir: The members of the cricket team which is representing Philadelphia against the Australian team, now in this country, have modestly styled themselves "the Gentlemen of Philadelphia." Why not extend this valuable idea, and call a girls' basketball team "the Well-Bred Girls of Bryn Mawr," or a men's football eleven, "the Polished Sons of Penn"? Or is it cricket alone which is essentially a "gentleman's" game? What was it that Kipling said about "the flannelled youths (?) at the wicket"? One seems to remember that his opinion of the British national game in its effect on fighting ability was not high.

Philadelphia, September 27.

SHOULD OUR MILITIA SERVICE BE MADE COMPULSORY?

To the Editor of The Nation:

Sir: The recent participation of the German Emperor in the Swiss army manœuvres and the generous tribute paid by him to the effectiveness of the Swiss militia organization have revived European interest in a system of national defence which, while in no way tending towards the formation of a military class, has proved its usefulness as a means of training all classes of citizens in manly devotion to the common weal. There can be no doubt that the Swiss people, peaceful and unaggressive as they are, look upon their compulsory militia service as the chief instrument of the maintenance of genuine democracy and are as proud of it as of any other national institution.

The American militia has the same aim and a similar organization as the Swiss militia. But it loses its highest usefulness by not being compulsory. Far from being a common ground for all classes of citizens in public service, it has come to be restricted to a certain class of people particularly inclined towards this sort of sport. By large masses of the working people it is looked upon with unfeigned hostility, as a bodyguard of the rich and as a menace to labor organizations.

Is it not in the interest of democracy to consider whether the State has not a right to demand of each of its citizens such a modicum of military service as the few weeks annually of a militia encampment imply? Would not compulsory militia service help to reduce the bitterness of class feeling from which we are suffering? Would it not most likely prove to be the best means for introducing the immigrant from Europe into the spirit and the tasks of American citizenship? Would it not supply a most valuable element of education to our youth, especially in our large cities, which neither baseball nor vocational training has been able to supply: the sense of comradeship of high and low in a great common cause? And is there any real reason why some individual State, such as New York or Massachusetts, should not make a beginning with this experiment?

Kuno Francke.

Literature

ANDREW JACKSON.

The Life of Andrew Jackson. By John Spencer Bassett, Professor of History in Smith College. 2 vols. New York: Doubleday, Page & Co. $5 net.

Since Parton published his entertaining, and in many respects indispensable, "Life of Jackson," no one has attempted any very comprehensive biography. Professor Sumner's volume in the American Statesman series, excellent in many ways, is not comprehensive, and is perhaps after all history rather than biography. In any case, the wealth of new material which has been made accessible in the last decade amply justifies the design of Professor Bassett to correct the false impressions left by Parton and "to write a more intimate and complete biography" than any one else has attempted.

Perhaps no character in American history is so well suited to be the subject of a great historical biography as Andrew Jackson, because no character has ever been at once so completely identified with a great movement and so essentially a personal embodiment of it. Without Washington the Revolution would probably have failed, but Washington is less typical of the revolutionary spirit than is Samuel Adams. Lincoln owes his fame to certain universal qualities of mind and heart, and a satisfactory biography of the man must be something more and better than the history of his times. But Jackson is the very incarnation of the spirit of that frontier democracy which, through the growing influence of the Middle West, and at the critical moment under his leadership, so profoundly transformed our public life in the second quarter of the nineteenth century. By inheritance and environment he was the child of the frontier. In him both the qualities and the defects of the frontiersman were accentuated: the self-reliance and the violence, the frank honesty and the narrow-minded suspiciousness, the splendid idealism informing material and practical interests, the unconscious provincialism of intellect united with an instinctive insight which often gave right solutions by wrong methods—such was the frontiersman. Such, also, was Jackson, and he was little else besides. Hence it is that the life of Jackson may conveniently be made the centre of the story of the period which saw the first insurgent movement of the West against the East, against "aristocracy," against the money power and an official class in control of the Government. In fact, apart from the historical setting, Jackson falls to the level of an eccentric personality, less interesting than John Randolph; but observed against the background of his times, he is seen to be, with Franklin and Lincoln, one of the great representative Americans.

Professor Bassett seems to have conceived Jackson in some such way. He has aimed, he says, "to give the story its legitimate setting in the general history of the country"; to show "in the faithful story of his life the exact trace he left in the national history." Not an easy task, as the author is well aware. He has accordingly fortified himself by an exhaustive study of the sources, both manuscript and printed. His knowledge is comprehensive and minutely accurate. He has lived with his subject, one would infer, for many years, so that what he has to say does not strike one as having been mechanically transferred from a systematically arranged note-book. And yet one lays down the book with a clearer conception of the man Jackson, to be sure, and more informed in the detailed knowledge of the events of which he was the central figure, but wondering a little why, after all, Jackson bulks so large in our history, and without any very distinct idea of those profound social forces which were transforming the America of Washington and Jefferson into the America of Polk and Harrison.

If we seek an explanation of this, it will be found partly in the fact that Professor Bassett has had in mind, not only the "legitimate setting in the general history of the country," but also what may be called the personal setting in the more immediate surroundings of Jackson—the individuals whom he met day by day, the events that were the occasion of his particular actions. "I have sought, also," he says, "to present a true picture of the political manipulations which surrounded him and in which he was an important factor." Now, in this Professor Bassett has achieved his principal success. He has more talent for the exposition of detail than for the effective grouping of detail. The result is excellent when we have to do with the military activity of Jackson; less excellent, but still valuable in its way, when it is a matter of his career in national politics. All the personal intrigues that accompanied the campaigns of 1824 and 1825 are exposed with great explicitness. A detailed narrative of particular facts enables us to follow every step in the formation of Jackson's first Cabinet. The personal interests concerned, the conferences, the letters written and received, the masterly reticences of Van Buren—all the tangled skein of the intrigue, the "political manipulation," which isolated Calhoun is picked out with great skill. And so with the Maysville veto, the nullification business, and the destruction of the bank. It is true that from all this detail the figure of Jackson emerges clear and distinct, but relatively a little opertopping, with something of the air of a lion walking among jackals.

Certainly all this detail is worth having. And no one would wish the "political manipulation" glossed over. But it ought somehow to be subordinated, introduced in such a way as to bring into relief rather than to obscure the more general and important aspects of the situation. We need to know the intrigue that accompanied the formation of Jackson's Cabinet, but we wish to see a little more clearly the general significance for American history of such a Cabinet being formed at all. The manner of destroying the bank is less important than the general conditions which made possible its destruction in so ruthless a manner. Professor Bassett has so emphasized the immediate personal setting of Jackson that we lose sight of the "legitimate setting in the general history of the country."

However, the masterpieces of historical biography are soon numbered. To regret that Professor Bassett has not written one is not to say that he has not given us an excellent life of Jackson, the best one there is, one that will long be useful to all students of American history.

CURRENT FICTION.

[TWO WESTERN TALES.]

The Black Pearl. By Mrs. Wilson Woodrow. New York: D. Appleton & Co.

Friar Tuck: Being the Chronicles of the Reverend John Carmichael, of Wyoming, U. S. A., as set forth and embellished by his Friend and Admirer, Happy Hawkins, and here recorded by Robert Alexander Wason. Boston: Small, Maynard & Co.

Desert and cañon and mountain, miner and outlaw and sheriff's posse, are among the familiar properties of this far-Western romance. We have almost ceased to look for freshness in their handling, and certainly Mrs. Woodrow has done no wonders with them. Still, there is a sort of zest about her narrative which distinguishes it from the ordinary manufactured article. When the outlaw is trapped by the sheriff, he does not escape by rule; and even the avalanche which descends upon the hero and the heroine in the last scene but one is composed of firmer materials than rock-pasteboard and snow-paper, and dodges them after a recipe of its own.

The Black Pearl herself is a not altogether "convincing" person. She is an immediate product of the desert, but her parents have both been "show people," and her mother has trained her for a dancer from childhood. When the story begins, she has already won success on a minor circuit, and her path lies straight towards world-wide fame. But the desert calls her, and she has to escape to it now and then, at the expense of contracts and future prospects. On the occasion of one of these professional backslidings, a manager follows her, falls in love with her, and presently makes her a double proposal of a not unfamiliar kind. Hence the action. Given the Pearl's father, a semi-criminal Spaniard; her desert lover, a masterful but chivalrous Westerner of the type of Mr. Wister's Virginian; a witty and accomplished outlaw, "Crop-eared José" (a little after Bret Harte); and the inevitable sheriff—and you have melodrama plainly in sight. The disconcerting fact is that a third man is introduced rather late in the action who turns out to be the real hero, shares the avalanche scene with the Pearl, and wins that somewhat doubtful prize from all comers. Two broad comedy figures, the manly Mrs. Nitschkan and the romantic Mrs. Thomas, with their contrast of make-up and their always amusing lines, are the most original persons on this stage.

The new reminiscences by Mr. Happy Hawkins have lost nothing in cheer and gained nothing in consecutiveness. But his creator gives warning that this is a story told as stories *are* told—in the open by a campfire, or in a log cabin of a winter night—by the Happy Hawkinses of real life. "This is not the proper way to tell a story. A story should travel in an air-line and not stop at smaller stations, while Happy prefers to take his bed along on a spare horse and camp out wherever the mood strikes him." The inference seems to be that this is a method of story-telling not hitherto employed in print—as if Cervantes had not used it, and Fielding, and Sterne, and Thackeray, and twenty novelists of the present hour. But if it is not a fresh method, it is always a good one. The only requisite is a central thread of plot, however tenuous, from which to digress. If it were not for the figure of "Friar Tuck," this book would be simply a string of more or less amusing anecdotes and reflections, and would have small chance with the novel-reading public.

Friar Tuck himself is by no means a novel figure. We have met him or his kin frequently in recent fiction. He is the roving, genial, muscular young parson (with a sad past), who, falling from the blue into some backwoods neighborhood, thrashes all the local bullies to begin with, and saves their souls to end with. The contrast between cowboy and "sky pilot" is always piquant, though almost a matter of convention by now. "Friar Tuck" comports himself well in the rôle, and is suitably rewarded. The adventures shared by Happy, the Friar, and Horace Walpole Bradford (reformed tenderfoot) are sufficiently fantastic; but it is generally understood that there is no such thing as probability in the West of fiction. For Happy's anecdotes the reader needs a strong stomach: many of them are brutal, and some of them are filthy.

Marie. By H. Rider Haggard. New York: Longmans, Green & Co.

To the middle-aged reader whose youth rejoiced in "She" and "King Solomon's Mines," this story offers an uncommon sensation. It is almost as if Jules Verne, or Capt. Mayne Reid, or what other among our boyish idols, had returned to life on the title-page of a current novel. There is a touch of the uncanny about it. The hero of this narrative is none other than our ancient crony, Allan Quatermain. He himself tells the story in an old familiar voice, the voice of the conquering hero who prides himself on being a modest man. He recalls here an episode of his first youth. The action takes place in the Cape Colony of the thirties, when the first strong clash came between the English and the Boers. "Of this blood-stained time," says the author in his Dedication to Sir Henry Bulwer, "I have tried to tell; of the Great Trek and its tragedies, such as the massacring of the true-hearted Retief and his companions at the hands of the Zulu king, Dingaan." There does, indeed, seem to be more foundation in fact than is strictly desirable in a romance, but it goes without saying that Sir Rider is as little hampered by his data as one could well be. The elements of mystery and magic which belonged to "She" and "King Solomon's Mines" are regrettably absent; but the incidents are as fantastically improbable as the most exacting urchin could desire. Young Allan's crowning feat, perhaps, is the killing of two falcons at one shot, in order to even up a shooting-match with a rival in love and war:

> I saw that the larger hen falcon was about to cross directly over the circle of its mate, there being perhaps a distance of ten yards between them. I aimed; judged—for a second my mind was a kind of calculating machine—the different arcs and speeds of the birds must be allowed for, and the lowest was ninety yards away. Then, with something like a prayer upon my lips, I pressed while every eye stared upwards.

Where There's a Will. By Mary Roberts Rinehart. Indianapolis: Bobbs-Merrill Co.

The will in this case is a document, by which the proprietor of a medicinal spring and sanatorium leaves the property to his son, with the proviso that if said son does not operate the institution successfully for the first month, it shall be sold to a certain purchaser and made into an ordinary summer hotel. There are two heroines: the girl who dispenses the medicinal water (and, incidentally, makes the spring medicinal by the proper addition of drugs) and a guest, the daughter of a Senator, who is engaged to a foreign prince. There are two heroes: a stalwart young fellow who personates the absent inheriting son, conducts the sanatorium, and falls in love with the Senator's daughter, and a red-headed doctor who falls in love with the Hebe of the spring. The complications that ensue are as ingeniously tangled and untangled as in any of the detective stories which have given Mrs. Rinehart a unique place in that delectable field of fiction. The fun is fast and furious. The author has caught up the mantle of Frank R. Stockton, and needs only a surer knowledge of the English language to come very close to that master of amusement.

Who? By Elizabeth Kent. New York: G. P. Putnam's Sons.

A British soldier, landing at Newhaven and taking the train to London, finds himself alone in a compartment with a fair and fainting young woman. To protect her from police officers who search the train for a woman charged with murder, he declares her his wife, and under this title takes her to a private hospital in London. The murdered person turns out to be his cousin, Lord Wilmersley, to whose estate he thus becomes heir. Lady Wilmersley, the supposed murderer, has disappeared. Is the hero's protégée the missing person, or is she not? Here is a pretty problem for a detective story, but, unfortunately, the detectives are left quite in the background of the plot, in such a way that the reader is deprived of the exciting interest of the chase.

The Secret of Lonesome Cove. By S. H. Adams. Indianapolis: Bobbs-Merrill Co.

The "secret," it is scarcely necessary to say, is the identity of a body discovered in a lonely spot on the Maine coast, and bearing evident marks of a violent death. The detective is a scientific gentleman who alternates between periods of intense activity and of apparent inertia, after the manner of all legitimate sons of Sherlock Holmes. An artist is involved in the plot, and a mystic star-gazer of Boston, and a rather original group of country folk. Altogether, the yarn is up to the average in cleverness and interest.

THE PHILIPPINES.

The American Occupation of the Philippines, 1898-1912. By James H. Blount. New York: G. P. Putnam's Sons. $4 net.

Judge Blount has spent six years in the Philippine Islands; two years as an officer in the volunteer army, and four years as district judge under the civil government established there by President Taft. He must know the Philippine situation, therefore, much more intimately than a mere resident would know it: his experience as a judge brought him into direct relations with the Filipinos on the one hand, and with the Government on the other; while his connection with both the army and the civil régime should enable him to judge impartially the disputes between the civil and military authorities. Besides, he has apparently examined carefully all the official documents necessary to an understanding of the policy of the United States Government, and he has doubtless read most of the controversial literature on the subject. Naturally, Judge Blount has his prejudices, like any one else; but he writes from experience and excellent first-hand knowledge, and he writes with an honest purpose.

From first to last, the Philippine business has been managed for the people by the Government. The public has been allowed to know, not what happened, but what, if it had happened, would have been to the credit of the party in power. It has been easy to manage this. In 1898, when the word Philippines was first printed in the newspapers, few people in this country had ever heard it before. We had heard of the Philippians, but never of the Philippines. To show the thing shaped like a camel or backed like a weasel, the

Government had only to suggest one or the other. Informed that the Filipinos were half-savage people somewhere in the Pacific, crushed for centuries under Spanish misrule which the United States had decided to bring to an end for humanity's sake, we were ready to believe it. We were told that the Filipinos, with the exception of a small minority of malcontents, desired nothing better than to be governed by the United States. It seemed more than likely. The malcontents, of course, had to be suppressed; which would be easily done; which was done forthwith; and a civil government was established which transformed an oppressed race into a happy and contented people—we were told all this, and we believed it. We believed it because we have never really cared whether the Filipinos were oppressed or not: what has touched us is the belief that the United States must always be doing something heroic and splendid as an example to the nations of Europe.

The truth has, of course, leaked out in time, but not in time to do much good. The truth, as Judge Blount sees it, is somewhat as follows: After the destruction of the Spanish fleet, the United States sought out Aguinaldo and made "a gentleman's agreement" with him that if the Filipinos would get up an insurrection on their own account and help us drive Spain out of the islands, we would not stand in the way afterwards if they wished to establish an independent government. The Filipinos, under the lead of Aguinaldo, thereupon organized, not only an insurrection, but an efficient government and army, made themselves masters of the most important islands, and gave us much-needed assistance in taking Manila city. But long before this happy event the United States Government changed its mind; it decided that it would be a good thing, both for the increase of trade and for the reputation of the republic, to take and hold the Philippines. Now it seemed hardly worth while to inform Aguinaldo of this change of intention, for it was quite certain that he would not fight to overthrow Spanish rule in the islands in order to set up the rule of the United States instead. Since we intended to take the Philippines anyway, it would simplify matters to let the Filipinos help us do it. This plan was adopted, and Gens. Anderson and Merritt were so instructed. When we had at last succeeded, with the aid of Aguinaldo, in getting rid of Spain, President McKinley informed the Filipinos that independence in their language meant the same thing as benevolent assimilation in ours. Unfortunately, they had never thought of it in that way; and it required 120,000 troops, six years of fighting, and $300,000,000 to assimilate the Filipinos benevolently; and to this day they remain assimilated only because we maintain in the islands a government that is despotic in fact, however "essentially popular in form."

Why have we done all this? Is it a debt we owe the cause of humanity? We give the Filipinos stable government and good schools; but they prefer to govern themselves, and Judge Blount thinks they could do it very well; while if they really wish to be educated, they could find the way. But perhaps we have developed their economic resources? It seems not. The sugar and tobacco industries are less flourishing than they were under Spanish rule, and the hemp market is controlled by the International Harvester Trust of America. At least, the Philippines are necessary to the United States for military purposes? Competent judges say they are worthless. Can it be, then, that we have raised an army of 120,000 troops and spent $300,000,000 in order to increase the profits of the Tobacco Trust, the Sugar Trust, and the International Harvester Trust? Judge Blount's account of it would lead one to think so.

Under the circumstances, the government of the Philippines must inevitably be a difficult business. But behind all the temporary conditions which make it difficult now, Judge Blount thinks he sees a fundamental obstacle which must remain so long as our form of government is what it professes to be:

> "The weakness of the American colonial system," he says, "has always lain in the fundamental unfitness of republican governmental machinery for boldly advocating and honestly enforcing doctrines which deny frankly . . . that governments derive their just powers from the consent of the governed. . . . Thus it is that to get home support for the policy, the supreme need of the colonial government is constant apology for its own existence, and constant effort to show that the subject people do not really want freedom to pursue happiness in their own way as badly as their orators say they do."

This is certainly a very old-fashioned doctrine, but perhaps there is something in it after all.

Cuneiform Parallels to the Old Testament. Translated and edited by Robert William Rogers, Professor in Drew Theological Seminary. New York: Eaton & Mains. $4.50 net.

English and other translations of cuneiform texts are scattered through many books, and are not always accessible to non-specialists; and particularly, those whose object is comparison between the cuneiform records and the Bible do not find the material ready at hand in trustworthy form. Though much useful matter for this purpose is to be found in works like Schrader's "Keilinschriften und das Alte Testament," Harper's "Assyrian and Babylonian Literature," and Winckler's "Keilinschriftliches Textbuch zum Alten Testament," there has been up to this time no book that supplies just the requisite illustrative documents, and this is what Professor Rogers has undertaken to do.

The parts of the Old Testament on which light may be got from Babylonian and Assyrian sources are the early chapters of Genesis, occasional allusions elsewhere to myths, the pre-Israelite history of Palestine, Israelite history and chronology from the ninth century to the capture of Babylon by Cyrus, religious ideas and usages, and ethical and legal codes. The material of the present volume, following this order in a general way, is arranged under the heads: Mythological Texts (creation, Adapa, the Gilgamesh epic, Ishtar's descent to Hades, legend of Sargon of Agade); Hymns and Prayers; Liturgical and Doctrinal Texts; Chronological Materials; Historical Texts; Legal Texts (including the Code of Hammurabi). The texts are not attached to Biblical passages, and there is no attempt at comparison; this is left to the reader. In connection with each text its history is given—its first modern publication, and the principal works that deal with it; and the original is added (in transcription) so as to enable the student to control the translation, and also to encourage him to examine it in an independent way. There are a few brief explanatory and introductory remarks, a list of works quoted or mentioned, a map of the Assyrian, Babylonian, and Persian empires, many illustrations, and an index. The volume is thus an excellent manual for the study of the material treated. It contains the most recently discovered texts, and the latest suggestion for emendations and translations; and, the author believes, "the largest body of cuneiform literature yet assembled in any language for the illustration of the Old Testament."

Professor Rogers has done his work carefully and well. It is impossible here to attempt an examination of all points of interest in the wide field covered by this volume; but two or three of the author's historical interpretations may be mentioned. Semitic influence on Egyptian thought in the fifteenth and fourteenth centuries B. C., has been unduly emphasized by some recent writers, but, whatever its nature, it cannot be regarded as a determining influence in the religious revolution effected by Amenophis IV (about the year 1400). The king's exclusive worship of the sun was virtually monotheism, and, as far as our knowledge goes, no Semitic people of that period had a cult approaching monolatry; nor is there good ground for supposing that his mother or his wife imported monotheistic conceptions into Egypt. Along with them, however, Professor Rogers mentions "philosophizing priests" as factors in the new movement. This is a suggestion in the right direction; the Egyptian literature of the time exhibits the tendency of priests and poets to concentrate worship at a particular moment on the deity prominent in the writer's mind at the moment, and the king, who seems to have been a religious genius, grasped the essence of this tendency, saw that one supreme god was sufficient, and chose as the embodiment of divine rulership the deity who was worshipped all over the land. Some such hypothesis as this seems to be the only one that fits the facts. A related point of interest occurs in the section on the pantheon. The author gives examples of the identification of deities—that is, a great god is credited with the functions of certain minor gods. But, in a late Babylonian text it appears that some of the greater gods are identified with Marduk, and this representation Professor Rogers calls "pantheism" (p. 191). If, however, the text is purely Semitic, there can hardly be any question of pantheism, a conception alien to Semitic religion and never reached by a Semitic people out of its own resources merely. We have here simply a glorification of the chief god of Babylon by making him the real source of the powers of Sin, Shamash, and other deities—he has absorbed their functions. Such absorption may be a step towards monotheism, as it was in the case of the Jews, who gradually made over to Yahweh the powers and functions of the foreign deities with whose cults they came into contact. One geographical remark may be added. In the inscription describing Tiglathpileser's campaign in Western Asia the term "Musri" supplied in line 226 cannot mean Egypt, but, from the connection, must designate a district in Northern Arabia.

Famous Houses and Literary Shrines of London. By A. St. John Adcock. Illustrated by Frederick Adcock. New York: E. P. Dutton & Co. $2.50 net.

London, all in all, is for the man whose interest is in letters, the most fascinating city in the world. That the capital is less expressive of England than, for instance, Paris is of France, is a truism with which every one is familiar; but it does not apply to the literary associations of the island. In the case of these, with very few exceptions, London is England. There are other shrines scattered through the land to which the cultured tourist makes reverent pilgrimage—Stratford-on-Avon, the Lake district, even Johnson's native Lichfield—but ninety-nine times out of a hundred London holds for us as intimate associations with the great names of literature as any of the provincial places which, by reason of birth or of residence, have since been peculiarly identified with them. The Mecca of every literary Englishman, great or small, is London; and sooner or later he drifts there, to the centre of things and the society of his fellows. And thereafter his feeling towards the great city, particularly if he unwisely abandons it for a country home, is more often than not that expressed by Lamb, when, from the wilderness of Enfield, he cries: "I would live in London shirtless, bookless."

The literary and artistic shrines of London are everywhere—from the mean streets of Soho, where Blake saw the earliest of those strange visions, to the impeccable clubland of Pall Mall, where stately, genial Thackeray passed most of his waking hours; from riverside Chelsea, with its memories of Turner, Carlyle, Whistler, to the middle-class respectability of South Kensington and the respectable bohemianism of St. John's Wood. Most of these literary shrines are inconspicuous, commonplace dwellings that one may pass without so much as a glance, and it needs no inconsiderable amount of historic imagination to invest them with the radiance that should properly cling around the former habitation of genius. Mr. Adcock, however, not only possesses that imagination himself, but he has the gift of imparting it to his readers. In his preface the author modestly declares that what he has written is to be taken merely "as the complement of my brother's drawings"; but while the drawings referred to, seventy-four in number, deserve nothing but praise for their delicate pencilling, we must protest against the author's depreciation of his own contribution to the whole.

Mr. Adcock's manner is that of the genial raconteur rather than of the essayist or of the historian. Consequently, and very happily, even if, as his preface would hint, he feels himself under some sort of obligation to be impartial, his natural predilections, his likes, his dislikes, and his prejudices at times carry him away with them, with the result that, in revealing the characters of whom he writes, he reveals also himself. Towards Johnson his attitude, as was that of the great Doctor's contemporaries, is one of respect; Goldsmith he loves, and loving him, is almost petulantly angry with Boswell, to whom he is not a little unjust. Blake is another favorite, and the chapter devoted to that odd genius is among the best in the book. Lamb, of course, holds a large place in his affections, and so does poor, brave, pathetic Hood. Reading of the last-named, your reviewer was conscious of hastening over the lines to make certain that the oft-repeated story of the mustard plaster had justice done to it. It had; and that instance is illustrative of the peculiar charm of the book: which is, in great part, a re-telling of some of the best stories in the English language.

Mr. Adcock's work, we may be sure, was a labor of love, and the *labor limæ* is skilfully concealed, yet it is obvious that the compilation of such a volume must have involved a vast amount of patient and laborious research.

From Chaucer down to men whose lives have touched our own, scarcely a name that has been great in the literature or art of England is omitted; for, though all were not London born, all, with few exceptions, spent some part—and that a not unimportant one—of their lives in the metropolis.

Notes

In "La Follette's Autobiography: A Narrative of Political Experiences," which will come this season from the press of Doubleday, Page & Co., there is the full story of the Senator's break with Mr. Roosevelt.

We shall shortly have an opportunity to read the work of Richard Middleton, the young English poet who recently committed suicide at the age of twenty-nine. His two posthumous volumes, "The Ghost Ship and Other Stories" and "Poems and Songs," will be published this month by Mitchell Kennerley.

Little, Brown & Co. are bringing out Thornton W. Burgess's "Mother West Wind and Her Animal Friends," and Mary E. Waller's "A Cry in the Wilderness," which is a story of the entanglements experienced by a young woman attempting to earn her livelihood unaided.

In a fourth edition, now appearing from the press of Smith & Elder, J. Ellis Barker has greatly enlarged his "Modern Germany." Nine new chapters have been added, including discussions of Anglo-German relations, the Morocco crisis, the Social Democrat party, and German industrial conditions.

Five hundred and seventy-eight memoirs, written by 181 contributors, are contained in the second volume of the second supplement of the Dictionary of National Biography, which is published this week. "Faed to Muybridge" is the caption.

Maurice Hewlett's new novel "Mrs. Lancelot" is announced by the Century Co. for October 16. It is a tale of the love of three men for a beautiful woman, with the scenes set in the Georgian period.

The same house will publish shortly Prof. Charles A. Beard's "American City Government: A Survey of Newer Tendencies," and "Russian Wonder Tales" with twelve pages in color by the Russian artist, Bilibin. The illustrations were made originally by the Bureau of Issuance of Crown Papers of the Imperial Russian Government, and are used in this edition by special permission.

"Philip Dru, Administrator: A Story of To-morrow, 1920-1930," has been written for B. W. Huebsch by a financier who withholds his name. According to the plot, our present Government is overthrown by a graduate of West Point, who establishes himself dictator and before he resigns institutes many reforms. The book will be issued in a few weeks.

The autumn announcements of Ginn & Co. include: "History as Past Ethics," by Philip Van Ness Myers; "Through Our Unknown Southwest," by Agnes C. Laut, and Charles H. Levermore's "Forerunners and Competitors of the Pilgrims," being two large volumes of original narratives of voyages to the New England coast from 1600 to 1620.

Among the forthcoming books in Putnam's list are the following: "The Blackberry Pickers," by Evelyn St. Leger; "The Diaries of William Charles Macready, 1833-1851," edited by William Toynbee; "The Japanese Nation," by Prof. Inazo Nitobé; "A Book of Discovery," an account of exploration from earliest times to the finding of the South Pole, by M. B. Synge; "The Knave of Diamonds," a novel by E. M. Dell; "Prisoners of War, 1861-65," a record of the ways in which prisoners were treated by both sides in the Civil War, by Thomas Sturgis; "Henrietta Maria," by Henrietta Haynes; "Romance of the French Châteaux," by E. W. Champney, and "The Peace Movement in America," by Julius Moritzen.

William J. Locke's latest story, "The Joyous Adventures of Aristide Pujol," is issued this week by John Lane Company.

The following are books which Houghton Mifflin Company publishes this week: The Jessie Willcox Smith edition of "'Twas the Night Before Christmas"; "Licky and His Gang," by Grace Sartwell Mason; "Forfeit," a story of the days of witchcraft, by Clara Lathrop Strong; "Egyptian Days," by Philip S. Mardeu; "The Best Stories to Tell to Children," by Sara Cone Bryant; "The Holy Christian Church," by R. M. Johnston; "The Gateway of Scotland," by A. G. Bradley; "Gallant Little Wales," by Jeannette Marks; "The Historical Works of John Fiske," Popular edition in eleven volumes; "The Writings of Bret Harte," Overland edition in nineteen volumes; "Readings in American Constitutional History," selected and edited by Allen Johnson; "English for Foreigners, Book II," by Sara R. O'Brien; "Ralph Roister Doister," edited with introduction and notes by Prof. Clarence G. Child.

Dodd, Mead & Co.'s list of recent and forthcoming books includes in fiction: "One of the Multitude," by George Acorn, with an introduction by Arthur C. Benson; the following works of Wilkie Collins, in an edition similar to the same publisher's popular edition of Trollope—"The Woman in White," 2 vols., "The Moonstone," 2 vols., "The Dead Secret," and "After Dark"; "The Epic of Ebenezer," a Christmas story by Florence Tinsley Cox; "The Sign," by Mrs. Romilly Fedden (Katharine W. Douglas); "The Golden Rose," by Mrs. Hugh Fraser and J. I. Stahlmann; "The Vanishing Man," a detective romance by R. Austin Freeman: "Miss Philura's Wedding Gown," by Florence Morse Kingsley; "Mr. Achilles," by Jennette Lee; "The Squire's Daughter," by Archibald Marshall; "The Hollow of her Hand," by George Barr McCutcheon; "The Old Loves," by Weymer Mills; "Rose Royal," by E. Nesbit; "The Saving Pride," translated from the French of Yvette Prost by Frank Alvah Dearborn; "The Closing Net," by Henry C. Rowland; "Adrian Scroop," by R. A. Wood-Seys (Paul Cushing), and Anthony Trollope's "The Belton Estate," now brought out in this country for the first time.—Travel: "The New China," by Henri Borel, translated from the Dutch by C. Thieme; "The Philippines Past and Present," by Eleanor Franklin Egan; "Men and Manners of Modern China," by J. Macgowan; "Panama, Past and Present," by George Henry Payne; "A Guide to Florida," by Harrison Rhodes and Mary Wolfe Dumont; "China, as Seen and Described by Great Writers," compiled by Esther Singleton; "The 'Flower of Gloster,'" by E. Temple Thurston; "Alaska, an Empire in the Making," by John J. Underwood, and "The Tourist's Russia," by Ruth Kedzie Wood.—Biography and history: "The Romance of Sandro Botticelli," by A. J. Anderson; "Reminiscences of a Diplomat's Wife," by Mrs. Hugh Fraser, and "A Short History of Scotland," by Andrew Lang.—Miscellaneous: "This and That, and the Other," a volume of essays by Hilaire Belloc; "A Miscellany of Men," by G. K. Chesterton; "Stories of Shakespeare's English History Plays," by H. A. Guerber; "On Emerson, and Other Essays," by Maurice Maeterlinck, translated by Montrose J. Moses; "The Land of Lost Music," a volume of lyric verses by Robert Munger; "Rhymes of a Rolling Stone," by Robert W. Service; "Efficiency in Giving," by William H. Allen, and "Race Improvement, or Eugenics," by La Reine Helen Baker.

The principal article in *Petermann's Mitteilungen* for August is by Prof. Lawrence Martin of the University of Wisconsin, descriptive of his explorations of the Alaskan glaciers, especially those of the Copper River. In the military department there is an account of Palmyra Island, with the reason why it was annexed to this country last February. A map of the island is given as well as one of the Pacific, showing the distances, both of miles and of days' journeys, between the Panama Canal and the principal islands and ports.

"Das Leben Friedrich Nietzsche's," by his sister, Frau Förster-Nietzsche, was published in three volumes in 1895, 1897, 1904. It was sown from the full sack, and consists of a vast mass of half-digested documents, letters, reminiscences, analyses of works, etc. It is also, despite its formlessness and prolixity, and whatever we may think of the all-embracing *pietas* of the author, a biography of extraordinary interest. In accordance with various requests the author has now undertaken to present this work in abridged form, and the first part of this abridgement, under the title of "The Life of Nietzsche; Volume I, The Young Nietzsche," has just been translated into English and published in this country by Sturgis & Walton. In the main the new work follows the plan and even the language of the old, though a good deal of the documentary material has been dropped. Especially in the earlier chapters we seem to be reading the life of the biographer almost as much as of Nietzsche himself. Some of Frau Förster-Nietzsche's remarks about herself might well have been omitted, but on the whole there is no reason to take offence. Her relations with her brother were extraordinarily intimate, and her naïveté brings out with great clearness the home life of the future philosopher. The biographer says truly: "I, alone, can speak with any real knowledge of these years, for, as Baron von Gersdorff and Rohde once said to me: 'We are acquainted only with small portions of his life; but you know everything that links those isolated portions together.'" The present volume carries the life to the year 1876; when the second volume appears we may take occasion to speak of the work in greater detail.

"Through Holland in the Vivette" (Lippincott), by E. Keble Chatterton, is a somewhat technical account of a cruise which the author and a friend made in a small sailing yacht during portions of two successive summers. The book will prove instructive for any one who is minded to follow in their path, for Dutch waters, even inland, are treacherous and require expert attention. Mr. Chatterton is an enthusiastic yachtsman, with a love for all manner of sailing craft, and Holland, the land of contrasts, offered him an excellent chance to compare old-fashioned and modern rigs. Aided by photographs and clever drawings by his "Mate," he acquaints the reader with such types as the "bok," "boier," "tjalk," "hoogarts," "hotter," and "paviljoen pom." Casual mention of Dutch scenery and customs gives a certain charm to a narrative which, aside from technical explanations, is little deserving. As he freely admits, the writer is not strong in the Dutch language, but even the knowledge of his limitations has not kept him entirely out of error. "Gouda" is not pronounced "K'hooda," the "G" having a sound much like that of "ch" in the German "ach," and the diphthong being the same as in the English "found."

Critics who are in the habit of bewailing the decline of serious reading will find little comfort in the history of the publishing trade during the last few years. A rising standard of prosperity and improved methods of marketing may account in part for the rapid output of collections of standard authors, elaborate historical compilations, libraries of science, and Best Books in varying foot-lengths. But for the most part we are bound to assume that a genuine demand exists for books of a permanent nature. In this country we have concentrated on the ornamental and rather expensive subscription book; but when English publishers began to show the way in the matter of putting out serious reading at popular prices, we were not slow in finding that there was a market for such wares among us. The enormous success of Everyman's Library on both sides of the Atlantic has given rise to similar enterprises which are even more significant in that they eschew fiction and aim to cover the entire field of human knowledge in the form of the text-book or manual adapted for home readings. Thus we should seem to be witnessing a revival of the educational people's books which enjoyed a vogue during the years following the great scientific discoveries of the later part of the nineteenth century, and which have continued to flourish on the Continent. One such collection, the Home University Library, has received notice from time to time in the columns of the *Nation*. A new series that calls for mention is "The Cambridge Manuals of Science and Literature," which was begun in 1910, and at the present moment has a list of more than two-score volumes.

The Cambridge Manuals (Putnam, 40 cents net) are attractive little books, averaging 150 pages, bound in flexible linen, and showing a clean type page. A detailed review is here out of the question. The writers are evidently men competent in their field though there is no exceptional parade of distinguished names. Professor Skeat and Professor Judd are, perhaps, the two names most familiar in this country. Even a hasty examination, however, is enough to show that in nearly every instance the writers have lived up to the ideal of a popular handbook. They treat their subject in a simple style, and without any attempt to exhaust the field or to make original and therefore contentious, contributions to knowledge; a fault which we have occasionally pointed out in other publications of this type. This does not mean that only the most general treatment is attempted. On the contrary, we have separate volumes devoted to such highly specialized topics as "The Migration of Birds" (Coward), "Rocks and Their Origin" (Cole), "Spiders" (Warburton), and "The Natural History of Clay" (Searle), subjects which would seem to lie outside of the scope of the general reader. The series is evidently strongest on science. The range of literature is wide enough: "Greek Tragedy," "The Ballad in Literature," "English Dialects," "History of the English Bible," "Religious Poetry of the Hebrews," "Religious Poetry of Persia," "Goethe in the Twentieth Century." If Goethe is included, we might easily have had one or two specific names in English literature; but these will probably come in time. History is but poorly represented, and apparently not because the series is intended to live up closely to its name, and confine itself to science and literature. In that case, we should not have had a volume on New Zealand, one on ancient Assyria, and several volumes dealing with religious sects in England. It is to be doubted whether two volumes on the architecture of the English parish church is quite in place in such a collection. On the other hand, such books as Harper and Ferguson's "Aerial Locomotion," and Barker's "Cash and Credit," are distinctly useful. Every volume is provided with an index, and, where the subject requires it, there are illustrations.

Two more parts of the "Publications of the Babylonian Section of the University of Pennsylvania Museum," constituting Volume II of the new series, have appeared. These are both by Prof. Albert T. Clay, now of Yale University, formerly curator in Philadelphia. The first part contains autograph texts of 228 of the business documents of the Murashu Sons, of Nippur, dated in the reign of Darius II, discovered by Dr. Haynes in the third expedition to that site, together with fifty Aramaic dockets or endorsements on the same. No translations of selected texts are given, as was the case in Professor Clay's former publications of the Murashu tablets (Volumes IX and X of series A of the Publications of the Babylonian Expedition), but, as in those volumes, much space is given to a careful index of proper names occurring in the tablets. The second part continues Dr. Clay's similar publication of "Documents from the Temple Archives of Nippur, dated in the Reigns of Cassite Rulers" (Volumes XIV and XV of series A). In the introduction to this part is given a restoration from several imperfect seal impressions of a representation of an ancient plough and seed drill (one of the earliest yet found, fourteenth century B. C.), drawn by two humped oxen and worked by three men. This is a good commentary on a tablet in volume XIV of the old series, which is a pay-roll of just such a plough gang of men and oxen, the share of each ox per month being equal to that of two and a half men.

"An Encyclopædist of the Dark Ages: Isidore of Seville," by Ernest Brehaut, Ph.D. (Studies in History, Columbia University), strengthens the suspicion that the purpose of Doctor's dissertations in our American universities is to assemble such bulk of material as will draw forth the desired Ph.D. The object is blameless, and the diligence, as in the present instance, may be praiseworthy. Whether the result will be of interest either to scholars or to the educated public is another question. Dr. Brehaut has brought together quite a sufficiency of information as to the famous Bishop of Seville, his connection with the intellectual past, and his own squalid epoch; also as to his treatises and the sources from which he drew their substance. Two-thirds of the book are devoted to the famous "Etymologies." An introduction is given to each of the first sixteen books (though the author seems rather to have balked at the last four), followed in each case by a number of pages of "Extracts." Although Isidore was enormously used in the Middle Ages, no one but a special student would care to read the "Etymologies" now; and if that student were a scholar, he would doubtless prefer the original Latin to abridged translations made by another.

If the jail at San Quentin is typical and we accept the statement of Donald Lowrie, in his "My Life in Prison" (Kennerley), we must admit that American prisons have missed their mark, that they are not correctional. His views on the parole system can be applied to nearly every phase of prison life. Speaking of the parole system, he says: "Viewed from the standpoint of the prisoner, of the 'down-and-outer,' these rules are eminently unjust. If the law says I may have a chance to redeem myself I do not think it is right that I should have to pay for the opportunity." What distinguishes this narrative of prison life from others is the lack of malice on the part of the author. Whatever else may be said about this work, it is undoubtedly fair to those who are trying to improve conditions, and, except in the case of the prison chaplain, it displays no hatred towards individuals in charge. Mr. Lowrie shows a keen understanding of human nature and devotes his work to the effect of the modern prison on the character of the convict. The author states that 85 per cent. of the paroled prisoners "make good," whereas the majority of those who serve their sentence come back for another term, and he makes the point that this is due to the system of "correction."

A new book by William James seems like a gift from the other world. And such a gift is particularly welcome when it brings together into a closely knit unit a dozen of his most important essays. For the "Essays in Radical Empiricism" (Longmans) have been so well chosen and so carefully arranged as to constitute not a collection but a treatise. Most of the essays will be familiar to readers of James's more technical work, having been published in various philosophical journals, but their presentation in one volume and in logical sequence greatly enhances their value. The doctrine which they unitedly expound is to be sharply distinguished from pragmatism. It is, in fact, a much larger thing than pragmatism, and one which James himself regarded as much more vital. And it may well be that future generations will regard "radical empiricism" as James's most important contribution to philosophy.

Joseph McCabe's "Goethe, the Man and His Character" (Lippincott) is intended as a biography for English readers for whom Lewes is antiquated and the translation of Bielschowsky may be too cumbersome. As the title indicates, the book deals chiefly with the personal career of Goethe and enters upon no extensive analysis of his works. These are, of course, mentioned, and are connected with those experiences of the poet which they "confess," but the treatment of them is somewhat perfunctory, and no memorable judgments are passed. Mr. McCabe regards "Werther" as Goethe's greatest work. We miss also any very penetrating delineation of the many men and women with whom Goethe came into contact during his long life. A certain prevailing lack of precision may be illustrated in a single reference: Carl Friedrich's "wife Maria (formerly Maria Paulowna, a Russian princess)" was Maria Paulowna to the end of her days. Does Mr. McCabe know that she was the daughter of the Czar Paul? This does not appear from her position in the index under "Pavlovna, Maria" (*sic*). It is only in his characterization of Goethe's mother that the author departs from the methods of a compiler, and to the view that Frau Aja—so called "after some ancient German princess," we are told—"had little or no influence on her son, and he had little or no affection for her during the greater part of his life," Mr. McCabe will not persuade many of the knowing. As to his other opinions, the sources of his information are the most recent and are generally trustworthy. In spite of occasional lapses from entire seriousness, he writes with sustained interest, but without enthusiasm.

Prof. Barrett Wendell's "Literary History of America," despite its shortcomings, is no doubt still the best work on the subject; it is not likely to be superseded by its latest rival, "A History of American Literature" (Frowde), by Prof. W. B. Cairns, of the University of Wisconsin. Professor Cairns candidly acknowledges that he "places greatest emphasis on general movements, because American literature is first of all important as an expression of national life." Waiving the question whether "sectional" is not more accurate than "national," is not American literature first of all literature? Are Emerson, Thoreau, Hawthorne, and Poe of value chiefly as expressions of American life? When we think of English or of French literature, we Americans may, indeed, feel that our possible achievement has been only hinted at in the past, but surely we need not blush with shame. If the writings of the Colonial and Revolutionary periods are of interest mainly as an expression of American life, it is true that the writings of the nineteenth century (when American literature properly began) are primarily important as books, as literature, and not as reflections of social manners and modes of thought. Professor Cairns, as his point of view might lead one to suppose, is weak in his discussion of the great writers, and strong in his treatment of general movements. In comprehensiveness, as well as in treatment of movements, the book is notable, indeed unrivalled; everybody who has a sizable claim to admittance wins a place—James Hall, for example, receives a whole page.

"The Essentials of Civil Government: United States and Wisconsin" (Milwaukee: Gillan & Co.), by S. Y. Gillan and W. C. Hewitt, is a brief manual for grade school pupils. The first part deals with the Constitution of the United States. The authors have adopted the plan of quoting in full a section or paragraph of the Constitution and then explaining in brief and very simple terms the meaning of the statements contained in it. The second part is devoted to the government of the State of Wisconsin. The book should prove a satisfactory text.

"The History of Pennsylvania" (Lippincott), by Charles Morris, is designed for any "course of study embracing the history of the State of Pennsylvania." It is hardly a history in any vital sense, but rather a collection of facts and events strung on a chronological thread, and possessing little continuity of any other sort.

Science

Animal Life in Africa. By Major J. Stevenson-Hamilton. New York: E. P. Dutton & Co. $5 net.

The author of this book, as warden of the Transvaal Government Game Reserve, a district of some 14,000 square miles in the bush country bordering on Portuguese East Africa, has had peculiar opportunities for the successful discharge of his task. The work is restricted chiefly to Southeast Africa, and even there the author wisely refrains from attempting to give a complete account of every variety of wild life. The selection is made of such mammals, birds, fishes, and reptiles as are most likely to be found by the traveller and sportsman in this region. But the volume appeals, by its sympathy with the animal world, to many who may never hope to visit the Transvaal, so vivid are its descriptions of bird and beast, and so attractive are its accounts of their changing habits and their attitude towards man. Major Hamilton rightly stresses the fact that animals are by no means mechanical in habit, and, as he says:

> The best of observers often contradict one another upon points of fact, and subsequent investigation may demonstrate that the disagreements were due, not to want of accuracy on their part, but to the individual eccentricities of the wild creatures themselves. . . . The wider knowledge a man has of wild beasts and their ways, the less prone is he to disbelieve anything he may hear concerning them. Man, even savage man, is utterly outside the economy of wild life. There exists among the beasts of the forest a sort of freemasonry, to which he and to some extent his domestic animals also, are strangers. The observer little by little becomes conscious of this, and the longer he studies wild animals in their native haunts the more forcibly does he realize his ignorance of the motives which often control their individual and collective actions.

It is interesting to see how unaggressive wild beasts—even the *carnivora*—naturally are, and that "there is still considerably less danger in traversing the African jungle by day than there is in crossing a thoroughfare in modern London"; nor is the account of the gradual acquisition of fear of man and of *carnivora*—and its loss when the occasion of alarm disappears for a relatively short time—of less interest to the student of what we may term "animal psychology." Major Hamilton's chapter on The Destruction of Great Game is unpleasant reading, but it shows conclusively the wisdom of the British Government in creating such game preserves as that over which the author exercises control. The sordid story of the wanton slaughter of game has only too many parallels throughout the world, but it seems to have been the good fortune of British Africa to have checked the destruction while there was yet time.

In his introductory chapter on the ungulates, Major Hamilton considers the various diseases to which they are liable, with particular reference to the tsetse fly. He then discusses—in nearly every case with full reference to habits, breeding, utility, etc.—a great variety of mammals, birds, and reptiles. Fishes are restricted to the tiger-fish, yellow fish, and South African carp. As is natural in a treatise from this point of view, the mammals are most fully considered, and yet it is obvious what wealth Africa possesses for the sciences of ornithology and ichthyology. It is impossible not to regret that, among his numerous anecdotes of hunting experiences and his accounts of his own pets, such as the amusing eland Alfonso, Major Hamilton did not include at least a little of the abundant folklore which must prevail concerning the varied animal life of Africa. The two instances noted by the author are that, among the Amatshangana, the tail of a cane rat must be cut off by its captors before reaching their village, since on no account may it be seen by a married woman; and that crossed sticks are often placed on the apex of a hut to ward off owls, which are ill-omened. The latter case is plain, but the former is not clear. So exceptional are Major Hamilton's opportunities that he would probably be able to furnish valuable information on the beliefs and folklore of the Africans of his section regarding birds, beasts, and reptiles.

The three concluding chapters of the volume are distinctly practical. In his Hunting Notes the author discusses the best hunting seasons, weapons and equipment, methods of the chase, and the skinning of trophies; his Travelling Notes include advice on health, African diseases and accidents, the daily routine, clothing, and camping; and under the caption of Transport in Africa he considers the advantages of various modes of travel. In fact, it would not be easy to imagine any contingency in which the hunter in Southeast Africa might not consult this volume. On page 383 Major Hamilton refers to technical literature which the hunter and traveller in these regions should carry with him. The future African Nimrod should most certainly add to the books there enumerated Major Hamilton's own "Animal Life in Africa."

Stokes will bring out this week "The Curtiss Aviation Book," by Glen H. Curtiss.

In "The Hysteria of Lady Macbeth," announced by Moffat, Yard & Co., Isador H. Coriat makes a special study of abnormal psychology.

Readers to whom their alopecy is a burden will derive some consolation from the perusal of the little book by Andrew Simpson on "The Bald-Headed Man" (Broadway Pub. Co.), but hope will not be awakened thereby nor the sale of hair restorers increased. While this author evidently recognizes that baldness has many causes, though he lays little stress on the considerable number of varieties very well known to students of the skin, he strives rather to explain the wide prevalence of the "natural" trouble, which he finds in the nations that are most wealthy, most progressive, and best fed. The fact that women generally retain their hair much better than men, and that in certain races the loss of hair is unusual, is held to be a sufficient reason for rejecting the view that any general external cause, such as micro-organisms, can be in play. The bald-headed man is bald headed not because of weakness or sinfulness, but by virtue of a strength which compensatively makes him less easily the victim of tuberculosis. His constitutional endowment is such that his digestive powers can put more solids into the blood, and this enrichment leads through the nervous system to a more vigorous action of the heart, and this in turn leads to a congestion of the scalp by forcing more blood to it. In this way the blood vessels become engorged and are weakened, the scalp is over-heated, the hairs die and fall out, and the scalp becomes thin and wasted. Natural alopecy is thus a disease of prosperity, and of cold climates which create appetite; "therefore the lusty, vigorous men of the northern nations of the world become bald while the thin-blooded dweller of the tropics does not." Women, having weaker muscles and particularly less active hearts, cannot so readily develop these conditions. When once this baldness clearly shows itself the damage is already done, and the original healthy state of the vessels cannot be reëstablished; the bald must remain bald. These constitutional peculiarities may be inherited, but the author does not even suggest that something might be done early in life to overcome the tendency thus acquired. This explanation of natural baldness is ingenious, but far from convincing. Very much more study is needed to establish even the existence of the fundamental differences on which the theory is based.

Drama and Music

Prof. Felix E. Schelling has assumed the general editorship of a new series, Masterpieces of the English Drama (American Book Co.). It proposes to furnish a scholarly and yet popular edition of great English playwrights, outside of Shakespeare, from the later years of Elizabeth's reign to the latter part of the eighteenth century. Each volume will contain a brief biographical preface, and each play will be preceded by a note on its source, date of composition, etc. Three volumes have now appeared—"Beaumont and Fletcher," "Webster and Tourneur," and "Christopher Marlowe," under the special care, respectively, of the general editor, Prof. A. H. Thorndike, and Prof. W. L. Phelps. To judge by these samples, the work expended on the series promises to be accurate and thoughtful. The make-up of the volumes is not unattractive.

Spectacular representations of Shakespeare generally result in the substitution of the shadow for the substance, but in "King Henry V," at Daly's Theatre, Lewis Waller has paid attenton to the text, as well as to the pictures. These latter are often artistic enough to justify their existence, if not the wholesale excisions made on their account. Such of the text as remains is very well treated. Mr. Waller's Henry is a virile, consistent, and picturesque impersonation, lacking in romantic charm and youthful impulse, but forcible, dignified, and attractive. The actor was at his best in such vigorous appeals as the "Once more unto the breach" and the Crispin Crispian speeches. He did not sound the deeper notes in "Upon the King" and "Oh, God of Battles," but he was always intelligent, even when uninspired. The whole cast was competent, but the comic characters, ordinarily very mournful, were uncommonly excellent. Fluellen has rarely been played so well as by A. F. Thompson, and the Bardolph of Charles Francis was a most racy study. The sullen humors of Nym found a capital interpreter in Thomas Louden. The Pistol of Herbert Jarman, striking in design, was less satisfactory in execution, but ought to grow into a notable characterization. Annie Hughes played Quickly with too much refinement, and so missed an essential element in her description of the dying Falstaff, but all the members of the group were played with sympathetic insight. Miss Titheradge, a clever and versatile actress, was a most piquant Katherine, but had not the declamatory power needed for Chorus. "Henry V" has not been so well played in the last forty years.

If not altogether surprising it certainly is not encouraging to find Winthrop Ames, whose managerial enterprises are supposed to be inspired by a zeal for the higher drama, standing sponsor for such an insincere and insignificant piece as the "June Madness," of Henry Kitchell Webster, which he has produced in the Fulton Theatre. This, indeed, has thus much in common with some plays of the modern school that it treats the ancient subject of the relations of the sexes with more frankness than discretion, but it has nothing new to say, while the specific example which it offers to prove the feasibility and expediency of "free love" as a social institution is too obviously theatrical fiction to have the slightest value as argument. The whole play is a most disingenuous bit of special pleading. In its original form, that of a novel, the story may have seemed more plausible, but on the stage the essential facts are less easily disguised, and the supposed consequences of them are clearly contrary to the vast bulk of human experience.

The heroine is a refined and accomplished woman of the world, whose abilities have won her an assured position while she is still young. Nothing is said of her friends, relatives, or environment. One day, in June, being alone, she has yearnings for companionship and a mate. She goes to a holiday resort, makes advances to an attractive young man—who promptly responds—and lives with him for ten delirious days, after which, by mutual agreement, they part, never to meet again. Twenty years later, unharmed in character or repute by her experience, she is the secretary and factotum (at a fabulous salary) of a multi-millionaire, whose son is in love with her daughter, an angelic creature who knows nothing of her origin. Her old lover, now a famous novelist, is to be married to the millionaire's daughter and heiress. The latter is jealous of the secretary—whose secret she has discovered—and tries to drive her from the house. But the famous novelist renews his old allegiance, falsely declares that he had been married to the fair secretary, whom he now claims as his own, and all ends happily, the millionaire being only too glad to give his son to the daughter of chance, while his own wife and daughter, with no past to speak of, are left to console themselves as they may. As drama the piece is feeble because of its obviousness, its coincidences, its improbabilities, and its evasions, but chiefly because of its shallow and essentially vulgar conception of womanhood.

Sir John Hare has determined to make another provincial tour in England. Leave-taking is such sweet sorrow, especially when it is remunerative.

Gertrude Kingston will begin her season at the improved Little Theatre, in London, with a revival of Bernard Shaw's "Captain Brassbound's Conversion."

Bernard Shaw has revised his "Cæsar and Cleopatra" for the use of Forbes Robertson.

The criticisms of the London press on Walter Browne's "Everywoman," as it is played in Drury Lane Theatre, make amusing reading. Most of them evince serious consideration. The writers are impressed by the moral pretence of the thing, by the appearance of such an actor as H. B. Irving in the part of Nobody, and by the splendor of the spectacle. But they all find difficulty, apparently, in reconciling the poverty of the text—in spite of the emendations of Stephen Phillips—with the magnificence of the setting. They do not know that the original idea of the author was to produce the piece without any scenery beyond the bare decoration of the Elizabethan stage. He wished to depend entirely upon the moral and sentiment of the lines. To the managerial sense, however, it appeared that the morality would be much more attractive if the vices which it assailed were graphically and luxuriously illustrated. Soon morality was swallowed up in spectacle, and it is not strange that the critics had some difficulty in finding it. Mr. Phillips's task, however he has accomplished it, was hopeless from the first.

At this summer's Sängerfest in Nuremberg, the audience was treated to what was virtually a Wagnerian novelty. In 1861 the composer of "Tannhäuser" made a special arrangement of the Pilgrims' Chorus for the Vienna Männergesangverein, with orchestral accompaniment, and this arrangement the Viennese Society allowed the Deutsche Sängerbund to use at the festival in Nuremberg. It was the first time that so large a choir had sung that sublime chorus with orchestra, and the effect on the audience was overwhelming.

Oscar Hammerstein's excellent production of Charpentier's "Louise" was one of his most notable achievements at the Manhattan Opera House. It aroused, also, much curiosity as to its composer, his personality, and his plans. It was reported that his success with "Louise" had spoiled him for other operas—that he had become dissipated and averse to work. These rumors he has set at nought by quietly composing, not only one opera, but a trilogy. The first of them is entitled "L'Amour au Faubourg." The scene is placed partly in the Cabaret des Fêtes Galantes. The second describes the "palace of wretchedness," while the third has for its subject a strike.

"Parsifal" will probably be produced at Covent Garden, London, next year, after the expiration of the copyright. German singers and a German conductor will be obtained.

Something new under the sun was heard a few weeks ago at Cracow. Moniuszko's opera "Halka" was sung, with the libretto translated into Esperanto.

Stuttgart has again become a centre of interest in the musical world. It is not only that Richard Strauss's latest opera is to have its first performance there, but there is something of very much greater importance. Two new theatres have been built, and they represent the greatest advance in this branch of architecture since Wagner erected his Festspielhaus in Bayreuth, nearly forty years ago. Prof. Max Littmann had evidently given the matter a great deal of thought before he erected these two structures, which are not only externally such as to arouse every one's admiration, but unite in their internal arrangements all things that the experience of centuries has shown to be best for acoustic results and for the comfort and enjoyment of the public.

Professor Littmann's plan, which doubtless marks the beginning of a new era in theatre building the world over, is that of a combination of music and drama in the same house—or, rather in two houses. Just as there are operas, like Wagner's, and

Verdi's "Aida," which require a large stage and auditorium, so there are spectacular dramas with elaborate scenic effects and ensembles that demand a big building. To these, accordingly, the larger one of Professor Littmann's new theatres is consecrated. The smaller one is intended for operas like Mozart's and Lortzing's, and those of many of the French composers. Thus, instead of having an opera house either too large for some operas or too small for others, and a separate theatre with the same defects, Stuttgarters now possess two houses, in which full justice can be done to all kinds of plays, with or without music.

Perosi is finding admirers in Austria-Hungary. Last spring his opera, "Pompei," was staged in a Viennese theatre, and next spring the same city, as well as Budapest, will witness the production of a new opera, which he is at present completing. Its title is "Jenny," and he calls it "a drama of longing." The story is based on incidents happening partly in Switzerland, partly at Monte Carlo.

Concert-goers at Weimar will have an opportunity next winter of hearing a composition by Liszt that has never been performed in public. It is entitled "Titan," and is based on the legend of "Prometheus." The score is for baritone solo and orchestra.

Art

Engraved Gems: Signets, Talismans, and Ornamental Intaglios, Ancient and Modern. By Duffield Osborne. With thirty-two plates. New York: Henry Holt & Co. $6 net.

Most popular manuals are extorted by the bribes of publishers from half-trained bookmakers or unwilling experts. This handsome volume on engraved gems is an exception. It represents nearly twenty years of travel and collecting and is written for those of like zeal. Mr. Osborne tacitly includes himself among the class which he names "romantic archæologists." What he asks of his studies is not the æsthete's limited joy, but the widest range of association with the past. This trait determines the character of his book. While alive to the beauty of the finest intaglios, he is chiefly interested in iconography. Hence he gives more attention than is usual to later stones of poor workmanship which happen to be peculiarly interesting in subject. This policy corresponds very well to the needs of the actual collector, for whom the book is chiefly planned. Gems of the fifth and fourth centuries B. C. are virtually unattainable. He who lands a Hellenistic intaglio is more than lucky. For all but very rich or fortunate collectors an Augustan gem must represent the high level. From then on the situation changes. There are few Italian jewellers who do not possess a saucerful of gems of the late Empire. These can still be had for a song. Some are beautiful, and most are interesting. It is this field that Mr. Osborne has especially cultivated, though he has also studied deeply in the earlier and finer periods.

Being a popular manual, the book makes no display of authorities. It is handsomely printed on fine paper, and at the end are gathered thirty-two plates comprising about seven hundred half-tone cuts from casts. These, under close scrutiny, will generally betray the workmanship, whether it be the diamond point, the drill, or the wheel. On all these technical and necessary matters Mr. Osborne is an excellent guide. He has frequented the few modern gem-cutters, most of whom become, often unwittingly and through the dealers' guile, forgers as well. The preface is given up to the history of gem collecting, a romantic narrative. There never was a greater collapse in a fad than was caused by the sale of Prince Poniatowski's specious forgeries in 1839. The result has been a heyday for the museums and for the few surviving collectors. It is thanks to Prince Poniatowski's misplaced archæological zeal that Mr. Osborne is able largely to illustrate his book from his own and his friends' collections. The introduction treats of the classic interests in gems, forgeries, materials, size, workmanship, designs, signatures, and inscriptions—in general, what the collector needs to authenticate and date the examples that come under his eye. Twelve chapters are devoted to a chronological survey from Minoan to modern times. In every case the materials and subjects proper to a period are carefully given.

A second part treats the subjects that are found on carved gems. A third part includes an elaborate description of tools and technical processes, of the stones used, a useful list of historical signets mentioned in literature, and a concise description of the plates. There is as well an alphabetical list of attributes and things, and a general index of names. Everything is clear and orderly. And the collector who cannot possess the massive volume of Furtwängler, could ask for nothing more accurate and convenient. We know of no handbook in any language that so nearly meets the practical needs of the average person interested.

It should be added that Mr. Osborne excludes cameos, which are merely a form of small relief sculpture. One or two suggestions may be offered for a second edition. After the book went to press Sir Martin Conway published in the *Burlington Magazine* a casket in the treasury of St. Maurice d'Agane, which contains several classic intaglios. Since it also contains an interesting mediæval forgery of a classical cameo, it is possible that here may be found also mediæval intaglios—rarer they are than black swans. In general, this mediæval field much needs to be cultivated. Mr. Osborne is surely right in supposing that the art never wholly died out. Among historic signets might have been included that chalcedony belonging to Nicolaio Nicoli, which is highly praised by Ghiberti in the third of his Commentaries. Mr. Osborne's implied doubt as to the nude Three Graces on antique gems seems unwarranted. Furtwängler reproduces several examples in the Berlin Catalogue, and the subject is rather common on Levantine coins of the later Empire.

Charles F. Kelley and William L. Mowll have written "A Text Book of Design," which Houghton Mifflin Company brings out this week.

The Pennsylvania Academy of the Fine Arts and the Philadelphia Water Color Club announce that under their joint management an exhibition of original work, or illustrations in whatever medium will be held at the Academy, beginning Sunday, November 10, and ending Sunday, December 15. A prize of one hundred dollars will be awarded for the best work in the exhibition that has been reproduced in color for the purpose of publication. Following are the committees: Jury of selection—Hugh H. Breckenridge, George M. Harding, Thornton Oakley, Philip L. Hale, F. Luis Mora, and Fred Wagner. Hanging committee—George Walter Dawson, Thornton Oakley, and Hugh H. Breckenridge. Academy's committee on exhibition—Clement B. Newbold, chairman.

An interesting account of the work of the Dutch excavations at Argos has appeared in the London *Times*. These excavations have been carried on since 1902, when Prof. W. Vollgraff, of the University of Groningen, commenced operations on the low, flat hill known as the "Shield." In successive annual campaigns he laid bare an important prehistoric settlement of about 2000 B C., with heavy fortifications; then at the foot of the hill, a number of large Mycenæan rock-tombs of the fifteenth and fourteenth centuries B. C., the contents of which are now in the National Museum at Athens. Professor Vollgraff then succeeded, by experimental trench-cutting, in getting a clear outline of the topography of ancient Argos, discovering among other objects of special interest the stadium, the gymnasium, the sanctuaries of Apollo Pythios and Athena Oxyderkes, a round temple of unknown age and dedication, the Roman aqueduct, the Nymphæum, and a large stone terrace, which in all probability is the *kritêrion,* or ancient place of judgment, mentioned by Pausanias. The chief interest, however, lay in identifying the *agora,* which in ancient Greek cities was the centre of the civic life. It is an immense rectangular area of some 3,000 square metres, which was partly roofed in and was surrounded on all sides by walls, temples, and colonnades. On the north side, which is above 100 metres in length, the colonnade has been unearthed almost intact, the columns still standing to a height of several metres, while most of the capitals are lying about near by. This colonnade apparently dates back to the fourth century B. C. An *agora* belonging to classical times of these dimensions and such arrangement is thus far unique in Greece or Asia Minor. Pausanias describes the Argive *agora* quite elaborately, and names no fewer than seventeen temples abutting on it. One of these temples has already been unearthed by Professor Vollgraff; it is 32 metres long by 15½ metres broad, and was built of fine white limestone. The substructure and numerous fragments of the superstructure are preserved, as well as the shattered statue of the goddess, whose name may perhaps be determined when the pieces are put together. Professor Vollgraff's excavations are to be continued, and one may confidently hope for even more important discoveries.

The recent excavations on the Palatine in Rome will soon be opened to the public. When the clearing of the débris from the *atrium* of Domitian's palace has been completed, a good view will be obtained of the vast *impluvium* of the palace of the Cæsars. This colossal fountain had a capacity of a thousand cubic metres. The water was distributed in lead pipes from Nero's aqueduct, fifteen feet below the *impluvium*. The foundations of the Golden House and earlier Cæsarian dwellings have been laid bare. Below these have been found some interesting remains, including twelve ancient lifts. One of these lifts, which descend into the earliest known city, is being cleared and put into working order.

One of the largest, most complete, and most important temples of Mithra is being unearthed in the vast excavations now proceeding at the Baths of Caracalla at Rome. The temple proper underlies the stadium, which consists of a central nave 75 feet long, flanked on either side by an aisle. Many relics of Mithra worship are coming to light, among them a number of valuable inscriptions.

Richard George, son of the late Henry George, died Saturday at the age of forty-two. He was a sculptor. He made portrait busts of the late Tom L. Johnson, William Jennings Bryan, and the Rev. Father Edward McGlynn.

John Leighton, whose death at the ripe age of ninety is announced from London, was one of the original proprietors of the *Graphic*, was a founder of the Ex Libris Society, for which he designed many bookplates, and illustrated a large number of books. Under the pen name of Luke Limner, he published in 1881 "Suggestions in Design."

Finance

TAKING EUROPE'S GOLD.

Last week there arrived at New York, by the incoming European steamers, $1,300,000 gold. A further $2,500,000 was taken from the London market and consigned to New York, and on Monday of the present week, $5,000,000 more was engaged for import. Thus far these engagements for America have been exclusively taken from the newly-mined Transvaal gold, delivered in England by the weekly steamers from South Africa, of which last Monday's $6,000,000 arrival was the largest cargo ever brought from the Cape on a single steamer. All the engagements, made on the basis of a movement of foreign exchange decidedly in our favor, were the response of the international market to the great demand on American bank resources, due to the sudden expansion of this country's internal trade, to the unprecedented movement of grain to market, and to revival of financial activities—reflected already in a 6 per cent. rate for long-time discounts in the New York money market and an 8 per cent. rate, last Monday, for demand loans on the Stock Exchange.

It will thus be seen that the "gold-import movement," whose postponement Lombard Street has been anxiously advising, is fairly under way. How large is the movement likely to be, and what will be its effect on financial Europe?

This westward flow of gold across the Atlantic is the first movement of the kind, on a genuinely commercial basis, that has occurred in half a dozen years; for the $17,000,000 brought from England and France in July and August, 1910, was wholly a result of international stock market operations, and the $100,000,000 imported from outside countries, in the two months after the panic of 1907, was bought at a heavy premium, as if it had been pork or iron.

So far as Europe is concerned, we sent $20,000,000 gold to Europe earlier in this present year, to help out the Paris market, and, until September, we imported virtually none. Last year, we neither exported nor imported any considerable amount. In 1910 we sent Europe $15,000,000 more than we got from her. In 1909 the excess of gold exports, in our trade with Europe, was $24,000,000; in 1908 it was $43,000,000. Even in 1906, when our gold engagements from Europe were, all told, $87,000,000 and our shipments virtually nothing, it needed the active help of the United States Treasury to stimulate the movement, and the gold was obtained from England, not only on the basis of prodigiously large foreign borrowings by rich American speculators, but by reason of abnormally heavy payments by England to America, necessitated by the losses of English fire insurance companies in that year's San Francisco conflagration.

The amount of gold which comes to us from abroad, in a season of sudden American trade revival and of heavily increased agricultural and other exports, has usually been very large; but its total magnitude would depend on circumstances. In the twelve months which began with July, 1897—the most recent period of the kind in our history—we imported $120,000,000 gold, though only $70,000,000 came from Europe. In the autumn of 1879 we took $60,000,000 gold from England, France, and Germany. Those periods were in many respects analogous to this, so far as concerned the United States.

It is as yet, however, wholly impossible to predict to what extent this season's gold import movement will approach those totals. That must largely depend on the other question, how a large and continuous gold engagement for New York would affect financial Europe. The English cables declare that its effect would be highly disturbing; if so, and if the Bank of England rate were to rise, say, to 6 per cent., we should have to reduce our expectations. But there are some other things to keep in mind in that connection.

In the first place, we have thus far been taking gold, not from the Bank of England's vaults, but from the weekly arrivals of new Transvaal gold on the Cape Town steamers. That is how we drew the $17,000,000 gold in July and August, 1910, without causing a ripple on the European money markets. On the other hand, it must be remembered that London had been reckoning on these very South African consignments to provide the gold which the English market had expected to send to India, Egypt, and Germany. If, because of New York's successful bid for the series of South African arrivals, the gold for those other markets has to be drawn, contrary to previous expectations, from the reserve of the Bank of England, then it might be argued that we have indirectly imposed the burden on the Bank itself.

But this would still leave the question open, how much gold Europe itself can comfortably spare, and that question has two sides. The large gold shipments to us, in 1897 and 1898, are commonly said to have troubled nobody, because the Bank of England's gold coin and bullion holdings were then so exceptionally high. It is true that the £49,200,000 gold in that institution on June 24, 1897, was the high record of its history. But the Bank held only £40,386,000 at this time in September, 1897, its ratio of reserve to liability being 48½ per cent.; whereas last Thursday's weekly report showed £41,693,000 gold and a reserve ratio of 51⅜. When one turns to the great Continental banks, one finds by their statements of last week that the Bank of France holds $33,000,000 more gold than a year ago, and the Imperial Bank of Germany $34,000,000 more. The present gold holdings of the German institution break all records for its history, and both it and the Bank of France have made heavy reduction in outstanding loans since this time in 1911.

In 1879, too, it was generally supposed that Europe needed its own existing supplies of gold. The building-up of the French reserve of gold, after the payment of the huge war indemnity to Germany, was still in progress. There were in those days, moreover, no weekly arrivals of new gold from the Transvaal. Yet, although our demands of 1879 on Europe's gold supplies came with wholly unexpected suddenness (our Treasury's London agent had just quoted the Rothschilds as predicting a steady gold export movement from New York), the Bank of England's official discount rate did not go above 3 per cent. that season.

So that the question is still left open, whether London is or is not altogether justified in its apprehensions regarding a large and continuous gold movement to America. That will be determined by events. It is probable enough that, if the New York requirements should be exceptionally large, some of last summer's financial plans of the English and Continental money markets would have to be revised. But that is a somewhat inevitable incident of a sudden and unexpected change in the international position. It is perhaps not an unreasonable conjecture, therefore, that when the season has progressed a little further, Europe itself will find that the necessary gold can be provided with a minimum of inconvenience.

Washington and Lincoln
Leaders of the Nation in the Constitutional Eras of American History.
By Robert W. McLaughlin
Crown 8vo. With portraits. $1.35 *net; by mail* $1.50.

A discussion of the central problem of constitutional Government, a problem uppermost in the minds of the people to-day, namely, that of power in its derivation, expression, and abuse. The two commanding personalities of the Nation are revealed at work upon this mighty problem of power in Government. It is this revelation of masterful leadership, with the comparison suggested and the relation traced, that constitutes the distinctive contribution of this book.

The Moonlight Sonata
By JOHAN NORDLING

The love of Beethoven for the beautiful Countess, Julia Guicciardi, is the theme of this story, which has just scored a success abroad in three countries. A moving novel of fine artistry that is also a faithful picture of the master, of his fair inamorata, and of the social and artistic life of Old Vienna. *Cloth, 12mo. Color frontispiece and other illustrations.* $1.25 *net.*

The Cahusac Mystery
By K. and HESKETH PRICHARD
Authors of "Don Q," Etc., Etc.

A tale of London and Paris, presenting the reader to vivid and interesting men and charming women. A son's desire to clear his murdered father's memory from disgrace and offer it untarnished to the lady of his choice is the motive of the story. *Cloth, 12mo. Illustrated with colored frontispiece,* $1.25 *net.*

"It is 'a possession unto everlasting.' . . . It will be read by myriads and shed light on the millions."—*S. Reinach.*

ECCE DEUS

(English Edition—much enlarged). Large 8vo, xxiv, 352, $2.25 net.

By WILLIAM BENJAMIN SMITH

This book, continuing and transcending its forerunner, *Der vorchristliche Jesus*, sets forth "a totally new orientation of the history of religion in the time of the Roman Emperors" (*Schwen*). Its cardinal contentions are these:

1. That the primitive Christian preaching proclaimed the Savior-God, Jesus. 2. That Protochristianity was an aggressive Monotheism, the "Eternal Gospel" of Rev. xiv, 6, 7: "Fear God and give Him Glory." 3. That this Gospel was "veiled" in symbols that represented the heathen gods as "demons," pagandom as a "sinful woman" or "prodigal son," etc. 4. That its slogan "Repent!" means "Turn!"—from the Sin (Idolatry) to true worship of the true God.

"To say that I have read this book with interest would be to say too little. . . . As historian of the most remote origins of Christianity, William Benjamin Smith appears to me as superior to all the German radicals as Renan was superior to Dupuis and to Voltaire."—*S. Reinach,* in *Revue archéologique.*

"On the whole, to read this book is to take a shower-bath before breakfast."—*H. U. Meyboom,* in *Theol. Tijdschrift.*

"In my opinion Professor Drews and his authorities are right in the main."—*T. K. Cheyne,* in *Hibbert Journal.*

"Smith, the most learned and the keenest-witted among Drews' authorities, possesses extraordinary erudition and productive power. . . . The spuriousness of the Christ-passages in Josephus is strikingly demonstrated; the discussion of the Tacitus-passage seems to me quite as worthy of attention."—*H. Windisch,* in *Theol. Rundschau.*

"From a critical point of view, undoubtedly more significant is the delightfully logical and every way masterful *Ecce Deus* of the American mathematician, who in technical knowledge and sagacity lays many a theological specialist deep in the shade. . . . The work is a brilliant demonstration of Feuerbach's great thesis. . . . The proof of his proposition Smith has, it seems to me, accomplished with the clearest logic."—*Dr. W. v. Scholz,* in *Die Zukunft* (Berlin).

"The weight of proof brought forward is crushing. . . . The book is a plenitude of wisdom and of startling suggestions."—*Baars.*

"As the reader sees, the book is as far as possible from being a depreciation of Christianity. Indeed, the pious readers of the Bible, as well as expositors, owe Smith a debt of thanks."—*K. Jentsch,* in *Die Zeit* (Vienna).

"One can not but admire the solidity of learning and the patience of research that the Tulane professor brings to the discussion of a large and difficult problem."—*C. H. Toy,* in *International Journal of Ethics.*

"We have all along been misreading the early Christian records. The trend of criticism has been to convert the Jesus of the New Testament into an utterly ineffectual source of Christian influence; and Professor Smith, with his insistence upon the fact that original Christianity was the worship of the One God . . . has scuttled liberal theology and restored the original idea of the divine object of worship, while destroying the idea of a Palestinian personal originator of the new religion."—*A. Ransom,* in *The Literary Guide* (London).

"In this way Smith essays to unveil the secret of Protochristianity and to make its true nature intelligible. And I am certain that whoever takes his work in hand will be as much amazed at the acumen with which the author establishes his conception in detail as at the multitude of new insights that he affords us. In fact, his *Ecce Deus,* no less and in truth still more than his 'Prechristian Jesus,' throws an altogether new and startlingly bright light on the New Testament and on the whole history of early Christianity. . . . And above all, we now understand correctly and for the first time the deeper sense of the Gospels themselves and many otherwise wholly incomprehensible details of their narratives. . . .

"But enough of particulars. He who seeks for deeper insight must betake himself to the works of Smith. And whoever does so will, beyond question, agree with me in the judgment that the American may calmly match himself in learning with every theologian of our day, while in *Geist* he overtops them—well, pretty much all. This appears especially clearly in the Appendix to his work, where he repels with equal skill and high-bred gentility the odious attacks of Weinel on his earlier work, 'The Prechristian Jesus,' and visits upon the hostile specialist an overthrow that is literally annihilation."—*W. v. Schnehen,* in *Volkserzieher* (Berlin).

"Like a flash of lightning, the book illumines the New Testament. What was dark before, becomes bright as day."—*A. Joeckel* (Leipzig).

OPEN COURT PUBLISHING COMPANY, CHICAGO

Gerhart Hauptmann's fiftieth birthday

will be celebrated this fall. In America the event will be marked by the publication of his new novel, "Atlantis," and by the issue of the first two volumes of his complete dramatic works in English translation. Since the death of Ibsen, Hauptmann has been the undisputed head of Continental dramatists.

THE FOLLOWING WORKS ARE NOW OBTAINABLE:

THE FOOL IN CHRIST, *a novel.* $1.50 *net; postpaid,* $1.65.	THE WEAVERS, *a drama.* $1.00 *net; postpaid,* $1.10.

IN PREPARATION FOR EARLY PUBLICATION:

ATLANTIS, *a novel.* $1.50 *net; postpaid,* $1.65.	DRAMAS, Volumes I and II. *Each,* $1.50 *net; postpaid,* $1.65.

The novels have been translated by Adele and Thomas Seltzer. The dramas are translated in part and edited by Ludwig Lewisohn. Vol. I will contain an introduction and four plays; Vol. II will contain three plays. For further information address the publisher.

Free Library 480 26 Oc 12

A BOOK THAT HAS BEEN LONG WAITED FOR

THE MODERN READER'S CHAUCER

THE COMPLETE POETICAL WORKS OF

GEOFFREY CHAUCER

Now first put into modern English by

John S. P. Tatlock AND **Percy MacKaye**

Author of "The Development and Chronology of Chaucer's Works"

Author of "The Canterbury Pilgrims" "Jeanne d'Arc," etc.

Illustrated by 32 full-page quadri-color plates from paintings by the celebrated English artist, Warwick Goble.

Chaucer's entire works have never before been put into modern English.

Fugitive fragments retold in prose and verse by Pope, Dryden, Wordsworth and others of lesser fame exist, but the wit, beauty and wealth of this great English poet are practically unknown to the modern reader.

This condition is now removed by this work in which the editors—specialists in their knowledge of CHAUCER—adhering closely to the original, have rendered into modern English all the wonderful tales of this early poet.

The editors have kept as much of Chaucer's raciness and archaic savor as is consistent with the reader's ease and have been strictly faithful to the original, paraphrasing as little as possible, and never misrepresenting.

It is believed, therefore, that the present volume will be welcomed by a great number of cultured people everywhere, who, desirous of becoming fully acquainted with this classic English poet, but unversed in old English, have experienced difficulty in reading Chaucer in the original.

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net postpaid.

PUTNAM'S NEW BOOKS

The Story of the Bronx

From the purchase made by the Dutch from the Indians in 1639 to the present day.

By STEPHEN JENKINS,

Author of "The Greatest Street in the World—Broadway." 8vo. With over 100 illustrations and maps, $3.50 net; by mail, $3.75.

The romantic history of the northern section of Greater New York from the days of Jonas Bronk, after whom the Bronx was named, through the centuries crowded with events that have issued into the present. The geographical landmarks acquire a new significance as around them this accurate historian of local events and conditions weaves the substantial fabric of fact and more sparingly the lighter web of tradition.

The Hoosac Valley. Its Legends and Its History

By GRACE GREYLOCK NILES

8vo. With 110 illustrations and maps. $3.50 net; by mail, $3.75.

The early history of the Hoosac Valley is inextricably interwoven with that of the very foundation of our Great Republic. Miss Niles's purpose is not to furnish new pages for history, but rather to present the story of beginnings in historic Hoosac in its true relation to the world's great history. A mass of legendary material hitherto uncollected, together with profuse illustrations of Revolutionary heroes and historic fields, combine to make the volume valuable and attractive, not only to the residents of the Hoosac and Wallomsac country, but to all students of American history.

Little Cities of Italy

By ANDRE MAUREL

Translated by Helen Gerard. 8vo. 40 illustrations. $2.50 *net; by mail,* $2.75.

MILAN — MODENA — FERRARO — RIMINI — ASSISI — PAVIA BOLOGNA — RAVENNA — URBINO — SPELLO — MONTEFALCO SPOLETO — ORVIETO — VITERBO — PESARO — PIACUZO PERUGIA, ETC.

These little sketches will open new and charming fields of interest. M. Maurel has wandered from town to town, painting in vivid colors his impressions of their historical and artistic aspects, showing with keen insight how closely allied are these, what each owes to the other, and how indebted is the present to both.

The Japanese Nation

ITS LAND, ITS PEOPLE, AND ITS LIFE

With Special Consideration to Its Relation with the United States.

By INAZO NITOBE, A.M., Ph.D.

Professor in the Imperial University of Tokyo, author of "Bushida." Crown 8vo. $1.50 *net; by mail,* $1.65.

A thorough study of Japan by one of her foremost scholars. It is one of the very few existing accounts of this much misunderstood nation. The book is thoroughly vital, infused with thought, brilliant in style, and should prove serviceable to all who want to arrive at a true impression of the Japanese people.

The Romance of Leonardo da Vinci

By DIMITRI MEREJKOWSKI,

Author of "The Death of the Gods," "Peter and Alexis," "Tolstoi as Man and Artist," etc.

Exclusively Authorized Translation from the Russian by Herbert French.

New Edition, entirely reset. 2 vols., with 64 illustrations. 8vo. $5.00 net; by mail, $5.50.

"It amazes, while it wholly charms, by the power of imagery, the glowing fancy, the earnestness and enthusiasm with which the writer conjures Italy of the Renaissance from the past into the living light."—*London World.*

The Nation

NEW YORK, THURSDAY, OCTOBER 10, 1912.

The Week

The detailed allegations of extensive frauds in the Roosevelt primary vote in New York, made by Ogden Mills before the Senate investigating committee, can hardly make pleasant reading for the Armageddonites; but it is not so much the charges themselves as their relation to the genesis of the Roosevelt movement at Chicago that gives them interest. However deep may be the foundations of Roosevelt's candidacy, and however wide its appeal, the thing that made it a practical reality was the cry of "Thou shalt not steal," with which the Colonel rallied his followers at Chicago after the nomination of Taft. Since that time, the reverberation of this cry has been growing extremely faint; as is natural enough in view of the facts about contesting delegations manufactured for "psychological effect," about Harriman and Archbold and Morgan contributions, about sharp practices aimed at the capture of Republican electoral tickets, that have been coming before the public. To have on top of this a story of fraudulent votes in the New York primaries, and of other corrupt practices specified in detail, is painful indeed. How strange, too, that with the sentiment of the party so overwhelmingly for the Colonel, it should have been found necessary to employ the kind of professional talent to which his interests seem to have been entrusted in the New York primaries. In Pennsylvania, to be sure, the vote was brought out by the exertions of Flinn and his $144,000, more or less; but that's different.

One of the achievements with which Col. Roosevelt has been credited in the popular mind is the passing of the Pure Food law. That he discovered Dr. Wiley, ordained him to the ministry of making what we eat and drink fit to be eaten and drunk, endowed his crusade against poisons and lying labels with the munitions of war—in short, gave Wiley his chance—is not all this written down in the chronicles of the Roosevelt Administrations? What does the doctor mean, then, by joining Roosevelt with Taft as hostile to pure-food legislation and enforcement? But yesterday Pinchot and Jimmie Garfield, yes, and Root and Taft and even Heney and Lindsey were all doing their marvellous exploits because they were sheltered under the ægis of the Mighty One. The forests were being preserved, Cuba was being enlightened, the Trusts were being busted, the farmer was being uplifted, our meat was being inspected, all because He had said the word. Now comes Dr. Wiley to explain that he could have got along better in his task if Omniscience and Omnipotence had deigned to look upon it with favor instead of superciliousness.

Gov. Hadley's outright declaration for Taft must be accounted a severe blow to the Roosevelt cause. Hadley was the very soul of the Roosevelt fight at Chicago, and it will go hard with the Colonel to get his followers to accept the view that he is now an accomplice of thieves, an accessory after the fact in the most tremendous act of grand larceny known to history. We do not believe, indeed, that he will undertake to make this charge explicitly against his former champion; but he has made it against others, in the most comprehensive terms, and if it does not apply to Hadley it breaks down in regard to any other public man of good repute. Moreover, the alignment of the Missouri Governor at this time coincides with what looks like a general weakening of the Colonel's cause all along the line. As for Mr. Taft's declaration concerning Presidential primaries, which Gov. Hadley had stated that he was waiting for, there was in it a somewhat unwonted display of shrewdness on the President's part; for he simply quoted and reaffirmed his own declaration of March 18:

> Wherever full and fair notice of the election can be given, wherever adequate election safeguards can be thrown around to protect a preferential primary for the Presidency, wherever the Constitution of the State permits its being made applicable to the present election, I favor it and welcome it.

One of the more notable features of this Presidential campaign is the part taken in it by college men as college men. The real distinction of Mr. McCombs's success at Baltimore is not that he should have attained the nomination of the man he set out to have named. Senator Hanna, W. C. Whitney, and others had done that years before Mr. McCombs put his finger into politics, and for Hanna, at least, the job was as new as it was for McCombs. But the Princeton man won his success, so far as it was won by organization, not only by bringing into activity a class of citizens that had not been depended upon before for political work of that sort, but by working through them almost exclusively. The triumph of Wilson was accordingly the triumph of the amateur, and not the less impressive or fortunate upon that account. This aspect of the campaign is thrown into higher relief by the rapid spread of the Woodrow Wilson College Men's League, which both financially and otherwise has stood on its own feet from the start. Despite its name, it looks upon itself as non-partisan, and aims to be a permanent factor in national political campaigns, since it proposes to throw its influence on the side of the most worthy, regardless of his party badge. It has already enrolled thousands of men who had never belonged to a political organization, and by so doing has rendered a valuable service, not only to its candidate and his party, but to the whole country.

Whether the Syracuse Convention was or was not unbossed; whether, as some believe, the whole appearance of an uncontrolled Convention was merely a Tammany pretence, the fact remains that the nomination of Congressman Sulzer for the Governorship of New York State must be a bitter disappointment to Democrats everywhere. The Convention has chosen a man who in no wise measures up to the needs of the hour, or to the needs of the office. So far from clearing the present confused situation or uplifting a standard to which patriotic citizens might repair without any harassing doubts and with complete certainty that this was the way to better and freer government, the Convention has repelled thousands of independent Democrats and Republicans alike who wished to vote against Roosevelt. Sulzer is the Murphy candidate; he could not have been chosen save by Murphy's full approval. However independent he may have been at times, he is and has been essentially a part of Tammany Hall, against whose infamies he has never taken up arms. Nor is there the slightest reason to believe that, if elected, he will really free himself from the influences which have made him what he is and kept him in public life.

With the aid of the "Washington" Party and Boss Flinn, that generous political contributor and seller of gold bricks, Pennsylvania apparently has moments of seeing the light. From Harrisburg it is announced that the Allied Civic Bodies Committee, representing the third-class cities and larger boroughs of the State, is preparing to frame a bill to provide a commission form of government for municipalities of that class. The bill, to be submitted to the next General Assembly, will call for commissions of five members, each commissioner to be the head of a department; councilmen elected at large for two-year terms, and a non-partisan ballot. After protracted debate, the Committee decided not to include a provision for the recall, but the new bill will embody the initiative and referendum. It is not difficult to imagine how the gorge of the Progressive Flinn must rise at the prospect of such an invasion of his field.

With commendable restraint the people of Arizona have gone nearly a year without trying out that shining new recall pocket-knife which they cried so heartily to get. But human endurance has its limits. Recall petitions are being circulated in Arizona. They are aimed at no corrupt judges, at no venal creatures of the reactionary régime, but at the Governor of the State, who was himself an ardent champion of the recall. Moreover, the issue on which the Governor has been tried and found wanting is the question of prison administration. Gov. Hunt is in favor of a liberal parole and pardoning policy which is everywhere a feature of the humanitarian, progressive programme. His opponents, reactionaries presumably, are now using the recall for their own purposes. Simultaneously, recall petitions are being circulated against two State Senators who are opposed to woman suffrage. Thus it is fully demonstrated that the recall is a game which two can play at, and that the people of Arizona will go on playing it with great spirit for some time, until the novelty of the game has worn off.

Comments upon the death of ex-Senator Peffer illustrate American good nature better than they do American clear thinking. The late Kansas Populist was covered by the press with ridicule during his term in the Senate. He was then held up as the very type of the wild-eyed crank. His ideas were preposterous and his personality absurd. But now that he is gone we are told that he was, after all, a reformer before the reformers; that his doctrines were simply in advance of his time. He is now described as "an original Progressive." He lived to see his crying in the wilderness caught up by great political parties. The scorned planks of the Populist platform of 1892 have become the pride of the Progressives of 1912. There is a deal of talk like this. Similar language is often used of Mr. Bryan. It is said that others are in office, but that he is in power. The banners under which he went to successive defeat are now borne aloft by others. He, too, fought for years, hated and unrewarded, for causes which were merely ahead of the age. The age has now caught up with him, and his causes are triumphant. In the speech which Gov. Wilson made at Lincoln the other day, he referred to Mr. Bryan as the one who had shown the way and who had "freed" his party. We are asked to believe that, in the case of Bryan as of Peffer, it is the old story over again: the stone which the builders rejected has become the head of the corner.

We freely admit that some of the proposals which the Populists favored, and which Bryan borrowed from them, have lived to win favor from the leading parties and from the country. But even after generosity has been strained in making such concessions, what is the net result that stands plain before any one who looks at the whole movement historically, and with unclouded eyes? Why, indubitably, that a little good was mixed with a great deal of evil. The Populists and Mr. Bryan could not go wrong at every point. Look at the Populist platform of 1892, and recall Mr. Bryan's speeches of 1896 and later years. Both were drag-nets to catch every possible cause of popular complaint, and to propose every conceivable remedy. It would go hard if some genuine reasons for dissatisfaction were not hit upon, and if a few promising reforms were not proposed. A machine-gun spouting bullets could not fail to hit the target now and then, though thousands of shot went wild.

No comfort can be got from the statistical study of homicide in the United States, by F. L. Hoffman, in the insurance journal, the *Spectator*. His survey covers the figures in the leading American cities for the past thirty years, and shows conclusively an increase of homicide in the last ten years. The rate in the aggregate of these cities—with a total population in 1911 of nearly 16,000,000—was 5 per 100,000 in the decade 1882-1891, and 4.9 in 1892-1901; but in the decade 1902-1911 it rose to 7.2, an increase of more than 40 per cent. This is a startling result; and, while one cannot help suspecting that investigation might to some extent explain it away—as being due, more or less, to changes in statistical arrangements—the increase is so large, and the number of years covered so considerable, that it is hardly possible to doubt the general truth of the conclusion. Moreover, the article takes occasion to bring forward another aspect of the question, which is only too familiar, and on which there is no room at all for doubt. This is the shameful preëminence of our country, as compared with other civilized nations, in the matter of homicide. The homicide rate for the "registration area" of the United States is nearly five times as great as that for England and Wales; and if there is any incompleteness in the statistics, this would only further emphasize the discrepancy, as the English figures are unquestionably almost absolutely complete. Here is a phenomenon most discreditable to our country. For it the people cannot shift the responsibility to the Trusts or to malefactors of great wealth.

The statement issued by the New York, New Haven & Hartford Railroad, in regard to the terrible disaster near Westport, Conn., on Thursday night of last week, contains this information:

> First 53, a few minutes ahead of second 53, went through this crossover, which is a No. 10, all right. Second 53 took the crossover at high speed in spite of the fact that home signal was at danger, or in stop position.

The high speed was not only in spite of the signal, but also in spite of the company's standing rule that the speed at such a crossover shall not exceed fifteen miles an hour. On July 11, 1911, at Bridgeport, Conn., on the same railway, a fearful and fatal wreck was brought about by precisely the same cause. Now, the question of vital interest to the public is not that of the degree of blame to be attached to the engineer. Individuals will take risks under stress, unless held in check by a constant and firmly enforced rule, obedience to which becomes an absolute habit. This cannot be brought about by the mere posting of rules. Unless the rule is vigorously enforced by a stern penalty for every violation, it will be habitually violated when the temptation arises, and out of every so and so many violations there will be one that brings about agonizing loss of life. The crucial question as to this latest wreck is: Have there been violations of the crossover-speed rule on the New Haven since July 11, 1911, and, if so, have these violations been punished? If, after its warning of last year, the company has not taken the only course that can be effective in preventing just such accidents, the responsibility for the lives destroyed last Thursday night rests squarely upon its shoulders.

Upon whose head rests the blood of our marines slain in Nicaragua? Who can defend the orders that sent them to their death? Washington declares that we are at peace with that republic; that our soldiers are in Nicaragua only because we have been asked to protect Americans. So, going far beyond a legation guard or a capital police, we have manned and operated railways, and then deliberately taken sides with the existing Government and attacked and defeated the rebels, killing and wounding 300 or 400. If we are at peace with Nicaragua, it is an extraordinary thing. If we can attack the rebels there, for what reason should we hesitate to attack the rebels in Santo Domingo or Hayti or Venezuela or Brazil or anywhere else that a revolution is or may be? And if we are going to take sides with the existing Governments, why not issue an ultimatum once for all and say that there shall be no rebellions anywhere to the south of us? It is a most dangerous precedent, full of the possibilities of mischief.

It has been our observation that most of the American capitalists engaged in business in Mexico are patiently awaiting the outcome in that country without bombarding the United States Government with demands for intervention. Especially is this true of certain mine-owners, who are cheerfully bearing the loss due to the shutting down of their mines. There is a different class of our countrymen, however. From one of them we have seen a letter which declares that "if the United States would intervene, lands in Mexico would double and treble mighty fast. As soon as the United States takes a hand, there will be the greatest influx of people to Mexico you ever saw." "This land-speculation matter," writes an American in business in Mexico City, "is one of the leading causes that produce this agitation for intervention." To the best of our knowledge, if the question of intervention were left to the American colony in the City of Mexico, there would be an overwhelming vote against it. The crossing of the boundary by American troops would be the signal for a general uprising against the Americans, and there would be more American property destroyed in the first week than could be replaced in months and years of hard labor.

The English newspapers, in reviewing Lord Kitchener's first nine months as British Agent in Cairo, have much that is favorable to report. Ever since his arrival the gates of the Agency have been open to any person in need of counsel or aid, with the result, so one enthusiastic correspondent writes, that "Lord Kitchener's smiles have done more to conquer Egypt than all the guns and troops together." To those who recall Kitchener as the grim Sphinx of the Boer War, this sounds like a fairy-tale. Yet we hope that it is true and that this correspondent is right in saying that the English Agency "has been the Mecca of an Egyptian social, political, commercial, industrial, and agricultural renaissance." Whether it is also true that by his tactics Lord Kitchener has put an end to the Nationalist movement, we are inclined to doubt. We fear that with England in Egypt, as with ourselves in the Philippines, there never can be native happiness under foreign rule. It is, however, pleasant to record that drainage works are now under way which will bring two million acres more of land under cultivation and add to the country's annual revenue no less than $15,000,000. Among other desirable reforms the new Agent has introduced peasant savings banks, with some minor court improvements, and has rescued the fellah from some of the exactions of the usurers who abound in the country.

The Russian Government, according to the news given out in Washington, has proposed to the other six Powers concerned in the recent Chinese loan negotiations that certain deferred claims against China, based on the Boxer affair of 1900 and amounting by estimate to $50,000,000, be now pressed for immediate payment. The dispatches, which must have been based on information from our State Department, strongly intimate that the purpose of this manœuvre is to give "a sharp and forceful rebuke to the Chinese Government for contracting loans with independent bankers in disregard of the warning of the Powers, and after rejecting the proposed international loan." It is further declared that "no official intimation is given" as to the attitude of the United States towards this reported Russian invitation. Such a proposal, if it has actually been made, would in one sense not concern our Government, which voluntarily waived its own claims on the Boxer indemnity years ago. But in a larger interpretation of our Government's duties in the premises, our State Department has a definite concern, and ought to reply emphatically to Russia and the other Powers. The status of the Boxer indemnity has nothing whatever to do with the question what bankers China shall select to finance her loans to-day. The one is purely a governmental matter; the other, whatever may be said of "dollar diplomacy," is a matter of the money market. To use the one situation as a club to punish China for her action regarding the other would be a piece of international bullying for which not a shred of decent apology exists. The United States Government has already gone dangerously near to compromising its own position in these matters; but the very fact that it has done so calls for plain language by our State Department, if any such iniquitous proposition as this is laid before it.

RESPONSIBILITY TO THE PEOPLE.

It has been noted that the language held by the Hon. William Sulzer is amazingly like that of the Hon. Theodore Roosevelt. Both are tremendously strong on giving "the people" exactly what they want when they want it, and on compelling all office-holders to be rigidly accountable at all times to the voters. Indeed, in this doctrine, Mr. Sulzer long anticipated Mr. Roosevelt. He has proclaimed it in season and out of season, with thought and without it—mostly the latter—these many years. The sonorous old phrases naturally, therefore, come more trippingly from his tongue than they do from Mr. Roosevelt's. All power direct from the people, all responsibility immediately and continuously to the people—that has been the "bountiful answer" that fits all political questions, which Mr. Sulzer set forth in a hundred speeches long before the Colonel took it up. In this respect, Roosevelt and Sulzer to-day illustrate the fellowship of kindred minds.

Responsibility to the people has often, as we all know, been made to cover a multitude of political sins. It is a glib and mouth-filling phrase, the real meaning of which, in any given case, depends upon the spirit and purpose of the public man who uses it. We know what Gov. Hughes meant by it. He announced that he held his commission from the people of New York, and that he intended to be their responsible Executive, but the result was to fill the State with cries of rage by offended politicians. Hughes, they said, was a compound of the revolutionist and the renegade. Much the same was said of Woodrow Wilson when he followed the same line as Governor of New Jersey. On the other hand, bosses and political corruptionists have always loudly professed the desire to know what was the popular will in order that they might carry it out. They, too, have said that all their influence came from the people, and that it was their constant effort to satisfy them, knowing that the people held the power of life and death over them. In this, so far as lip-professions go, Boss Barnes would be at one with Charles E. Hughes, "Jim" Smith with Gov. Wilson. It is obvious that a phrase like "responsibility to the people," which is thus capable of covering, as by a single blanket, Richard Croker and Theodore Roosevelt, requires analysis and explanation. The thing cannot be so simple as it looks. There must be some catch in it, some misunderstanding.

The whole question was examined by Mr. Arthur Sedgwick in his Godkin Lectures at Harvard, which have now been issued by the Scribners under the title "The Democratic Mistake." Mr. Sedgwick does not in the least reject the idea of the necessity of political responsibility to the people, under our form of government. Rather he exalts it. But he shows by an inquiry into the history of the conception, and its actual working out in practice, what abuses have crept in under guise of it, and what changes are needful if the fundamental idea is to be made of real value. In the beginning, the thought was to find some authority other than the Crown or the Ministry to whom public officials should be "answerable," by whom they might be censured if unfaithful, and deprived of their positions. It was natural, and it was wise, in our young democracy, to substitute "the people" for the old reviewing and controlling power of King or Cabinet. But from this it did not at all follow that the only way to enforce responsibility to the people was by frequent elections, by a large multiplication of elective offices, and by the creation of complicated political machinery. "When annual elections cease, tyranny begins." There may be some force in that venerable saying, but it all depends upon the political conditions prevailing. If there is in existence a greedy boss or an all-powerful machine, dictating all nominations and demanding all patronage, the election of a lot of officials every year would merely mean glorious new opportunities to build up the only tyrannous power within the state which we have any reason to dread, and really would make it harder than ever for the people to make their will known and effective.

This is the theme which Mr. Sedgwick suggestively develops. He is certainly in line with the best opinion, and also with the best practice, of our time, when he insists that actual responsibility to the people has been too much obscured and dissipated, and that the way to restore it is by electing fewer men to office, while appointing more, fixing accountability in officials to whom we give more power and a longer tenure, and everywhere simplifying political machinery as much as possible. Commission government, the concentration of authority in executives, the short ballot, biennial or triennial Legislatures, continuity in office of useful public servants during good behavior—all these things, so much cried out against by politicians of the baser sort, are truly devices to make responsibility to the people more real. Contrast all this with Mr. Sulzer's notion of making spoils of all the offices as speedily as possible. He would have "rotation in office," as a means of making the people a force in the government, but what he would actually bring about in that way would be a demoralization and degradation of the public service, while leaving the people in such a whirl of being "rotated" that they would not know whom to commend or whom to punish.

"REAL" POPULAR GOVERNMENT.

The decision of the California Supreme Court in the Taft-Roosevelt electoral contest is an illuminating comment upon the glib charge that our courts have usurped legislative functions, and, besides, are so fossilized that they cannot properly interpret acts which are in accord with modern ideas of justice. To the mind of every judge of the California court, the primary law which he was interpreting was anything but a guarantee of political justice. Its practical effect is the disfranchisement of scores of thousands of voters. Yet the court meekly bowed its head to the sovereign will of the people, constitutionally expressed, and set the seal of legality upon the morally indefensible course of the Johnson Republican organization. The recall of decisions could have done no more. Such incidents as this make one wonder whether, after all, the indictment of our representative institutions is so complete as to call for their condemnation. To ask a still bolder question, Is direct legislation synonymous with popular government?

An answer, one would think, must be found in the pages of the September *Annals of the American Academy of Political and Social Science*, which is concerned with the initiative, the referendum, and the recall. As one proceeds through the volume, it becomes evident that the work of getting the people to rule themselves has not been without its difficulties. Certain kinds of measures, indeed, are regarded as unsuited for popular consideration at all, not because of any preconceived theory of the limits of a pure democracy, but because experience, even a short experience, has shown the folly of submitting them to popular vote. Among these are any measures that fail to interest the people, also complicated questions, and competing or alternative proposals. This last class has caused advocates of direct legislation much trouble. The unruly voter, apparently determined to justify at all hazards the confidence reposed in him, is not unlikely to vote for both of the alternatives instead of one of them. This is such an embarrassment of riches for even the greatest admirers of genuinely popular government that various States have been compelled to provide against it by some such device as that proposed for Wisconsin, by which, in the solemn language of the pending amendment to the State Constitution, "if measures which conflict with each other in any of their essential provisions are submitted at the same election, only the measure receiving the highest number of votes shall stand as the enactment of the people." This is almost as arbitrary an interpretation of the popular will as we are accustomed to have from the courts.

More striking than this deliberate withdrawal of whole categories of measures from the domain of direct legislation is the attitude of its supporters towards the majority of the voters. In the very act of pleading the right of "the people" to originate, consider, accept, and reject legislative proposals, they confess a profound skepticism regarding the activity of the bulk of the electorate in reference to such proposals. In the first place, the percentage of signatures necessary to invoke the authority of the initiative and referendum is usually small. The favorite figure for the initiative in ordinary legislation is 8 per cent., for the referendum 5 per cent., although Ohio has settled on 3 per cent. This arrangement is modified here and there by a provision similar to that proposed for Wisconsin, according to which not more than half of the signatures shall be from a single county.

But the significant thing in this respect is the position of advocates of direct legislation with reference to the number of votes that shall be necessary to carry a measure. Almost, if not quite, invariably, this number is not a majority of those voting at the election in which such measures are presented, but only a majority of those voting on the measures. That this often means government by a minority is demonstrated by the records of such elections, which have doubtless influenced the adoption of this very provision. It is not so common to find an advocate of direct legislation standing up for this condition. The usual attitude is one of apology for the people, and of hope that in time they will do better. Prof. W. F. Dodd, however, of the University of Illinois, says squarely: "It is not necessary that such a popular judgment be represented by a majority of all persons voting at a general election, or by a majority of all the electors of the State. Indeed, such requirements are practically prohibitive, because of the fact already referred to that a larger vote can ordinarily be gotten for candidates than for measures." Voting under representative forms, then, is still the "popular" method of government.

Such a philosophy as this simply means that the portion of the people interested in a subject should have the right of legislating upon it. If the mass of voters is indifferent, let it be virtually disfranchised. G. K. Chesterton argues vigorously for the opposite theory, that every vote not cast should be counted in the negative. We are not concerned to answer in that matter here. We wish to note now the complete admission, explicit as well as implicit, that, while parts of the American people have allowed themselves to be led to the initiative and referendum water, broadly speaking, they have not drunk of it. This may prove that it is a very foolish people, but it also proves something else, viz., that, in our experience with both representative and direct government, the results have not been of such a character as to permit the stigmatizing of the one as oligarchical, and the honoring of the other as "popular." Each is an imperfect device, dependent for its working upon imperfect human beings. The Republican platform adopted at Chicago contains a sentence that puts the point pithily: "Indifferent citizenship is an evil from which the law affords no adequate protection, and for which legislation can provide no remedy."

A TIME OF VIOLENT LANGUAGE.

Of the heathen it was said anciently that they thought they should be heard for their much speaking. But the modern man appears to think that he shall be heard for his much shrieking. Violent language seems to be on the increase the world over. Dr. Crothers has an amusing and instructive article in the October *Atlantic* on the universal tendency at present towards vehement speech and ferocious attitudes on the part especially of public men. He was in England when the bitter controversy over the Republican nomination for the Presidency was going on in this country. Certain bits of personal vituperation were cabled to the London newspapers, whereupon one of them remarked that "all this is characteristically American, but it shocks the unaccustomed ears of Europe." This moved Dr. Crothers, as a puzzled American abroad, to jot down a few of the things which the ears of Europe were getting from men in European public life. In the House of Commons itself the members were called "miscreants," and the Prime Minister was covered with personal vilification. At Budapest the commonest parliamentary expressions were "swine," "thief," "liar," "assassin." What the Unionists said of Lloyd George, and what he said of them, measured up to the highest American standard. If the ears of Europe have not been accustomed to such verbal assaults, they are rapidly getting to be.

Dr. Crothers has his own theory of the causes of this sudden rush of the democracies of our day into linguistic riot. Vast and impatient bodies of men discover, either that—as they believe—their rights are being taken from them, or that something which they intensely desire is denied them, and by a common impulse they take to shouting and throwing stones and making violent threats. But whatever the explanation, there can be no doubt of the fact. Political argument has come very often to have a shrill and abusive note. Speeches are expected to rise in a violent *crescendo.* Interviews and statements are couched in the most savage words. Writing is thought to be feeble unless it splits its cheeks and tears the language to tatters. A typical instance is the first of Tom Lawson's new articles, which is one long blowing off of epithets and unintelligible invective.

Only by such frantic hurling about of adjectives is it thought that a controversialist can establish a reputation for being truly forcible, or induce people to listen to him.

This is quite explicable, and not all of it is to be condemned. As a sign that men feel strongly about public questions, it is to be welcomed. Indignation and hot convictions are not bad things in politics. Only, it is important that they be well founded, that the fury be directed against real political sins and the right political sinners, and that roused citizens do not content themselves with "slaying Krüger with their mouths." And it is equally desirable that people in a democracy should not forget that there are other ways than vehement oratory and loud outcries to produce a deep impression. Of this we have had a noteworthy instance in the present campaign. It has been remarkable for din and vociferation. But one day a man of detached position and long-established reputation addressed himself to the public. He analyzed the political struggle now going on and gave his opinion of the protagonists in it. He did this in a spirit that was entirely calm and in language that was strong without rage. Not one heated expression escaped him. From his pen there dropped not a single objurgatory word. Yet the opinion was general that this contribution of ex-President Eliot's to our great political debate was more effective than that of any other man.

We are not objecting to vehemence as such. It is sometimes necessary, and it may frequently be useful. But there is danger of its becoming monotonous. Not every man who seeks to get a hearing from the public should think it needful to adopt the 'Ercles vein. The constant strain of noise gets to be tiresome. There are other ways of obtaining attention. By very force of contrast to the strident methods in which we have been over-indulging, a quieter tone would have an excellent chance of attracting notice. Our political speakers and writers would do well to try the effect of a little variety. They might profit by reading Emerson's essay on "The Superlative." Restraint is often more forcible than raging; under-statement than exaggeration. We believe that the excess of violence from which we have been suffering this year is but a passing phase of our political temperament. It seems popular now, but is bound to wear out; for, like opium, its use compels a constant increasing of the dose, thus defeating its own end.

PSYCHOLOGY OF ELECTION ODDS.

Although betting on election results has seen its best days, there is still enough of it left to make statements of prevailing odds of interest to those on the lookout for "straws"; and these straws are much more to be relied on for a knowledge of the way the wind blows than are the straw votes, little or big, with which individuals and newspapers amuse themselves. Whenever the prevailing odds are decidedly and steadily in favor of a given candidate, the opinion they reflect is almost always verified by the result of the election. In the present campaign, the odds have been steadily quoted at about 2 to 1 on Wilson against the field; and, in the light of past experience, it will be extremely surprising if the man picked out in the betting as so emphatically the favorite should prove to be a loser.

But while the mere selection of the winner—in a case where the battle is not a close one—is executed with a high degree of trustworthiness by the higgling of the bettors, the like can by no means be said as to the arithmetical measure of his chances. Indeed, from the very fact that whenever the standard odds in favor of a candidate are at all heavy the choice is vindicated in the outcome, it may be inferred that these odds are, generally speaking, not heavy enough. If it hardly ever happens that a candidate on whom the odds are 2 to 1 is defeated, it follows that in most cases these odds, to reflect the actual situation, ought to have been much heavier. If, for example, it could be established that out of every ten instances in which these odds prevailed the favored candidate was successful in all but one instance, this would be a sufficient inductive proof that when the betting odds are 2 to 1, the candidate's actual chance of winning is such that the just odds should be 9 to 1. Whatever the reason, the fact seems evident: bettors who feel almost certain that a given candidate will win are either unwilling to offer, or do not find it necessary to offer, odds anything like as high as those which that conviction would justify.

A not uninteresting confirmation of this general view is furnished by the juxtaposition of the rates said to obtain during the present campaign as affecting the three Presidential candidates, Wilson, Taft, and Roosevelt. It is stated that the odds on Wilson have been, all along, 2 to 1; that on Taft the betting stood first at 1 to 4 and afterwards became 1 to 3; and that on Roosevelt the odds were 1 to 3 and later 1 to 4. We have, then, for the three possibilities (ignoring, as the bettors doubtless do, the off chance of Col. Harvey's imagined deadlock) odds of 2 to 1, 1 to 3, and 1 to 4. Now, assuming that Wilson's chances are correctly measured by odds of 2 to 1, the odds against Roosevelt and the odds against Taft are necessarily too low. This is a simple arithmetical fact. For the odds of 2 to 1 mean that the probability of Wilson being defeated is one-third; and hence that, if Taft's and Roosevelt's chances were equal, each of them would have a chance of one-sixth of being elected. That is, the odds on either Taft or Roosevelt, if alike, ought to be 1 to 5; and if either fared better than this, the other should fare worse. Instead of this, the odds are 1 to 3 and 1 to 4; showing that even the degree of confidence reflected in the Wilson odds fails to get registered where a higher numerical preponderance is required to embody it. The Wilson figures doubtless lag behind the reality of the situation; and the Taft and Roosevelt figures lag behind even those.

To explain the general phenomenon of which we are speaking might form an interesting study in psychology. But it must be remembered that election odds do not register the attitude of the participants towards a known or agreed state of facts, such as belongs to an ordinary game of chance; nor can they properly be regarded as a mean between different estimates of the mathematical probabilities. They are the result of a bargaining process, like the play of demand and supply in the market. There are many men of many minds; some regard the favored result as almost certain, others as somewhat doubtful, while still others feel that there is a reasonable chance of the opposite result. If, for the sake of simplicity, we exaggerate this condition of things, and imagine bettors divided simply into two classes, those who feel sure that A will win and those who feel that there is a very fair chance of his losing, then, if the former class are decidedly more numerous than the latter, the odds will be heavily in favor of A; but the figure at which they will stand will depend simply on the relative strength of these two bodies, and there is not the slightest reason why it should correspond to the actual probabilities of the case, as they would be viewed, say, by an extremely well-informed and impartial observer. Thus the fact that the odds in A's favor are 2 to 1 expresses, not anybody's deliberate estimate of the mathematical chances of the election, but the undeniable fact that among those engaged in betting there is a heavy preponderance of opinion that A will be elected. And, viewed in this light, the actual experience of campaigns seems just what it should be; for it is not surprising that when the dominant opinion among so large a number of shrewd observers points emphatically and steadily to one result, that opinion is almost sure to be correct.

REWARDS OF LITERATURE.

There is one very considerable portion of the British people for whom the question of minimum-wage legislation must possess peculiar interest. The condition of the large body of men and women who are engaged in the production of novels that do not sell very well, if the subject were only brought up in Parliament, would stir public sympathy quite as powerfully as the case of the coal miners or the railway workers has done. What Parliament would be facing is not a problem but a mystery. The question how a mine worker can live and bring up a family on his meagre wages is a problem. The question how a minor novelist lives is a mystery. One minor novelist has just recounted his experiences in the *National Review.* It is a brief, matter-of-fact record of thirteen years' hard labor at the writing game, involving an output of fourteen published novels, three unpublished novels, and a volume of sketches, and showing a gross profit of £646, or a little less than two hundred and fifty dollars a year. This author now announces his intention of giving up literature and setting up as driver of a taxi-cab; a position, it may be remarked, for which he should be eminently qualified. Any man who has been able to steer his way through life for thirteen years on five dollars a week should find no difficulty in threading a taxicab through the most congested traffic in Piccadilly. It is true that in some quarters this confession by the writer in the *National Review* has been characterized as unduly pessimistic. Another minor novelist has written a reply in which he shows that in the last nine years he has written eight novels and made an average profit of a thousand dollars a book, thus lifting himself by strenuous effort to the economic level of a motorman or an assistant bookkeeper.

Patriotic Americans will note with pride a striking difference between this country and England in the matter of literary "confessions." In England the magazines print the confessions of novelists who do not sell. In this country the magazines print the confessions of best-sellers. The difference cannot be explained simply on the ground of differences in national temperament. It may be that as a people we know how to take our medicine better than the Englishmen do. If an American writer's books refuse to sell, he either drops out of the "game," or else sticks to the game without making a fuss about it. Our characteristic optimism induces us to lay emphasis on the men who have "arrived." Nevertheless, the preponderance of cheerful confessions over the other kind must be accepted as proving that the rewards of authorship in this country are much higher than abroad and are much more generally diffused. But the interesting question is, Just how much better paid are our novelists than their fellow-craftsmen abroad, and does even our higher average of pay supply the members of the profession as a whole with a living wage? A careful study of several recent human documents in this field leads one to the conclusion that, even in this country which proudly counts a dozen men who ask a thousand dollars for a short story, and which produces every season a half-dozen novels that sell by the hundreds of thousands, the fiction business hardly pays.

We mean that it hardly pays when you consider the mental, physical, and moral effort that goes towards the attainment of success. There are instances, of course, where writers have succeeded in hitting the bull's eye with a first or a second book. But from the published confessions as a whole it is plain that, to the average "best-seller," success comes only after years of hard work, discouragement, and, what is most important of all, disenchantment. And here our native writers are at one with the Englishmen. The American producer of best-sellers is at pains to show that he has no illusions with regard to his work. Commercial success is the only thing he claims to have achieved. He did nourish artistic ideals in those far-off days when the high price of beef was a much less vexing problem to him than the high cost of postage stamps. To-day he is engaged in giving the public what it wants. Now and then a novelist will venture to argue that writing the kind of literature the public wants is not a very degrading occupation, after all, but even this writer will seldom pretend that he enjoys doing it. So we still face the question why men will go on writing books which they do not regard as worth while, when the same amount of labor, persistence, and brains would be sure to bring them much higher rewards in any other line of business. Suppose there are a dozen writers in this country to-day who get a thousand dollars for a short story, and earn twenty-five thousand dollars a year. What other profession or calling is there whose twelve most successful practitioners, in a nation of one hundred millions, must be content with so modest an income?

The only profession that is worse paid than literature is the ministry. The number of clergymen in the United States who receive even half of twenty-five thousand dollars may be counted upon the fingers of one hand. But then the minister does enjoy those non-monetary compensations which the writer of best-sellers expressly has sacrificed. Joy in creative effort, joy in one's mission, the good opinion of one's fellow-workers—all these, according to our printed confessions, the successful novelist has thrown overboard. The writer in the *National Review* defines a minor novelist as one whose books average a sale of two thousand copies. If these two thousand copies were "The Egoist" or "What Maisie Knew," the problem would be a simple one. But our writer tells us that he was not engaged in turning out masterpieces, but pot-boilers; and what is the use of writing pot-boilers that do not even serve to make the pot boil? The case of our own best-sellers is essentially the same. It is true they do keep the pot boiling, with something over for dessert, and even an occasional motor car and a house in the country. Only, the motor cars and the bungalows could be more easily and more plentifully earned if our writers gave up literature for business. There at least one finds the opportunity for doing honest work. Business men do not work with their tongue in their cheek, in order to make a handsome income. They do not have to say to themselves, "I could turn out a very superior brand of soap, but if the public wants bad soap, I give the public what it wants."

THE RETURN OF SIDE-WHISKERS.

It is in France that they keep the closest eye on fashions, and it is from a French source that we learn of the beginnings of a movement in England to restore the side-whisker. So far it is only a tentative and modest effort to return to an earlier style. There is no question as yet of bringing back the long and sweeping hirsute appendages which used to frame the faces of Englishmen in the first years of the last century, falling from the ear far below the chin, as Canning is pictured for us, or as Byron appears in D'Orsay's sketch of him. Not even so far as the "mutton-chop" has any bold innovator yet ventured to go. The first step that costs amounts at present to no more than a slight tuft of hair hardly going below the cheek-bone. But this is now admitted by fashion and soon may be decreed. At the recent marriage of a popular actress in London it was noted that the bridegroom as well as each of his best men wore this faint suggestion of a side-whisker. Note of this was instantly taken by the devotees of the latest style, and the reporters made haste to interview the best-known coiffeur of Mayfair. He solemnly predicted the speedy coming in of the side-whisker, though he added the warning: "It is not sufficient for the man of fashion to have side-whiskers. The essential thing is to know how to wear them."

He, of course, as an expert, was prepared to give advice to young elegants to whom Jove, in his next commodity of hair, might send a beard. He had prepared a series of carefully designed models, some of them in wax, showing the various arrangements of whiskers permissible. Naturally, the comic papers took the matter up. One of them had the whimsey to print some portraits of modern English statesmen as each of them would appear with the new hairy ornament. Sir Edward Carson might have seemed even more portentous in Ulster if he had worn the truculent whiskers here assigned him, while Winston Churchill, similarly arrayed, could no more be exposed to the taunt—which, for that matter, was flung at Pitt—of Angry Boy.

Most public men in England are careful of their appearance, and their prevailing style has been to go close-shaven. The full beard is, to be sure, tolerated: one could hardly imagine the Duke of Devonshire without it, and the gray wisps at the side of Gladstone's face are familiar. Lloyd George's belligerent moustache is an exception, but it goes well with his reputation for being unconventional if not a trifle revolutionary. The general rule is a hairless face: and it is most often seen in the Englishmen of to-day. One recalls the maxim of Mr. Podsnap: "Rise at eight, close-shave at a quarter past." To many of his fellow-countrymen this has long seemed as indisputably as it did to him a fundamental part of the British Constitution. But with a whisker not so large as a man's hand now on the fashionable horizon, what mad excesses of beard may not be impending!

The fluctuations of custom in this regard have certainly been extraordinary. Women are entitled to turn the laugh on men, in any long view of the styles of wearing a beard, or going without one. The velleities of feminine fashions could show no greater vagaries or more sweeping changes. Go to the library of any college and look at the class-pictures of students graduating between about 1840 and 1855. The faces are clean-shaven. That was then the orthodox American fashion. An old German, who came to this country in those years, has told of his vain looking for work in all the shops and offices up and down Broadway. At last one kind merchant drew him aside and informed him what was the trouble. He wore a heavy moustache. There was no hope of finding employment till he cut that off: it was too defiant of custom, too suspicious. Who could trust a man with hair on his face? But pass on a dozen years to the Civil War period and later, and the land was filled with flamboyant whiskers. Some of the pictures of college baseball teams of that date, as of the first football elevens—or fifteens—look as if no one were eligible unless he were bearded like the pard. The beard, instead of being a badge of irregularity and something like opprobrium, became a symbol of respectability and even dignity. Everybody knows that Lincoln, when he was elected President felt it necessary to "raise a beard," with a result that was little short of a national misfortune.

There ought to be the largest individual liberty in all this matter. To some faces a beard means salvation; to others a calamity. We have all seen clean-shaven men who appear almost as if making an indecent exposure of their character. There is a story of Gibbon allowing Madame du Deffand, who was blind, to finger his face, but she found his features so repulsive that she instinctively cried out: "Why, this is a bad joke!" A stout hedge of beard would have prevented that; and there are plenty of men whose friends ought to advise them not to stop with the incipient side-whisker of the coming English style, but to cover up as much of their faces as they can.

NEWS FOR BIBLIOPHILES.

That the briefer form of "Diana of the Crossways" was a condensation of the more extended novel for the convenience of serial publication is made virtually certain by the statement of Meredith in one of the letters printed in the September *Scribner's*. In May, 1884 (before the appearance of the first instalment of "Diana"), Meredith writes that he is conducting his heroine on "her sad last way to wedlock," showing that he probably has already got her through the scene that ends the story in the *Fortnightly*. My view is further borne out by the following considerations, of interest also on their own account.

It is known that "The Shaving of Shagpat," "Richard Feverel," "Evan Harrington," and "Harry Richmond" were all, in the original form, much longer than as now published. "Shagpat" and "Richard Feverel" did not appear serially. In the other cases, the principal reductions were made from the version common to the periodical and the first edition in book form.* In all these cases, the earliest form is the longest;

---

*In the final volume of the Memorial Meredith is given an extensive table of alterations "on the original text" of Meredith's novels. But it should be observed that, while no statement is made to that effect, the "original text" is taken to mean, in the case of the prose works, the text of the first edition in book form. This is just the contrary of the method followed with the poems, in which case the original text is stated to mean that of "the first publication of the poems, whether in a periodical or in a volume." As a result of this policy in reference to the prose, there is no statement given of the very great alterations made in some of the novels when published serially—viz., those discussed in the following paragraphs.

and there is established a presumption that, in general, Meredith cut down the original versions of his novels instead of enlarging upon them.

It is not generally known that very great differences exist, in the case of "One of Our Conquerors," "The Tragic Comedians," and "The Amazing Marriage," between the book and periodical forms. "The Tragic Comedians," as it appeared in the *Fortnightly Review*, has but fifteen chapters, as against nineteen in the book, two abbreviated chapters having, in several cases, been run together. "The Amazing Marriage," in serial form, has but one chapter less than in book form; but the aggregate difference in bulk amounts to some thirty-five pages of the Memorial edition. The difference is greatest in the case of "One of Our Conquerors." It is, perhaps, sufficient to point out that, in one place, no less than seven consecutive chapters (xii-xviii) were entirely omitted in the periodical.

In this most striking instance, we may be certain that the difference represents a cutting down of the extended novel for serial publication. For there is extant an agreement between Meredith and the publishers, Chapman & Hall, in which was conveyed the right to run the novel serially in the *Fortnightly*, the author to "undertake to reduce the same so that it can be passed through the said *Review* in not more than seven monthly issues." So that here we have Meredith actually contracting to treat "One of Our Conquerors" as we accuse him of treating "Diana."

Hardly less convincing is the evidence in the case of "The Tragic Comedians." The MS. of this novel, recently offered for sale in New York, which was that used for printing the first edition of the book, is stated to be the extended form of the novel. The owners of the MS. write:

> It is apparent that the book was put in type from the manuscript, and then, in order to condense it for the magazine, passages, generally complete paragraphs, were cut out. . . . The book seems to have been printed in 1880, and as the later instalments in the magazines were in the numbers for January and February, 1881, we may presume that the story was condensed in order to prevent it running on in serial form until March or April.

In this case, at least, we seem justified in setting aside the description on the title page of the first edition, "Enlarged from the Fortnightly Review."

But exactly parallel are the cases of "Diana" and "The Amazing Marriage"—the one obviously cut off before the end, so as not to extend into the year of book publication or beyond the periodical year, the other squeezed into the twelve numbers of *Scribner's* for 1895, the very year of publication in book form. It is further significant that the sole important difference between the periodical and book forms of "Vittoria" is a single cut of seven Memorial pages (in chapter xlv), apparently found necessary in order to conclude the story in the *Fortnightly* for December, 1866. And now we learn from one of Meredith's letters that he contemplated—and it is probable that he carried out—a considerable reduction of "Beauchamp's Career" for publication in the *Fortnightly*. In this case the excised portions were not restored in book form.

In view of all these facts, it is perhaps unnecessary to appeal to internal evidence to show that the passages not appearing in the periodicals were cut out of the extended form, and not enlargements upon the short form. It would take long to achieve demonstration by such means. And yet, it will be clear to the careful reader that these passages, while they are such as might naturally have been excised by an author wishing to reduce the bulk of his narrative, are not generally of a sort likely to be added to a novel once completed and given to the world. Meredith would have been much more likely to cut out Dame Gossip's ballad-story of "The Piccadilly Hare and Hound" (in chapter xxviii of "The Amazing Marriage") than to have inserted it after the work was cold. Moreover, there are many instances in which what follows the omitted passage comes too abruptly, and does not join on naturally to what goes before. In some instances a somewhat unsuccessful attempt was made to restore the coherence sacrificed in the cutting. In chapter xix of "Diana," an extended account of the drive taken by Diana and Lady Dunstance has been omitted, and the dialogue of the drive is telescoped upon one at Copsley itself. There is still retained a reference to "the drive home" and "the solitude they had enjoyed"; and, in order to supply the clue to the mystery, an awkward phrase is inserted earlier, by which the scene of the Copsley dialogue is transferred to the drive. In general, the internal evidence bears out the assumption that, with these late novels, as with the earlier ones, the original version was the most extended.

THE SEMESTER COURSE AND CULTURAL STUDIES.

TO THE EDITOR OF THE NATION:

SIR: An examination of college catalogues will reveal the fact that college administrators of to-day arrange their curricula in semester courses. If this tendency prevails, the field covered in each course must be less extensive than catalogues now show it to be. Let us discover how much time a semester course includes and of what nature a cultural course is.

Ordinarily a course is a "three-hour subject"; a college "hour" is theoretically sixty minutes, and a semester eighteen weeks. Hence, according to schedule, an instructor has with his class fifty-four hours—four and a half twelve-hour days. But an "hour," due to delay in getting started, etc., seldom lasts more than forty-five minutes, and of the eighteen weeks one invariably goes to examinations, one inevitably to holidays, and one usually to miscellaneous college exercises. Disregarding the last, since it is variable, and counting on three forty-five-minute periods a week for sixteen weeks, we find that an instructor who, according to schedule, has fifty-four hours with his class, has, according to practice, only thirty-six hours. That this is a fair estimate any college teacher will at once recognize.

Besides these thirty-six hours, how much time can an instructor know his students to be putting on the work of a cultural course? Theoretically, for each hour of recitation or lecture, a student gives two hours of "outside study"—that is, six hours a week for a three-hour course during one semester, ninety-six hours. Not many instructors and not many students are able to assert that any but the exceptional student gives this much time to preparation of a lesson in a cultural course. Granting, however, that the average student puts thirty-six hours into preparation, much of this time goes into general reading—the hasty reading of novels or of dramas, for example; part into the reading of biographies and criticisms; part into close study. Really, how much time should one reckon a student in a cultural course when not in class *studies?*

If we allow these ninety-six hours as fair reckoning and add to them the thirty-six spent in class work, we find that each course gets one hundred and thirty-two hours—five and a half days. Actually, does it?

Now let us inquire what the nature of the material in a cultural course is, say, in English literature. For one hundred and thirty-two hours of work, and especially for thirty-six hours of close classroom study, a course that covers the history of English literature from the beginnings to the poems of William Watson ranges too widely. A course that involves more philosophical work, like the study of a century's writers, covers too little time for real thought and grasp. One which aims at knowledge of a type of literature depends on wide reading—which therefore must be done, if the work is to be thorough, before actual study can begin. One that aims to give appreciation of a writer's significance as a thinker involves knowledge of history, of biography, of criticism, of literary study—to say nothing of logic and psychology. Usually the student's knowledge of history is either obtained through vague generalizations dished out by the instructor or is taken for granted; the biography is "got up" hastily through the medium of E. M. L. books or some such condensed material; critiques, most of them far too elaborate and complex and philosophical for desultory study and for a college student's grasp, are too liberally assigned as "suggestive references" and "interesting treatments of the subject"; the literary study itself comes out rather meagrely. Further, an instructor must teach students how to study and often how to think.

A vast amount of material, therefore, is before any teacher who faces a so-called cultural course, and, it is apparent, time for the handling of only a small part of it. Wise selection of what shall be done and wise limiting of the amount of material is imperative.

For more than a decade now colleges have been extending their curricula—not only adding new courses, but, because of the growth of thorough scholarship, packing existent courses fuller. Now comes upon them the restriction of these packed courses to severe time limits. Such procedure does not heed the most valuable cry of the day, that for intensive rather than, or as well as, extensive work.

The semester course, if it remains a telescoped year course, as it now seems to be, will not help the reputation of cultural courses. These subjects, one well knows, need at this time particularly strengthening. HAROLD G. MERRIAM.

Beloit College, October 1.

SECESSION IN CALIFORNIA.

TO THE EDITOR OF THE NATION:

SIR: The writer of your notice of my book, "The Contest for California in 1861," says: "The proof that Col. Baker prevented it [the secession of California and Oregon] consists largely in quoting from his speeches in the campaign of 1860." Your reviewer errs. Only one such speech is cited, and the quotations from that are few and brief. But that speech is *not* relied on, nor are others, "largely," nor even to the slightest extent, to prove Col. Baker's dominant share in defeating the secession plot. The speech is not referred to as having any relation whatever to that work by Col. Baker—of which there is ample proof.

Your reviewer remarks that "the danger of secession in California and Oregon is probably exaggerated" in my book. If your writer knows anything about it, if he knows there is exaggeration, should he not plainly say so? If he does not know anything about it, is it fair to endeavor to discredit the book by a conjecture?

ELIJAH R. KENNEDY.

New York, September 20.

[Mr. Kennedy's thesis is that California was on the verge of secession in 1860, but that Col. Baker saved it for the Union. I had never come across any conclusive evidence that there was any real danger of secession in California. I read Mr. Kennedy's book, but such evidence as he presented did not change my opinion. I therefore concluded that he had exaggerated the danger. But as I do not like to be dogmatic, I gave him the benefit of the doubt and said "probably exaggerated." Chapter ix is headed in part as follows: "Secession propaganda defeated—Extraordinary meeting in San Francisco—Oregon and California won for the Union." Most of this chapter is devoted to a speech of Col. Baker's in San Francisco. It is true, not much of it is quoted, but it is described at some length, and much is made of its tremendous influence in the State, and, immediately following, the chapter closes with these words: "A few days later the Presidential election occurred; Abraham Lincoln had a plurality of six hundred and fourteen in the State of California. Col. Baker had won the State for the party of freedom." I supposed this to be the decisive event, for it is a little difficult to think of a State voting for Lincoln and then seceding from the Union, inasmuch as most of the States which did secede did so precisely because Lincoln was elected. It is true that in chapter xi Mr. Kennedy has Col. Baker save California a second time by inducing Lincoln to send Gen. Sumner to replace Gen. Johnston in the Department of the Pacific. When an author proves his thesis in a number of ways, it is difficult for the reviewer to know which one it will please him to have particularly noticed.—THE REVIEWER.]

THE DYNAMITING AT LAWRENCE.

TO THE EDITOR OF THE NATION:

SIR: I note in your issue of September 5 that, although you do not hold Mr. Wood guilty of the "plant" of dynamite at Lawrence, you do incline to the truth of the charge that the American Woolen Company is responsible therefor. Although it has not been my privilege to investigate the evidence leading to the charge, I have had to live through another of W. D. Haywood's "personally conducted" strikes. The similarity of the charges now preferred at Lawrence to those preferred against the mine owners at Telluride, Col., is so striking that it raises an immediate presumption of falsity in my mind. At least three men professing friendship to the mine owners and citizens of this community were made away with during the labor trouble here, and their deaths charged to the mine owners by this same friend (?) of the workingman who is now charging like crimes upon the president of the American Woolen Company. In short, a community which has once suffered a visitation from Mr. Haywood is loath to put much credence in his present charges. Coincidences oft repeated are apt to become habits.

W. L. HOGG.

Telluride, Col., September 24.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In the account of Mr. Farnell's paper before the fourth International Congress for the History of Religions (*Nation*, October 3), Hercules is a slip for Achilles. Kindly make this correction. M. J., JR.

Philadelphia, October 4.

A PROPHET OF PROGRESS.

TO THE EDITOR OF THE NATION:

SIR: I cannot forbear adding to the hilarity of those not yet gulled by the Lord of Progress by quoting an "editorial section" of the New Thought magazine, the *Nautilus*, for September, headed: "This is Prophecy":

> Roosevelt will be the next President. I say it calmly, coldly, the morning after. I have inside information—information from the spirit within—that Armageddon will be pulled off November 5, and that the people are getting ready to speak with the voice of God for T. R. and Hiram Johnson, of California.

Madison, Wis., October 5.

COLERIDGE AND THE SUSQUEHANNA.

TO THE EDITOR OF THE NATION:

SIR: What suggested to Coleridge and Southey their project of establishing a colony in America, and why did they choose the banks of the Susquehanna as its site? I am not aware that a satisfactory answer has ever been given to the first of these questions, and delightful as is the guess that they picked out the name "Susquehanna" because of its musical sound, I feel that a weightier reason must have moved the young adventurers. They were very much in earnest, and were trying with all their might to be practical men.

It seems to me probable that they had heard of a French settlement whose brief annals make one of the most romantic minor incidents in American history.

As early as 1792, French *émigrés*, among whom were several nobles and high ecclesiastics, sought refuge in Philadelphia from the dangers of the Revolution. They appear to have been guided thither by officers of the royal army, who had served in America under Lafayette. In 1793, negotiations were begun with Robert Morris and John Nicholson for the purchase of a vast tract of land in what is now Bradford County, Pa., and on April 22, 1794, the Asylum Company was formed. Broad streets were laid out, and thirty dwelling houses, a church, and a theatre were erected on the banks of the Susquehanna, one hundred and eighty miles northwest of Philadelphia, in an almost unbroken wilderness. There is a tradition that the aristocrats who composed the colony hoped at one time to welcome exiled royalty and hatch a counter-revolution. But their little Coblentz was doomed to swift decay, and the Duke de la Rochefoucauld-Liancourt, who visited Asylum about two years after its establishment, found it already moribund. Its history is recorded in full in Mrs. Louise Welles Murray's "The Story of Some French Refugees and Their Azilum," 1903, and ably summarized in J. G. Rosengarten's "French Colonists and Exiles in the United States," 1907.

Of course Coleridge and Southey may have heard of this colony in more than one way, but it is almost certain that they saw the following notice, which appeared in the *Gentleman's Magazine* for June, 1795, and it would be quite enough to inflame their imaginations:

> There is a colony established not far from the Susquehanna River, in America, by a class of wealthy Frenchmen, who formerly distinguished themselves in the Constituent Assembly of France, but were prudent enough to retire in time with their families and property; among these are Noailles, Talon, Blacon, Talleyrand, and others of the *ci-devant* Noblesse: they have relinquished their titles, and have domesticated here in the most social manner. Their little settlement is called French Town. The tavern is kept by an officer, who was formerly le Baron Beaulieu!

French Town was Asylum; the persons mentioned in the above notice, and several others once prominent in the church, the army, and the court of old France, were among its founders; their records in that capacity have been preserved.

It is not unlikely that the removal of Dr. Priestley to Northumberland, Pa., also on the Susquehanna, imparted fresh glamour to the name. After 1791, when the Birmingham mob burned his house and destroyed his books, manuscripts, and instruments, Priestley was, more than ever, an object of enthusiastic admiration to progressive young men. And as a Unitarian preacher himself, Coleridge felt a more than common interest in Priestley's emigration and in the beautiful river over whose waters this bright lamp of reason now cast his ray.

THREE BOOKS ON CHINA.

The Chinese Revolution. By Arthur Judson Brown. New York: Student Volunteer Movement. 75 cents net.

Where Half the World is Waking Up: The Old and the New in Japan, China, the Philippines, and India. By Clarence Hamilton Poe. New York: Doubleday, Page & Co. $1.25 net.

Of these two books on Eastern Asiatic conditions the first might be described by the publishers' well-worn adjective as "timely," the second, in ordinary language as popular. A mere chance brings them both to our notice at the same moment, but the same chance suggests a comparison between the motives which attract different types of Americans to examine existing problems in the Far East. In the case of Dr. Brown, a secretary of the Presbyterian Board, the interest may fairly be called professional. An upturn in China involves enlarged opportunities in the most important missionary field in the world, and the factors directing new intellectual currents there are discussed with a view to stimulating supporters of missions to fresh efforts. Mr. Poe, editor of the *Progressive Farmer* of South Carolina, offers a series of articles, written originally for his own paper, from which one may deduce the topics selected from the other side of the world which are calculated to interest the practical American. He has no propaganda to promote, no axe to grind. The problems presented by a tour in the East are fresh to him, and he measures them all by standards of material prosperity. He approves the work of missionaries because they advance the comfort of their converts, but the soul of the Far East inspires in him no philosophical reflections; his gospel is the gospel of economic improvement.

"The Chinese Revolution" bears a title that is misleading if the reader expects an account of the unheaval which is still advancing towards its uncertain end. The author has wisely refrained both from attempting the history of a revolution that is incomplete and from estimating the operation of forces which are still obscure. Some of his chapters are built upon his former book, "New Forces in Old China," and others leave the impression of a rather hasty recasting of material which a Mission Board secretary has to keep constantly in readiness for use in his office. But while this is equivalent to saying that Dr. Brown's volume must be put in the category of missionary literature, it does not mean that it lacks general interest and value on this account. His summary of essential facts in the series of events leading to the recent outbreak in China is readable and sufficiently informing to interpret for the ordinary student the detailed accounts of the revolution which may presently be expected to appear. The supreme need of the near future, as the period of disruption drags on, is the constructive force which can remodel a new nation out of the welter of old material. Despite the antagonism of some Western critics who are destitute of religious faith themselves, the importance of conveying to China at this critical juncture the vital energy of our Christian culture must appeal to observers whose vision is wide enough to look beyond the present impotence of that faith among many churches at home. It is not an argument for proselyting so much as for adjusting to the case an agency which Lecky called "the most powerful lever that has ever been applied to the affairs of men." "Foreign missions," observes the author, "are not only a question of religion, but a problem of statesmanship which is of concern for the whole world. As such it merits the sympathy and coöperation of every intelligent and broad-minded man, irrespective of his religious affiliations."

Mr. Poe's description of economic and social conditions in modern Asia reveals a shrewd and kindly observer whose comments exhibit little of that air of superiority which characterizes the writings of most white travellers in the East. He is impressed, as most Occidentals are, by the palpable poverty of Asiatic peoples as contrasted with the physical comfort generally obtaining in the West; "but when one comes to consider," he adds, "only the sheer economic causes of the difference between Oriental poverty and Occidental plenty, it seems to me impossible to escape the conviction already expressed and elaborated that it is mainly a matter of tools and knowledge, education and machinery. In the Orient every man is producing as little as possible; in the Occident he is producing as much as possible. That is the case in a nutshell." Whether the ultimate prosperity of a nation is entirely conditioned by the earning power and the spending power of its people is a question upon which the author does not venture to speculate, but however conclusive his reasoning may seem to most of his American readers, it is doubtful if the educated minds of the East will ever be filled with the supreme satisfaction which the economic ideal affords us there. There are plenty of Orientals who are as keen to be rich as we are, but there are also those among them who still refuse to believe that wealth is a necessary road to happiness.

Mr. Poe has much to say that is informing about the industries of Japan under its new factory system. On the whole, he thinks that her recent industrial advance has been greatly exaggerated, and that as wages increase and the standard of living improves, she will be unable to compete on a large scale with countries possessing greater natural resources. The labor supply is inadequate, less than half a million at present, out of a total population of fifty million, working in factories. Thus far, moreover, she has been handicapped for effective industrial growth by the inefficiency of her operatives—nearly two-thirds of them women—and the attempts of her government to stimulate industries by subsidies and special privileges. "Whatever loss," he concludes, "we may suffer by reason of Japan gradually supplanting us in certain cruder forms of production should be abundantly compensated for in the better market for our own higher-grade goods that we shall find among a people of increasing wealth and steadily advancing standards of living." In China and India the author seems to have enjoyed fewer opportunities to inspect factory life: a comparison of which with what he saw in Japan would have been interesting. The Chinese farmer, however, impressed him favorably as one who understood his work better than our own countrymen, in spite of his inadequate implements. In India, we learn, the total acreage under cultivation is very nearly that of the United States (250,000,000), and it supplies almost exactly three times the population—no account, however, being taken of exports. The reader will be conscious of a little vexation at the haphazard character of Mr. Poe's jottings, but they are seldom misleading, and he has the ability to keep up interest to the end.

The Chinese at Home, or the Man of Tong and His Land. By J. Dyer Ball, I.S.O., M.R.A.S. New York: Fleming H. Revell. $2.

There seems always to be a demand among those generally called "intelligent readers" for the book that does not tell too much. Mr. Ball has attained to a high degree of success in making a book of this sort. His many writings on the life and language of China belong to the class of unlabored works which serve as introductions convenient to the beginner, but are resented a little by students. The author of "Things Chinese" is never profound; his art lies in his simplicity and continence; he will not embarrass you with his learning. A long life in China has made him familiar with the people who live there, their habits and points of view. His personal friends are mainly members of a community rather notorious for its ignorance of the inhabitants of a country where they are only awaiting a chance to go home, and neighbors like these do not bother much about the researches of real Sinologues. He is not without sympathy for the natives, yet, either because he lives in Hongkong or because of an official career in that colony, there is in his attitude an aloofness from the Chinese curiously in contrast to his intimate knowledge of their ways. In the country of the blind, the one-eyed man is king; it may be a simple thing to satisfy the scholarly demands of commercial Hongkong, but the seats of critical scholarship in "foreign" China have long since passed from the south to Shanghai and Peking, and even a reputation and life-long labors among the Cantonese may leave much to be desired in one who speaks for the whole of China.

While it is necessary to set forth these three limitations to the author's work—his insularity, his mediocre scholarship, and his lack of acquaintance with upper China, where they do things differently—he has excellent qualities. His statements are always trustworthy, and this is rarely to be said of a book about China; his discursive style is easy to read, and his range of topics embraces most of the subjects that one cares to know about in an exotic land, though there are points upon which the specialist would always like to hear further. The famous flower boats, we are told, have now almost entirely disappeared from Canton River, owing to typhoons and the depredations of river thieves, but nothing is said of the dreadful increase of open prostitution that has replaced them. The student of sociology desires to know why this evil should follow in the wake of foreign establishments in Shanghai and Hongkong, as it does, threatening the middle classes of China with a vicious practice likely to surpass the opium habit in harmful results. But we learn nothing of this from "The Chinese at Home."

Perhaps the most successful chapters of Mr. Ball's book are those on the speech and popular literature of modern China. Most Europeans know that it is a country of many dialects, but few realize that at least half a dozen of these dialects are languages as different as English and Dutch, or that the local patois are so numerous as to allow three or four, sometimes, for one large city. The so-called Mandarin is not the classical tongue, but a quite modern dialect of the capital city adopted by the higher officials as a sort of lingua franca for the conduct of public business, in which, however, interpreters have to be employed when the common people of the provincial towns are involved. Of the literary capacities of the written language the author has a high opinion:

> In the hands of an accomplished writer the Chinese language is capable of a condensed picturesqueness and vigor such as can be rendered into no foreign language less ideographic in its mode of writing, unless by means of wordy paraphrases. Each character in its (often numerous) component parts carries a wealth of imagery to the sense, and whole series of metaphors are embodied in a single epithet. A language of this kind lends itself especially to the description of the scenery, and the most superficial analysis of Chinese poetry reveals the fact that the productions which are most applauded in this branch of literature consist simply of elaborate word-painting, whose beauty resides rather in the medium of expression than in the author's thought. Hence it happens that when odes, renowned for centuries among Chinese readers, are transposed into the naked languages of Europe, it is found that their charm has vanished, as the petals of a flower are dropped from the insignificant and sober-colored fruit.

An effective and picturesque feature of the book is its series of six Chinese drawings of common street types admirably reproduced in color.

CURRENT FICTION.

The Sin of Angels. By Martha Gilbert Dickinson Bianchi. New York: Duffield & Co.

The novels of this writer do not lack cleverness, and her work has shown steady gain in substance. But a certain hectic quality persists. Her earlier stories were set abroad, and her interpretation of European society was marked by that not unfamiliar self-consciousness of the reformed New Englander. Here, after the outset, the scene is laid in America, and the problem involved is, or is supposed to be, peculiarly an American problem.

The "sin of angels" is, of course, ambition; and the American male who neglects everything else, including his wife, for the sake of getting to the top, is the chief figure. That the wife destined to be the victim of pride is not the American female, gives a touch of novelty to the present handling of a not very novel theme.

Raleigh Payne determines to become a leader of men, not for the service he may be able to do, but for his own private glory. He does not value money for its own sake, but as a means to his end, and makes it incidentally, and with his left hand, after the fashion of young men in books. Early in his career, he arranges an alliance with a nice American girl, whose position he thinks will help him, and throws her over without compunction when a better matrimonial chance presents itself. The young Austrian countess whom he marries is vouchsafed him by reason of a family scandal, not concerning herself, which makes her ineligible in higher quarters. She is a beautiful and high-spirited girl, not really in love with him; and when he plants her in virtual solitude on his country estate in America, and goes about his business, he is paving the way for trouble which any novelist or dramatist could have warned him of. She herself warns him, but nothing can touch his fatuity and self-absorption. A lover arrives in due course—and with him, to speak grossly, the reader's chief cause of complaint. For he is a finicking bore of a lover.

Eve Triumphant. From the French of Pierre de Coulevain. By Alys Hallard. New York: G. P. Putnam's Sons.

This was the first novel of note by the brilliant Frenchwoman who signs herself "Pierre de Coulevain." It was crowned by the French Academy, and appeared in English ten years ago. The success of her later stories in translation has led to this new issue. The fact that the heroine is American, and much of the action takes place in New York, offers a natural purchase upon the interest of an American audience. The story presents the everlasting problem of a woman's struggle between loyalty to a husband and passion for a lover.

Priscilla's Spies. By G. A. Birmingham, New York: George H. Doran Co.

We have been wishing for another story from Mr. Birmingham as spontaneously diverting as "Spanish Gold," and here it is. The setting is the same, that Irish coast village (under whatever name) which the story-teller knows and loves so well. Mischief is in the air from the rise of the curtain. The leading lady (she cannot by any stretch of fancy pass for the ingenue) is the fifteen-year-old daughter of a Sir Lucius Lentaigne, whose ancestors settled in Ireland for the sake of religious freedom. To her comes as guest for the holidays a cousin, Frank Mannix. He is two years older than she, and fresh from leadership in an English school, but it very quickly appears that the condescension is not to be on his side. Priscilla calmly takes possession of him from the start, and in the adventures which follow he never emerges from a subordinate rôle. But any rôle at all in connection with Priscilla is a boon, as the boy has sense enough to see. Priscilla's favorite playground is Rosnacree Bay, and the fortune of the moment has furnished it with the materials of romantic adventure. For some days a strange pair have been exploring the bay in a small sailboat. Priscilla puts forward the theory that they are German spies, and persuades young Mannix that they must be tracked down The incidents that follow involve the presence of the head of the English War Office, and a whimsical lady from the British Museum. In the background are a group of genial and rascally Irish peasants, who have a little affair of their own in hand which complicates the operations of Priscilla. But the things that happen are of minor consequence: what matters is the personality and the inimitable chatter of Priscilla—part naughty child, part budding maiden, half-flower and half-insect, and altogether human.

The Lovers: A Romance. By Eden Phillpotts. Chicago: Rand, McNally & Co.

By his sub-title Mr. Phillpotts warns us that we are to have something a little different from his usual commodity. In fact, this is an historical romance, no less. The time is that of the American Revolution, and the action is connected with the experiences of some American prisoners of war in England. Our business is chiefly with two of them, a naval officer and one of his men, who escape with the aid of two British maidens of appropriate degrees, and marry them when the war is over. Mr. Phillpotts is not much more successful than his fellow-countrymen are wont to be in the attempt to employ Yankee speech. His Benjamin Gun of Vermont speaks the tongue of Dartmoor for the most part, though he now and then remembers to say "gal," or "varmint," or "derned." Dartmoor is the scene: a pair of highwaymen, masks and all, do their best to enliven it. But the one indubitably human and genuine person in the story belongs to that long line of innkeepers which Mr. Phillpotts has established so firmly in our memories.

Eve. By Maarten Maartens. New York: E. P. Dutton & Co.

This writer's fiction has always the air of being the clever work of a beginner from whom a good deal ought to be expected. One keeps hoping that its exuberance and conscious brilliancy will give way to poise, and that its substance, by some trifling chemical change, will become rich and firm where now it is tenuous and volatile. But no such changes have really come about thus far. This story, like all its predecessors, is of a quality which might have been interesting in the work of a tyro, but is not quite worthy of an experienced workman.

Eva Melissant is the daughter of a sybaritic pair who in the retired luxury of their Dutch estate have contrived to live through twenty years of married life without a blur on the mirror of their content. They have brought up their children to be happy as the only sure duty in life. Eva marries a man considerably older than herself, and of very different upbringing; a burgomaster who takes himself seriously and has political ambitions. Another man and another woman make their appearance, too late for the ill-matched pair. It is Eva who gives way to temptation, and who has to pay the penalty. The old domestic drama, which no amount of handling can exhaust of its possibilities, ought to be handled with some degree of freshness and some kind of force, if at all. The Eva of this rendering is appealing, pathetic, in her way, but tragic only in the cheaper sense of the word. "Maarten Maartens" is a skilful artificer of situation and of "bright" dialogue, but he somehow never quite does a big thing.

FRANCIS BARBER.

Johnsonian Gleanings. By Aleyn Lyell Reade. Part II, Francis Barber, the Doctor's Negro Servant. Privately printed at the Arden Press, London.

This second volume of Mr. Reade's "Gleanings" appears on better paper and in better form than the first, although only the same number of copies (350) is printed. A third part is promised, dealing with Johnson's boyhood; it ought to be by all odds the most interesting result of the author's devout and all-embracing research in the obscurer fields of Johnsonian knowledge.

This is not meant to imply that the present publication is without interest. Francis Barber, himself, may be an utterly insignificant character, about whom, after all Mr. Reade's investigation, we know very little, but that little shows the great Doctor in his most amiable, not to say sentimental, mood. For thirty years Johnson "watched over the welfare of his humble negro servant," sending the lad to school, and afterwards himself reading the Greek Testament and praying with the man. Mrs. Piozzi relates that when the cat Hodge got so old that it had to be fed on oysters, Johnson used to go out and buy them himself. According to Mrs. Piozzi he did this in order "that Francis the Black's delicacy might not be hurt at seeing himself employed for the convenience of a quadruped." Miss Cornelia Knight, however, gives a slightly different color to the act by connecting it with Johnson's strong sense of subordination as the basis of society. "The ideas of Johnson on social order were carried so far," she wrote, "that when he wanted to send for his favorite cat he would not order his servant, who was a negro, to procure it, saying that it was not good to employ human beings in the service of animals; he therefore went himself on the errand."

Mr. Reade entertains the common prejudice against Hawkins, and is blind to that biographer's common sense and other merits. "Hawkins," he says, "estimated the value of the bequest to Frank in one place at 'full fifteen thousand pounds,' and in another at 'little short of £1500.' Essentially mean in his judgments, and with a strong apparent bias against Frank, he would admit no merit to Johnson for his generosity, and no qualities in the servant to deserve it." Now, Hawkins, as Dr. Johnson's executor, may not have shown himself as very generous or scrupulously honorable, but his judgment in this particular seems to us eminently right, and it is a pleasure to vindicate against his detractors, led by Boswell, the author of a biography of a value as eminent as it is neglected. Hawkins observes:

> How much soever I approve of this practice of rewarding the fidelity of servants, I cannot but think that, in testamentary dispositions in their favor, some discretion ought to be exercised; and that in scarce any instance they are to be preferred to those who are allied to the testator, either in blood or by affinity. Of the merits of this servant, a judgment may be formed from what I shall hereafter have occasion to say of him.

But we need not depend on Hawkins for the life of Barber after his master's death and for the evil effects of this legacy, certainly out of all proportion to the testator's means. Mr. Reade himself tells the story, though he does not apply the moral. Barber retired with his white wife and children to Lichfield. There, according to the biographer of his son, they "were improvident, strove to make a figure in the world, lived above their means, and dissipated their property." The end was poverty and helplessness. So much of what is told of Dr. Johnson presents him as harsh and overbearing, that we may welcome any further knowledge of his softer side. His sentiment towards Francis Barber may have led him into an error of judgment, but it is an error that brings us nearer to the heart of the great Dictator.

Mr. Reade completes his narrative with an account of Barber's son Samuel, who became a respected Methodist preacher in Staffordshire. At present a descendant of Francis is working in the potteries at Burslem.

The Exchequer in the Twelfth Century. By Reginald L. Poole, M.A., LL.D. New York: Henry Frowde (Clarendon Press).

The delightful and valuable twelfth-century essay known as the "Dialogue of the Exchequer" has received many learned and interesting commentaries from the time of the first edition by Madox in 1711 down to the new Oxford Edition of 1902; but none, we venture to think, is more learned and certainly none more interesting than the commentary which Mr. Poole chose to give as the substance of his Ford Lectures at Oxford in 1911. After discussing the authorship of the Dialogue and surveying the literature of the subject, he explains in detail the methods of receiving, reckoning, and paying out moneys at the royal English Treasury in the days of Henry II.

The decimal system of reckoning, introduced at the Exchequer shortly before the composition of the Dialogue, was carried out by the use of counters moved about on a large table which was marked off in columns like an abacus. Its introduction is remarkable when one remembers that English traditions ran not on decimal but on duodecimal lines; the pound weighed twelve ounces and contained 240 pennies; land was estimated by the hide-unit of 120 acres; the arithmetic table ran up not to a hundred, but to *hundtwelftig*. This revolutionary change from a system based on twelve and six-score to one based on tens and hundreds could not have come by degrees; it must have been definitely devised by some one. Mr. Poole, with his knowledge of Arab history and with some suggestions from Professor Haskins's studies on Norman Sicily, ingeniously links many evidences to show that the inventor was none other than one Adelard of Bath. In saying that the decimal system was introduced we do not mean to say that men used nine digits and a zero. The advantage of using zero had been explained early in the ninth century in a treatise by an Arab mathematician named Al Khuwarezmi; his system, known from his name as Algorism, was not, however, familiar in Europe until his treatise was translated into Latin more than three centuries later.

Accounts in the Exchequer were cut on wooden tallies; but students have always had difficulty in bringing the description in the Dialogue of the way tallies were cut at the Exchequer into agreement with such specimen tallies as are preserved; the reason is that none of the specimens which have been studied have been Exchequer tallies. Those, for instance, which are figured in the first volume of the Pipe Roll Society and wrongly referred to by the editors as Exchequer tallies, really had nothing to do with the Exchequer; they are tallies between the reeve of a manor and his tenants. All the Exchequer tallies which were kept under the Houses of Parliament were destroyed in 1834 when the careless janitor who was burning up old tallies heated the flues so hot that he incidentally burned up the Houses of Parliament. Very recently, however, a bag of true Exchequer tallies was found in a chapel of Westminster Abbey, and they confirm in a remarkable way the accuracy of the details set forth in the Dialogue.

The English Exchequer has left its imprint on the English language, not only in such evident words as "cheque" and "tally," but also in "stocks," in the sense of stocks and bonds. If one lent money to the Bank of England down to a hundred years ago, tallies were cut for the amount as they were cut at the Exchequer in the time of the Crusades: the Bank kept the "foil" and the lender received the "stock"; you thus held "bank-stock." Incidentally, Mr. Poole shows that "sterling" is not derived from the Hanseatic "Easterlings," as has been wrongly asserted by antiquarians since the time of Queen Elizabeth; *esterlin* or *sterlingus*, meaning an English silver penny as distinct from various French pennies, is found in Norman manuscripts as early as 1100 A. D.; a pound of sterlings, meaning a pound's weight of 240 pennies, became shortened into the "pound sterling"; and to this day sterling has the specific meaning of English as opposed to other currency; one does not speak of a franc sterling or a dollar sterling.

Mr. Poole's chief authority, of course, is the Dialogue itself, and from this he often quotes a page or more at a time (with freedom in translation and some condensation); but he has also scrutinized the Pipe Rolls and other financial records with a zeal and care which enabled him to set right more than one error of the editors of the Pipe Rolls, and which encouraged him to drop many valuable suggestions to students who wish to work with financial manuscripts in the English Public Record Office.

My Life Story. By Emily, Shareefa of Wazan. Edited by S. L. Bensusan, with a Preface by R. B. Cunninghame Graham. New York: Longmans, Green & Co. $3.50 net.

For long the gossip in the European colonies in Morocco was busy over the story of the English wife of the Shareef of Wazan, and over the adventures of her two sons. The situation was curious enough. This was not a case of a woman of rank hiding her tarnished reputation in the desert, or of one of no rank at all achieving a position of which she could otherwise never have dreamt. But a young girl of good education and technically a lady went, in her marriage choice, voluntarily outside of her race and religion. And the Shareef, on his side, was not simply of the blood of the Prophet, as the title would mean elsewhere in Moslem lands, but he was of the closest lineal descent—more so than the reigning house—and held in the eyes of the people an hereditary sainthood which enabled him to work miracles and be a source of direct and concrete blessings from Allah on all his environment. And as this dignity passed down to his sons, so it gave a unique position to the mother of his sons, his English wife. She became, and still remains even more since his death, a quasi-sacred personage.

A career and a situation so unique—stranger even than that of the sergeant of the Black Watch who became governor of the sacred cities of Mecca and Medina—have in them human interest of the highest, and it is as a human document that this book is strong. The Shareefa—to give her the title which she evidently universally received, though it is not easy to see how it could come except by birth—is a woman of tact, character, and thoroughly domestic instincts—the home-making, English type. In many ways she recalls Lady Burton, though she shows neither Lady Burton's eccentricity nor her dash of original genius. And her problem was much the same. It was that of holding an essentially undomesticated and Ishmaelitish husband by sheer dint and weight of character. Softness and attraction, too, there had to be, but these in the long run would have availed little. Lady Burton carried her task through successfully to the end; Richard Burton had thrown Venus in the lottery of life and found the helpmate exactly corresponding to him. It may be doubted if this could have been possible for the Shareef of Wazan, whose problem was even more complicated and proved in the end too hard for his English wife. Foreigners in Morocco summed it all as "drink"; it may be that the Shareefa's own guess of slow poisoning was correct. Much evidently happened of which her book tells us nothing; the blue-pencilling of the editor has confessedly been stringent. Much also happened which she admits frankly that she did not understand. With more of the instinct of the student she would have understood more. But in that case she would have been a quite different woman and would probably have failed of the success which she did achieve. And that success was really great. We leave her at the end securely seated among sons and daughters-in-law and grandchildren, the *kebeera*, or great lady, of an ordered Moroccan household. If her husband failed her and then died, her sons rise up and call her blessed. And again and again she reiterates in her book that she in no way repents of the choice of her youth.

With the work of the editor it is not easy to be patient. Apparently, besides the blue-pencilling, his contribution is a single note on page 177, and it is wrong. A multitude of Arabic words and names, distorted by ignorance of spelling and by the eccentricities of the Moorish pronunciation, are left uncorrected and unidentified. The work which De Goeje did in his glossary to Doughty's "Arabia Deserta" was emphatically called for here. As it is, the future Dozy, when he writes a new *Supplément*, has his work cut out for him. For though this book is primarily and principally a human document, it is also, though often most exasperatingly, a contribution to our knowledge of Moorish life. It covers not only present-day customs, but also a large amount of folk-lore, and as it, of necessity, goes deeply into the woman's side of life, many of its details are unregistered elsewhere. The chapters and appendices on sayings and superstitions; on folk-medicine, cookery, and the table generally; on marriage, birth, and death ceremonies; and on life in the town and in the desert deserve, and from the queerness of the Arabic spelling will require, most careful reading. "Taking sanctuary" among the Moors is illustrated throughout the whole book and has an appendix to itself. Another appendix on divorce throws much light on local custom, but must be read in relationship to the Malikite school of canon law. Otherwise it will mislead. Twice (pp. 86, 140) the Shareefa saw a "haunting ghost," and her experiences were in striking accord with the "true ghost-story" as opposed to the ghost of literature. Moorish saints, too, had dreams about her, and these are precisely of the class translated by Weir in his "Saints of Morocco." Cunninghame Graham's preface is negligible.

Mezzo Secolo di Storia Italiana (1861-1910): Sommario. R. De Cesare, Città di Castello: Lapi. Lire 2.

This epitome, which in the space of about 100 pages embraces the chief events in recent Italian history, was prepared by Senator De Cesare for the volume which the Academy of the Lincei issued to commemorate the semi-centennial of the national government. Senator De Cesare tells the story with his usual fluency. Having lived through the period he describes, and known many of the actors, he has at his command much information that does not exist in print. His views are often really those of the man on the inside.

Two qualities strike the reader of this summary: its fairness, and the skill with which the proper perspective is kept. The author's judgments, even on politicians with whom he has no sympathy, are never venomous. He honestly endeavors to record the contribution which each man or party made to the national welfare. Only for Persano, who lost the battle of Lissa, and Baratieri, who was responsible for the Italian disaster in Eritrea, has he no extenuation. Among the ministers, he criticises Nicotera most severely.

In so brief a compendium, however, it is the rightness of the general narrative, rather than individual verdicts, that determine its value; and this we find throughout. Senator De Cesare does not gloss over any of the failures or stains; but he does take care to indicate the immense difficulties which beset his country down to a few years ago

In addition to the political history, Senator De Cesare summarizes in separate sections the evolution of legislation and of commercial relations, and the conflict of labor and capital. Valuable tables of 47 ministries—from Cavour to Luzzatti—complete the summary. Half-tone portraits illustrate it. The book might well be translated into English, especially for the American public, which needs to be better informed about the people with whom our relations are constantly increasing.

Notes

Miss Mary Greer Conklin holds a brief for good talk in a book which Funk & Wagnalls promise shortly—"Conversation: What to Say and How to Say It."

Joseph A. Altsheler has planned a trilogy on the subject of the Texan struggle for independence. It will be published by Appleton with the title "The Texan Star."

October 15 is set by the Century Company for the date of issue of William C. Redfield's "The New Industrial Day."

Edward F. Croker, for twelve years head of the New York Fire Department, has written a book on "Fire Prevention." It will come next week from the press of Dodd, Mead & Co.

A. C. McClurg & Co. are bringing out "The Illumined Life," a short manual of living based on the lines of New Thought.

The recently discovered Odes of Solomon are said by Dr. Edwin A. Abbott to furnish the missing link between the religious poetry of the Jews and the Christians. The matter is discussed by Dr. Abbott in his forthcoming book, "Light on the Gospel from an Ancient Poet" (Cambridge University Press; Putnam).

"An Experiment in Industrial Organization," being a treatise on factory methods, has the sound of an American publication, but it is written by an Englishman, Edward Cadbury. It will soon be issued by Messrs. Longmans.

Frederic Harrison is about to publish, through Macmillan, a companion volume to his "Choice of Books." It will bear the title "Among My Books: Centenaries, Reviews, Memoirs."

A new edition is announced by the same house of a work which first appeared forty years ago, Lord Fitzmaurice's "Life of William, Earl of Shelburne, afterward First Marquess of Lansdowne, with Extracts from his Papers and Correspondence." The work in its present form is said to contain important additions.

Houghton Mifflin Co. promises for Saturday: "A Picked Company," a romance of the Pacific Slope, by Mary Hallock Foote; "The Provincial American," by Meredith Nicholson; "Their City Christmas," by Abbie Farwell Brown; "A Doctor's Table Talk," by Dr. James G. Mumford; "A History of the Presidency from 1897 to 1909," by Edward Stanwood; "The Castle of Zion," the story of the Old Testament from David to Job, by George Hodges; "Merchant Venturers of Old Salem," by Robert E. Peabody; "New Light on the Old Truth," essays on religious topics, by Charles A. Dinsmore; "The Path of the Conquistadores," by Lindon Bates, jr., and "Charles Eliot Norton: Two Addresses," by Edward W. Emerson and William F. Harris.

Bliss Carman has a new book for autumn publication, "Echoes from Vagabondia" (Small, Maynard).

Mrs. Frances Berkeley Young's new book, "Mary Sidney, Countess of Pembroke," is about to be issued by David Nutt.

Among the books soon to be put forth by Longmans, Green & Co. are the following: "The Girlhood of Queen Victoria: Extracts from the Private Diary of Her Majesty from her 13th year (1832) till her Marriage in 1840," edited with an introduction by Viscount Esher; "Miriam Lucas," a novel by Canon P. A. Sheehan; "Railroads," by William Z. Ripley; "Essays in Appreciation," by Canon George William Douglas, and "The Story of the Discontented Little Elephant," told in pictures and rhyme by E. Somerville.

The demand for the Bible in all parts of the world is increasingly great. In the first week of September, consignments weighing nearly twelve tons were sent out from London by the British and Foreign Bible Society to nineteen different places. The translations were in twenty-five different languages.

The trend of secondary education in England is indicated in the recent report of the Oxford and Cambridge Schools Examination Board. The subject which the largest number of scholars offered was elementary mathematics, the next ranking subjects being history, French, and Scripture knowledge, with the most distinctions gained in this last. French was offered by three-quarters of the whole number, but German by less than an eighth, while the candidates for distinction in Latin and Greek were 153 less than in 1910. It is interesting to note that the number of girls offering the classical languages was proportionately much greater than that of the boys.

The account of the "Head-hunters of Northern Luzon," to which the whole of the *National Geographic Magazine* for September is devoted, is a valuable contribution to ethnology. The facts have been collected during eleven annual trips into this region by the author, Dean C. Worcester, Secretary of the Interior of the Philippine Islands. The several tribes are remarkable for their dissimilarity. Some live in the most primitive condition. Others dwell in attractive, well-built houses, and are "excellent hydraulic engineers." The Ifugao construct irrigation ditches running for miles along almost perpendicular mountainsides, and marvellous rice terraces which have retaining walls ten to forty feet in height. The earth is fertilized, and the crop is often tremendous. The Bontoc Igorots have forest laws forbidding the felling of trees until they have reached a large size, and young trees are planted by them. Head-hunting is becoming rare, though with some tribes it is excessively difficult to suppress, because it is intimately connected with their religious beliefs. The admirable illustrations consist of the reproduction of 102 photographs taken by the author and the official photographer of the Government.

Lippincott has brought out a good edition of "Lorna Doone," in a single slender volume, with illustrations from the Exmoor country.

"The Story of Old Fort Dearborn" (McClurg), by J. S. Curry, has much local interest as a clear and detailed account of an episode in the history of Chicago. More than this, the episode is typical. It has been repeated substantially many times, the country over, in the earlier and later periods, as the great wilderness has emerged into the United States. The small frontier military post, with a garrison exposed to perils and hardships which often wipe it out, is a link between savagery and civilization which has never been missing. This book tells the story well.

Two years ago Booker T. Washington and Robert E Park spent seven weeks abroad in an investigation of the conditions of "the masses of the people who were at the bottom in the scale of civilization." Their trail led from Ireland to Russia, and from Denmark to Sicily. In so large a field, covered in so brief a time, only general impressions were or could be sought. These, however, were sufficient to convince Mr. Washington that "the position of the negro in America, both in slavery and in freedom, has not been so exceptional as it has frequently seemed." Indeed, the journey, which was ostensibly in the form of a vacation for at least the more notable of the travellers, evidently had the effect of increasing his natural hopefulness regarding the prospects of his race in this country. The visit is described in a volume entitled "The Man Farthest Down" (Doubleday, Page), and it is easy to see from its pages why a stream of immigrants flows from the Old World to our shores. Yet, if the picture of the European peasant is at first sight depressing, not only does it have the advantage of raising one's spirits with reference to the situation of the man farthest down in this country, but it has a cheerful aspect of its own in the circumstance that it is less repellent than it was within living memory; at least, so these investigators found it. A particular result of the trip was the confirmation of Mr. Washington in his often expressed conviction that the way out for the negro is by the economic rather than the political path. The greatest boon that could be conferred upon the English laborer, he remarks, would be for him to have the same opportunities for constant and steady work that the negro now has in the South. Next to that would come industrial education, which the negro is getting. Not the least interesting of the observations here recorded is that "the man farthest down in Europe is woman." It should be added that the book is as readable for its lively presentation of conditions in Europe as it is valuable for its conclusions.

Part ii of W. S. Sonnenschein's "The Best Books" (Putnam) has now appeared. It follows part i after a lapse of two years. The completion of this work in a third volume is promised for the immediate future. This is virtually the sixth edition of a monumental contribution to bibliography which first appeared in 1887. The title may be subject to misinterpretation in these days of highly condensed collections of "best books," put forth for popular consumption. The first edition listed some 50,000 titles. The present edition will contain between sixty-five and seventy thousand. Mr. Sonnenschein's best books are thus seen to be really all the good books and some that are not so good but are still useful in fair measure. The present volume is devoted to the two general classes, Society and Geography and Travel. Under Society is placed Law, Political Economy, Sociology, Political Science, Commerce, and Education. The scope of the work is indicated by the 3,500 titles enumerated under Law, 4,000 titles under Political Economy, and 2,500 under Education. Not the least value of the book is to be found in its intelligent and painstaking scheme of topical classification. Numerous well-chosen divisions and subdivisions make it of service as a guide to systematic courses of reading and study. As an example we may cite the catalogue of works on Socialism, comprising some 300 titles, with appropriate characterization of the standard works in each group. As an English work, it naturally deals in greatest detail with the British Empire, but American authors are far from being neglected.

We have on our table the second edition, revised and enlarged to a volume of more than four hundred pages, of Dr. Gonzalo Picón-Febres's "Libro Raro," or dictionary of words, phrases, and "otras cosas" frequently used in Venezuela. A good many Spanish writers complain bitterly of the reluctance of the Real Academia Española to admit neologisms. Thus Don Cecilio Acosta declares that "Castilian has remained stationary; since its Golden Age it is virtually what it was." He goes on to say that not merely a protective but a prohibitive system has established, as it were, a cordon of guards to see that no foreign words should be imported, with the result that modern terms of the arts and sciences are lacking to correct Spanish writers, and such authors as Victor Hugo cannot be adequately translated.

Still more is this the case with the Spanish-American countries, where new conditions and new objects represented in daily speech and in popular literature are not recognized even in the twelfth edition of the Academy Dictionary. Dr. Picón-Febres includes not only *Venezolanismos*, but also many words used in Bolivia, in Costa Rica, in Chili, and in Peru. All sorts of subjects are discussed in his book. One may here learn that the little rodent known as *acure* (a creature "timid and sufficiently prolific") is known to the Cubans as *curiel*, to the people of the Venezuelan Andes and Hayti as *curi* and—perhaps—to the Peruvians as *cui* (plural *cuyes*). Occasionally the author pokes a little fun at what he calls *la Excelentisima Señora Academia Española*. He takes example of the worthy Dr Samuel Johnson and allows his personality to shine forth in a naïve and amusing manner, but the book contains a vast amount of curious information, and it cannot fail to be of use to those who read "Fidelia" and other novels of Venezuelan life. It is clearly printed on opaque paper. A final note informs us that Don Mariano Poncela has been working for many years, "with the greatest care, perseverance, and labor" (*atención, perseverancia y laboriosidad*), on a "Diccionario Hispano-Americano." It is to include the modifications in the language from the earliest times up to the present, with the varieties arising from the Spanish possession of American and Philippine territories. It is published at Curazao by Bethencourt é Hijos.

The same publishers have also just brought out a 500-page volume, entitled "Teatro Crítico Venezolano," which, in spite of its title, has nothing to do with the drama, but is a compilation of articles and letters referring now with eulogy and again with all manner of abuse to the various writings of Gonzalo Picón-Febres, Doctor en Ciencias Políticas, Individuo Correspondiente Extranjero de la Real Academia Española y de Número (electo) de la Venezolana. Dr. Picón-Febres modestly accepts the praise (which certainly might turn the head of a lesser light), but he shows himself a valiant fighter when he is attacked, and still more when it seems necessary for him to defend his country from misunderstanding, from neglect, from wanton abuse. He is the author of nearly a score of volumes—novels, poems, critical essays, public discourses, and historical writings. What more than anything else arouses his righteous wrath is the almost complete ignorance of Spanish America throughout the United States.

Dr. Picón-Febres charges us with brutal egotism, excessive pride, and ill-founded vanity, and declares that all one needs to do is to observe carefully "the character abrupt as a precipice, the impudent rudeness, the absolutely extravagant customs, the vicious inclination for material pleasures, and the lack of true elevation, found in the larger part of the North American people, to realize that there is 'more noise than nuts' (*más el ruido que nueces*) in its boasted civilization, that its lauded culture is in considerable measure a big lie, as much a lie as the 'doctrine of Monroe,' and that the skyscrapers, the electric light of Edison, the machines, the peddler-press full of advertisements and of nothing, the ridiculous baseball, the innumerable theatres devoted to boresome absurdities, and the brutal athletics devoid of grace and of gallantry—a grotesque and barbarous caricature of that glorious system of gymnastics which could triumph with superb stateliness in the Olympic games of Athens—neither are nor can be the exact and adequate elements fitted solidly to constitute the true greatness of a country."

He acknowledges that the United States possesses "men profoundly illustrious and learned, of very fine gentlemanliness (*de muy fina caballerosidad*), of good judgment, with lofty ideals, loving morality and justice, and that they disapprove of the propaganda of the press against Spanish America . . . and the policy of voracity which, bound up with the fantastic Monroe doctrine, is now more than ever directed to expropriation and fraud, unreservedly violating all international principles, insulting the majesty of civilization, and resting on the right of might; . . . but these men," he continues, "are few. They form a feeble minority against the immense, overwhelming, and unthinking majority, living to live, believing and repeating what they hear, without analyzing it, going whither they are led, and blowing whistles, harmonicas, and horns on the night of a Presidential election, and waiting till midnight on the principal streets till they learn the name of the one elected . . . by the will of the people!" All this, it may be said, is called forth by an innocent reference in a Boston paper to the Spanish-American republics as "small communities"! Our brethen to the south are sensitive, but Dr. Picón-Febres is quite right in mourning over the fact that we Americans are densely ignorant of our neighbors. It is certainly our loss.

There has been a strong movement in recent years in England, participated in to a certain extent in this country, in the direction of the simplification of grammatical terminology, so that within certain limits the same name may be applied to the same phenomenon, whether it is found in modern or ancient languages. The recommendations of a Joint Committee on Grammatical Terminology were published in revised form in a pamphlet "On the Terminology of Grammar," in 1911 (London: John Murray). Since this publication the recommendations have been at least partly adopted in four recent English grammars and now appear in "A New Latin Grammar" (Frowde) by that veteran classical grammarian, Prof. E. A. Sonnenschein. This grammar of 266 pages possesses many new features, in addition to the elimination of a large number of grammatical and syntactical terms with which recent grammars, particularly in this country, have teemed. In the section devoted to Forms simple syntactical principles are introduced and exemplified, thus giving the volume the appearance of an enlarged beginner's book. This is a direct reversal of the current American habit of including a desiccated grammar in the beginner's book. The principles exemplified are the uses of the cases, simple agreements, simple rules of government, uses of the Gerund and Supine, and the like. In the Syntax the usual order is reversed and the constructions of the verb are treated before those of the noun. In the former Professor Sonnenschein follows the analysis of the subjunctive which he has recently set forth in his treatise, "The Unity of the Latin Subjunctive: A Quest" (London: John Murray). The treatment of the Syntax gives the appearance of great simplicity. On examination, however, this simplicity is found to consist more in the omission of categories than in simplicity of statement. This, however, is not strange, as we have been striving for the latter in this country for a generation. Practically it is doubtful whether some of our American grammars, in spite of the burden of terminology which should be lessened, are not better books to teach.

John Edwin Bradley, who for many years held office in the public schools of New England, New York, and the Middle West. died on Monday at Randolph, near Boston. He was a graduate of Williams College, and was the author of several books, among them "Science and Industry," "School Incentives," "Healthfulness of Intellectual Pursuits," and "Unconscious Education."

Ex-Senator William Alfred Peffer, who died last Monday at Grenoble, Kan., aged eighty-one, was the author of a tariff manual, besides what he described as a "national poem" ("Myriorama"), "The Carpet-Bagger in Tennessee," "The Farmer's Side," "Americanism and the Philippines," and "Rise and Fall of Populism in the United States."

The Rev. Walter William Skeat, professor of Anglo-Saxon in Cambridge, England, is dead, in his seventy-seventh year. He was a prolific writer on the early periods of the English language and literature, and discussed a very wide range of topics. Perhaps the two subjects in which he was most interested were etymology and various aspects of Chaucer. It was hardly to be expected that a writer with so many interests would show the accuracy which scholarship has come to require. Yet, in spite of his numerous slips, he was a man of vast learning, who, particularly by his knowledge of out-of-the-way lore, such as popular superstitions and customs, has helped to elucidate many cruxes in Middle English texts. Professor Skeat was born in London in 1835, was educated at King's College School, Highgate School, and Christ's College, Cambridge. After serving for a time as curate of East Dereham, he founded, in 1873, the English Dialect Society, of which he was president. This brought him into touch with Dr. Furnivall, whom he assisted in editing early English texts. His best-known works are Langland's "Piers Plowman," in four parts, 1867-84; "An Etymological Dictionary of the English Language," in four parts, 1879-82, and "Complete Works of Geoffrey Chaucer," six volumes, 1894. Dr. Skeat was a fellow of the British Academy.

Science

THE PHYSIOGRAPHY OF AUSTRALIA.

SYDNEY, Australia, September 13.

The reaction of the United States upon Australia and New Zealand has been both wide and deep, but till lately it has been mainly political; it guided, if it did not quite govern, the formation of the political and ecclesiastical Constitutions in both countries. Now, in a later day, Australasia owes to the paramount American commonwealth the gift of a new science. Physiography, which might be more appropriately termed physiogeny, in so far as it has ceased to be merely descriptive and has become constructive, is an American science. Its first commanding, yet prescientific, expositor was Arnold Guyot, a Swiss refugee, who became an American professor, and the impulse that he gave to it is not yet spent. Powell and his followers, still more Davis and *his* adherents, took up the torch from his sinking hands and by its light they have built up a science that is beautiful in its completeness and symmetry. On the base that they founded and according to the models they have reared, a band of ardent physiogenists is now engaged in raising an Australian wing. The leaders, Profs. Edgeworth David and J. W. Gregory, are avowed or unavowed followers of Prof. W. H. Davis of Harvard; and their students or colleagues belong to the same school.

The three volumes under review reveal this ascendency.* In the introduction to the volume on New South Wales Professor David states that "it has been decided not to repeat in the present volume the principles of the evolution of scenery so admirably enunciated" by Professor Davis; but they are everywhere presupposed in it; some of them are assumed in the earlier volumes on the Geography of Victoria by Professor Gregory, and on the geography of South Australia by Mr. Howchin; and without some knowledge of them the three volumes will not be fully intelligible. Indeed, the marked superiority of these works may be gauged by the degree in which the principles of the American school have been assumed and applied.

The editor of the new volume, T. W. Edgeworth David, professor of geology in the University of Sydney, discoverer of the rich Maitland coal field, and geologist of the Shackleton expedition to the Antarctic, strikes in his luminous introduction the note of explanation and not merely description that characterizes the New Physiography. In his first chapter on Mountains, Dr. Woolnough, the chief contributor to the volume, is no less emphatic. With him, so assured is his footing, explanation precedes description; and it is only after he has engendered his mountains that he classifies them, as it is only after he classifies them that he describes the mountains of New South Wales. The Davisian "peneplain" and the Powellian "base-level" soon make their appearance, and the now established universal agency of erosion is everywhere invoked. Dissection is exhibited. The unitary character of a huge but disconnected Continental strip is shown. The mighty panorama of the Blue Mountains, which taxed the ingenuity of Darwin eighty years ago, is first convincingly explained. Dr. Woolnough proves that the vertical-walled cañons, 2,000 feet in depth, that dissect the plateaux, are the work of rivers flowing over them since their elevation from base-level. To most who have travelled over these formidable and unique masses the statement must appear incredible. The insignificant streams that now trickle over them are obviously inadequate to sustain a decent waterfall. The explanation is that, in earlier days, the streams had much larger watersheds and were of far greater dimensions, when they were engaged on their task of dissecting the plateaux. They were, therefore, both more powerful and more concentrated, and ploughed their way almost unresistedly through an extremely weak geological structure of chocolate shale between two great masses of sandstone. It is Newberry's explanation of the Grand Cañon of the Colorado over again.

The principles of the American school are continually proved or illustrated afresh by the authors of this volume. Nowhere are those principles more felicitously applied than in following the

***New South Wales: Historical, Physiographical, and Economic.* Edited by T. W. Edgeworth David. Melbourne: Whitcombe & Tombs.

The Geography of Victoria. By J. W. Gregory. The same.

The Geography of South Australia. By Walter Howchin. The same.

evolution of the scantily fed river-systems of the island-continent. Depleted though they are, these systems have been its chief demiurge. Their erosive power, their transporting force, their youth and adolescence, their maturity and old age, their rejuvenescence and their death, their being "antecedent" (as Powell first named them), or "consequent," "obsequent," "insequent," or "subsequent," their engrafting and their meandering, their piratical captures, their diverting and even reversing, their dismembering and obliterating of other streams, and the winding up of an often violent career by their being, alas! "beheaded" or even "drowned" (for Professor Davis's term, "betrunked," seems not to have been taken up), reveal the wealth of the terminology introduced into Physiogeny by the American school, and they have changed the face of physical geography in Australia. The examples of river-piracy given in all three volumes show how powerful an agent it has been in the production of existing topography. Even the minor process of engrafting has combined all the rivers of the Murray and Darling systems into one of the great river-systems of the world.

The volume on Victoria is by the hand of a master. When it was written Dr. Gregory was professor of geology in the University of Melbourne; he is now professor of geology in the University of Glasgow, and he has a more than national reputation. Being wholly his handiwork, the book has a unity necessarily, yet not conspicuously, lacking to its companion volume on New South Wales. Accepting from Suess the two Atlantic and Pacific types of coast, he shows conclusively that Victoria has a coast of the Atlantic type, whereas its adjoining state, New South Wales, has a coast-line of a Pacific pattern, or, as Professor David would say, sub-Pacific; the two meeting at Cape Howe. Superseding the lexicographers, he gives a fresh and more scientific definition of a mountain, but adopts their definition of a mountain range. He is original in condemning the Great Dividing Range of Victoria as a geological myth; it is only a watershed. He holds that rivers are born, not made. He follows the American school in exhibiting the passage of rivers from their noisy youth up among the mountains to their staid maturity down on the plains. He traces their evolution. He distinguishes the corrosion that cuts away and deepens the bed of a river from the erosion that wears away its banks. After a river has reached its base-level by corroding its bed, it can only erode, and it acts on the surrounding country. He shows Victorian rivers being captured and beheaded. He exhibits the action of the wind in aiding an ocean current to form the Ninety Mile Beach. He tackles the difficult problem of the formation of the Gippsland Lakes, and, after a beautiful and complex chain of sustained reasoning, he arrives at the conclusion that "they are the remains of a great sheet of water, most of which has been filled up by deltas and rands." As they are still in process of evolution, he conjectures that they will one day resemble the Norfolk Broads, which are a group of similar lakes, but in a more advanced stage of development. Both they and their congeners, together with a division of the Murray Lakes, are alike due to processes of river-deposition.

Walter Howchin's volume on South Australia is handicapped by the comparatively uninteresting character of the province he describes. It is a physiographical failure. Nothing has succeeded with it. All its prime features have been nipped in the bud. Rivers, lakes, earthquakes, volcanoes, minerals, and what-not, are the merest shams—no, its copper is a reality! The river-system does not appear in Mr. Howchin's index, and there is some reason for the accidental omission. There are, indeed, countless rivers, but few of them are permanent, and they run only when in flood. They all get lost in the sandy flats or the mangrove swamps, or flow into Lake Eyre, without ever filling its rapacious maw, or they are lost by evaporation, or they are drowned by the sea. Yet, while they last, all Powell's terms and all Davis's concepts are found applicable. The most striking feature in the country is the Great Artesian Basin. The most extensive artesian system in the world, with its area of 590,000 square miles, stretches over three states. Its true source is still vehemently disputed. The prevalent view is that the artesian supplies originate from rivers, whose waters keep sinking to various depths—an underground Darling. The process by which an unfailing supply is trapped in beds of porous rock, sandwiched between two layers of water-tight rock, is too complex to be stated here, but Dr. Woolnough's explanation (in the first-reviewed volume) appears as convincing as it is lucid. No other view, indeed, was held till Professor Gregory, in "The Dead Heart of Australia," ascribed the artesian waters to a plutonic origin. Enormous masses of igneous rocks, which had large quantities of water dissolved in them before they solidified, underlie Central Australia, and this supply is invoked as the chief, if not the exclusive, source of the artesian waters. This being their source, he argues (in his volume on the geography of Australia contributed to Stanford's series) that the supply is not everlasting. He thus holds out a threat of destruction to thousands of sheep farmers whose stocks now thrive on artesian bores.

J. C.

Prof. D. T. Macdougal, director of the Desert Laboratory at Tucson, Ariz., describes in the *Scottish Geographical Magazine* for September some of the physical and biological features of our deserts. In one of the arid regions, with summer and winter rainfall periods, there are as many floral species per square mile as in the densest tropical jungle, and one tree cactus may hold from 500 to 1,000 gallons of sap. An account of Patagonia, its history, government, industries, and the Boer and Welsh colonies, is given by W. G. Rae Smith, with illustrations.

Prof. H. S. Carslaw has rendered an important service by translating excellently the historical and critical study of "Non-Euclidean Geometry" (Open Court Pub. Co.), by the late Prof. Roberto Bonola. The essay begins with Euclid's definition of parallel lines, and after discussing the impossibility of proving this axiom, the author traces in admirable fashion the gradual development of non-Euclidean geometry. The clear and concise way in which the subject is treated and the large number of references given make this book interesting and valuable.

A modern work on evolution with the apparent object of exalting a given system which has, in the minds of many biologists, only an historic interest, is apt to attract little attention. This will undoubtedly be the case with André Tridon's excellent translation of Delage and Goldsmith's "Theories of Evolution" (Huebsch). Nevertheless, the book will serve a useful purpose in furnishing in English a history of evolution with critical estimates of the work of Darwin, Wallace, Weismann, of Lamarck and neo-Lamarckians, all written with the admirable clearness characteristic of cultured French men of science. The scientific value of such estimates is considerably minimized by the obviously partisan attitude of the authors, which becomes painfully prominent in the inadequate discussion of heredity and especially of Mendelism. This trait is probably due to the fact that the original volume was written three years ago in preparation for the Lamarck celebration in France and published, in cheap form, by Flammarion. Since that time the remarkable investigations in experimental biology, and especially in genetics, have thrown new light on the problems of evolution and make such a work as the one under review seem almost like the product of a past generation.

The death is announced of Lewis Boss, who since 1876 was director of the Dudley Observatory and professor of astronomy in Union University, Albany. He was born in 1846, and graduated from Dartmouth. He was engaged in several Government expeditions, was a member of learned societies here and abroad, and wrote numerous books on astronomical subjects.

Bradford Torrey, naturalist, writer of many books of nature-studies, and formerly editor of the *Youth's Companion*, died on Monday at Santa Barbara, Cal., in his sixty-ninth year. "Birds in the Bush," "A Rambler's Lease," "The Foot-Path Way," "A Florida Sketch-Book," "Spring Notes from Tennessee," "Footing It in Franconia," "Nature's Invitation," and "Friends on the Shelf" are among his best known works.

Drama and Music

Bernard Shaw et son œuvre. By Charles Cestre. Paris: Mercure de France.

Till M. Cestre appeared on the scene, Bernard Shaw was fortunate in his biographers. For a living celebrity, biographical fortune consists in getting one's self presented by idolators and enemies. Every caricature and every idealized presentment of a popular hero is a welcome screen between the curious public and the precious secret of the hero's actual character. Mr. Shaw himself, like a peculiar cuttlefish emitting luminous ink, has, as every one knows, deliberately sought to blind his followers with excess of light. Mr. Chesterton, squarely seated on the grounded end of the literary see-saw, has ably caricatured his opposite as a virtuous but fanatical angel dangling between earth and heaven, at the sky-end of the plank. Holbrook Jackson has given us a devout account of his master, the Socialist, and Professor Henderson, authorized biographer, has with equal devotion described the great philosopher's clothes, hair, and daily walk.

M. Cestre is neither friend nor foe; he is merely a competent foreign explorer of English literary phenomena. He alone, under the pretext of introducing Shaw to French readers, has taken him into the laboratory and anatomized him. Students of English literature who are indebted to M. Cestre's admirable work, "La Révolution française et les poètes anglais," will know what qualities he has brought to this lesser task —searching analysis, a sense for fine distinctions complemented by an easy grasp of general ideas, lucid exposition, the impartial gusto of an investigator, and a critical spirit constantly functioning. When he lays down his pen, Bernard Shaw is no longer a complicated enigma in brown tweeds, but a disarticulated Irish Puritan classified and mounted for inspection. The book falls into four parts: a rapid survey of the author's career as Socialist, journalist, and dramatist; a systematic interpretation of the principal plays; a penetrating study of Shaw's temperament and ideas; and, finally, an examination of the form of the works.

To English readers the third and fourth divisions will doubtless prove most helpful. As definitively as anything that we have seen, they answer the terribly agitating question, "Is Shaw serious?" M. Cestre is cautious. He warns us at the outset that we are not under obligation to take any particular utterance seriously. Shaw is a humorist and, furthermore, a characteristic product of the intellectual curiosity and mobility of the day:

> He reflects also what they contain that is extravagant and dangerous. The taste for novelty and the need of change, which are in our time powerful elements of progress, entail also a certain satiety, and demand means of expression constantly more strong, and stimulants still more violent. Thence the orgy of *réclame,* which we see in contemporary society. Shaw, imitating the example of his age, uses and abuses *réclame.* . . . Shaw does not escape another fault of our day, the result of our fever of intellectual adventures; that is, a rashness in the forward movement, which does not always take care to assure the safety of the bases of supply and to maintain points of connection with the past. Along with just observations and profound paradoxes, there is in him an adroitness in constructing an artificial logic and in deriving general conclusions from particular instances which can only be called sophistry. . . . He does not always know how to preserve measure in laughter, as he does not always observe discretion in reasoning.

And yet, despite all reservations, M. Cestre contends that at bottom Mr. Shaw is serious—as serious as he can be under the circumstances. It is he that continues, after his fashion, in this latest age the great Puritan tradition of revolt formerly represented by Carlyle and Milton, and the literature of prophecy, the peculiar province of the Anglo-Saxon people. It is he that sees through the respectable shams, the hoary hypocrisies, and the accepted cant of the established order. A perfectly sincere sense of disillusion underlies the railing skepticism of his comedies and the rebellious bitterness of his prefaces. But his humor and the health and vigor of his temperament preserve him from misanthropy, and throw him back upon a kind of visionary idealism and a mystical faith in progress and the scientific spirit. He is, in short, a practical skeptic and a speculative idealist, or, as we should say in America, he is a radical progressive whose criticism of the *status quo* is frequently illuminating and always irritating, but whose constructive programme is intrepidly Utopian and, it should be added, inextricably involved in humbug. Thus, as M. Cestre pointedly observes, he reflects the spirit of the age.

A poetic drama on democracy, entitled "Nimrod," is announced by Lothrop, Lee & Shepard. It is the work of Dr. Rolt-Wheeler.

Gerhart Hauptmann is said to be at work on a drama whose material is drawn from Homer. It will probably be called "Der Bogenspanner Odysseus."

We have to acknowledge from the Macmillan Co. the receipt of two more volumes of the Tudor Shakespeare—"Richard the Second" and "The Winter's Tale," edited, respectively, by Prof. Hardin Craig and Prof. Laura J. Wylie.

"The Case of Becky," which has just been produced in the Belasco Theatre, and which professes to be charged with deep scientific and psychic import, is in no way remarkable, except as an example of managerial astuteness. It is artfully designed to cater to the credulity and ignorance of the general public in regard to spiritual and other mysteries of nature, and undoubtedly does constitute a novel and effective theatrical entertainment, in spite of its artificiality and essential insignificance. The central idea of it is founded upon the published report of a distinguished Boston specialist on the case of one of his patients supposed to be the victim of a dissociated or disintegrated personality, whose inharmonious elements, working independently and antagonistically, were held to be responsible for eccentric and vicious actions wholly inconsistent with her true character when properly organized. The sufferer was restored, theoretically, through the gradual elimination of these discordant elements by means of suggestion, administered to them severally under hypnosis. There seems to be no room for doubt that the lady in question was somehow mentally deranged, that she was unconscious at one time of what she had done at another, that in mesmeric sleep she revealed motives and impulses of which she was unaware when awake, and that she was ultimately, by hypnosis or otherwise, cured. Not every one, however, who reads the report will be converted to the theories of the writer. In the play the heroine is described as having been born while her mother was under the influence of a professional hypnotist, who had compelled her, presumably against her will, to leave the home of her husband, a distinguished physician, and to this circumstance is ascribed the double nature which she is supposed to illustrate. She is alternately refined and charming or abominably vulgar and vicious. Finally, by stage coincidence, she comes under the care of her real father, the physician, who first quells the evil spirit in her by hypnotic power, and then, by the same agency, extorts full confession from the mesmeric quack, while destroying his capacity for further mischief.

Obviously, this is mere theatrical romance seeking justification in a ridiculous assumption of scientific pretence. In its crude extravagance it is virtually a burlesque of the original story. There is nothing even moderately fresh in its pretentious chatter about hypnotic phenomena. But the piece is most admirably stage-managed and capitally acted. The mesmeric business doubtless appears most impressive to the unsophisticated. Miss Frances Starr plays the double part of the heroine effectively enough—that is to say, she is alternately exceedingly "tough" and prettily refined—but without any exhibition of subtle correlation between the twin halves of the supposed dual nature. The artistic acting is shown in the physician of Albert Bruning.

"Years of Discretion" is the name of a new comedy which David Belasco will produce in the Republic Theatre in January. It is the work of Frederick and Fanny Hatton. Mr. Belasco is said to have great faith in it, and has engaged a remarkable cast for its interpretation. This includes Lyn Harding, Bruce McRae, Herbert Kelcey, E. M. Holland, Effie Shannon, and others.

The London *Telegraph* pokes fun at those who affirm that Sir Hubert Parry imitates

Handel and has nothing of his own to say. It refers triumphantly, as proving the contrary, to his latest work, "Ode on the Nativity," just produced at the Hereford Festival—a composition which is "a legitimate successor" to Parry's "The Blest Pair of Sirens." The critic thinks it doubtful if Handel himself could have written a more moving setting of the fifteenth century poem than Parry has in his latest production, adding that it will be a real surprise if his opinions are not supported by the general acclaim, during the next few months, of competent musical societies and their audiences.

Otto Goritz, the incomparable German baritone, has written an operetta which will probably have its first hearing some time in the present month at Hamburg. In composing this work, Mr. Goritz made use of a phonograph for recording the melodies he improvised on the piano. In course of time, he had accumulated several hundreds, from which he selected the best for his comic-opera score.

Maud Powell is one of the eminent musicians engaged as soloists for the coming season of the Philharmonic Society. She will not be heard in New York, however, before March 6 and 7. As usual, she has a novelty to offer—a concerto by the late Coleridge-Taylor. The autumn and winter months will be devoted by her to a tour of the West and the South.

A subscription list for a monument to Massenet has been started in Paris. The publishers, Heugel et Cie., headed it with 10,000 francs. Massenet's annual income during the last years of his life is reported to have exceeded 700,000 francs. He began his musical career by playing the kettledrum in a theatre band.

Ysaye, whom many call the greatest violinist of the period, will make his first appearance in eight years in New York with the Philharmonic Society on December 10. During his American tour he will play concertos by Bach, Brahms, and Bruch.

The death is announced of Berlin's oldest musical critic, Prof. Rudolf Fiege. He lived eighty-two years, and for more than half a century he was the critic of the *Norddeutsche Allgemeine Zeitung*.

Art

LIFE OF HARRIET HOSMER.

Harriet Hosmer: Letters and Memories. Edited by Cornelia Carr. Illustrated. New York: Moffat, Yard & Co. $3.

There is an illustration in this life of Harriet Hosmer which should not escape the notice of suffragists. It represents the tiny figure of the sculptress amid the two dozen stalwart workmen who took her pay—the mere hands who obeyed her informing mind. All portraits of herself agree with this in a common impression of quaintness and bonhommie. In her attitude there would be something vividly pert, were it not for the steadiness of the fine eyes deeply set under a bulging forehead, recalling the brow of Beethoven. We have the face of one who had the uncommon good luck, in those "Book of Beauty" days, to be brought up a tomboy. With rod and gun, boat and horse, she was familiar from her childish days near Boston. Many years later she helped to organize the Campagna hunt, and shone as a horsewoman. Once when nearly fifty she was dragged some hundred feet by a favorite hunter. Remounting, she rode the chase out, though in a jocular letter on the event she admits she was "somewhat stretched." As a punster, wag, clever doggerelizer, organizer of revelry, she endeared herself to all manner of people. Most of the letters in this volume—and they are from very famous folk—are addressed to "Dearest Hatty." The Brownings adored her, and, more reservedly, sedate Mrs. Jameson. More stiffly in London and at home the George Ticknors made much of her. Of the lovely Queen of Naples, whose portrait as heroine of Gaeta Harriet Hosmer did in marble, she was the friend and household guest. Socially she conquered in every world. Hence it is amusing to find Fanny Kemble observing, early in the Roman days, that "Hatty's peculiarities will stand in the way of her success with people of society and of the world, and I wish for her own sake that some of them were less decided and singular." Evidently, the great tragedienne was either lacking in knowledge of the world or else obsessed by the memory of the madcap school-girl she had befriended a few years earlier at Lenox.

The hoyden quality of this admirable woman has been emphasized because the average lettered person still insists on identifying her with the angelic Hilda of "The Marble Faun." On this point we may as well consult her friend, Sir Henry Layard, who writes:

> I have been recently reading "Transformation," so you may easily fancy you have been very constantly in my thoughts. I, of course, concluded that you were the heroine, but I cannot believe that you ever threw a gentleman over the Tarpeian Rock, even after a picnic in the Coliseum! Then as to the other lady, I could not fancy you with doves and a pet Madonna, so I gave up all attempts at further identification.

So much for legend, and yet the glamour of Harriet Hosmer's life remains that of Hawthorne's Rome—the goal of fervent ambitions, the generous foster-mother of alien talents, the seat of magnanimous companionships and admirations.

The color and quality of this old Rome have been delightfully caught in Henry James's memoir of W. W. Story. The reminiscences of Elihu Vedder and of Mrs. Hugh Fraser help to complete the picture. The obvious elation of it all we may sense in a letter of Harriet Hosmer to a school friend:

> Do you remember what you said to me about becoming so fond of Italy that I should never want to go home to live? Oh! thy prophetic soul, it is even so! Here I am as merry as a cricket and as happy as a clam, finding the nights nothing and the days shorter. . . . In America I never had that sense of quiet settled content such as I now have from sunrise to sunset. . . .
>
> There is the most charming circle of people here that you can imagine. Among them Mrs. Kemble and Mrs. Sartoris. They are like two mothers to me, and their house seems home all over. Then the Brownings are here, both so delightful. Mrs. Browning a perfect darling, and every Sunday and Wednesday evening there is a friendly party, as she calls it, at Mrs. Sartoris's, consisting of Mrs. Kemble and the Brownings, two young artists [one of them Leighton], and your humble servant. Mrs. Sartoris sings, and Mrs. Kemble sometimes reads, and all in all it is the perfection of everything that is charming. The Thackerays, too, are here, and they are such dear girls. Every now and then there is an excursion projected for the Campagna, consisting of these same persons, and we go out for the day frolicking.

The letter not merely recalls bygone idyllic days, but serves also to represent the rapid touch and go of Harriet Hosmer's epistolary manner. A joke is never far away in these letters, and the headlong prose easily breaks over into punning verse after the model of Hood and Saxe.

Endeared by her native good-fellowship, idealized through her valiant following of her star, Harriet Hosmer seems the very genius of those departed days. Time was greatly to enrich her acquaintance. Her abundant vitality was in turn to capture the Italians. Among the British aristocracy of birth and wit she was to become a familiar. Her talent everywhere drew kindred ability, repelling none. Charlotte Cushman was for a time her house-mate. As one dips into her letters one comes into the most delightful contacts. Once Harriet saw Mrs. Jameson before the colossal Ludovisi Juno, Goethe's favorite marble, murmuring, "It is herself, her very self!" She refused other explanation than that she was thinking of the beauty of a young friend in England. Later Harriet Hosmer met Lady Ashburton, Carlyle's "Gloriana," verified the resemblance, and won that noble woman's friendship. The touch is characteristic of these memoirs. Yet the most stable friendship was with the Brownings. His letters to her are admirable in real tenderness and burlesque adoration. She had the thrilling experience of a runaway with him in a peasant's donkey cart, and of hearing him enact the scene until the author of "Aurora Leigh" was consumed with laughter. It was Harriet who rejected the proposed alternate title "Laura Leigh" because "it had no backbone."

The peculiarity of this Roman circle seems to have been its generosity.

Everybody looked like a genius to everybody else. Story and Crawford were demigods and played the part magnanimously. Browning, with Homeric concision and repetitiousness, invariably writes of Page, the American portrait painter, as "that noble Page." In view of the actual accomplishment of Harriet and her contemporaries, it is easy to laugh at this cult of mutual admiration. Yet it should be noted that, relatively to the Italian artists of the time, the Powerses, Gibsons, Crawfords, and Hosmers were rather tall fellows. Moreover, something is to be said for this atmosphere of friendly adulation, if only because it permitted middling talents to be developed to their full capacity. Harriet Hosmer's work does not look very important to-day, but at least it is complete and characteristic. There is no suggestion about it of cramped opportunity or thwarted ideals. But before we consider her work we should note how her admirable qualities as a person smoothed her way as an artist.

Her father's wise training gave her a splendid physique, and he set no obstacle to her then unusual vocation. At St. Louis Dr. J. N. McDowell repeated for her privately his lectures in anatomy. His medallion portrait was her first work, and he wrote her in acknowledgment, "Dear Hat, I like, not love, you, for my poor old heart that has so often been chilled by the winters of adversity cannot now love, but could I love any one, it would be the child who has so remembered me." At twenty-two Harriet was in Rome, and John Gibson had promised her father, "Whatever I can teach her, she shall learn"—an engagement most loyally kept. Before her twenty-fourth year she had "arrived" with what remained her most popular works, Puck and Medusa. Before thirty such statues of monumental pretensions as the sleeping Beatrice Cenci and the funereal effigy of Julie Falconnet, the first statue by an American artist to be set up in Italy, had won her both fame and prosperity. At thirty she received the commission for a colossal bronze of Senator Benton, which still stands in St. Louis. In her thirty-third year a post of honor was given to her Zenobia in the British Universal Exhibition. Two years later the marble Queen made a triumphal appearance in America. There never was a more swift and solid success, nor more favoring circumstances. When the panic of 1857 impaired her father's fortunes, her friend, Wayman Crow, who had already given and procured her commissions, gladly became her banker, and tided her over through what otherwise might have been disastrous years. Her distinguished British friends became excellent patrons for her sculpture, and she was the first American artist after Stuart who enjoyed a full measure of international patronage. Everything played into the hand of this brave and genial woman.

Harriet Hosmer came to Europe a completely open-minded person, and it is an amusing surmise what she might have done had she, instead of going to Gibson at Rome, gone to Baryé at Paris. She had a vitality not inferior to that of the great *animalier* and shared many of his tastes. To go to Gibson, however, was emphatically to accept the leading of Flaxman, Thorwaldson, and Canova. It was the day in which, under the influence of the poorer classical originals, the sculptors smoothed all character out of the clay in order to please the marble-cutters, who further polished away on their own account any residual strength. The art was in danger of perishing from excess of artisanship. In good periods of marble-cutting the stone tends to obey alien laws. Good Greek and Renaissance marbles suggest, according to their kind, the severity of the bronze or the freedom of the clay. Our best modern sculpture in marble is thus conditioned. The bronze is ever present in Saint-Gaudens, the clay in Rodin. Such tonic graces of older sculpture had disappeared before the thumb of the great Canova and the pumice stone of his marble-cutters. John Gibson held to the tradition with gentle fanaticism, merely adding the archaistic novelty of staining his faultless nudities in what he imagined to be the Greek fashion. A man of blameless life and amiable character, gently persistent in his adoration of an antique beauty which he completely misunderstood, he was just about the narrowest influence that could have been brought to bear upon a young artist beginning in the fifties. That Harriet Hosmer, after all, established something like a personal style, testifies strongly to her vitality.

She sensibly took the course of accepting the limitations and emphasizing the qualities of her chosen *genre*. Of the Fountain of the Siren, which she was making for Lady Marion Alford, she writes to Wayman Crow, "It is to be so sweet that it ought only to play *eau sucrée*." Such is the impression of her Medusa and Enone, of her Beatrice Cenci, and with an appropriate touch of roguishness of her Puck and Will o' the Wisp. It seems as if the woman in her, which was somewhat belied by her looks and manners, found its true outlet in what she called her "children." In any case, it is the caressed and caressing qualities of her figures that lend them an authentic Victorian warmth, and make them superior to the merely correct frigidities of her older contemporary, Story. The captive Zenobia, her most carefully considered work, constitutes an exception. It is an appealing thing in a derivative way, catching much of the faint stateliness of those Hadrianic models upon which it is clearly based. It elicited from the unexuberant John Whittier the handsomest compliment ever paid to an American artist by an American man of letters. "In looking at it," he writes, "I felt that the artist had been as truly serving her country, while working out her magnificent design abroad, as our soldiers in the field and our public officers in their departments." Her design for a Lincoln monument, which was in hand for more than twenty years and remained unachieved, has a Michelangelesque grandiosity recalling Alfred Stevens and foreshadowing George Barnard. It was intended to be "the foundation of a new school," but it may be doubted if hands trained by John Gibson could have executed convincingly the generous proportions of the African sibyl as one sees her in the cartoon.

Harriet Hosmer's abundant worldly wisdom was chiefly for the matter immediately in hand. Her letters, while abounding in vivid friendliness, are singularly barren of artistic or literary interest. To collect some of her more absurd political opinions would seem ungracious were they not illuminating. The United States, "being union only in name," she was willing to see dismembered at the opening of the Civil War. In predicting a short life for the French Republic, she perhaps merely agreed with most of the world. She joyfully saw at perilous close range the Italians take Rome, bitterly resented the transformation of her beloved city, and, overestimating the social ostracism of Victor Emmanuel, proclaimed the prompt bankruptcy of the new kingdom. All in all, a most vital person of short views, and intense. She lingered on for a full generation, mostly in England, through an exiled old age of ease and comparative inactivity, dying in 1908, in her seventy-ninth year, quite the last of the Romans of Hawthorne's day.

One aspect of the spell she cast upon high and low remains mysterious. She had powers which to-day we rather vulgarly call psychic. When a girl, after a visit to the spiritualist writer, Lydia Maria Child, while riding home, she saw a rail that "raised itself from the fence and moved around to the outside of the post, a distance of several yards, and then stood upright." At the moment of the unexpected death of a favorite Italian maid, the wraith appeared to Miss Hosmer, announcing the felicity of the departed. She felt distant accidents, found lost articles—was an accurate clairvoyant. Once "Lady A" (surely Lady Ashburton) had lost a box containing "valuable papers." Harriet Hosmer located not merely the right bank, but the right box. One likes to indulge the surmise that these papers which were found amid "women's belongings, . . . rare laces chiefly," may have been the letters of the stern Sage of Chelsea. As for Harriet Hosmer herself, this memoir gives no hint of a sentimental passage. Early in the Roman days she writes: “Even if so inclined, an artist has no business to marry. For a man, it may be well enough, but for a woman, on whom matrimonial duties and cares weigh more heartily, it is a moral wrong, I think, for she must either neglect her profession or her family, becoming neither a good wife and mother nor a good artist.” There is no indication that she ever regretted this decision, or that her marble “children” and the friendship of the best of her contemporaries were an inadequate solace for the softer joys she had put aside.

The results of the excavations carried on at Corfu during the last season have proved of great interest. An ancient temple, identified as that of Aesculapius, has been completely laid bare. It is about 8½ metres wide by 11½ metres long. A large number of the columns have been found, and some of them have been reërected in their original places. In the middle of the temple was found the pedestal on which the cult statue stood. The excavations in the temple where the relief of a Gorgon was discovered last year have also been completed. The space between the temple and the altar was cleared and a number of interesting objects were found, among them painted tiles from the roof of the temple. The altar itself is of an interesting type, being decorated on the outside with a Doric frieze of metopes and triglyphs. As is well known, the German Emperor took a keen interest in these excavations.

Behind the famous monument of Demetria and Pamphile in the Kerameikos, in Athens, there have lately been found three sarcophagi of poros stone and the remains of a funeral pyre. Only two of these sarcophagi have been opened. One of them contained the skeleton of a woman, two alabaster figures, and a *lekythos* (oil-jug); the other the skeleton of a man, two alabaster figures, and two *lekythoi*. Among the ashes of the pyre were also found portions of another skeleton and some small vases. These tombs probably belong to the fourth century B. C., and are those of the persons represented on the relief, namely, Demetria and Pamphile, and of a third person.

Finance

STOCK EXCHANGE “REACTION.”

Having passed, in regard to the season's unmistakable trade revival, through the successive stages of apathy, incredulity, awakened interest, and great enthusiasm, the Stock Exchange last week presented all the aspects of a prolonged and vigorous movement for the rise. This appeared to have substantial basis. It was grounded on the assurance from every industry that rapid recovery was in progress; on the absolutely record-breaking expansion of the steel and iron trade; on the August earnings reports by the country's railways, fully one-half of which showed the largest net receipts ever reported in that month; on the four successive weeks of September, in each of which grain deliveries from farms to primary receiving points exceeded the highest weekly total prior to this autumn; on a monthly Government cotton crop estimate, foreshadowing the largest yield but one in the country's history, and on an engagement abroad of nearly $10,000,000 European gold for import to New York. But, having reached its climax of enthusiasm, in the middle of last week, the stock market broke suddenly and sharply.

It was characteristic of this very singular “Presidential-year market” that, when at last the setback in prices came of which we had so long been warned, it should have come, not because of a political scare of any sort—real or imaginary—but because the Balkan peasants had shouldered their muskets to march across the Turkish border. It had seemed, to those familiar with the manœuvres of the Stock Exchange, as if politics must provide something to shudder at, before the season was over. Experience, indeed, recalled “political scares” in election years when nobody knew what he was frightened about. The thrill of terror which ran through Wall Street in September, four years ago, was certainly a case in point. Nobody then had any doubts about Taft's election, and the same Wall Street which was breaking prices on the Stock Exchange, because of the “political argument,” was simultaneously betting 2 to 1 against Bryan on the curb.

At least that much of an “election scare” ought to have been feasible this present autumn—in connection, for instance, with Mr. Roosevelt's return to the East. But no one suggested it as probable. Whether the absence of any such demonstration meant that the community had from the first absolutely made up its mind as to what the electoral result must be, with one party solidly united and the other split in two (the Wall Street “curb,” which is now betting 4 to 1 on Wilson's election, favored him, by 2 to 1, within a month of his nomination), or whether it signified that the conservative community was genially receptive to any of the three conceivable results, is possibly debatable. The attitude has been remarkable. Certainly, in no other previous Presidential campaign of our history could the amazing episode of this week's star testimony before the Clapp committee have been dismissed, as it was, with casual and indifferent comment. But however all this may be, the “bear argument” which apparently could not be found in domestic politics was at last discovered in European diplomacy. The stock market had its break, and every one declared the reaction altogether “healthy.”

No doubt, if it had not come on that particular pretext, some other would have been found for it; and in the present case, the decline was emphasized by the fact that financial Berlin and London, in their first dismay over the “Balkan crisis,” threw on the New York market something like $10,000,000 of their holdings of American shares. But Balkan war scares have always had the quality of exciting financial Europe excessively for a minimum stretch of time. Some people wonder that these demonstrations should come so often at this period of the year. Probably that is because the harvests in those localities have just been laid in and the snow has not yet begun to fall.

The interval between the two events fairly defines the margin allowed for the market's interest in the Balkans; for those belligerent states will seldom fight when the crops are in the field or when the mountain passes are blocked. In the present case, the interval of warlike demonstration will probably be still narrower; for Turkey will doubtless now see fit to yield gracefully to the Italian terms of peace, and that would change the status of things in the Balkans. Besides, so far as concerns our own Stock Exchange, the Presidential election occurs hardly four weeks from to-day, and financial markets will have to display some kind of interest in it, at such short range as that.

For Women—and Men

MAKING A BUSINESS WOMAN
By Anne Shannon Monroe

Starting as a four dollar a week typist, Miss Gale wins independence in four years. Her story discloses the exciting possibilities of a young woman's every-day life in business, and is constantly and definitely suggestive to other modern minded young women.

Just ready, $1.30 net; by mail, $1.40.

WHY WOMEN ARE SO
By Mary R. Coolidge

Explains and traces the development of the woman of 1800 into the woman of to-day. "It interprets and justifies to women their struggle for better things; they can draw from it conviction and argument." An authoritative book.

Just ready, $1.50 net; by mail, $1.62.

Henry Holt & Co., 34 W. 33 St. New York

Founders of Modern Psychology
A New Book by Dr. G. STANLEY HALL
D. APPLETON & COMPANY - NEW YORK

Pygmies and Papuans
The Stone Age of To-day in Dutch New Guinea

By A. F. R. WOLLASTON, Author of "From Ruwenzori to the Congo." With appendices by W. R. Ogilvie-Grant, A. C. Haddon, F.R.S., and Sidney H. Ray.

This volume, entertaining as a book of travel, and scientifically informing, is an account of a scientific expedition made in 1911 under the auspices of the Royal Geographical Society and the Ornithologists Union to the Snow Mountains of Dutch New Guinea. The adventures and the scientific results of this expedition are here presented, and the book offers new and important matter to naturalists, geographers, anthropologists, philologists, and others. The appendices offer matter of special and detailed value to scientists. *Octavo. Profusely illustrated in color and black and white, and with maps. $4.00 net.*

NEW SMALL-MAYNARD BOOKS

Important Books of Varied Interest Now Selling

SECOND PRINTING OF

PLAY-MAKING: A Manual of Craftsmanship

By William Archer

"This book has long been desired," says the *Bookman,*" and there is no man in the world better equipped to write it. Students of the drama may derive from it a sane reckoning of where the truth of dramatic art lies. Further, it is admirably what its title claims for it, and should be of genuine value to the playwright. Not often may we find a subject so well and comprehensively discussed."

"It is, moreover, as suggestive to the play-goer as to the play-maker," says the *Boston Transcript.* 8vo. $2.00 *net; by mail,* $2.15.

The Story of Evolution

By Joseph McCabe

Author of "The Empresses of Rome," etc.

A continuous chronicle of the development of the heavens and the earth, and of all the work done in a score of sciences in connection with Evolution. Fascinatingly illustrated. 8vo. $3.50 *net; by mail,* $3.70.

In Forbidden China

By Viscount D'Ollone

The account of an adventurous exploring expedition of the French Government into the highlands of Western China, among an almost unknown and still unconquered people. The narrative has the charm of the unfamiliar. 146 illustrations, map, 8vo. $3.00 *net; by mail,* $3.80.

White Mountain Trails

By Winthrop Packard

The best guide and companion for the lover of the White Mountains. By the author of "Florida Trails," etc. Boxed, 8vo, fully illustrated. $3.00 *net.*

The Campaign of Gettysburg

By "Miles"

The best single account of Gettysburg, written from original sources by an impartial English army officer. 3 maps, 8vo. $2.00 *net; by mail,* $2.15.

Tripoli the Mysterious

By Mabel Loomis Todd

A charming and informing record of personal observation, especially timely. Profusely illustrated, 8vo. $2.00 *net; by mail,* $2.15.

Problems of Men, Mind and Morals

By E. Belfort Bax

Fifteen brilliant essays by the greatest English Socialist. 8vo. $1.50 *net; by mail,* $1.65.

"The best book on Ireland ever written by an Irishman."

The Pope's Green Island

Intellectual, Religious, and Social Life in Modern Ireland.

By W. P. Ryan

Until lately Editor of *The Irish Nation.* Author of *The Cross and the Plough.*

The Liverpool Post says: "It approaches genius. A most fascinating production—every page of it."

The Argentine in the Twentieth Century

By Albert B. Martinez and Maurice Lewandowski

A complete exposition of the Argentine Republic—economic, agricultural, commercial, industrial and financial—which has been crowned by the French Academy. 8vo. Map. $3.50 *net; by mail,* $3.70.

Who's Who in the Theatre, 1912

Edited by JOHN PARKER.

A new biographical dictionary of actors, actresses, managers, critics, playwrights and others connected with the stage in England, the Continent, the British Colonies, and the United States. $2.50 *net; by mail,* $2.80.

NEW FICTION

THE BIG FALL NOVEL OF 1912

FRIAR TUCK

Being the Chronicles of the Reverend John Carmichael, of Wyoming, U. S. A., as set forth and embellished by his friend and admirer, HAPPY HAWKINS, and here recorded

By ROBERT ALEXANDER WASON

Author of "HAPPY HAWKINS," "THE KNIGHT ERRANT," etc.

"Friar Tuck" is one of those books, published only once in a decade or so, which have the universal appeal of humor, character and story, each in lavish measure. It is in no sense a sequel to "Happy Hawkins"; it is, rather, a companion volume, and is even better.

"'Friar Tuck' is assured a large popularity."—*Boston Transcript.*

"'Thank the Good Lord for Wason!' exclaimed one of Brooklyn's most noted divines a few evenings ago as he read with a deep sigh of regret the last paragraph of 'Friar Tuck.' A great story, a delight and a glory!"—*Brooklyn Citizen.*

Fifth edition in this country. Large editions sold in England, Canada (two printings), and Australia.

Illustrated by STANLEY L. WOOD. $1.35 *net; by mail,* $1.50.

The Novels of Ethel Sidgwick

Ethel Sidgwick is a new English novelist whose work has taken its place at once as distinguished. She comes of a literary family—the late Professor Henry Sidgwick was her uncle, and Mr. Arthur Christopher Benson, Mr. E. F. Benson, and the Rev. R. H. Benson are her cousins—and she possesses, as the London Times *says, "the true imaginative gift, as distinguished from the mere power of vivid reporting, which is the necessary qualification for continuing to produce work of permanent value in fiction."*

"The most promising of the writers newly introduced into America."—*Chicago Evening Post.*

PROMISE $1.35 *net; by mail,* $1.50

LE GENTLEMAN $1.25 *net; by mail,* $1.40

AN IDYLL OF THE QUARTER

HERSELF $1.35 *net; by mail,* $1.50

Frontispiece in color by Carton Moorepark.

New Books for Younger Readers

The Young Woodsmen; or Running Down the Squawtooth Gang

By Hugh Pendexter

The third volume of the successful Camp and Trail Series, telling of the further adventures of Stanley Malcolm and Bub Thomas among the lumbermen in the Maine woods. 12mo. Illustrated by Charles Copeland. $1.20 *net; by mail,* $1.35.

The Young Fisherman; or The King of Smuggler's Island

By Hugh Pendexter

The first volume of a new series of books for boys, entitled "Along the Coast Series." It narrates the adventures of two boys among the fishermen along the coast of Maine. 12mo. Illustrated by Charles Copeland. $1.20 *net; by mail,* $1.35.

Barry Wynn

The Adventures of a Page Boy in the United States Congress

By George Barton

A new departure in books for boys—the story of a thoroughly boyish boy in the midst of events and scenes which make workings of the national government familiar. 12mo. Illustrated by John Huybers. $1.20 *net; by mail,* $1.35.

Fred Spencer, Reporter

By Henry M. Neely

Fred Spencer is a young telegraph operator of seventeen, in the office of *The Morning Call,* a great city daily. He turns reporter in an emergency and has thrilling adventures. 12mo. Illustrated by A. A. Blum. $1.20 *net; by mail,* $1.35.

The Lucky Chance

The Story of a Mine

By M. W. Loraine

A capital story for boys, depicting the actual conditions in a Western silver mine. 12mo. Illustrated by Haydon Jones. $1.20 *net; by mail,* $1.32.

In Search of Smith

By John Mackie

A vigorous story of Northern Australia. 12mo. 22 illustrations by R. Caton Woodville. $1.50 postpaid.

On Foreign Service

Or the Santa Cruz Revolution

By Staff-Surgeon T. T. Jeans, of the British Navy

A masterpiece of naval writing, centring around a South American revolution in which an Englishman takes a prominent part. A brother of the revolutionist leader is a sub-lieutenant on one of two British cruisers ordered abroad to watch the progress of the revolt, and the adventures of the two are related with rare dramatic force. 12mo. Illustrated by W. Rainey, R.I., with a wrapper in full color. $1.50 *postpaid.*

Ready October 26

More Little Beasts of Field and Wood

By William Everett Cram

A companion volume to the author's "Little Beasts of Field and Wood," which has been a standard for ten years. 12mo. Illustrated by the author. $1.20 *net; by mail,* $1.35.

Floor Games

By H. G. Wells

The versatile author of "Tono-Bungay," "Marriage," and "The Man of Worlds," here shows his skill in dealing with children. Every house should have a floor on which games can be played, he says, and shows the games to play.

"The book which should make mothers and fathers and nurses the most excited is H. G. Wells's 'Floor Games'," says George Cram Cook in the *Chicago Evening Post.*

The Letters

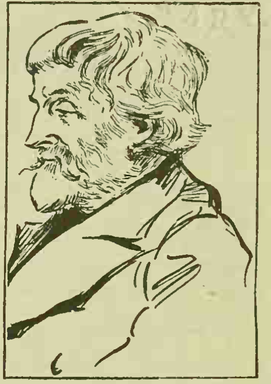
The death of a valued writer often brings a compensation—which is very rich and full in the case of George Meredith—a deeper and closer understanding drawn from the reading of his personal letters.

The Letters of George Meredith, which have been in process of selection and preparation since his death in 1909, will be found one of the most varied, interesting, and revealing of such autobiographical collections. They extend over some fifty years, beginning —except for a few scattered notes from his boyhood—about 1858, when Meredith was thirty years old, and after his first marriage. Among his correspondents are included his lifelong friends, John Morley (Lord Morley), Admiral Maxse, another of his most intimate associates; Frederick Greenwood, Chapman the publisher, Leslie Stephen, Robert Louis Stevenson, Trevelyan, and many others, besides a group of family friends and some of the members of his own household. The collection is not intended to supply a narrative of his life, nor would it do so, in spite of its extent; but it gives an unsurpassed reflection of temperament and character, of personal relations, of opinions, and even of moods; for Meredith excelled in all the good qualities of a letter-writer.

The Poems

As the passage of time has justified the publication of the letters, so it has demanded the collection of his poems into a one-volume household edition, simple, inexpensive, and convenient.

George Meredith was one of the great poets in the succession of English poetic masters. It is therefore right that all of his poetry should be made available in one volume by which his eminence can be appreciated and judged. Founded on the carefully revised text of the Memorial Edition (in which the poetry fills three large volumes) this is an impressive volume containing more than 600 pages. Mr. Trevelyan, who wrote during the author's lifetime "The Philosophy and Poetry of George Meredith," which is referred to in Meredith's recently published Letters, has added some illuminating notes to the poems. The volume is the standard definitive edition of Meredith as a poet.



GEORGE MEREDITH

New Pocket Edition of Meredith's Works

The text is the same as that in the *Boxhill Edition*. It is similar in appearance and general make-up to the biographical edition of Stevenson.

New Volumes in the Pocket Edition of George Meredith's Works

CELT AND SAXON

" 'Celt and Saxon,' " the London Athenæum says, "is full of brilliant wit, profound insight, and superb passages of lyric prose."

THE POETRY AND PHILOSOPHY OF GEORGE MEREDITH

By George Macaulay Trevelyan.

In the first half of the book Mr. Trevelyan examines the author's style in his poetry; in the last, in order to fix his place as a philosopher, moralist, and critic of society, he examines and explains the content of his poetry.

WORDSWORTH
POET OF NATURE AND POET OF MAN
By E. HERSHEY SNEATH.
320 pages. $2.00

The author traces in detail the history of Wordsworth's mental and spiritual development as a poet, showing the influence upon him of heredity and physical and social environment. The text includes a careful study of the poet's own works and of the various external sources. The volume forms a complete statement of Wordsworth's poetic and philosophic creed.

NEW SMALL-MAYNARD BOOKS

Important Books of Varied Interest

SECOND PRINTING OF

PLAY-MAKING: A Manual of Craftsmanship

By William Archer

"This book has long been desired," says the *Bookman*, "and there is no man in the world better equipped to write it. Students of the drama may derive from it a sane reckoning of where the truth of dramatic art lies. Further, it is admirably what its title claims for it, and should be of genuine value to the playwright. Not often may we find a subject so well and comprehensively discussed."

"It is, moreover, as suggestive to the play-goer as to the play-maker," says the *Boston Transcript*. 8vo. $2.00 *net; by mail*, $2.15.

Art

By Auguste Rodin

Translated from the French of Paul Gsell by Mrs. Romilly Fedden.

A book which takes its place at once as the most important art book in years. With 106 illustrations in half-tone and photogravure. Large quarto. Buckram, $7.50 *net;* three-quarter levant, $15.00 *net;* carriage additional. *Ready November* 16.

In Forbidden China

By Viscount D'Ollone

The account of an adventurous exploring expedition of the French Government into the highlands of Western China, among an almost unknown and still unconquered people. The narrative has the charm of the unfamiliar. 146 illustrations, map, 8vo. $3.00 *net; by mail*, $3.80.

The Bayreuth Letters of Richard Wagner

Edited and translated by **Caroline V. Kerr.**

An indispensable book for the Wagner lover, telling the fascinating story of the great composer's struggles for the Festival Theatre at Bayreuth, treating of the years just subsequent to the period covered in the recently published autobiography. Illustrated. 8vo. $2.50 *net; by mail*, $2.70. *Ready October* 26.

Tripoli the Mysterious

By Mabel Loomis Todd

A charming and informing record of personal observation, especially timely. Profusely illustrated. 8vo. $2.00 *net; by mail*, $2.15.

Problems of Men, Mind and Morals

By E. Belfort Bax

Fifteen brilliant essays by the greatest English Socialist. 8vo. $1.50 *net; by mail*, $1.65.

The Pope's Green Island

Intellectual, Religious, and Social Life in Modern Ireland.

By W. P. Ryan

Until lately Editor of *The Irish Nation*. Author of *The Cross and the Plough*.

The *London Spectator* says: "A remarkable picture of the Ireland of to-day." 8vo. $1.50 *net; by mail*, $1.65.

Who's Who in the Theatre, 1912

Edited by John Parker

A new biographical dictionary of actors, actresses, managers, critics, playwrights and others connected with the stage in England, the Continent, the British Colonies, and the United States. $2.00 *net; by mail*, $2.80.

The Empires of the Far East

By Lancelot Lawton

A masterly study by a leading English journalist and publicist of Japan and her colonial possessions, of China and Manchuria, and of the political questions of Eastern Asia and the Pacific. Two volumes. 8vo. *Per set, $7.50 net; carriage additional. Ready November* 9.

NEW FICTION

FRIAR TUCK

Being the Chronicles of the Reverend John Carmichael, of Wyoming, U. S. A., as set forth and embellished by his friend and admirer, HAPPY HAWKINS, and here recorded

By ROBERT ALEXANDER WASON

Author of "HAPPY HAWKINS," "THE KNIGHT-ERRANT," etc.

"Friar Tuck" is one of those books, published only once in a decade or so, which have the universal appeal of humor, character and story, each in lavish measure. It is in no sense a sequel to "Happy Hawkins"; it is, rather, a companion volume, and is even better.

"'Friar Tuck' is assured a large popularity."—*Boston Transcript.*

"'Thank the Good Lord for Wason!' exclaimed one of Brooklyn's most noted divines a few evenings ago as he read with a deep sigh of regret the last paragraph of 'Friar Tuck.' A great story, a delight and a glory!"—*Brooklyn Citizen.*

Fifth edition in this country. Large editions sold in England, Canada (two printings), and Australia.

Illustrated by STANLEY L. WOOD. $1.35 *net; by mail*. $1.50.

The Novels of Ethel Sidgwick

Ethel Sidgwick is a new English novelist whose work has taken its place at once as distinguished. She comes of a literary family—the late Professor Henry Sidgwick was her uncle, and Mr. Arthur Christopher Benson, Mr. E. F. Benson, and the Rev. R. H. Benson are her cousins—and she possesses, as the London Times *says, "the true imaginative gift, as distinguished from the mere power of vivid reporting, which is the necessary qualification for continuing to produce work of permanent value in fiction."*

HERSELF $1.35 *net; by mail*, $1.50

Frontispiece in color by Carlton Moorepark.

THE SECRET OF FRONTELLAC

By FRANK K. SCRIBNER. A romance of present-day France, the setting a wonderful old chateau; the plot, an exciting mystery hinging on the solution of a strange secret which is an inheritance from the French Revolution—an obscure but vivid and dramatic chapter of French history. The love story is warranted to warm the heart of the most hardened reader of romances. Frontispiece by Leon V. Solon. $1.25 *net; by mail*, $1.40.

MARY, MARY

By JAMES STEPHENS. A novel of Dublin.

"It is a very long time indeed," says *Punch*, "since I read such a human and satisfying book. Every page contains some happy phrase or illuminating piece of character drawing." $1.20 *net; by mail*, $1.35.

Zebedee V.

By EDITH BARNARD DELANO. The story of the achievements of a natural-born promoter, who turns a little country village near Baltimore upside down with his schemes, and incidentally marries a third wife, whose acquaintance he makes through an advertisement. The comedy situations and human nature put Zebedee V. Slocum in the same category with David Harum. Illustrated. $1.20 *net; by mail*, $1.35. *Ready October* 26.

New Books for Younger Readers

The Young Woodsmen; or Running Down the Squawtooth Gang

By Hugh Pendexter

The third volume of the successful Camp and Trail Series, telling of the further adventures of Stanley Malcolm and Bub Thomas among the lumbermen in the Maine woods. 12mo. Illustrated by Charles Copeland. $1.20 *net; by mail*, $1.35.

The Young Fishermen; or The King of Smugglers' Island

By Hugh Pendexter

The first volume of a new series of books for boys, entitled "Along the Coast Series." It narrates the adventures of two boys among the fishermen along the coast of Maine. 12mo. Illustrated by Charles Copeland. $1.20 *net; by mail*, $1.35.

Barry Wynn

The Adventures of a Page Boy in the United States Congress

By George Burton

A new departure in books for boys—the story of a thoroughly boyish boy in the midst of events and scenes which make the workings of the national government familiar. 12mo. Illustrated by John Huybers. $1.20 *net; by mail*, $1.35.

Fred Spencer, Reporter

By Henry M. Neely

Fred Spencer is a young telegraph operator of seventeen, in the office of *The Morning Call*, a great city daily. He turns reporter in an emergency and has thrilling adventures. 12mo. Illustrated by A. A. Blum. $1.20 *net; by mail*, $1.35.

The Lucky Chance

The Story of a Mine

By M. W. Loraine

A capital story for boys, depicting the actual conditions in a Western silver mine. 12mo. Illustrated by Haydon Jones. $1.20 *net; by mail*, $1.32.

In Search of Smith

By John Mackie

A vigorous story of Northern Australia. 12mo. 22 illustrations by R. Caton Woodville. $1.50 *postpaid.*

On Foreign Service

Or the Santa Cruz Revolution

By Staff-Surgeon T. T. Jeans, of the British Navy

A masterpiece of naval writing, centring around a South American revolution. 12mo. Illustrated by W. Rainey, R.I. $1.50 *postpaid.*

A Countess from Canada

By Bessie Marchant

An enthralling story for girls, filled with the atmosphere of the out-of-doors. 12mo. Illustrated by Cyrus Cuneo. $1.50 *postpaid.*

More Little Beasts of Field and Wood

By William Everett Cram

A companion volume to the author's "Little Beasts of Field and Wood," which has been a standard for ten years. 12mo. Illustrated by the author. $1.20 *net; by mail*, $1.35. *Ready October* 26.

Floor Games

By H. G. Wells

The versatile author of "Tono-Bungay," "Marriage," and "The War of Worlds" here shows his skill in dealing with children. Every house should have a floor on which games can be played, he says, and he shows the games to play.

"The book which should make mothers and fathers and uncles the most excited is H. G. Wells's 'Floor Games,'" says George Cram Cook in the *Chicago Evening Post*. *Ready October* 26

NEW BOOKS OF IMPORTANCE—YALE UNIVERSITY PRESS

WILLIAM HENRY GOODYEAR, M.A.

GREEK REFINEMENTS. By William H. Goodyear, M.A., *Curator of Fine Arts, Brooklyn Institute of Arts and Sciences, Brooklyn, New York.*

The aim of the present elaborate and beautiful work is to summarize for architects, art students, and for those who are interested in the history of Greek civilization, the notable discoveries of all observers of architectural refinements in Greek temples. The author, who enjoys an international reputation because of his own great discoveries in this field, is eminently qualified to write on the subject. The non-technical treatment and many beautiful illustrations render the work of absorbing interest to those of the general reading public who seek a knowledge of the principles of architectural taste. The edition is strictly limited to seven hundred and fifty copies printed from type.

Royal quarto, 240 *pages,* 120 *illustrations, Appendices, Index, and Bibliography. Slip case. Price,* $10.00 *net; carriage,* 50 *cents extra.*

HON. SIMEON E. BALDWIN

Governor of Connecticut.

THE RELATIONS OF EDUCATION TO CITIZENSHIP. The ninth volume of Dodge Lectures on the Responsibilities of Citizenship.

The purpose of the book is to promote among "educated men of the United States an understanding of the duties of Christian citizenship and a sense of personal responsibility for the performance of those duties."

12*mo. Cloth binding, Gilt top,* 178 *pages, Index. Price,* $1.15 *net; postage,* 10 *cents.*

MAX FARRAND, Ph.D. (Editor)

Professor of History, Yale University.

A JOURNEY TO OHIO IN 1810. As recorded in the Journal of Margaret Van Horn Dwight. Edited with an introduction by Max Farrand. Vol. I in Yale Historical Manuscripts.

This century-old journal possesses rare literary as well as valuable historical qualities.

12*mo. Board binding,* 72 *pages. Price,* $1.00 *net; postage,* 10 *cents.*

THOMAS R. LOUNSBURY, LL.D., L.H.D.

THE YALE BOOK OF AMERICAN VERSE. By Thomas R. Lounsbury, LL.D., L.H.D., *Professor of English, Emeritus, Yale University.*

This anthology is a chronologically arranged collection of poems by American authors, excluding the work of any living writer. The Editor has made a catholic yet discriminating selection, including specimens of all kinds of poetry, the serious as well as the light, the contemplative, the pathetic, the humorous, and the satiric. Not even have the travesty and vers de société been omitted. Lyrics inspired by the Civil War, as well as the National hymns, find their place in the collection.

Professor Lounsbury, whose commanding position in American letters peculiarly fits him for the onerous task of editorship, has brought wide and accurate reading to his labors, and as far as practicable has followed in each case the author's latest revised text.

A delightful introduction of over fifty pages states the viewpoint of the Editor in regard to anthologies with a wit which charms and a reasonableness which disarms criticism.

Octavo. Cloth binding. 600 *pages. Index. In a slip case. Price,* $2.25 *net; postage,* 20 *cents. Bible paper, Cloth binding,* $3.00; *postage,* 20 *cents. Bible paper, Full Morocco.* $5.00 *net; postage,* 20 *cents.*

Author's autograph edition, numbered and signed by Editor and Publisher, limited to 150 *copies. Full Gilt, full Morocco, in slip case,* $10.00 *net; postage,* 20 *cents.*

EDWARD BLISS REED, Ph.D.

ENGLISH LYRICAL POETRY. From Its Origins to the Present Time. By Edward Bliss Reed, *Assistant Professor of English, Yale University.*

This is the first history of the English Lyric which has yet appeared, and is the outgrowth of a series of lectures which have been delivered at Yale University during the last decade. It is not only valuable as a work of reference, but is particularly adapted for use in classrooms.

"Professor Reed has brought to his task the necessary knowledge of the scholar and student of literature, and—what is much rarer—taste, judgment, and a broad perspective. . . .

"It is for his scholarly but far from pedantic treatment of the earlier phases of English Lyrical Poetry that Professor Reed's book will be especially valued."—*The Athenæum.*

"It is a survey which will interest almost any person who loves good literature."—*Phila. Enquirer.*

"English Lyrical Poetry is both a fascinating book to be read casually and a valuable one to refer to. . . . It can be heartily recommended to the gentle 'general reader.'"—*N. Y. Times Saturday Review.*

"There is undoubted place for this history, not only in colleges, but in the larger world."—*Chicago Dial.*

8*vo. Cloth binding. Gilt top.* 616 *pages. Price,* $2.25 *net; postage,* 20 *cents extra.*

WILLIAM ERNEST HOCKING, Ph.D.

THE MEANING OF GOD IN HUMAN EXPERIENCE. A Philosophic Study of Religion. By William Ernest Hocking, PhD., *Assistant Professor of Philosophy in Yale University.*

This important work begins with a survey of religion as seen in its effects in history and in personality, opening the question whether religion is chiefly a matter of feeling or of thought. The author discusses James, Bergson, Höffding, and other thinkers, working out a striking theory of the relation between ideas and feelings in consciousness. Professor Hocking has been singularly fair to the various important trends of philosophic thought. The book is readable, serious, original, and thoughtful, and has already secured high praise from leading philosophic thinkers of the day.

Crown 8*vo. Cloth binding. Gilt top.* 586 *pages. Index. Price,* $3.00 *net; postage,* 28 *cents extra.*

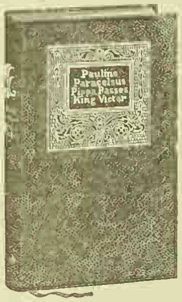
Browning: Pocket Edition

Edited by CHARLOTTE PORTER and HELEN A. CLARKE. Introduction by Professor William Lyon Phelps. Photogravure frontispieces. Set of 12 volumes, cloth, $12.00. Leather, $18.00. Volumes sold separately, in cloth at $1.00 and in leather at $1.50 per volume.



The large type "Pocket Edition" of the works of Robert Browning includes the complete output in verse of the great poet, as well as two essays in prose, and presents this matter in a form that leaves nothing to be desired by the most devoted Browning-lover. By the use of Bible paper the volumes have been made of compact size, delightfully easy to handle, and at the same time the type in which both text and bibliographical matter are set is large and clear, making restful, easy reading. The editors, Miss Porter and Miss Clarke, are two of the best-equipped students of Browning in this country or Europe. Their introductions and notes are full and scholarly, and taken as a whole shed all the light to be desired on the poet and his works. A valuable feature is the terse, clear digest given of every poem. A general introduction to the edition has been written by William Lyon Phelps, professor of English literature at Yale University. The excellence of the editorial work, the handsome appearance of the text, and the general attractiveness of the volumes as masterpieces of skilful book-making unite to make this the ideal edition of Browning's works.

NEW BOOKS

THE COURTS, THE CONSTITUTION, AND PARTIES. Studies in Constitutional History and Politics. By ANDREW C. McLAUGHLIN, Professor of History in the University of Chicago.

The work consists of five papers, the first of which discusses the power of a court to declare a law unconstitutional. Two deal with the growth and essential character of political parties, and are followed by one on the history of differing theories of the Federal Union. The work fittingly concludes with a discussion of the written constitution in some of its historical aspects.

308 pages, 12mo, cloth, postpaid, $1.63.

AMERICAN POEMS. Selected and edited with illustrative and explanatory notes and bibliographies. By WALTER C. BRONSON, Professor of English Literature, Brown University.

The book offers a most carefully chosen and well-balanced presentation of the poetic works of Americans, covering the entire period of our history. For the teacher as well as the student the value of the work is greatly enhanced by the comprehensive Notes, Bibliography, Glossary, and Index. It is believed that the book will have the wide popularity of Mr. Bronson's earlier collection, English Poems, which has been adopted by all leading American colleges.

680 pages, 12mo, cloth, postpaid, $1.68.

HEREDITY AND EUGENICS. By JOHN M. COULTER, WILLIAM E. CASTLE, EDWARD M. EAST, WILLIAM L. TOWER, and CHARLES B. DAVENPORT.

A book intended to present the recent developments of knowledge in reference to evolution, heredity, and eugenics, and related subjects. Five of the leading investigators in this field have collaborated in its production, and the result is a work which will appeal to the general public, because it presents the latest conclusions in a popular and extremely interesting manner. The authors are eminently fitted to discuss that branch of the subject covered by their respective contributions to the work.

312 pages, 8vo, cloth, postpaid, $2.70.

THE MECHANISTIC CONCEPTION OF LIFE. Biological Essays by JACQUES LOEB, Head of the Department of Experimental Biology, Rockefeller Institute for Medical Research.

This volume consists of nine chapters written on different occasions, and mostly in response to requests for a popular presentation of the results of the author's investigations. The layman is led into the wonderful realms of biology, where he is made to see with understanding eyes things which heretofore have had no meaning for him, or about which he has at best speculated and thought with but partial comprehension.

238 pages, 12mo, cloth, postpaid, $1.65.

THE MINISTER AND THE BOY. By ALLAN HOBEN, Associate Professor of Homiletics in the Divinity School of the University of Chicago.

From the first chapter on "The Call of Boyhood," through one on "The Approach to Boyhood," the author leads us by suggestion and informing principles to realize the enormous opportunity afforded by the raw material "boy," on which the minister may work. Later chapters on play and vocational choice show how to train the boy for citizenship, how responsive he is to the right sort of impetus, and how his religious life may indirectly, and even unconsciously, be stimulated by the proper appeal to his manly instincts while furnishing him with a normal outlet for his natural enthusiasm.

Illustrated, 180 pages, 12mo, cloth, postpaid, $1.10.

THE ETHICS OF THE OLD TESTAMENT. By HINCKLEY G. MITCHELL, Professor of Hebrew and Old Testament Exegesis in Tufts College.

The aim of the author is to present a faithful and, as nearly as possible within the limits of a manual, a comprehensive view of the development of ethical ideas among the Chosen People. To this end he takes the books, or parts of books, of the Old Testament in the order of their origin, so far as their dates can be determined, and discusses their teaching. This is the first volume to be issued in the series of "Handbooks of Ethics and Religion" edited by Shailer Mathews.

420 pages, 12mo, cloth, postpaid, $2.15.

THE HISTORICITY OF JESUS. A criticism of the contention that Jesus never lived, a statement of the evidence for his existence, an estimate of his relation to Christianity. By SHIRLEY JACKSON CASE, Assistant Professor of New Testament Interpretation in the University of Chicago.

Did Jesus ever live, or is he a mythical personage like the deities of Greece and Rome? The negative opinion has found supporters in America, England, Holland, France, and Germany. To present a complete and unprejudiced statement of the evidence for Jesus' actual existence is the aim of the author of the Historicity of Jesus.

360 pages, 12mo, cloth, postpaid, $1.62.

THE THIRD VOLUME OF A GREAT WORK. JUST PUBLISHED

"A masterly work, one long needed, and one that will be keenly appreciated."
—*Journal of Education.*

A Cyclopedia of Education

Edited by PAUL MONROE, Ph.D.

Professor of the History of Education, Teachers College, Columbia University,

With the assistance of Departmental Editors and more than
One Thousand Contributors.

Volume III. GAI—LIB. Now Ready.

Views of Noted Educators

"It serves the interests of Professional Education better than any publication that has ever appeared in this country." — *Charles H. Judd, Univ. of Chicago.*

"Will go quite beyond anything that has yet been done in any language in summing up authoritatively what is established about education in all its varied phases."—*M. V. O'Shea, Univ. of Wisconsin.*

"It exceeds my expectation. A fine piece of work in organizing our present knowledge in the field. The work will be of the greatest service to all."—*Elwood P. Cubberly, Leland Stanford Un.*

"Its great value and usefulness are immediately apparent. It will save a vast amount of labor by its concise and competent treatment of a large number of topics."—*Elmer E. Brown, U. S. Ex-Commissioner of Education.*

COMMENT FROM LEADING REVIEWS

New York Post

"There has been hitherto no encyclopedia of education in English. The present publication, therefore, meets a real need and will be heartily welcomed, especially since its merit entitles it to approval as a worthy companion of the German and French educational encyclopedias. The editors have shown discrimination in the selection of contributors, and have succeeded well in securing harmony and proportion."

The New York Sun

"The undertaking is of exceptional interest, and the work promises to be of great value. It addresses itself in fact not only to all teachers, from kindergarten to university, but to a large body of intelligent outsiders. The scheme is comprehensive, dealing both with history and present conditions. It includes biographies of educationally prominent men of all ages, notices of educational institutions, reviews of national systems of education, etc. Our warmest thanks are due for this 'open sesame,' this godsend to all educators."

San Francisco Chronicle

"The object of the work is a concise discussion of all topics of interest to the teacher, giving such information concerning every division of educational practices as is essential to a book of reference. From the subjects chosen at random as samples of the manner in which the articles have been written it is gratifying to note that in aiming at conciseness there has been no sacrifice of clearness or precision."

The Outlook

"In the present immense and varied literature of education—a subject now looming larger than ever in the public mind—not teachers only, but the many who are either officially charged with, or attracted toward, an intelligent participation in the treatment of educational problems, are here furnished with the succinct and comprehensive information they require. This includes every aspect of education. Here is found, not only the information required in a handy reference book of cyclopedic range, but also an assemblage of systematic treatises on every phase of the subject."

Vol. I. A—CHU; Vol. II. CHU—FUS; Vol. III. GAI—LIB.

To be complete in five volumes, the set, $25.00. (*Liberal terms to teachers.*)

PUBLISHED BY **THE MACMILLAN COMPANY** 64-66 FIFTH AVE. NEW YORK

The Nation

NEW YORK, THURSDAY, OCTOBER 17, 1912.

The Week

There can be but one feeling in regard to the attempt to assassinate Mr. Roosevelt—a feeling of deep joy that he escaped with apparently slight injury. Americans have reason to congratulate each other that their country has been spared another causeless murder of a public man. The act of an irresponsible creature, afflicted with homicidal mania, cannot fairly, of course, be made to reflect on the general moral standing of a nation; yet we all felt a sort of patriotic humiliation when Garfield and McKinley were shot, and it is a profound satisfaction not to have to go through that again. And in the circumstances of this crazy attempt upon Mr. Roosevelt's life there are many things to dwell upon with gratitude. His characteristic coolness and pluck in danger stood out admirably; and the affection which great numbers of his fellow-countrymen have for him was expressed in a way which must be a solid comfort to him and his family and his personal friends.

There are those who argue now, as they did after McKinley's assassination, that the way to prevent such shocking and lamentable crimes is to forbid severe criticism of public men. But this will not bear examination. Free discussion is the very breath of our political life. Mr. Roosevelt himself would be the first to assert this. And in this case the effort which some are making to explain the crime as a result of the active opposition which Mr. Roosevelt has stirred up, is particularly foolish in view of the incoherent writings found on the person of the would be assassin. These were made up of fantastic messages from the spirit world and reference to the example of Gen. Nogi, and the only allusion to anything connected with Mr. Roosevelt is to the third term—something which since the Chicago Convention has been very little talked about. We must keep our heads in all this business. Even under the pressure of the strong feeling caused by the threatened calamity, happily averted, we must calmly admit that it is only what might have happened to President Taft or Gov. Wilson. The latter has been accused of seeking to cripple American industry and to throw thousands of men out of work. But if some crazy workingman out of a job had let that prey upon his mind until he was seized with a mad impulse to shoot Gov. Wilson, would there have been any justice in charging protectionists with responsibility for the crime? It is obvious that we cannot order or alter our whole plan of government by public discussion, merely because cranks and lunatics can get hold of deadly weapons and commit crimes that startle the world.

A very early phase of Gov. Wilson's candidacy for the Democratic nomination is recalled by the information laid before the Senate investigating committee on Monday concerning contributions to the funds of two of his rivals. It was apparently the question of getting pecuniary aid from Thomas F. Ryan that gave rise to the famous Watterson-Harvey episode in Gov. Wilson's pre-Convention story; and it is now brought out that Ryan contributed handsome amounts to the funds of both Gov. Harmon and Representative Underwood. Presumably, there would have been no difficulty, at the time the Watterson-Harvey affair occurred, in obtaining from the same source a liberal endowment for Gov. Wilson's campaign, but he would have none of it. That this circumstance stood him in good stead was made evident long ago; and the demonstration now given, in the Senate committee hearings, of the total absence of help to his cause from any source of this kind, will be sure further to swell his vote at the election. And the sharpness of his decision on the subject, at a critical moment, will be recalled as one of the evidences of Gov. Wilson's possession of qualities belonging specifically to the man of action, and not to the academician or the doctrinaire.

The country may well take pride in the naval service. It is one branch of the Government which has developed amazingly in the last ten years along the line of efficiency, as well as in numbers. There can be no question that in drill, smartness, and general all-round professional ability the navy ranks with the best abroad. The service may still be lacking on the construction side and lag behind European navies, particularly because of the absence of any originality among our designers. But we believe that if Mr. Reuterdahl were to bring up to date his criticisms of the service which made such a stir at the time of the world cruise, he would have to admit that there has been great improvement since that day. Efficiency experts are quoted as saying that they have few recommendations to make as to the ships afloat, although they still have some as to the navy yards. Under Rear-Admiral Osterhaus the fleet has had much practical sea drill. It may be that there is still a good deal left to future commanders, but in one respect, at least—the matter of target practice and gunnery—it is hard to see how the present efficiency could be much improved upon. For the progress made, therefore, the navy is entitled to high praise.

Among the papers which constitute the large volume on "Industrial Competition and Combination" recently issued by the American Academy of Political and Social Science, the one by Mr. Miles M. Dawson, entitled "Publicity of Accounts of Industrial Corporations," has a peculiar interest, being written from the point of view of a life-insurance expert. Mr. Dawson argues, from the comparative experience of this country and Great Britain in relation to life insurance, that thoroughgoing publicity without supervision is practically more effective than supervision even though accompanied by publicity. We have had in life insurance about fifty years of State supervision, while in Great Britain there have been about forty years of publicity unaccompanied by supervision; and he points out in detail important features of insurance malpractice which have flourished in this country in spite of—indeed, in some respects, because of—supervision, while a strictly enforced publicity has been sufficient to prevent their occurrence in England.

Mr. Dawson also points out that the effect of supervision on life-insurance companies here "has been to make conditions hard or even impossible for the new and small companies, and, by applying an unyielding and often wholly unsuitable reserve standard to them, drive them out of existence; while publicity [in England] has nursed them when weak, and, by affording means for suitable and significant comparisons, has encouraged them to strengthen themselves." Mr. Dawson is of opinion that similar results may be expected to follow from an attempt to apply Government supervision—as distinguished from thoroughgoing publicity, which he urges—to industrial corporations; and the point is certainly one that has a most important bearing on the merits of the Roosevelt-Perkins industrial-control programme.

The Interstate Commerce Commission's investigation of the Westport disaster appears to be directed in the main towards the vital question involved. It is, of course, necessary to determine the specific cause of this particular wreck; but the question of the culpability of the individual engineer who was immediately responsible for the safety of the train is of minor importance in comparison with an inquiry into the methods of the railway management. If the practice of the management is such as to put strong pressure upon the engineer to make up lost time, without also holding before him the prospect of severe punishment in case he accomplishes this at the cost of a violation of safety rules at cross-overs and the like, accidents like that at Westport, and the similar one of last year on the same road, are bound to occur. "Only a profounder respect for orders," said Vice-President Horn of the New Haven road last week, "will prevent accidents"; but it is idle to expect a profounder respect for safety orders unless the management shows by its acts that it is in earnest in giving those orders. Failure to make the prescribed time is brought home to the engineer promptly, and this is an unpleasantness which it is human nature for a man to avoid if he can; and if he can avoid it by a violation of a safety rule which he knows will *not* be reckoned against him unless it results in disaster, he will be sure, in a very large number of cases, to take chances.

It is quite true that a heavy break on the European stock markets, at a time when war and rumors of war are suddenly thrust upon the scene, reflects the apprehensions of the financial community. It is also true that what is known as "European high finance" is likely to be especially well informed of the real diplomatic situation at the opening of any war—the reason for that intimate knowledge being that belligerent Governments, even before they actually go to war, must sound the great banking houses on the question of raising money. It is, therefore, perfectly reasonable to infer from the demoralization on Europe's stock exchanges, during the past few days particularly, that the Balkan situation is regarded as containing the possibility of grave international peril. But it is not always reasonable to assume that the extent of the threatened peril is indicated by the extent of the decline in prices. This statement may seem paradoxical; but its correctness will be readily understood when one considers what must be the effect of any sudden bad news on a stock market whose prices have been jacked up to abnormal heights by excited speculation, as compared with its effect on a market where speculation and values are entirely normal.

The lack of an Academy in this country to pronounce finally upon questions of art has long been felt and lamented. The heads of the judicious have often been bowed in humiliation at the spectacle of some millionaire vaunting the artistic claims of his new residence or of some *chef d'œuvre* within it. But there has been no help. We have had to endure the scoffs of Europe in silence. Hence the discovery that, after all, we have a Court of Last Resort in such matters is cause for gratification. Fortunately, too, this Court is no self-constituted tribunal, but a body of men chosen by due process of law, and amenable to the Constitution and the statutes. The revelation of its existence is due indirectly to Mr. Samuel Untermyer, whose fancy was captured at Brussels by a fountain with three dancing girls, modelled in bronze.

Mr. Untermyer classified his purchase, for the benefit of the customs officials, as "sculpture." The guardians of the port, however, had their own ideas about bronze fountains and dancing girls, and re-classified the importation as "manufactured metal." This opinion made the question one of international importance. Nothing less than the American standard of art was at stake. But where was the supreme bench empowered to pass upon the dispute? At this point, as calmly as if it were a matter of determining whether a sword-cane is a cane or a sword, the Board of General Appraisers intervened. They decided that the fountain, with its dancing girls, was indeed sculpture, dutiable at 15 per cent., and not manufactured metal, dutiable at 45 per cent. Hereafter let the foreign visitor be careful how he sneers at our confusion of standards in art. So long as our tariff laws endure, we can boast standards as rigid as the Board of General Appraisers can make them.

Recall of college presidents by a two-thirds vote of the alumni is the latest suggestion. President Taylor of Vassar refers to it in his annual report, though it is plain that he does not take it over-seriously. But he makes it the occasion for some just remarks on the impetuous meddling with college problems that they do not understand, of which some alumni associations have been guilty. The strength and hope of any college lie largely among its graduates, and a president or faculty or board of trustees that should unnecessarily antagonize the alumni, or not seek to be on the best terms with them, would stand self-condemned. But President Taylor utters a needed warning against "precipitate action" and "too rapidly formed conclusions," on the part of alumni associations. They should recognize their own limitations, and act in accordance with them. It can never be true, Dr. Taylor affirms, that the body of graduates, as such, can "give a proportional, constructive, and continuous administration to a college."

This year's revision of the football playing rules was at least the tenth annual overhauling, and yet the game is not reformed, to judge by the prophecies of the experts. Thus, there is a general fear that the 1912 revision will bring back the line-plunging game. It is already observable that the line men are heavier, and the play as developed resembles too closely the old line-bucking variety which was so dangerous, and also so inimical to the interest of the game. The scoring has been changed, the value of the touchdown being again altered so as to make the goal from the field less important. The intermissions between periods have been cut from two minutes to one, and the playing field has been decreased by ten yards. The most promising changes are one which admits scoring through a forward pass and another which permits of five downs to advance the ball instead of four. What other game was ever so frequently altered?

A Nobel Prize is to come to America for the third time—for the second time in the domain of scientific research—through the award of the prize for medicine to Dr. Alexis Carrel, of the Rockefeller Institute. Dr. Carrel cannot be claimed as an American, either by birth or by training, having come to America in 1905; but he wins this great distinction at the unusually early age of thirty-nine, and of the twelve years that have passed since he attained the degree of M.D. in France—which, to be sure, implies a very advanced stage of scientific attainment—seven have been spent in medical work in this country. The recognition that now comes to him is of interest not only as a personal triumph, but as renewed and most authoritative evidence of the high value of the investigations which are carried on at the Rockefeller Institute.

Mr. Borden's Ministry in Canada does not find its path one of roses. Difficulties, some of which are inherited, while others are of its own creating, confront it on two great questions of public policy. One of tnem is the matter of a Canadian navy, and its subordination to Imperial ends. On this issue there is a sharp division even within the Conservative party. Several Canadian newspapers have reported that, so acute is the dissension, Mr. Monk will retire from the Cabinet before Parliament assembles. And Bourassa, in the *Devoir*, is hanging on Mr. Borden's flanks. He declares that Mr. Monk was so absolutely committed against Laurier's Naval act and the no less unhappy naval policy of Mr. Borden, that his resignation cannot fail to be offered. There is even talk that Mr. Borden will soon be forced to go to the country on the policy of giving Canadian Dreadnoughts to the British navy.

The other serious embarrassment of the Canadian Prime Minister grows out of the demand of the big steel companies of Nova Scotia and Ontario that the system of bounties, which they enjoyed until two years ago, be reënacted. With the usual logic of tariff beneficiaries, these iron and steel manufacturers assert that they cannot "go ahead" until they get help from the Government. It is said that Mr. Borden has personally no objection to reviving the bounty system. But it is significantly added by the writer of a special article on the subject in the London *Times:*

> An obstacle exists in the almost universal opposition of the farmers of Eastern Canada and of the grain-growers in the provinces west of the Great Lakes to the system of bounties. It was this opposition—long continued and openly manifest—that made it impolitic for the Laurier Government to renew the bounties when the bounty laws expired in 1910 and 1911.

Silly Canadian farmers! Yet even their American brother-agriculturists are waking up to the fact that bounties and tariffs are mainly devices for fleecing them.

A preliminary skirmish over the Home Rule bill has been fought in the House of Commons. The spirit displayed on the Liberal benches was hopeful and aggressive, if one considers that the tide of public feeling has been described as running strongly against the Government. The same buoyant note is struck in the Liberal press, which has refused to be frightened by the fervent anti-Home Rule demonstrations in Ulster. For the most part, the Government organs even refuse to take the Ulster uprising seriously. They have been having a great deal of fun with "General" Carson and "King" Carson, and the wooden guns that have been paraded to show Ulster's resolution to do and die. The peril in the Liberal situation is an internal one. Will the Labor party remain faithful to the alliance, or is it prepared to go to the extreme of joining with the Unionists in turning the Government out? On the whole, there is no reason to doubt that the working arrangement between Liberals and Laborites can be continued, though the latter will undoubtedly insist upon their pound of flesh. Their demands will be backed up by the result of recent bye-elections. If the Labor members remain faithful to the coalition, the Home Rule bill is in no danger in the Commons.

A recent German book of a decidedly imperialistic spirit, Paul Rohrbach's "The German Idea in the World," expresses an opinion long held by German naval and military officers. This we would respectfully commend to those of our own jingoes who, in the intervals of fearing Japan, tremble at the mention of Germany. Summarizing the forces of the great nations, the author turns to the United States with the remark that it is not in the same class with the other Powers, in the matter of necessary self-defence, "since it is, because of its geographical situation, as good as unassailable." This we know has long been the prevailing German military opinion, but we shall, we suppose, continue to read in our sensational Sunday supplements that the Kaiser has no other dream in life than to take a big slice of South America. Only those totally ignorant of European affairs can conceive of Germany's seeking trouble on this side of the Atlantic. What an opportunity that would be for her enemies on the Continent and in England! No German can be found who does not rate higher than anything else his country's commanding position in Europe, and none is so foolish as to desire to jeopardize it.

Herr Rohrbach's book gives concisely recent figures of expenditures for military purposes. Thus, in England ten years ago each individual citizen paid $7.25 for army and navy expenses. This has now risen to $8.00 a head. In France, during the same period, there has been a rise from $5.25 per head to $6.32. In Italy, prior to the war, each citizen was paying a war-tax of $3.37, and Russia $2.12, while we in the United States are paying $3.00 per capita for army and navy expenditures. In ten years Germany's per capita expense for military purposes increased from $3.75 to nearly $5.00. These figures are in a sense misleading, because so much depends upon the financial condition of the country. Thus, a burden of $3.00 in Italy is far heavier and far more exhausting to the nation than the same amount in the United States, with its higher scale of prosperity. But these facts serve a particularly useful purpose in showing how great and how universal the growth in war expense has been in the last ten years. Nowhere is there a diminution of these frightful burdens; everywhere a steady increase.

THE "TARIFF ISSUE."

It must have been apparent to every experienced political observer that a distinct change in the campaigning of the Republican and Progressive parties has occurred in the past two or three weeks. During the two months or so which followed the nominations, the attitude of the parties was peculiar but unmistakable. The Democrats were carrying on a vigorous and effective campaign against the field. The Third Party was devoting itself to attacking the Republicans in general and President Taft in particular. The Republican leaders, meantime, were simply standing still. They were like men stunned, and it could hardly be said that they conducted any campaign whatever until well into September.

What has happened these last few weeks—the period when actual canvass always dispels illusions and discloses the real nature of a political situation—is that the Democratic party has moved forward on precisely the lines laid down at the campaign's beginning, that the Republican party has waked up and begun to do what, in the light of political strategy, it should have been doing many weeks before, and that the Third Party has almost completely abandoned its original tactical position, and is concentrating its attention now on issues which had little or no part in its original programme. A military critic would say that the Republicans had taken the field only after their opponents had been long left undisturbed in their advance on the important positions, and that the Progressive Party had executed that highly dangerous and usually disastrous manœuvre, the changing of front in the face of the enemy.

We are impelled to these remarks by the striking unanimity with which the Republican and Third Party campaigning has, in the last week or so, been converged on the issue of the protective tariff. In both parties, orators and organs are now openly and excitedly taking the old-fashioned Bourbon attitude that the country's prosperity is menaced by the Democratic programme on the tariff. Both are talking—precisely as if this were the Presidential campaign of 1892—about "European pauper labor," and the prospect of "bread-lines" of laborers in the United States if the Democratic party wins. Both are beginning to hint again at the tariff of 1894 as the cause of the panic of 1893. The *Tribune* of last week, speaking in Mr. Taft's behalf, explained how, after the American workingman shall have been confronted with Gov. Wilson's tariff policy on the statute books, "he can fall back on the charity of the soup house." The *Press*, Mr. Roosevelt's New York organ, denounces the Democrats for opposing the protective tariff, "though without it American business should perish and American wage-earners starve."

Now, we shall not dwell on the rather amusing inconsistency of this suddenly adopted attitude of the two wings of the disrupted Republican party. We might point out that the Republican party's Chicago platform declared that "some of the existing duties are too high and should be reduced," and that the Third Party's tariff plank contained the information that "we demand tariff revision because the present tariff is unjust to the people of the United States." We might even remind the excited philanthropists of the press that the Democratic platform, after denouncing, like the two other platforms, the present protective tariff, added that "we recognize that our system of tariff taxation is intimately connected with the business of the country," and that the legislation enacted to correct existing injustices should be "legislation that will not injure or destroy legitimate industry"—a declaration supplemented by Gov. Wilson's remark, in his speech of acceptance, that in tariff revision "we should act with caution and prudence, like men who know what they are about and not like men in love with a theory."

All this throws a light that is odd enough on the present turn in the Republican and Third Party campaigns. But we are most impressed by the fact that those two parties are now, in the last weeks of the campaign, harking back to the days when high protection was a fetich and when the public man who touched the tariff duties, except to raise them higher, was laying a sacrilegious hand upon the ark. The Republican party is reverting to this attitude, in the face of its knowledge that it was the Taft Administration's hostility to tariff reduction which split the party in two. The Progressive Party is adopting the same position, in the face of the well-known fact that the Progressive faction, which was formed in the Republican party in 1910, and out of which the present Third Party directly grew, was at that time founded almost wholly on the issue of tariff reduction.

If any one is puzzled to account for these extraordinary inconsistencies, he will find the explanation in political history. The campaign of those two parties, as originally planned—especially that of the Third Party—has broken down. Mr. Taft still may argue forcibly for preserving the Constitution and safeguarding freedom from industrial monopoly; but both those issues had been championed in the thick of the fighting by the Democratic candidate, while the Republican campaign was at a standstill. To-day both issues belong to Gov. Wilson. As for the Progressives they have apparently discovered, late in the day, just what the American people think of ripping up the Constitution, handing the private citizen over to the tyranny of majorities, and licensing monopolies in the necessaries of life. When such discoveries are made, there is nothing for it but recourse to other and all but forgotten campaign slogans. In former political campaigns it was the Bloody Shirt, the Confederate Debt, the repudiation of United States bonds; to-day it is soup-kitchens and bread-lines. The desperate eleventh-hour manœuvre bids fair to be exactly as successful now as then, and it reflects an equally remarkable conception of the American voter's common sense.

CAMPAIGNS AND VOTES.

Mr. Edward Stanwood, author of the standard "History of the Presidency," contributes to the current *Atlantic* an interesting article on "Election Superstitions and Fallacies." These range all the way from the queer belief that "no man possessed of a middle name could be elected to the Presidency a second time"—which, as Mr. Stanwood reminds us, had considerable currency prior to Gen. Grant's reëlection—to the comparatively respectable, though still quite fallacious, notion that no Senator can be elected President. The tap-root of all these superstitions and fallacies is in one and the same tendency. "There are men," as Mr. Stanwood says, "who discern an occult and invariable law in the sequence on three successive occasions of a certain event after another event which has no relation to the first, and which could not have caused it."

That Mr. Stanwood himself should fall a victim to this weakness, is of course out of the question; but there are fallacious ways of thinking far less crude but not altogether without kinship to these that he laughs at, into which even so careful a student may be trapped; and in his earnest argument upon a thesis of his own, Mr. Stanwood has committed such an error. He says:

> The most successful stumping tours in our political history, so far as the number addressed was concerned, and the most spectacular, were those of Mr. Blaine, in 1884, and those of Mr. Bryan in his three campaigns. But the election returns at the close of the canvasses cannot be tortured, with the utmost mathematical ingenuity, into proving that by their eloquence an appreciable inroad was made in the ranks of their opponents.

"Mathematical ingenuity" cannot, indeed, avail either to prove or to disprove that Bryan's speeches helped him; but this is primarily because no amount of mathematical ingenuity suffices to fix the solution of a single equation with two unknown quantities. We know the final result; but we have no means of knowing what the result would have been if Bryan had made no speeches, or had bored his Western audiences instead of pleasing them and arousing their enthusiasm. And inasmuch as, after all, Bryan's amazing personal ascendency over millions of American voters, an ascendency which was proof against repeated defeats, was built up solely by his public utterances, there is good reason—of a non-mathematical kind, to be sure—for supposing that his campaign speeches were not wholly without effect in attracting votes to his cause.

The thesis that Mr. Stanwood is here engaged in supporting is, in a word, that campaigning does not change votes. He makes an admission, indeed, which would deprive that thesis of most of its practical significance, even if its abstract truth were admitted; for he says that "the manufactured enthusiasm of those who attend the meetings probably has an influence in dissuading doubting and hesitating voters from deserting their party," and that it "certainly has the effect of bringing indifferent citizens to the polls on election day." The numbers that come under these designations would alone be sufficient to determine the issue in most campaigns; but Mr. Stanwood seems to regard as non-existent another class which plays an important part in our electoral contests. There are hundreds of thousands of "doubting and hesitating voters" with whom the question of their choice in a given election does not present itself in the light of "deserting" or not deserting their party; men who, though they have been in the habit of voting with a given party, do not regard themselves as bound to it by anything like an obligation. In the present campaign, of course—which Mr. Stanwood expressly sets aside as exceptional—the number of such men is enormous; but they have been very numerous at any time these thirty years, and for much of this period have probably held the balance of power. "Did you ever meet or know of a voter," asks Mr. Stanwood, "who was converted from one party to another by a stump speech?" Well, we may never have known of a change of heart so sudden and so radical; but we have been familiar with great numbers of cases in which judgment was held in suspense until the last weeks of the contest, and then was determined by the aggregate of the impressions derived from all sides during the campaign. Accordingly, the idea that, as the campaign progresses, there may be "a perceptible drift towards this candidate or that," which Mr. Stanwood regards as an illusion, we believe to have a most substantial foundation.

The argument that campaigning effects little or nothing in the way of changing votes is similar to the notion that newspapers have no influence, which crops up whenever the weightiest journals of a community are on one side in an election and the other side is overwhelmingly victorious. Such a result proves nothing of the kind; it may even be that the overwhelmingness of the victory is the very thing that deprives the event of value as a test. The most that sober journals can hope to do is to influence a comparatively thoughtful class of men—men to be found in every walk of life, rich and poor, learned and unlearned, but still small in numbers as compared with the whole voting population. They cannot hope to make any impression on a tidal wave. If a million votes are cast against their side and only half a million for it, this does not show either that they were wrong or that they were unsuccessful; it only shows that they are unable to turn the tide when it is running against them in that tremendous way. Fortunately, the odds against which they have to contend are not usually so heavy; and accordingly the influence that they do exercise is quite sufficient to justify that interest in their attitude which continues to be felt by the community at large, and to be reflected in the solicitude of politicians.

THE MURDERER'S TRADE.

The story told in court by the principal witness for the State of New York in the trial of Police Lieut. Becker has a significance that quite transcends its direct bearing upon the case at issue. It opens up an extraordinary perspective of human character and motive. It brings forward an entire group of fundamental problems, problems of psychology, sociology, and politics. It would be quite improper to assume in this place the correctness of "Jack" Rose's testimony. But whether "Jack" Rose told the whole truth, or only part of the truth, or nothing at all of the truth, it does not affect the essential value of his revelations regarding the attitude of the criminal mind towards the individual and society. What this witness has done is to furnish information from the "inside," confirmatory of the general public impressions regarding the spirit of the underworld. The public by this time is pretty generally convinced that there are men in this city with whom murder is a trade; and though the professional thug has always been found at work in all countries, the public is also convinced that, so far as this city is concerned, the class of professional assassins is on the increase, and the profession itself is being systematized to an unprecedented degree. People will tell you as a matter of course that in New York to-day any one can be put out of the way by hired thugs at so many hundred dollars for the job. But even the man who is convinced that the hired bravo is busy at work among us, must find it difficult to picture to himself the matter-of-fact spirit in which the practitioners of this horrible trade go about their work.

Thus it is in this sense immaterial whether Lieut. Becker instigated the murder of Herman Rosenthal, or whether "Jack" Rose himself was the prime mover in the affair, or whether the story told by Rose upon the witness stand was made out of the whole cloth. Assuming that "Jack" Rose's story was pure romance, we still face the fact that conditions must exist to furnish a basis for the man's imaginings. No matter upon whose initiative the gunmen who shot down Herman Rosenthal were hired, no reasonable man to-day will doubt that the hiring was done. It was done in a matter-of-fact way, and the bargain was carried out on both sides in a matter-of-fact way. "Jack" Rose, according to his story, met no rebuff, no hesitation, when he first approached the gangsmen with the "Herman Rosenthal proposition." They merely said, "All right; we are ready when you are ready." It was quite as if they had said, "At what time in the morning do you want the piano moved?" Delay ensues, and the thugs are reproached with the fact. "All right; let's go up and do the job now." Another witness testifies to the words of the man whose pistol had done the work. "I got cha," this efficient agent remarked with something of the craftsman's pride in a task well performed. Where was the sacred horror which, according to tradition, besets the most perverted soul at the thought of taking human life? Where were the preliminary hesitations and shrinkings, where was the aftermath of remorse? The fact seems to be that the people of this city and State must deal with a class in whom the intuitive horror of shedding blood does not function and whom society must consequently treat as out of the social pale.

It does not follow that we are driven by the circumstances of the present case into assuming the truth of Lombroso's criminal type. It is still possible to maintain that the gangster and the gunman are the product of a vicious environment, and not of a vicious heredity. But that only intensifies the social responsibility. Environment has played its part in the development of the ruffian type with which we are now concerned. To this point goes the fact that three of the men accused of having actually taken part in the murder of Rosenthal are of Jewish birth. The majority of the men who are charged with having instigated the murder are of the same race, a race which hitherto has been traditionally averse to crimes of violence. It is possible to bring up this point without fear of giving offence, because the evil has been frankly recognized by leaders of the Jewish community in New York. These hideous revelations have been made the occasion for a day of solemn mourning in the synagogues. Ministers of the Jewish faith have publicly deplored the conditions of life among the immigrant population in this city which have tended to destroy the ancient parental authority and to set up vicious standards and a vicious environment for the young generation. Undoubtedly there is work here for the social diagnostician and reformer.

But while encouraging such efforts as are being made for the fundamental cure of the conditions that foster crime, society must also act for its own protection through the more direct agency of the law. The severe administration of justice and the swift administration of justice are demanded by the situation. If anything has been made plain in this sordid Rosenthal affair, it is that the delays and uncertainties of justice from which we suffer more than any other nation, are a direct encouragement to crime. It has been made plain that the gangster fears punishment; he shrinks not only from the extreme penalty for murder, but from the possibility of a long term in prison. But our cluttered system of judicial procedure has given the criminal aid and comfort. Neither the certainty nor the swiftness of punishment is made vivid to him. If such extraordinary performances as the Thaw trial succeed in dulling the conscience of the ordinary decent citizen to the demands of justice, how can the effect upon the mind of the criminally inclined be anything but deplorable? A succession of criminal trials swiftly carried out, a succession of severe penalties justly inflicted, would act as an effective check to criminal violence. Precisely because so many murders in this city are not crimes of passion at all, but part of a business carried on for profit, the hand of the law can deal adequately with them. When the certainty of punishment is balanced against the profits from murder, the assassin's trade will be sharply checked.

THE ALIENIST AND LITERATURE.

The critics will eat humble pie if it shall turn out that the only true means of interpreting literature is afforded by science. The time is one to sound the alarm, now that psychopathic studies have collected a body of facts sufficiently large and complex, it is said, to serve as a touchstone of human motive. It is in Germany that the alienist has pushed these literary applications of science to the most overweaning extreme. Just at present the impulse comes from Professor Freud of Vienna, whose disciples are engaged upon a scrutiny of great personages of history and fiction, in its broad sense. Briefly, Professor Freud's theory is that action may be prompted by states of mind and body of which the agent is perfectly unconscious, the element of sex playing a large part. As one writer puts it, "We are all the victims of our complexes," the complex being "a system of ideas possessing a certain emotional tone or value." It is usually determined by experiences had early in life. The result is that a person may read into his conduct a religious, a moral, or other motive, whereas such considerations merely furnish the occasion of outbursts which were long ago predetermined on entirely different grounds.

The writer from whom we have just quoted, Dr. Isador H. Coriat, has written a book, "The Hysteria of Lady Macbeth," in which, in a language worthy of his theme, he undertakes to interpret literature by modern psychopathology. Lady Macbeth is the victim, he says, of "a pathological mental dissociation, arising upon an unstable, day-dreaming basis, and due to the emotional shocks of her past experiences. She is a typical case of hysteria; her ambition is merely a sublimation of a repressed sexual impulse, the desire for a child based upon the memory of a child long dead." In the light of modern science, the sleepwalking scene proves to be the result neither of "genuine sleep nor the prickings of a guilty conscience"; it is a "pure case of pathological somnambulism, a genuine disintegration of the personality." The passage beginning:

> I have given suck, and know
> How tender 'tis to love the babe that milks me,

is cited as an example of "a substitution, or what is termed in modern psychopathology as a sublimation or transformation of a sexual complex into ambition, a mechanism which is frequently found in hysteria." Lady Macbeth, we are told, is, naturally, neither ambitious nor brave, but acquires the appearance of such qualities by a process of "repression" which is a forerunner of "hysterical dissociation." "She thinks she chooses her actions, whereas in reality, they are chosen for her by the unconscious complexes."

This is, of course, not the first time that "science" (so-called) has laid violent hands on Shakespeare. Lovers of verisimilitude were cheered by one physician's statement that Juliet's deathlike sleep of forty-two hours was perfectly possible, and some of us have had the sneaking hope that a geologist might some day tell us how Bohemia once had a seacoast. But the new scientific critics have not stayed their hands from the very heart of the plays. Their attitude appears to be this: if the characters are really true to life, "science" is now in a position to explain them in more accurate terms than the ordinary critic possibly can. We are not here concerned with the question whether the new science is entitled to speak with any assurance even in regard to persons who have actually lived. But it makes itself ridiculous in setting up as the mouthpiece of Shakespeare. His plays are not mere transcripts of life. That they are far from that is proved by the modern realist who turns from them with the crushing judgment that no one ever talked like Hamlet. Hamlet can be called human only in the peculiar sense that, though his counterpart is not to be found on earth, human beings can at least conceive of a person in his circumstances behaving and talking like him; and the conception is instructive. But to resolve him into an ordinary neurotic, the victim of "repressed" love for his mother, as one physician has done, is as absurd as it is disgusting.

And even if Shakespearean plays were near to literal truth, psychopathic interpretation would need to hesitate. The problem is made difficult by the present lack of critical standards. Until there can be some substantial agreement on the purposes of artistic creation, authors will suffer from the fads of the moment. We all know to what wrenchings Shakespeare has been subjected. There have been the moralists who had their reason for the rise or downfall of every character. Desdemona suffered death because she lied about the lost handkerchief, and Cassio likewise because he had a mistress. The symbolists have come and gone, with their tenuous centrifugal meanings, while many of the most accurate scholars to-day affect to believe that the great master had enough to do telling a good story without bothering about anything so silly as a moral. Little wonder that the alienist has thought his services to be very much needed. In Germany, he is said already to have converted some of the most dignified personages of Greek drama into a great mass of nerves. Whereupon musical composers, like Strauss, have rejoiced, believing that by music alone can these be most truly expressed. It is to be hoped that such a pass may rouse literary scholars out of their present indifference to the deeper aspects of artistic purpose. For it can never be that creators of great characters intended them to be set forth in terms from which the human will is conspicuously absent. Even Ibsen, with his great dependence upon the laws of heredity, could have meant nothing so sweeping.

To the critic, who may feel amazement and humiliation at the inroads of the new German psychology into his field, we may recite the words of a great book: "Keep that which is committed to thy trust, avoiding profane and vain babblings, and oppositions of science falsely so-called."

"THIS ASTONISHING NATION."

If a nation may be supposed to feel like an individual on the subject of advancing age, we Americans have reason for much gratification. It is taking us a monstrous long time to grow old; the European who comes to our shores is still impressed, as he was in the days of our fathers and grandfathers, with a sense that what is presented to his vision is the spectacle of a youthful prodigy. Here, for instance, is the literary editor of the London *Daily News*, Mr. R. A. Scott-James, telling us, in the *North American Review*, of the thoughts with which a visit to America has filled his mind; and he finds the title best fitted to describe their general purport to be "This Astonishing Nation." Nor is it the vast expanses of our continental area, or the developments peculiar to the comparatively newly-settled West, that account for his impressions; since he frankly tells us that he has not visited Chicago or St. Louis or San Francisco, nor seen the Rocky Mountains or the Colorado Desert or "the flood of the Mississippi." Apparently, his experience has been confined to the cities of the Atlantic seaboard; yet he feels himself to have been in contact with a race full of the untamed blood of youth. When we recall that, in point of time, we are as far from the Declaration of Independence as the England of Goldsmith was from the England of Shakespeare, and much farther from the foundation of Harvard College than the England of Shakespeare was from the England of Chaucer, it cannot but strike us as remarkable that we continue, in the eyes of our British cousins, to appear so inveterately young.

The battery of the standard questions—"What do you think of us?" "How do you like us?" "Is this at all what you expected?"—with which the newly-arrived foreigner is assailed, has remained, generation after generation, a source of ridicule on the part of the visitor and of mortification on our own part. But there are few things that persist long in this world without some kind of justification; and, ridiculous as these inquiries are, they do not have their root solely in American naïveté. If, in point of fact, almost every European who publishes his observations on our country finds us a new thing under the sun, a mystery to be explained, a sign and portent to stand amazed at, it is small wonder that there is a certain curiosity on our side to watch the manifestations of this state of mind. On ninety-nine successive days, the "average American" newspaper man does not think of himself, or of his country, as a curiosity to be examined, or a problem to be solved; but on the hundredth day, when an eminent European chiel comes here, takin' notes—and faith, he'll prent it—what is more natural than that the thought of the American newspaper man should be directed to what he expects will soon be uppermost in the mind of the visitor? "A nation of men free from the burden and the responsibility of self-consciousness, having the directness and the spontaneity of young schoolboys"—this, among other things, is what Mr. Scott-James finds us to be; and indeed, in his case, the questions thrust at the incoming visitor on landing were hardly even premature, for his first feelings were emotion of such "bewilderment and desolation" [isolation?] that he was overjoyed to realize that he resembled the "average American" at least in the point of having the same number of legs.

In these remarks, we are far from intending to find fault with our English visitor's article, which is certainly not lacking in friendliness, and which contains many interesting reflections. One of these, which strikes us as specially worth quoting, refers to our passion for mechanical systematization:

> You cannot be long in New York without observing that business has been actually embellished with that loving care which is akin to the care of the artist. I have been taken through offices organized to a point of efficiency which must be highly unremunerative. One is assured that millions of dollars are spent upon labor-saving appliances, which clearly satisfy the business instincts of directors on their artistic side—by which I imply their disinterested love of efficiency for its own sake. I venture to utter a conviction when I say that this love of the machine is bred in the bone of the average American.

But the note that runs through the article as a whole—and through the whole class of writings of which it is an example—suggests the idea that, in a measure, the tables might be turned on the writers. Is it, after all, in ourselves or in our visitors that the youthfulness really resides? Is not the capacity to see in us wonderful traits and potentialities quite as much an evidence of the freshness of their spirit as of the unexhausted vigor of our own youth?

But there is another aspect of these foreign generalizers. They draw the picture of what seems to them the American type; do they draw it so that we ourselves recognize its fidelity to the fact? Mr. Scott-James, for example, deals in a most kindly way with the American's relation to the almighty dollar; he makes our refusal to accept as a basis for personal distinction any "adventitious aid" except the possession of wealth a basis of praise, not blame. The regard paid thus to wealth does not show grossness or vulgarity; it is connected with that "artistry of business" which is so distinctively American. "The appearance of gentility," on the other hand, "without the solid hall-mark of wealth, is for the American the most detestable of frauds." That sounds pretty well; but, just as we are beginning to feel that the writer has made out a better case for us than we could have thought out for ourselves, he goes on to say, by way of clinching the matter, that "no man who is not rich would dare to say that his ancestors came over in the Mayflower." At this, of course, with the best of will, we cannot forbear to smile; and all of a sudden we realize that one reason why the stranger can generalize so much more beautifully than the native is because he knows so much less of the facts. But this is in the nature of things; and, so long as our note-making visitors are—as is not only this one, but the majority of his confrères—honest, well-disposed, and intelligent, we can find pleasure and profit in the sidelights they throw upon our national life.

ON THE SUICIDE OF GEN. NOGI.

KAMAKURA, Japan, September 20.

Is it a piece of Buddhistic pessimism when I say that life itself is a tragedy from which only death is deliverance, and that therefore death is not life's end, but the hope and beginning? It is verily often proved here that death is not a cowardice or act of negation; even as an apology it has the highest possible dignity. Certainly there are various degrees of intensity in feeling life's tragedy according to personal temperament and circumstances, or to the nature of the age and race with which a man happens to bind himself; there is one who, appearing outwardly most rugged and insusceptible, is in his heart of hearts most tender and compassionate, and whose real nature rarely reveals itself, even though it is never misunderstood; and exactly such a one was Gen. Nogi, the famous Japanese soldier, known in the West as the Hero of Port Arthur, who committed suicide, or *junshi*, to use our Japanese word meaning a royal death, in following his master (the late Mikado) to the other world, on the very same evening when the Imperial hearse left the Palace. At this moment when his laudation is being sung most highly not only in Japan, but also in the West, as an act for the enforcement of the Japanese Bushido precept, I have no particular thought to dwell on that part; but what I am keenly and most forcibly moved by in the fact of his suicide, or *junshi*, is the human side of his nature, I mean how deeply he was wounded by life's tragedy. I do not like to speak and emphasize his death as martyrdom for old samurai precepts, but I want to bring out more the fact of his being a man most human and sweet; indeed, I think even that human personality alone would make him an immortal name.

Although it seems he already keenly realized the tragic side of life in his young day from the tragic death of his younger brother in his fifteenth or sixteenth year, and also the tragic death of Bunnoshin Tamaki, the younger brother's father-in-law, in connection with the so-called Mayahara Issei Rebellion, and also that, as Gen. Nogi wrote in his holograph, he wished to find the opportunity of death ever since he committed a disgraceful act in allowing the colors of his regiment to be seized by the Satsuma rebels whom he was sent to suppress in the tenth year of Meiji, or 1877, I think that his great decision, I mean his thought of suicide, was firmly formed during the late Russia-Japan War, or soon after that war. As the whole world knows well, he was the general who was sent by the late Mikado's august command to Port Arthur, the fall of which was the most imminent necessity for the Emperor's programme; but he fought the hardest battle at Port Arthur with many succeeding sad failures, and, as a natural result, he finally lost a thousand brave young soldiers and left wounded many more thousand soldiers. He was then criticised even bitterly by many in the Western press; while he would not have feared the foreign criticism, how, he thought, could he see and face the fathers and mothers of those dead soldiers? In fact, he wrote the following lines when he returned from the field making the so-called Triumph Return:

Hazu ware nanno kawo ka rofu wo min,
Seisen konnichi ikunin ka kayeru.

(What shame! Oh what face have I to see their old fathers! 'T is a triumph return; but to-day how many have returned from the field?)

That was this brave soldier's saddest cry of heart; I can understand well why he placed his two sons, Lieutenants Katsusuke and Yasusuke Nogi, in the hardest, most exposed situation at Port Arthur; and as he wished, they died the bravest tragic death. He could not have stood, above all things, against the criticism, if there was to be criticism, that his father's selfish love covered his sons from danger and death; it is said that he only smiled, not shedding even one tear (he acted differently in other cases), when his last son's death was reported, and even forbade that his remains should be put in a beer barrel or orange box, but commanded that it should be left in the field to become a prey of birds. It was in those days that the following popular song was sung in the streets:

You cannot cry saying that he was your
 only one son;
Here is even one who lost his two sons.

That one who lost his two sons was, of course, Gen. Nogi; when he returned from the field, it was said he often confessed to his friends that he felt as if his heart's shoulders were lightened from the death of his sons, as he thought it was a punishment for his lack of tactics or wisdom in losing so many soldiers and making their mothers cry. "That was my little apology I could offer," he used to say. While the other generals looked to be proud of their own war fame and went round amid the banqueting and wine-drinking after peace had been regained, it was only that Gen. Nogi, who shut his gate tightly against visitors and hated and most bitterly objected to listen to and accept the words of praise. "Sumanu" was his usual word whenever the war talk, particularly on Port Arthur, happened to come up; that "I regret" was short, but by that one Japanese word Gen. Nogi wished to express all things and everything of his true heart.

When he told his family not to make the formal funeral service for his lost two sons, he thought that the service would not be complete without the third coffin, that was himself; but to-day even the fourth one, that of Countess Nogi (what a great Japanese woman that was!), has been added to the funeral of the Nogi family. Why did not Gen. Nogi die then, when he had already decided to die at the end of the war? That was because he was afraid it might be said that he had gone mad from the loss of his sons and followed after them, and because, above all, there was the Mikado, who fully trusted in him and to whose service his whole life was offered. Although he wished to die to make the apology for once and all, I mean to the fathers and mothers of the lost soldiers, he was so situated that he could not so easily die; he was patiently waiting for the fit opportunity to make his life's final exit. I have some reason to imagine that he grew doubtful and suspicious of the true meaning of Humanity when his fighter's fame became greater and greater, even in the West; I believe he often asked himself why he was entitled to such a distinguished fame, while he acted nothing but a series of brutalities at Port Arthur, although it was not from his own free will. This feeling, I mean the distrust in general humanity, was intensified, I dare say, when he appeared in Europe in company with Admiral Togo a year or two ago, and was received with the greatest honor as the nation's hero; he became a thorough pessimist, and his pessimism was deepened when his beloved Mikado passed away.

If Gen. Nogi's life tragedy and his human side were clearly and intelligently told, I think that he would be more prized as a humanity-loving soul than as a "war-god." When we call him a true samurai, it was because of his true love of peace; only the man with the real love of humanity can become the true fighter on the battlefield.

YONE NOGUCHI.

MISCELLANEOUS GERMAN BOOKS.

Numerous are the attempts in modern German letters to apply existing systems of philosophy to the problems of contemporary society. But of all such books, Omar al Raschid Bey's "Das hohe Ziel der Erkenntniss" (München: R. Piper) is likely to leave the most profound impression. For as the late G. V. Widmann, that broad catholic spirit among the writers of Switzerland, remarked: "Von den Blättern . . . geht ein Hauch des Ewigen aus und eine beschwichtigende Stille, die wunderbar kontrastirt zu dem ruhelosen Umtrieb heutigen Lebens." The work is founded upon the old esoteric wisdom of the Upanishads, but the language in which this wisdom is conveyed is the author's own creation. He has delved into the very sources of speech and has found words that embody in concrete and lucid formulæ the meaning of ideological concepts. Dr. Fritz Mauthner has said of the chapter in which the author reduces time and space to concepts of the ego: "Ich fand den Abschnitt über Zeit and Raum, Ich und Welt, so schön, dass ich nicht anstehe, ihn den anschaulichsten Platons an die Seite zu stellen."

It is refreshing to read in a treatise which has a professor of Heidelberg for its author, "Religion und Kultur" (Jena: Eugen Diederichs), that the word *Kultur*, which has been much overworked of late, must henceforth be employed with great caution. Professor Weber inquires into the causes of the present widespread hunger for culture of all sorts, and explains it by the discrepancy between effort and attainment, the disconnected aspect of the spiritual cosmos of the modern world, and the consciousness of having taken part in various movements which have run their course without giving any true value. Religion is the panacea prescribed by some, but religion cannot be artificially created. Professor Weber does not think probable a renascence of Christianity or of any of the older religions. For man in the past, feeling his existence not as a process, but as being, and seeking something that embraced and surpassed it, found the final unity and was predestined for religion. Modern man, on the contrary, placed in the midst of a steadily shifting process of development, which is his life, seeing a before and an after, and establishing a relation between them, must think causally, which predestines him for irreligion. But modern philosophy has taught us a new way of looking at things—not to dissolve their unities, but to recognize and accept them as such, somewhat in the manner in which a poet lives and creates. This, the author asserts, gives us a conception of the continuity of being which no philosophical formula or religious dogma has yet succeeded in doing. He does not agree with all the charges raised against Christianity by Nietzsche, but he does reproach the doctrine of an Hereafter with having made of our present life only a preparatory transitional stage, with having travestied into formulæ of renunciation the strongest human instincts, and, by a peculiar perversion of its purposes, with having produced the capitalistic structure and the rationalistic materialization of modern society. He makes life itself, with all its manifold manifestations, the centre of his new religion:

> . . . die aller Willkür fremde innere Notwendigkeit, das eigene innere Gesetz wird herrschen, das jedem Lebensteil die Formung geben will, auch uns, die wir sie unter Führung des Bewusstseins finden sollen. Es ist die stärkste "Gültigkeit" von allgemeiner Art, die da ist. Nach dem von ihr in alles Sein gelegte Bild werden wir unsre Kräfte regeln, und wird sich jeder einzelne auf seine eigne Art ins Dasein, in den Raum der Formungs-, Handelns- und Entwicklungsmöglichkeiten fügen müssen.

Dr. Max Kemmerich has compiled a curious book of about three hundred pages under the title, "Aus der Geschichte der menschlichen Dummheit" (München: Albert Langen), and says in the preface: "Eine Geschichte der menschlichen Dummheit zu schreiben überstiege meine Kräfte: sie müste umfangreicher werden als die chinesische Enzyklopädie. Darum begnüge ich mich mit diesem Streifzuge, der einem ganz bestimmten Gebiete gilt. Der Zufall ist es nicht, der mich leitete."

Whoever has watched the discussions in the Bavarian Landtag and knows how violently the "ultramontane" and the liberal representatives are fighting for supremacy in matters of public education, will recognize in the words quoted the motive which led to the writing of this book. For, while the author gives a comprehensive survey of scholasticism, witchcraft and devil-craft, and other manifestations of superstition, the fourth chapter deals largely, and the fifth almost exclusively, with compulsory sectarian education and the fruits thereof in Bavaria. His familiarity with the subject is amazing, and his comments are direct and to the point. Thus when he relates in the first chapter the story of the juggler who appeared before Philip of Macedonia and caught peas thrown into the air upon the point of a needle, and instead of a rich reward got only a bushel of peas, he adds: "Wäre ein kluger Papst beim Aufwerfen der ersten Spitzfindigkeiten mit der ganzen scholastischen Richtung ebenso verfahren, dann hätte die gelehrte und die fromme Dummheit niemals solche Dimensionen annehmen können." Following the author through his selections from the writings of the early church fathers to recent utterances of an obsolete theology, leaves in the reader an impression similar to that gained by a walk through some museum of mediæval curiosities, including instruments of torture. Dr. Kemmerich's manner of treating his subject holds the reader's attention, although the subject is well-worn and by no means delectable.

The present singular alliance of science and literature is productive of some extraordinary books in Germany. One of the strangest is a volume of "studies of the unconscious in hero and heroine," by Fritz Wittels, a former pupil of Professor Freud, entitled "Tragische Motive" (Berlin: Egon Fleischel & Co.). The main idea of the book is indicated in this statement from the preface:

> Unsere Seele besitzt die Fähigkeit, Schwierigkeiten zu erkennen, die sich in der Aussenwelt ihren Wünschen entgegentürmen. Wir wünschen vielerlei, wenig wird erfüllt und ohne Mühe nichts. Die Seele besitzt aber auch die weniger beachtete Fähigkeit, Schwierigkeiten und Unmöglichkeiten zu ignoriren und unbeschadet aller äusseren Hindernisse *endophysisch* alle jene Wünsche zu erfüllen, denen in Wirklichkeit eine Erfüllung versagt bleibt.

One of the functions of this sub-conscious force, which he resents being looked upon as a matter of metaphysics, consists in substituting unconscious motives for those of the conscious will. Upon this premise he builds up some interesting theories relative to the actions of famous heroes and heroines in history and literature. That these theories shatter some of our cherished notions about their characters goes without saying.

Wittels begins his inquiry into the sub-conscious with Brutus, the time-honored favorite of school oratory, and interprets him thus: The speech of Brutus is that of the republican, conscious of his descent from Cato and the willing mouthpiece of his milieu: the actions of Brutus are those of the illegitimate son of Cæsar, secretly hating Cæsar for having dishonored his mother, secretly discontented with his lot, secretly impatient to succeed Cæsar. In his analysis of Belshazzar, of Rhodope, as presented in Hebbel's drama, "Gyges und sein Ring," and the Medea of Euripides, Wittels holds the reader's interest less by the force of his arguments, which are not always convincing, than by his forcible, brilliant style. An interesting paper is the one entitled "Hellas und Hysterie," in which he credits Jacob Burkhardt with having discovered that the Hellenes, generally regarded as models of strength and health, were hysterical. It seems that the suggestion which he launched in one of his books was accepted with particular eagerness by some Austrian writers, among them Hoffmannsthal, who forthwith set out to revise classical drama according to psychopathic standards. Wittels protests against these new versions of Klytemnæstra, Jocasta, Electra, Creon, and Œdipus, as "re-created" by Hoffmannsthal, staged by Reinhardt, and set to music by Strauss. He asks:

> Wenn die griechischen Tragiker hysterisch waren, warum müssen sie dann umgedichtet werden? Vielleicht sind wir selber oder das Publikum solcher Umdichtungen hysterisch, wenn wir Hofmannsthal besser goutiren als die Meister der grauen Vorzeit. Die griechischen Tragödien sind krass im Sonnenschein. Gespenster, Drachen, Götter erscheinen am lichten Tag. Die Umdichter sind krass in Nebel und Nacht. Nach der abgetönten Dichtung einer klassischen Periode scheint unser Geschmack grelle Kost zu fordern. Wir wollen einen Muttermord auf unserer Schaubühne sehen: aber nicht im naiven Lichte des Werktages, sondern im Schein von violetten Reflektoren und dunkelroten Reflexionen. Unsere Phantasie badet im Blut, aber niemand soll es merken, wir leugnen es uns selber ab, wenn wir am andern Tag unsere Beschäftigung, als da ist, uns ducken und Geld erraffen, wieder aufnehmen. Und nur dieses Versteckenspielen, diese Lügenhaftigkeit ist hysterisch.

Women occupy a surprisingly large space in the book, and in his analysis of female heroines from Judith to Lady Macbeth the sex in general receives a treatment which makes Wittels a worthy compatriot and contemporary of Weininger. His theory about women who commit murder for what is generally accepted as political reasons, seems specially framed for his "endophysical" fulfilment of desires otherwise unrealizable. He is suspiciously eager to inquire into the private life of Charlotte Corday, Vera Sassulitsch, Tatjana Leontiew, and Wanda Dobrodzicka, to discover some proof that they acted not from a conscious political motive, but from a sub-conscious sexual instinct.

Max Martersteig's "Die ethische Aufgabe der Schaubühne" (Leipzig: Insel-Verlag) is a thoughtful contribution to the literature of a well-worn topic. Taking his cue from Schiller's much-misinterpreted address of the year 1781, "Die Schaubühne als moralische Anstalt betrachtet," he says that the work of Schiller should always be looked upon as a whole, his importance becoming evident only as one follows his development from that address to the "Briefe über die æsthetische Erziehung des Menschen." Schiller's aim "to transmute the work of necessity into one of free choice" should always have been the aim of human action as of dramatic production. The noblest effort of humanity was to him the removal of the gross contrast between the sensual and the moral instinct of man. Tragedy should deal not with the Schopenhauerian negation of passion, but with its refinement and elevation. This, however, does not imply that Schiller wished the drama to be adapted to the standard of the nursery or the boarding-school miss. He recognized its dynamic quality and did not intend to give it fixed boundaries. Martersteig is of the opinion that a revision of the current conception of Schiller's æsthetic principles, and their application to contemporary problems of the stage, would save the theatre from being muzzled by "moral purism" and from degenerating through a degrading cult of Momus.

A. VON ENDE.

NEWS FOR BIBLIOPHILES.

The fourth and concluding portion of the great library brought together, in a half-century of collecting, by the late Robert Hoe, will be sold by the Anderson Auction Company in twenty sessions, afternoons and evenings, in the weeks beginning November 11 and November 18. While a large number of important and valuable books are included in this final sale, it does not equal any one of the three preceding portions.

There are forty-seven old manuscripts, including eighteen fifteenth-century Books of Hours; an Officium of the early sixteenth century with nine large miniatures; a Hebrew manuscript Bible of the fifteenth century; a manuscript Petrarch; several Persian and Arabic manuscripts, and a volume containing manuscripts of about sixty English poems, some being as early as the fifteenth century, others more modern transcripts, a collection formed by Joseph Haslewood.

Among notable early printed books are: "De doctrina christiana sive de arte predicandi" of St. Augustine, printed by Mentelin in Strassburg in 1466; the "Summæ Theologiæ" of Thomas Aquinas, printed at Mainz in 1471; Cicero's "Tusculanarum Quæstionum," printed by Jenson at Venice in 1472, and one of about six copies known on vellum; the "Philobiblion" of Richard de Bury, printed at Speier in 1483; "L'Oreloge de devocion" of Jehan Quentin, printed at Paris about 1500, and one of only three copies known on vellum; Rolewinck's "Fasciculum temporum," printed by Ratdolt at Venice in 1481; and a series of fifteen printed Books of Hours.

Among the books from the Elzevir press are the "Eschole de Salerne" (1651), said to be the only uncut copy known, and the first Elzevir Cæsar (1635), in a prize-winning binding by Simier. Chief of the Aldines is a copy of the Petrarch of 1501, the first Italian book to be printed in Italic types.

The Shakespeareana in this portion include a third folio Shakespeare (1664), a freak, having the portrait printed at the bottom of the page and verses above and upside down; quartos of "The Merry Wives of Windsor" (1619); "Troylus and Cresseid" (1609), and "The Puritaine" (1607); and numerous editions of the Works. Spenser's "Faerie Queene" (1590-1596), and his "Fowre Hymnes" (1596); Samuel Daniel's "Delia" (1592), the Ouvry-Locker copy of the second edition, said to be the only perfect copy known, and others of his books; three editions of Drayton's "Poems" (1608, 1619, and 1627); the first edition of "Gammer Gurton's Needle" (1575), the second English comedy, the authorship of which has been attributed to Bishop John Still and, with more probability, to William Stevenson; Samuel Rowland's "Martin Mark-all" (1610); the first edition in English of More's "Utopia" (1551); Shackerly Marmion's "Cupid and Psiche" (1637), with the rare engraved title; and the sixth edition of Bacon's "Essaies" (1613), are among the most important early English books. There are series of plays by Dryden, Otway, Davenant, Mrs. Behn, Durfey, Congreve, and others; also, Congreve's first publication, "Incognita; or, Love and Duty reconcil'd" (1692), which is very rare.

A series of books by Swift, some duplicate Popes, and an uncut copy of Sterne's

"Sentimental Journey" (1768) are among the eighteenth-century English books. Of books by nineteenth-century English authors the most notable is a long series of first editions of Shelley, including "Zastrozzi" (1810), "St. Irvyne" (1811), "Laon and Cythna" (1818), "Epipsychidion" (1821), and "Adonais" (1821), the last being a superlatively fine copy in the original paper cover and of full size.

The Americana of this portion include two great rarities, the first dated edition (1504) of Vespucius's "Mundus Novus" and the first Latin edition of Columbus's first letter, "Epistola Christoferi Colon" (Rome, Plannck, 1493), but as the genuineness of one or two leaves of this has been questioned, the book is sold without guarantee. The second edition of the first collection of Voyages, the "Paesi Novamente Retrovati" (1508); the first collection of voyages in French, the "Extraict ou Recueil des Isles nouvelment trouvees" (1532); the second edition of Maximilian of Transylvania's account of Magellan's voyage around the world (Rome, 1523); Gomara's "Pleasant Historie of the Conquest of the West India" (1578); and Champlain's "Voyages" (1620), are other notable items of Americana.

As in the previous sales, a large number of books, including some very important ones, are catalogued under Binding, being either elaborate specimens or more usually *provenance* books with arms or devices of famous former owners. There are three books from Jean Grolier's library and one from Maioli's. A few autograph letters and literary manuscripts are scattered through the two catalogues, the most important being an A. L. S. of Catherine de' Medici. An autograph manuscript of Sir Walter Scott, a series of letters by Ruskin, and a mass of poetical manuscript of the poet Southey are others.

At the end, about seven hundred lots, is Mr. Hoe's library of bibliography, including some books rarely offered for sale.

A sale of miscellaneous books which belonged to Mr. Hoe, but which did not form a part of his library, will be sold by the Anderson Auction Company on November 25 and 26. Included are a large number of French novels.

Correspondence

THE STATE UNIVERSITY.

To the Editor of The Nation:

Sir: Are there not reasons to fear that our State universities are allowing themselves to be flattered, persuaded, and driven into attempting much more than any human institutions can successfully perform? Instead of devoting themselves to one definite and all important but difficult task, the traditional task of universities since there have been universities, these institutions must now have, or pretend to have, a hand in the business of everybody. Knowledge is power; the State university is the home of knowledge, therefore, the State University must make it its direct and immediate business to see that everything in the State which maintains it goes right, from the drawing up and enforcement of laws, to the installation of sewerage systems in all the small towns of the State, and the instructive entertainment of rural communities at country schoolhouses on long winter evenings.

Of course, the very last thing in the world that any sensible man would think of arguing is that the State should deny itself the privilege of calling into its service the men and women most competent to do its work, wherever it can find them, provided it can offer them acceptable terms, and conditions under which they can do their work with decent effectiveness. But all men, including even university presidents and professors, are of limited powers. The man who spends himself in delivering university extension lectures, serving on commissions, and helping to whip legislation into some kind of tolerable shape before it is placed upon the statute books of the State, cannot also spend himself in teaching his classes made up of students in residence at the university.

One of the very worst results produced by this spreading out of the State universities is that it is uniting with many other agencies to bring into discredit the "mere teacher." It may be said, indeed, that there probably never was a time in the history of higher education when the university professor as a type was more respected than he is to-day, in this country, at any rate. That is true, no doubt. But he is respected because he serves on commissions, goes abroad as ambassador of the republic, heads some movement which makes a dramatic appeal to the public attention, or perhaps merely excites and keeps excited the news instinct of the reporter for the daily press. He is not respected as a good teacher, or even as a teacher at all. If the good teacher is indeed a disappearing type in university faculties, it is because the east wind of discouragement is blowing him out of the profession. Even the man or woman of fine character has some natural longing for the substantial rewards of life: for the public respect, and for appreciation of intelligent and devoted service, shown in such ways as those in which it is given to university administrative officers to indicate such appreciation, for example.

Not the least of the evils wrought by this tendency towards undue expansion into the fields of the world, indeed, is its mischievous influence on the ambitions of members of the university faculty. The men who become accustomed to the idea that academic glory and newspaper renown are to be won, not by teaching, but by "doing things," come to attach a very exaggerated value to the importance of getting themselves numbered among those who are "doing things" even within the limits of the university world. Among no class of men will you hear more talk about "executive ability" than among the senior members of a college faculty; nowhere will you see more wise yet troubled shaking of the head when it becomes a question as to whether Mr. A. is really qualified, by virtue of his executive ability, to fill some pettily higher position in the faculty than he now holds.

Can it be that the cause of the evil here under discussion is to be found in an altogether wrong attitude of the public towards the State university? We read with admiration of the sacrifices made by the early settlers in many parts of this country in order that the men and women who grew up there might be educated. When these early settlers founded schools and colleges, they were not thinking of immediate economic gain. Nor did they imagine that they were constructing a machine through which directly the attempt would be made to perform almost all the offices of society that call for a little knowledge out of the ordinary. In founding institutions of learning, of every grade, these pioneers were, above all things, giving evidence of their belief in the value of a man. For many years now, that pseudo-philosophical thinking which has had the ear of the respectable world, and has, in particular, dominated the notions regarding matters social and political that have found expression in American academic circles, has systematically depreciated the importance of the individual man, and has cried up that of society, of man in the mass. Can it be that the public has at last in living fact come to accept this doctrine, and that it no longer believes in the supreme value of the individual man, the one real human unit, and the proper subject of all our concern?

However this may be, the members of the faculties of State universities have in recent years been made disagreeably aware that the questions in which the authorities are really interested, and therefore, supposedly, the public also, are not such questions as these: How successful have you been in starting the young men and women who have sat under your instruction in the paths of sound thinking? How deeply have you instilled into them respect for the truth, and the determination to let their conduct be guided by the best understanding of things as they actually are that we can at present attain, rather than by long current and mistaken notions presenting them as they have been supposed to be? Have you done the utmost that in you lies so to direct the thinking of these young people that they will hereafter make it a chief business of their lives to form clear ideas as to what justice is, and what it demands in specific human relationships, and be constantly loyal to the obligation to help those ideas prevail in the world?

No, the interest of the public in the operations of State universities is apparently to be gauged by questions like these: How many more students have you turned out—the correct phrase!—this year than last? How many hundreds more have you laid your plans to get here, by every device humanly employable, so that you can turn them out next year, and next year, and the year after that? How many hundred university extension lectures have the members of your faculty delivered in the State during the past year? How many hundred correspondence students have been induced to add their names to your roll of students? How many hours a day does each member of your faculty work? What have you done for the butter-makers of the State? the cheese-makers? the fruit-growers? Above all, what have you done for the farmers? Finally, have you used every means in your power to keep the newspapers of the State talking about you, always remembering that it does not much matter what you have them say about you, so long as there is a large element of brag in it?

Is it true that this sort of thing represents the attitude of the public of the State to the university? If so, is the fact of good promise for the future of the State university as an institution? R.

A PROTEST.

To the Editor of The Nation:

Sir: We hear a good deal these days about elevating the stage. There seems to be a feeling among educated people in general, and a few managers in particular, that *the* profession is sadly in need of culture and refinement. A year or so ago, Mr. Daniel Frohman made a plea for the enthusiastic reception of college graduates within our ranks. "The stage will find its best recruits in the universities," he wrote, or something to that effect. More recently still, Mr. Belasco, bemoaning the absence of real gentlemen qualified to do gentlemen parts, has offered to train a certain number of young actors in this much-neglected art.

Is it then true that education and good breeding form a valuable foundation for a stage career, and are Messrs. Frohman and Belasco quite sincere in professing to be in search of actors thus equipped? I confess I am somewhat skeptical on this score, and in view of my own personal experience and that of some of my college friends, I believe my doubts are justified. To me there is no question but that culture of mind and manner is a handicap in this profession, at least at the start. This wonderful thing called personality that seems so essential in "landing the job" is nothing more nor less, nine times out of ten, than a lack of refined sentiments, an ill-bred willingness to blow one's own horn, a callousness to snubs, and, above all, the ability to push one's self and one's cause, regardless of means or of consequences.

These things the true gentleman, or true lady, will not do. If she has no "pull" she will go with the mob to the agencies to look for her engagement. She will stand in the back, of course, seeing that others are there before her, and so entitled to first consideration. If the door to the agent's inner office is closed, and marked "Private," she will not open it. She will be inconspicuously dressed, and will not look like an actress. When her turn comes to speak, her voice will be low, so that she may not attract attention. Mr. Agent will, of course, doubt her ability to throw it across the footlights. When asked of her experience, remembering the words of Emerson, "Every violation of truth is not only a sort of suicide in the liar, but is a stab at the health of human society"—she will tell the truth. Being modest, she will not speak at all of her real achievements. By this time, Mr. Agent is quite convinced that she is hopeless as an actress, and shuts off the interview by telling her to come in again.

And yet—and yet, I read and hear constantly that just such men and women are wanted on our stage; men who have studied and travelled, who speak several languages, who have polished manners and high ideals. We regret, I hear it said, that our actors are not more like the English actors in general culture.

I wish very much that this question could be thrashed out and settled for the good of all. If we have come to the point where something besides blondined hair and rouged lips seems proof of histrionic talent, let us give these university graduates a trial. If not, let them be discouraged at once and in every possible way, so that they may turn their valuable training into channels where it will bring results.

On my tour last season I became acquainted with a member of our company, who had graduated with high honors from Cornell. He spoke French and German fluently, and was also something of a musician. He had gentlemanly manners and dignity of bearing. He played a very insignificant part remarkably well, and one of my friends in the audience observed him particularly for a certain indescribable something that the others did not have. On the one occasion when he was called upon as understudy to handle a "fifty-side" part on short notice, he did so without a single error. Our stage manager told me it was the best understudy performance he had ever witnessed. The young gentleman in question has been in the profession four years, and during that time has been employed just fifty weeks. That is to say, he has had three years of enforced idleness in all, or has worked fifty out of two hundred and eight weeks. Three years spent in elbowing through the crowds on Broadway, in patient waiting for managers who never come, in breathing the vitiated air of their dreary offices. Three beautiful long years of vigorous youth gone, years for which other men in other professions, though struggling, too, no doubt, have certainly something to show.

GENTLEMEN AT THE WICKET.

To the Editor of The Nation:

Sir: I am surprised that no one has replied to your correspondent Mr. Baker's banter, in your issue of October 3, in regard to "gentlemen" cricketers. The expression, "the Gentlemen of" a place or country is a time-honored cricket term, meaning an eleven composed of men who belong to different clubs and are not professionals. As there are (fortunately, it seems to me) no professional cricket teams in this country, and as most matches are played between clubs, the term is not often used here, but I do not think any other expression takes its place. In England the term is familiar to every one, as is also the term "players," meaning professionals. In that delightful book, "The Cricket Field," written in 1851, I find the following on pages 63 and 64 of the American edition:

> In this year (1798) these gentlemen aforesaid made the first attempt at a Gentlemen and Players' match; and on this first occasion the players won. . . .
>
> There [in London] the play was nearly all professional; even the gentlemen made a profession of it.

Your correspondent's quotation from Kipling is too brief to express the main point, which is not a condemnation of "flannelled youths," for those are not his words, but of the spectators, who, instead of either fighting their country's battles, or working, or even playing some manly game themselves, flock by thousands to see a few other men play cricket or football, just as here in America they crowd the bleachers to gaze at hired baseball performers, who rarely even live in the cities which they are supposed to represent. Kipling addresses the men who let others fight for them in South Africa, and says:

Then ye returned to your trinkets; then ye contented your souls
With the flannelled fools at the wicket, or the muddied oafs at the goals.

As a condemnation of professional sport, these lines are admirable, but I have never heard that the British officers who broke off their cricket match on June 12, 1815, when Wellington and the Prince of Orange rode up to order an immediate advance on Waterloo, failed to give a good account of themselves in the battle. In this country, too, the members of the Washington Cricket Club of fifteen or twenty years ago can never forget the wonderful batting, considering the difficulties, accomplished by a gray-haired gentleman, who must have been a splendid cricketer in his youth, but who had lost his right arm, and even the control over some fingers of the left hand, in one of the finest displays of devoted heroism that ennobled the Civil War.

Charles C. Binney.

Philadelphia, October 12.

AMERICAN AND FOREIGN LABOR.

To the Editor of The Nation:

Sir: Two statements in your recent editorial paragraph against the restriction of immigration ought not to be allowed to go unchallenged. You state, "But American labor will enter certain lines of work on no terms." As a matter of fact, there is no kind of work which American laborers will not do, if they are paid enough or if the conditions are made sufficiently attractive. In some cases, it is true, there are other than financial conditions involved. The thoroughbred Southerner firmly believes that there are certain kinds of work which a white man will not do on any terms because such work is "niggers' work." Yet we know perfectly well that where negro laborers are few white men do this work as cheerfully as any other. Similarly, in certain sections where foreign labor has occupied a field, it seems to short-sighted citizens that American laborers cannot be had on any terms, such work being regarded as "fit only for foreigners." And yet we know perfectly well that where foreign labor is absent, American laborers do the work cheerfully, if they are paid for it. On the Pacific Coast it is asserted by certain prejudiced people that white men cannot be procured to do certain kinds of work, such work being regarded as Chinaman's work. Yet where there are no Chinese there is not the slightest difficulty in getting white men to do the work, provided satisfactory wages are paid.

You also state that "The United States needs immigration more than any other country, because men rise rapidly in the social scale, as they cannot elsewhere." How much we need a man is indicated by how much we are willing to pay him. It may be true that we need an immigrant more than some other countries, as evidenced by the fact that we pay him more. Yet the need cannot be very great unless we are willing to pay something above $1.50 per day. If we had to face the alternative of dispensing with his services or paying $2 per day, and we decided to dispense with his services, that would indicate that we did not need him $2 worth. If we did need him very badly, we should obviously be willing to pay him $2.

I know it is customary when the choice is offered of two alternatives to choose both, yet in some cases we cannot have both. This is a case in point. We have the alternative of industrial peace with high wages, brought about automatically through the operation of supply and demand; or we may have an abundant supply of cheap labor. But we cannot have both. If we choose to have an abundant supply of cheap labor, we must expect to have the struggle for high wages carried on by revolutionary methods. If we choose industrial peace, we must expect to reduce the supply of cheap labor, and have wages forced up automatically through the sheer scarcity of unskilled labor. It is for the American people to decide which alternative they prefer.

THE REALISTIC MOVEMENT.

The World We Live In. By G. S. Fullerton. New York: The Macmillan Co. $1.50 net.

The New Realism. By E. B. Holt, W. T. Marvin, W. P. Montague, R. B. Perry, W. B. Pitkin, and E. G. Spaulding. New York: The Macmillan Co. $2.50 net.

The progress of philosophy seems at times discouraging. Not only does it appear unable to prove anything; it seems almost impossible for it to disprove anything. Most of us were brought up to believe that realism, at any rate, was safely laid away in its grave where it would give no more trouble; but lo! it is stalking again about the land, like the ghost of one who has suffered an untimely death. In fact, it is proving a very lively ghost; for, not to mention its vigorous revival in England, the progress it is making in this country at the present time is comparable only to that made a few years ago by its great predecessor, pragmatism. The philosophical journals are filled with it, and within the last few months three books have appeared in its defence. One of these, Professor Perry's "Present Philosophical Tendencies," was reviewed in these columns not long ago. The two others will concern us here.

Professor Fullerton was one of the first to sound a return to realism, and his present book merely reiterates, in trenchant language, the doctrine he has advocated in many previous writings. The title of his book is well-chosen; for the chief argument on which the author relies is the assertion that the world of idealism is *not* the world we live in. Passages like the following abound: "If, in the laboratory, I say: close your eyes and turn that dynamometer into a memory-image; put this speck under the microscope and convert it into an insect; that cork is too large, stand farther back from it and reduce its size—if I ramble on in this fashion, it will be suspected that I have dined generously." The reiteration of clever ridicule like this doubtless serves a purpose. But the serious reader will probably feel that this sort of thing may be carried a bit too far; and he may even be reminded by it of Dr. Johnson with his famous stick refuting Berkeley.

Professor Fullerton's view differs from the old realism of Descartes and Locke in rejecting the notion of a "substance" behind phenomena. His real world is, he insists, frankly phenomenal. All real objects are "appearances" in the sense that they actually appear to some one or belong to the class of things that do or may or might so appear. Yet this does not mean that the world is subjective or dependent for its existence or its character on being known. Unfortunately, we are not told what an unperceived phenomenon may be, nor what is meant by calling a hypothetical object which never appears a member of the class of things that do appear; and the Johnsonian arguments on the subject, though very amusing, do not throw much light on the difficulty. Clearer is Professor Fullerton's main thesis, that physical objects, with both their primary and their secondary qualities, are perceived *directly*, not through the mediation of subjective states, and that hence, the difficulties which led to the invention of idealism were entirely gratuitous. The fact that two men see the same object differently, together with all the other facts of illusion and error, need not disturb us. It does not prove that we perceive things only indirectly and through our "ideas," or that our knowledge of the "outer world" is representative; it shows merely that *under different conditions the object is perceived differently*—exactly what we should expect. One never perceives the *object as such, i. e.*, abstractly. One perceives it every time under some particular condition. And there is nothing in this fact to make one's perception *indirect*.

Professor Fullerton's book leaves us just about where it found us—in "Everybody's World," the world of common sense. One, in fact, is tempted to ask at the end, If realism be true, what is there left for a philosopher to talk about? One will find the answer to this question in "The New Realism." A greater contrast than that between these two books, in spite of their almost identical aim and point of view, it would be hard to find. Professor Fullerton's book is cast in popular language and engaging style, and it gives back to the common man his comfortable old world again. "The New Realism" means to be *streng wissenschaftlich* and severely technical. Much of it is phrased in forbiddingly difficult language, with an occasional self-conscious use of symbolic logic and mathematics, as though to give notice to the man in the street that this is no place for him and that he had much better stay where he is and read something popular. And though it holds out a refuge for all those who are weary of the fancies of the idealists, the picture of the world it gives us at the end will hardly be recognized as that of "the world we live in."

The book opens with a joint introduction on which the six authors unite, after which each contributes an article on some phase of the problem. Thus Professor Marvin writes on "The Emancipation of Metaphysics from Epistemology"; Professor Perry, "A Realistic Theory of Independence"; Professor Spaulding, "A Defense of Analysis"; Professor Montague, "A Realistic Theory of Truth and Error"; Professor Holt, "The Place of Illusory Experience in a Realistic World," and Professor Pitkin, "Some Realistic Implications of Biology." Throughout these varied themes certain common points of view are repeatedly emphasized. Important among these are the attack upon idealism; the vindication of analysis and scientific method as ultimate; the consequent rejection of mysticism, neo-vitalism, and all other anti-naturalistic forms of thought; the acceptance of naturalism almost *in toto;* and the development of a view of consciousness which makes it not different in content from the rest of nature. It is particularly in this last respect that the writers of this book have gone beyond Professor Fullerton and most of their other fellow-realists. As idealism of a certain type destroyed the objective by interpreting it in terms of the subjective, so some, at least, of the new realists would seem almost to destroy the subjective and leave the world all "outside" with no "inside." Thus Professor Holt likens consciousness to a searchlight "which, by playing over a landscape and illuminating now this object and now that, thus defines a new collection of objects, all of which are integral parts of the landscape (and remain so), although they have now gained membership in another manifold—the class of all objects on which the illumination falls." Further, by an ingenious psychological hypothesis, secondary qualities are regarded as composed of actual vibrations in the nervous system of the same rate as the outer vibrations which are their source, and as being, therefore, not unanalyzable psychic elements, but "*form*-qualities in which the temporal subdivisions are so small that the *time*-sense cannot discriminate them, whereas the frequency, magnitude, or density still remains perceivable." Consciousness, thus, is not even an epiphenomenon. It constitutes nothing, but is a collection of other things picked out by the action of the nervous system. It follows naturally that the study of the action of the nervous system and of the organism in general is the true method of investigating the mind, and that introspection can give us but little trustworthy information concerning mental life. Psychology hereafter must cease dealing with "mental states," and philosophy must give up the notion that there is any such thing as "consciousness" distinct from material and logical objects and physical activities.

How completely this view of things stands all our traditional philosophies upon their heads is plain enough. And not only the philosophies, but poor old common sense as well finds itself in the same unaccustomed position. Doubtless the man in the street was considerably surprised when Berkeley told him that things were only his ideas; but, if I mistake not, he will be no less bewildered when he learns from the realist that his ideas are nothing but things. But perhaps the revolutionary nature of the new realism cannot be better characterized than it is by one of the new realists themselves, towards the close of the book under review:

> Reconstruction must begin; and a theory of life and mind must be worked out which dispenses with the old, discredited categories of idealistic psychology, such as "mental states," "subject-object polarity," "creative synthesis," and the like. Now it is evident that the first steps to slough off these notions will be not only difficult, but full of strange writhings. They will be no less violent than an endeavor to exchange the parts of speech of one's native tongue, and to use nouns for adverbs, or adverbs for prepositions.

CURRENT FICTION.

[THE DIFFICULT ART OF MARRIAGE.]

Marriage. By H. G. Wells. New York: Duffield & Co.

Is Mr. Wells headed straight for reaction? That is a question which will have to be answered in definite form by the future biographer of Mr. Wells when he deals with the latest book by the most modern of contemporary English novelists. A definite answer at the present time is hazardous. A writer of the modern temperament changes rather than evolves. Consistency being a rather outworn virtue, it does not follow that a man's opinions to-morrow must be in harmony with his opinions of to-day. But whether "Marriage" is a spiritual conversion or merely a spiritual caprice, it may be set down at once that in this book Mr. Wells has written an old-fashioned novel. It does not matter that our author insists upon describing his problem as a modern problem and his characters as modern men and women. In spite of frequent allusions to Albert Hall meetings, Mr. Asquith's troubles with the suffragists, and other actualities of the morning newspaper, the story harks back in its essentials to a literary type that the younger generation has long declared to be obsolete. When Mr. Wells's Marjorie lets her thoughts drift back, in curious archæological speculation, to the dim, dead past when Russians and Japanese were battling in Manchuria—almost seven years ago—she is at one with the modern young lady in *Punch* who cannot abide Bernard Shaw because he is so "Edwardian." But this is just mannerism. The story of Marjorie Pope's love and marriage is old-fashioned in theme, outlook, and treatment.

If Mr. Wells, as a student of social phenomena, stands for anything in the public mind, it is for the thorough reconstruction of this lumbering, creaking, utterly irrational world of ours into a neatly-mortised, water-tight, and strictly hygienic place to live in. In "Marriage" he pokes fun at the world-builders. The scientific reason was to make a clean sweep of old habits and prejudices. To-day Mr. Wells's attitude is much more charitable. He does not say it in so many words, but it is plain that old habits and prejudices are to him now something more than rubbish. He has almost attained that conservative temperament which respects facts and institutions whose roots lie deep down in time. Formerly, Mr. Wells used to be very impatient with the devil of inertia. In the present book he is exceedingly impatient with the kind of people that are always inaugurating Movements and Programmes. He loses his temper utterly when he speaks of the Gawdsakers, the people who jump up and scream "For Gawd's sake, let's do something!" without thinking things out. It is quite evident that Mr. Wells is not one of the moderns who regard themselves as points pressing forward into space. When he insists upon stopping and finding out where and how far he is going, Mr. Wells reveals a state of mind that is almost Victorian. This is a cruel thing to say, but the truth must be told.

Marjorie Pope, in "Marriage," is a clear-eyed, clean-limbed, healthy, intelligent modern young woman. We call Marjorie a modern young woman because that is what Mr. Wells calls her. Actually, her emotional life is precisely that of any girl in any century who stands wondering on the threshold of the unknown. She likes pretty clothes and slim-built young men, entertains vague notions on religion, detests her father's boorish manners, and dreams of a lover. He comes in the person of a brilliant young chemist who tumbles out of a monoplane on Marjorie's lawn. They elope, marry, and rent a small house in Chelsea which Marjorie furnishes in exquisite taste and complete disregard of the size of Trafford's income. They are happy. Children come. Trafford must give up his researches in the chemistry of molecules and go in for popular lectures, but the money difficulty persists. Trafford gives up lecturing before suburban women's clubs and goes in for synthetic rubber. He grows rich and his life grows empty. Marjorie' life is empty, too. She takes a larger and more expensive house and then a still larger and still more expensive house, and the larger the house the wider is the space between the corner in which Trafford eats his heart out and the corner in which Marjorie sits unhappy; until Trafford can bear it no longer. What tortures him is that in London there is no opportunity for thinking things out and talking things over. He decides to go to Labrador—alone, if necessary; but Marjorie goes with him. Then, through several months of northern twilight, Trafford thinks and talks; and the conclusion at which he arrives is this: Husband and wife must be comrades; but since the male is the pioneer of the race, in the work of civilization, he must not let himself be hampered by the female's natural appetite for beauty (including fine clothes and excitement). They come back to London and their children, Trafford to perfect his message and bring it before the world, Marjorie to help him with her sympathy instead of giving dinners and running up bills. Whether they put their plans into effect Mr. Wells does not tell us. Probably they do not.

The mere fact that Mr. Wells has written a novel which is not a battle-cry but an echo, while sufficiently interesting in itself, would not necessarily call for extended comment. As we have said, there is no safe predicting which way Mr. Wells will face in his next book. We may find him still further on the road towards the old standards and the old moralities, or we may find him holding an advanced outpost far ahead of "Ann Veronica." What does arrest one's attention in "Marriage," is that in breaking away from the modern conception of marriage and love in marriage, Mr. Wells remains faithful to certain characteristic dogmas of modern writers on the subject. He has kept the old turns of phrase. The book in its total effect is old-fashioned, but it has pages that are very advanced indeed. Thus we know that whereas the conservative mind prefers to regard the ideal marriage as a condition of peaceful beatitude, the modern mind is obsessed with the curse of placidity that follows upon marriage. Here Mr. Wells is quite modern still. He deplores the fading of romance that follows the tumult and the glory of Marjorie's courtship and the first golden days of wedlock. The burden of his song is familiar enough: With marriage the emotional climax is attained; soon the walls of the enchanted garden fall to the ground—and the real world outside forces its way in. At all times men have recognized the emotional calm that follows courtship, when Romeo forswears moonlit balconies and warms his slippers at the fire. Women have revolted at the fact. Men have accepted it with resignation. Recall Sardou's Cyprienne, and how she protests against the stagnation of married life. Des Prunelles asks whether she would have him dress up as a Calabrian bandit and climb in at her window on a rope ladder. And no one would accuse Sardou of being modern. But whereas the old world, accepting the fact that men are April when they woo and December when they wed, has attempted to go behind the fact and work out a reconciliation between the real and the ideal, the modern temperament refuses to be comforted. And so in countless novels and plays the hero turns from the lassitude of marriage to the never-failing stimulant of art. Your extreme modernist does not hesitate to return a verdict of guilty on the indictment. Marriage ceases to be true marriage when romance ceases; accordingily, it stands condemned.

And now note one of those essential contradictions that the modern soul adores. In one breath wedlock stands condemned of bovine placidity. In the next breath marriage is a failure because the sexes are in perpetual conflict and because woman is an eternal mystery. How a perpetual conflict can be tame, how an eternal mystery can be conducive to lassitude, how one can live in slippered ease with a sphinx about the house, we find it rather hard to understand. Mr. Wells tumbles into exactly this contradiction. Having assured us that in love one fails or wins home, and there's an end of it, Mr. Wells devotes three hundred closely-printed pages to showing how Marjorie and Trafford labored to find out whether their love is actually a failure or whether they have in fact won home. It takes them ten years to find out; and a solution that occupies one for ten years argues a fairly difficult and absorbing puzzle. There is certainly no spiritual or emotional stagnation in the married life of the Traffords. In the course of their search after their own souls, what tense situations Mr. Wells compels them to face, what emotional storms they must weather, what adjustment and readjustment they attempt! They ponder, they debate, they analyze their own attitudes towards each other and to the world, they indulge in regrets, they flame up with renewed hopes, they quarrel, they flee for refuge to their children, they flee to the silence of their own souls in Labrador, they starve, they face death, they face the greatest thing in the world—which is Truth. How can a condition which makes such demands upon heart and brain and character conceivably be described as monotonous?

There are modern critics of marriage who are not altogether blind to this weakness in their case. The more careful and conscientious observers among them recognize that this business of the stagnation of wedlock has been sadly overdone. They know that the period after the honeymoon is not one dead level of satiety. There are emotional revivals. The sacred flame leaps up again. Romance returns to its throne. The modern writer, taking cognizance of this well-established phenomenon, describes it as a process of falling in love again. That is the way Mr. Wells speaks of it. In his peculiar use of the word love to describe not a permanent state but a recurrent emotional condition, he still holds fast to the new school. Let us put the case crudely. Under the old-fashioned conception, if husband and wife are in love on Sunday and are found to be in love on the Sunday following, the assumption was that the two have been lovers during the six days intervening. Under the new conception, husband and wife may be in love on Sunday, out of love on Monday and Tuesday, in love again on Wednesday and Thursday. Take the case of Marjorie and Trafford. Their marriage is a love marriage, and, in passing, let us say that Mr. Wells has painted with truly admirable skill and insight the glow, the exaltation, and the tenderness of first love. But upon the Traffords' marriage follow disillusion, bewilderment, misunderstanding, tribulation. Trafford, as we have seen, succumbs to the lure of scientific research. Marjorie drifts into frivolous interests. They recognize the danger, and as a spiritual cure they decide to revisit the scenes of their honeymoon journey in the Italian Alps. The cure succeeds:

> Trafford seemed to have forgotten all the strain and disappointment of the past two years, to be amazed but in no wise incredulous at this enormous change in her and their outlook. He was now deeply in love with her again.

The influence of Alpine scenery and the luxuries of a millionaire's villa where the Traffords find themselves guests for a time continue the softening process. Away from suburban lectures and the fear of debt, Trafford begins to understand:

> He had judged her fickle, impulsive, erratic, perhaps merely because her mind had followed a different process from his, because while he went upon the lines of constructive truth, her guide was a more immediate and instinctive sense of beauty. —He was very much alive to her now, and deeply in love with her.

Here you have a pretty complete statement of what we may call the spasmodic theory of love in marriage; and when you come to analyze it, an oppressively vulgar theory it is. Our elders, after their commonplace, Philistine fashion, were not in the habit of exalting romantic love as the only foundation and justification of marriage. But in their own commonplace way they worked out a theory of love which for sweep and poetry renders the teachings of the modern romantics utterly cheap. They thought and spoke of love between husband and wife as a continuous process which, like every other process in the physical and spiritual world, is subject to the law of ebb and flow. They were not blind to the facts of life. When they wrote the history of a pair of married lovers they took into account the upheaval and subsidence of passion; they took into acount such hard facts as temporary disillusionment, misunderstanding, hostilities, temporary regrets. But all these they viewed as isolated manifestations of a single rhythmic process which in its unity they called love.

Is it a mere question of difference in terminology, or is there a real difference of mind and heart indicated when people speak of love as a harmonic law of life or speak of it as a temporary appetite? To us it seems that the difference is a very real one. At any rate, that is our quarrel with Mr. Wells. In essentials, he seems to be returning to the older and deeper view of love in marriage; but he cannot rid himself of the formulas and phrases he has gathered in the field of modern speculation.

The Moth. By William Dana Orcutt. New York: Harper & Bros.

Fifth Avenue and Newport are favorite stamping-grounds of current fiction. To breathe the upper airs of the Back Bay and the North Shore is a privilege less commonly (if less desirably) extended to the story-reader. Here are a group of people who are supposed to exist in that exclusive atmosphere. Their travels resemble Dr. Primrose's. They journey between Boston and Beverly as the Vicar between the blue bed and the brown. They have exquisite manners: "He was conscious of the impression he made and enjoyed it, but to prevent any suspicion of this from entering Lucy's head, he pulled a lavender silk handkerchief from his coat-sleeve and nonchalantly flicked at an imaginary speck upon his foot." At the same time they are reassuringly human. The gentleman of the lavender handkerchief, replacing that ornament in his sleeve, proceeds to mix a new cocktail known as "swizzle." "One goes a long ways, doesn't it?" remarks the delighted Lucy.

Lucy is the Moth, presented at first in the act of dancing about the flame of life. She has been married ten years, and has two children, but her desires are still those of sweet sixteen. She gives stag-parties, stands on the table, and tells her guests that she "loves them every one." Life stretches before her as one prolonged "good time." Her husband is a good-for-nothing man of pleasure, at Lucy's expense, and there seems to be very little hope for her when, in due season, she meets her fate. But the author believes in a pleasant ending, and the story has that, at least.

The Lost World. By A. Conan Doyle. New York: George H. Doran Co.

Your reviewer read the first instalments of this story in their serial form and was then halted by circumstances. He left Professor Challenger and his three comrades at the very point of attaining that unknown plateau in South America which has preserved the pterodactyl and dinosaur and other nightmare monsters from the Jurassic age (if the reviewer's geology is right). He can testify that it is rather painful to stop in the middle of the story. And now, having read the whole book, he can testify that the interest goes on increasing to the end.

To deal realistically with a theme of this kind requires no slight art. It would be easy enough to cram up a few books of geology and anthropology, and then imagine some way of getting a modern man back among the wild growths of the past; but to give the real thrill of living adventure to battles with flying elephants and ape-men is another matter. The creator of Sherlock Holmes has done this, and he has made the four adventurers in this lost world genuine men of distinct characters.

A DISTINGUISHED PUBLISHER.

George Palmer Putnam: A Memoir. Together with a Record of the Earlier Years of the Publishing House Founded by Him. By George Haven Putnam, Litt.D. New York: G. P. Putnam's Sons. $2.50.

The subject of this memoir died forty years ago. He was an important figure in his day, and it is strange that a full generation should have passed before these records were got together. To be sure, his memory has been embalmed in the firm name of the publishing house which he founded, but few of the present generation can have any but the vaguest notion as to the manner of man G. P. Putnam was. He was not among the great ones of his time, but he was among the good and useful ones, and his private character and public services should not be forgotten. The basis of the book is a memoir printed some ten years ago for circulation in the family. Such parts have been taken from the narrative as were of more general interest, and the personal story is supplemented by various letters and papers.

George Palmer Putnam was born in Maine, and was destined to be a New Yorker, but he came of Massachusetts stock on both sides. His father was a Bostonian and a Harvard man, who broke down soon after his admission to the bar and retreated with his young wife to Brunswick, Me. Thereafter it seems to have been her duty not only to bear his children, but to support them. At eleven years, the fourth child, George, was apprenticed to a distant connection in Boston, a dealer in carpets. At fifteen something drew him to New York. Without prospect of finding anything in particular at the end of the voyage, he took passage on a fast schooner which made the journey round the Cape in a week. Chance and the "Want" columns gave him his first job in a little Broadway bookshop. The rest is the familiar story of the poor boy pushing steadily on against the tide towards an achievement far beyond the ordinary.

At that time (the early thirties) Boston was already somewhat in the lead as a publishing centre. The predecessors of Lippincott were established in Philadelphia, the Harpers were laying the foundations of their prosperity in New York (not always in the most scrupulous way, according to the present chronicler), and there was a considerable number of minor firms which existed largely by the issuance of reprints. In Boston, the chief houses were Allen & Ticknor, the forerunners of Ticknor & Fields, and Little & Brown, now Little, Brown & Co. The Jonathan Leavitt with whom young Putnam served for some time as clerk and messenger, dealt chiefly in theological and religious books, which were easier to get and easier to sell in the America of that day than any other literary home product. With him Daniel Appleton, founder of the firm of Appleton, was associated at the time; and when he presently set up for himself, among the stock to be divided was a book called "Chronology, an Introduction and Index to Universal History," by G.P. Putnam. The young clerk's salary was $4.00 a week, but his duties kept him at the shop from early morning till nine or ten at night; his spare time, such as it was, he spent in reading. History especially interested him, and he began the "Index" at the age of fifteen, as an aid to his own studies. Three years later it was published, almost the first work of its kind in English.

But that little manual of dates was the first step in a long career of hard work and solid product. G. P. Putnam was one of the men—there are one or two to be found in every community—whom everybody counts on to do more than his share in whatever business he may be induced to connect himself with. He had a habit of being the working member of the numerous committees upon which such a man is bound to find himself. At twenty-three he became secretary of the first American association for the establishment of an international copyright law; and his son dwells with special pride upon the fact that "in all the subsequent movements that were made on behalf of international copyright between 1837 and the time of his death in 1872, my father took an active part, while a considerable proportion of these copyright undertakings were initiated at his own instance and were conducted largely through his efforts." His zeal in this cause was plainly due to his sense of justice rather to than to self-interest. Publishers of that day, both in America and in England, were incredibly indifferent to the principle involved in copyright. Publishing was a cutthroat game, and it was generally understood that the devil might as well take the hindmost. Yet from the moment when (in 1840) the firm of Wiley & Putnam entered the field, the junior partner declined to have anything to do with stolen books. "Irrespective of the protection or lack of protection afforded by the law, he held that authors should be left in full control of their own productions, and that political boundaries had no logical connection with the property rights of the producer." Against the less scrupulous usage of his rivals Mr. Putnam stuck to this principle to the end of his career as a publisher.

The same extreme conscientiousness—whether or not it derived from his New England blood—determined his attitude in all matters, public or private. Moral obligations involved in a business failure brought about by the crisis of 1857 were discharged as if they had been legal. The many philanthropic and political movements which engaged his interest were submitted to rigorous tests of right and wrong. On the other hand, it is clear that there was nothing forbidding or self-righteous in his nature. The long list of distinguished men and women whom he knew intimately bears witness to his human charm. His one act of clairvoyance as a publisher seems to have been his taking up of Washington Irving's works when the Philadelphia publisher judged them to be of no further value as an investment; and the affectionate relation between author and publisher which resulted, and which grew warmer with the years, was among the chief rewards of a useful life.

The Posthumous Essays of John Churton Collins. Edited by L. C. Collins. New York: E. P. Dutton & Co. $2 net.

The late Professor Collins, like many greater men, paid the penalty for his versatility. He was a brilliant popular lecturer, a broad and thorough scholar, an intelligent and sometimes acute literary critic. But two tendencies which no doubt strengthened him as a popularizer vitiated a good deal of his criticism, and sometimes led even his scholarship astray. One is his passion for seeking the moral everywhere; the other is his delight in the never-ending quest of the literary parallel. The pursuit of the parallel too often succeeds either in discovering parallel commonplaces or in developing a sort of literary strabismus which sees parallelism in the sides of a right angle. A striking example of these faults—a highly moral and entirely false parallel between the attitudes of Sophocles and Shakespeare towards suicide, from Professor Collins's "Studies in Shakespeare," has just been pointed out by J. H. Hanford in *Publications of the Modern Language Association.*

The core of the "Posthumous Essays" is a series of papers on great writers of the last century—Wordsworth as a Teacher, Emerson, Arnold, Browning, and Tennyson. Both of the faults which have been mentioned are conspicuous in these essays. The phrase "as a teacher" might appropriately have been affixed to all the titles instead of to one, for Professor Collins is constantly concerned with the didactic qualities of his subjects. The few literary judgments in the essays on Wordsworth and Emerson are taken over bodily, in some cases almost word for word, from Matthew Arnold. In the very essay from which Professor Collins borrows, Arnold has shown at some length that Wordsworth's philosophy is poetically of small account; yet Professor Collins can say, "It is difficult to understand Matthew Arnold's silence about the significance of Wordsworth's metaphysical philosophy"; and he, after expounding this philosophy, can predict that on account of it Wordsworth will ultimately be ranked above Milton and on an equality with Shakespeare. Tennyson interests Professor Collins because he grapples with the problem, "How are the grand central doctrines of Christianity to be reconciled with the facts of science?" Browning interests him because, like Bishop Butler, he teaches that "the moral government of God implies that we are in a state of trial with reference to a future world." The parallel with Butler is worked out in detail, and there are similar extended parallels with Lessing, and—save the mark!—with Montaigne. Professor Collins's parallel-hunting at its worst, however, can be more briefly illustrated by a quotation from the essay on Wordsworth:

> When Chrysippus tells us that all ethical inquiries must start with considering the universal order and arrangement of the world, and that it is only by a study of Nature and of what God is that anything really satisfactory can be stated about good and evil, we see how near we are to Wordsworth; it is exactly
>
> One impulse from a vernal wood
> May teach you more of man,
> Of moral evil and of good,
> Than all the sages can.

The vision of a critic who sees parallelism, much less identity, in these two lines of thought is indeed strangely distorted.

Besides these nineteenth-century essays, the volume contains a group of miscellaneous papers of very uneven value—a sympathetic sketch of Dr. Johnson, a rather commonplace defence of Burke's consistency, a lecture on Shakespearean theatres, an admirable study of William Godwin and Mary Wollstonecraft, and a collection of "Curiosities of Popular Proverbs" in which Professor Collins's delight in parallelism finds legitimate scope. Beginning with Lord John Russell's happy definition of a proverb, "One man's wit and all men's wisdom," this is a veritable treasury of information as to the history of popular sayings. It may be remarked that "to make a virtue of necessity" is much older than Matthew Paris, the earliest source referred to by Professor Collins; it is used twice by St. Jerome, and was evidently proverbial in his time.

The lecture on "Shakespearean Theatres" is picturesque, but rather inaccurate. It would be unfair to hold Professor Collins responsible for slips in the statement of fact, since his son tells us in the preface that part of his task was "to put into shape passages which were little more than rough notes." But it is unfortunate that an author who was so severe upon others for such inaccuracies should be represented as saying that "the Fortune (Theatre) was erected about 1598," or that James Burbage "played all the great parts in Shakespeare." Besides such obvious errors, the essay contains a good many dogmatic assertions on disputed matters. Its inclusion in the volume seems a mistake.

The essay on Godwin and Mary Wollstonecraft is, on the whole, the best of the series. Professor Collins skilfully outlines the characters and story of this remarkable pair, and gives an excellent summary of their doctrines. It is interesting to see in how many ways they anticipated movements which have grown powerful in our own time. Mary deserves more credit than she often gets as a pioneer of the woman's rights movement. Besides Godwin's revolutionary political teaching, his position with reference to marriage is almost identical with that of the most "advanced" modern theorists, such as Ellen Key. It is less generally known that he anticipated Mrs. Eddy. "He would contend," Mrs. Shelley tells us, "that death and disease existed only through the feebleness of man's mind, and—happy man!—that pain had no reality."

As a whole, although the "Posthumous Essays" will add nothing to Professor Collins's reputation, they will not seriously detract from it. With all their perversities of moralizing and parallelizing, they contain much that will interest every lover of literature.

The Work of Wall Street. By Sereno S. Pratt. New York: D. Appleton & Co. $1.75 net.

This work has a large scope. The author describes it as "an account of the functions, methods, and history of the New York money and stock markets." It is all that, and more. For Wall Street, like Saint Germain, is not a place, but a state. The term has both an objective and a subjective connotation. It implies the whole American field of material production and distribution, on the one side, and the whole American philosophy with reference to the largest utilization of that field, on the other. Wall Street represents things and the ways those things are regarded by the people who handle them.

Mr. Pratt discourses entertainingly and instructively on both of these aspects. He does not possess—few persons do—the broad vision, the capacity for subtle distinctions, the fluidity and flexibility of language, displayed by Walter Bagehot in "Lombard Street." He has, however, brought together a great array of facts gathered by long, painstaking, and many-sided observation, and has given them a relevancy which most persons unaided are quite likely to overlook.

The present work is an amplification and a recasting of a treatise on Wall Street issued in 1903. Much has happened since then, both in the way of industrial and economic transformation and in the way of public agitation for a new philosophy of speculation, to furnish a reason for this revision. The nation has passed through a great financial panic; the New York trust companies have been admitted to the Clearing House, and the Clearing House methods have been improved in various ways; improvements have been made in the New York Stock Exchange rules, among them one involving the abolition of the unlisted department; the question of combination or competition in the conduct of industry has been vigorously debated in and out of Congress; many important court decisions, notably by the United States Supreme Court, have been rendered in connection with the Sherman Anti-Trust law; the Monetary Commission has made a laborious study of the banking and currency question and has published a vast amount of valuable literature; the Railroad Securities Committee, headed by President Hadley of Yale University, has made an elaborate report on the principles which should govern the issuance of railway securities. No decade in American history has been more transforming than that which has elapsed since Mr. Pratt produced the first edition of the work before us.

This period has furnished much food for the reflection which has been put into the chapter on Investment, Speculation, and Gambling. If we restore the true meanings of these terms, we shall, says Mr. Pratt, promote sound thinking on some important subjects. Even the report of the Hughes Commission, admirable as it is in most respects, is, he adds, not altogether clear in the distinctions it makes between investment and gambling. While it shows conclusively the economic advantages of speculation, it reveals some confusion of thought which is likely to do harm in befogging the issues at stake. In saying that speculation may be wholly legitimate, or pure gambling, or may partake of the qualities of both, the report is far less accurate than in declaring that a distinction exists between speculation which is carried on by persons of means based on intelligent forecast and that which is carried on by persons without these qualifications. Speculation, contends our author, is never gambling, though the machinery, which is created to facilitate the operations of speculation, may be used by gamblers.

Speculation has no stancher defender than Mr. Pratt. Speculation, he declares, is a part of the great system of distribution to which credit and transportation belong—it performs in its way the same service for the world that credit and transformation do. It facilitates the process of distributing products to consumers. It is, in fact, a balance-wheel. That is, when it is the right kind of speculation, for while most of us must, with President Hadley, deplore the extent to which speculation is carried at the present day, we must also agree with him that there is a right kind of speculation which seems to be an absolute necessity for the successful and regular conduct of modern industrial life.

How are we to conserve this kind and destroy the other? Is it worth while to enact laws to prevent speculation in order to make gambling impossible? If it is not worth while, is it possible by new rules and regulations to destroy the opportunities for stock gambling while preserving the opportunities for speculation? The Hughes Commission frankly admitted the impossibility of distinguishing what is virtually gambling from legitimate speculation, and acted on the principle that exchanges can accomplish more than Legislatures. It recommended a number of changes in the New York Stock Exchange system, nearly all of which have been substantially adopted; but gambling goes on. Yet there are those who propose to enact laws to make speculation in stocks impossible, the consequences of which must, in Mr. Pratt's judgment, be disastrous.

Notes

From the Clarendon Press (Frowde) will come an historical grammar of the Welsh language by Prof. J. Morris Jones. Vol. I, which will be ready early next year, is concerned with phonology and accidence. The second and final volume is reserved for the syntax.

Putnams have among their autumn announcements two novels—"The Upas Tree," by Florence L. Barclay, and "Palmers Green," by Stewart Caven—and a long list of miscellaneous books: "The Letters of Ulysses S. Grant," edited by his nephew, Jesse Grant Cramer; "The Woman Movement," by Ellen Key; "An Introduction to Metaphysics," by Henri Bergson, authorized translation by T. E. Hulme; "Thy Rod and Thy Staff," by A. C. Benson; "Swords and Ploughshares," a treatise on peace, by Lucia A. Mead; "The Personality of Napoleon" (Lowell Lectures, 1912), by J. Holland Rose; "Wayfarers in the Libyan Desert," by Francis Gordon Alexander and a collaborator; "De Orbe Novo—The Eight Decades of Peter Martyr D'Anghiera," translated from the Latin, with notes and introduction by Francis Augustus MacNutt; "Kings and Gods of Egypt," by A. Moret; "Roger of Sicily, and the Normans in Lower Italy (1016-1154)," by Edmund Curtis, and "Canute the Great, and the Rise of Danish Imperialism during the Viking Age," by Laurence M. Larson.

October 19 is the date set by Houghton Mifflin Co. for the publication of the following: "Pike County Ballads" by John Hay, holiday edition; "Billy Popgun," a fantastic tale of adventure by Milo Winter; "Around the Clock in Europe," by Charles F. Howell; "Prudent Priscilla," by May C. E. Wemyss; "The Young Minute-Man of 1812," by Everett T. Tomlinson: "Time and Change," essays by John Burroughs; "The American Mind," by Bliss Perry; "The Children of Light," by Florence Converse; "Villa Mirafiore," a collection of poems by Frederic Crowninshield, and "Riverside Reader, VI," edited by James H. Van Sickle and others.

"Everybody's St. Francis," a forthcoming volume in the Century Company's list, is a life of the saint, by Maurice Egan, with illustrations in color, by Boutet de Monvel.

The Macmillan Company has now ready in fiction: "The Secret of the Clan," by Alice Brown; "Christmas," by Zona Gale; "Van Cleve," by Mary S. Watts; "The Stranger at the Gate," by Mabel Osgood Wright; Jack London's "The Call of the Wild," with illustrations in color and decorations by Paul Bransom, and "Mother," by Kathleen Norris, with illustrations in color.—Miscellaneous: "The Complete Poetical Works of Geoffrey Chaucer," put into modern English by Professor Tatlock and Percy MacKaye and illustrated with thirty-two full-page plates in color by Warwick Goble; the first two volumes of the Loeb Classical Library, being "Euripides, I and II," and "The Confessions of Saint Augustine, I"; "A Wanderer in Florence," by E. V. Lucas; "Socialism from the Christian Standpoint," by Father Bernard Vaughan; "The Business of Being a Woman," by Ida M. Tarbell; "Increasing Home Efficiency," by M. B. and R. W. Bruère; "Economic Beginnings of the Far West," by Miss Coman; Stevens's "Industrial Combinations and Trusts"; Hershey's "The Essentials of International Public Law," and Munro's "The Government of American Cities."

The following are among the autumn books of the Chicago University Press: "The Courts, the Constitution, and Parties," by Prof. Andrew C. McLaughlin; "Heredity and Eugenics," by John M. Coulter, William E. Castle, Edward M. East, William L. Tower, and Charles B. Davenport; "Questions on Shakespeare," by Prof. Albert H. Tolman; "The Minister and the Boy," by Prof. Allan Hoben; "The Ethics of the Old Testament," by Hinckley G. Mitchell, and "Old Testament Story," a teacher's manual and pupil's notebook, by Charles H. Corbett.

Duffield & Co.'s autumn list is conspicuous for its handsomely illustrated volumes for children. It includes: "The Poor Little Rich Girl," by Eleanor Gates; Boutet de Monvel's "Old Songs and Dances for Little Children," with translation into English verse; "Peterkin," by Gabrielle Jackson, with a frontispiece in color, by Maxfield Parrish; "Work and Play for Little Girls" and "Housekeeping for Little Girls"; "Musical Dates for Little Pates," by Isabel Stevens Lathrop, and "Ten Girls from History," by Kate Dickinson Sweetser.

Two titles are of special interest in Sturgis & Walton's announcements: "Constructive Rural Sociology," by John M. Gillette, and "Social Welfare in New Zealand: The Results of Twenty Years of Social Legislation, and Its Significance for the United States and Other Countries," by Hugh H. Lusk.

October publications of Little, Brown & Co. include three novels: "The Destroying Angel," by Louis Joseph Vance; "The Tempting of Tavernake," by E. Phillips Oppenheim, and "A Cry in the Wilderness," by Mary E. Waller.

Other announcements by the same house contain the following: A new edition of "The Broad Highway," by Jeffery Farnol, with twenty-four full-page illustrations in color, by C. E. Brock; "Romantic Days in the Early Republic," by Mary Caroline Crawford; "Woman in the Making of America," by H. Addington Bruce; "The Union of South Africa," by W. Basil Worsfold, being the fifth volume in the All Red British Empire series; "John Hancock, the Picturesque Patriot," by Winnifred Fales; "In the Footsteps of Richard Cœur de Lion," by Maude M. Holbach; "Medoc Myths," by the late Jeremiah Curtin; "History of French Private Law," by J. Brissaud, in the Continental Legal History series; a new pocket edition of "The Romances and Travels of Théophile Gautier," "The Franco-Prussian War and Its Hidden Causes," by Emile Ollivier, and Gustaf Janson's book of stories dealing with the Turco-Italian War, translated from the Swedish.

Four novels will come shortly from the press of Doubleday, Page & Co.: "The Soddy," a story of the Kansas plains, by Sarah Comstock; "Left in Charge," life in a rural parish of England, by Victor L. Whitechurch; "Object: Matrimony," by Montague Glass, and "Madame Mésange," by F. Berkely Smith.

The fifteenth and last volume of the Catholic Encyclopædia is announced by the Robert Appleton Company for publication this month.

The following are among Holt's immediate announcements: "The Montessori Mother," by Dorothy Canfield; "The Collectors," a volume of stories by Frank Jewett Mather, jr.; "The Home Book of Verse," by Burton E. Stevenson, and Schiller's "Kabale und Liebe," edited by Prof. William Madison Hervey.

"Shakespeare, Bacon, and the Great Unknown" is the title of a book which Andrew Lang had about completed at the time of his death. It attempts to confute the Baconian hypothesis and also the theory that some unknown person of distinction was the author of the plays. The book will be issued by Messrs. Longmans in November.

We welcome a new edition, in one volume, of A. M. W. Stirling's "Coke of Norfolk, and His Friends" (Lane). Reviewing the first edition of this biography, the *Nation* said, April 23, 1908:

> Altogether, the book may well engage the attention of him who wants to see English life of a century ago; and he will not fail to enjoy the character here revealed of what we, with a certain touch of fondness, are wont to style "a gentleman of the old school."

The Lippincott Company has an excellent edition of Rabelais in two volumes, showing good type, and being distinguished by numerous illustrations in which W. Heath Robinson has caught at least the animal, Falstaffian side of his author with notable gusto. But we must express astonishment that no prefatory advertisement is given of the character of the translation here reproduced. As the facts could be stated in a brief paragraph, one is at a loss to understand the reticence of the modern editor. As a matter of fact, this is, so far as we have examined, a very accurate copy *literatim* of the Urquhart-Motteux version of 1653, 1693, and 1694, whether taken directly from the *editiones principes* or indirectly from the careful reprint of the Tudor Translations. Even the title pages of the present edition, besides jumbling together the statements of the ancient and the modern publishers, do not give all the information conveyed in the original of the former. Those who desire to read Rabelais in all the sins of his flesh should know that this is the best and fullest text in English, and that the first three books, from the pen of Sir Thomas Urquhart, are one of the miracles of translation.

We welcome the reprint which Thomas Y. Crowell Company has just issued of "The Complete Works of Robert Browning," with introductions and notes by Charlotte Porter and Helen A. Clarke, and a general introduction by Prof. William Lyon Phelps, of Yale. The twelve volumes—the same number as in the original issue of 1898—have been brought, by the use of Bible paper, to the compass of a pocket edition; this without sacrificing the appearance of the type, which is of excellent size, and does not show through the pages. Some of the photogravure frontispieces, made from paintings of such artists as Vandyke, Michael Angelo, and Burne-Jones, are truly choice.

An agreeable medley of garden lore and philosophy at large is presented by Mary Ansell in the prettily illustrated book "The Happy Garden" (Cassell). On four acres at the edge of pine woods were contrived no less features than a lawn, a peat garden, a Japanese garden, a bridge, a toy river, and a pool. The whole by skilful meanders and vistas came to simulate great spaces. The conquest was a thoughtful one and interesting. Doubtless practical gardeners will find profit in the chronicle. A layman may profess himself unreconciled to the eclectic introduction of exotic sculpture into this British paradise. To point the gently Tory moral of the book, a belated Victorian wife and an ultra-modern spinster are amusingly conjured up. The tone of the author's well-sustained whimsicality recalls the incomparable Elizabeth; but the caustic note is absent. This entertaining book should make an acceptable gift for one who gardens either in fact or fancy.

R. F. Foster is favorably known to bridge players by former writings upon the game, and his latest book, "Royal Auction Bridge" (Stokes), will be welcomed as a practical guide to the game as commonly played now. The introduction of the declaration of "royal spades," or "Lilies," having a value only inferior to that of "no-trumps," has in many respects revolutionized the principles of the game, and Mr. Foster's aim in the present volume is to demonstrate how the double value attached to spades must influence the preliminary bidding. Mr. Foster has evidently adopted the new play *con amore* and regards the innovation as an immense improvement on the old game of auction. Concerning this point we have only space to remark that there is room for difference of opinion, and to many players the objection to "royal spades" will remain, that there seems no logical reason for according a double value to spades rather than to any or all of the suits. A further objection is found in the fact that the new declaration has limited very considerably the number of "no-trump" hands that are played, and the "no-trump" call is of the very essence of bridge. Granting the legitimacy of the innovation, however, Mr. Foster has given a lucid exposition of the principles involved by the new count.

Volumes creditable to British and American scholarship continue to appear in the International Critical Commentary (Scribner). The most recent is "The Book of Isaiah": Volume I, by Prof. George Buchanan Gray, of Mansfield College, Oxford. It contains an introduction (101 pages) and commentary on chapters i-xxvii. A second volume will include the commentary on the remainder of I Isaiah by the same author, and a treatment of chapters xl-lxvi, by Prof. Arthur S. Peake. Twenty years ago one of the heresy charges against Dr. Briggs, who is the American editor of this series, was that he held to a double authorship of Isaiah. It is now generally recognized, however, that not even the first half of the prophesy is a unity, but that considerable portions of the earlier chapters are not from the hand of the great prophet who received his call in the year that King Uzziah died. The tendency has been to undervalue the non-Isaian sections. It is a merit of Dr. Gray that he seeks to do justice to the large portions which cannot be attributed to Isaiah and to exhibit their significance in the development of Hebrew religion. He maintains that the term "genuine" is misleading as applied to passages in a book which has been shown to be a compilation from widely separated ages. The composite character of the book has been so clearly demonstrated that it is not safe to reckon a section as Isaian only because no clear evidence to the contrary appears; the opposite is true; evidence of Isaian authorship must be sought in each section, and the authorship of many portions must be left undetermined. It is Dr. Gray's frank recognition of this fact, and his fresh study of many portions of undetermined age and authorship, which render his commentary an advance upon all previous studies of Isaiah by English students. Another volume of the series contains commentaries on Micah, Zephaniah, and Nahum, by Dr. John Marlin Powis Smith, of the University of Chicago; Habakkuk, by Dr. William Hayes Ward, of the *Independent*, and Obadiah and Joel, by Prof. Julius A. Bewer, of the Union Theological Seminary.

In "The Charterhouse of London" (Dutton), W. F. Taylor tells anew the story of that famous foundation in its three successive stages, as Carthusian convent, as palace, and as school and hospital for pensioners. The Gothic fabric itself, made so familiar by Thackeray as the "Greyfriars" in "The Newcomes," serves to maintain the unity of a story that is full of vicissitudes, and throughout Mr. Taylor makes us feel the spell of old walls and pillars, of archways and quiet cloisters, even as he himself has felt it. The greater portion of the book is devoted to the first period, from the time of the foundation of the convent, in 1371, on the site of a plague burial ground, to its dissolution under Henry VIII; and these chapters are historically of the greatest value and interest. In the main, the history of the austere order founded by St. Bruno has been an uneventful one. No other "religion" has proved so consistently true, in letter and in spirit, to the principles of its founder; on this account, perhaps, it has avoided many of the trials, from within as from without, that have beset other monastic orders. The most stirring chapter in its annals is that which is told here, sympathetically but without partiality, and which relates to the heroic stand made by the London house against Henry VIII and his Machiavellian Vicar-General, Cromwell. For five years, despite every kind of persuasion, the monks, with but one or two exceptions, steadfastly refused to take the oath repudiating the Pope as "Christ's Vicar on Earth," and in that time eighteen of them, headed by their Prior, John Houghton, suffered martyrdom. The King won in the end, as was inevitable, and the convent became the prey of successive spoilers, until its purchase by Sir Edward North, when it entered on a brilliant period of its history as a noble's palace. From the North family it passed to the Howards, and finally to the wealthy merchant, Thomas Sutton, by whose will the Charterhouse was refounded as a hospital for the aged and the maimed and a school for the sons of poor parents. Mr. Taylor has done full justice to an inspiring theme. His facts are admirably marshalled and clearly expressed, and he quotes freely from the contemporary authorities.

An exceeding neatness is the most striking characteristic of Brander Matthews's "Gateways to Literature and Other Essays" (Scribner). This uniformity of surface somewhat disguises a peculiar inequality of texture. When neatness is wedded to shrewdness, as it is in perhaps half the essays, we have a marked degree of critical excellence. One may doubt if, within brief space, anything better could be said about Poe than Mr. Matthews says in his centenary address. This is the high-water mark of the volume, the single point where it rises to the high critical level as defined by the author. Just and stimulating are the essays on "Familiar Verse," "The Duty of Imitation," "In Behalf of the General Reader." The address on James Fenimore Cooper is handled with tact, though the eulogy seems a bit forced. An obituary notice of Bronson Howard is a fine example of deft and sincere journalism. What surprises a reader of these essays is the odd way in which the prevailing neatness lapses into a kind of complacent futility. It is hard to recognize the author of "Poe's Cosmopolitan Fame" in, for example, the essay called "The Devil's Advocate." It is a thin buzzing of protest against the repute of Dr. Johnson, Ruskin, and Carlyle, apparently because their literary habits were not quite gentle and neat. The address on "The Economic Interpretation of Literary History," on the whole a suggestive paper, is quite vague in its reading of the leading term, economic. Again, the essay on "French Poets and English Readers" arrives at the commonplace conclusions that our Teutonic vocabulary has deeper poetic associations, which is probably untrue for constant readers of French verse, while the rhythm of French verse is too slight and subtle to content English ears. All of which comes to saying rather elaborately that few Englishmen know French well enough to grasp the quality of French poetry. Again, the attempt to prove a wide and clear gulf between literary criticism and book reviewing quietly ignores the fact that a large portion of the best criticism was merely superior book reviewing in its day. In fact, Mr. Matthews seems to reduce book reviewing to the news noticing of books. Frequently in these essays there is an odd disparity between the precision of the style and the vagueness of both definitions and ideas. One leaves the book with something between surprise and irritation that one who can be so shrewd and just a critic seems often contented merely to chatter. At least the chatter is well bred and diverting, though the author gives an uncomfortable sense of being most at his ease in his more futile moments. A little devil's advocacy towards his own works would deeply oblige numerous admirers of his real and always companionable talent.

Mr. Bryan's letters from Chicago and Baltimore to a number of newspapers have been put into a book by Virgil V. McNitt, with the title "A Tale of Two Conventions" (Funk & Wagnalls). There is as much of Bryan as of the conventions in the "tale." This fact is accentuated by the addition to the letters as they were first published, of an editor's preface on "Mr. Bryan as a Newspaper Correspondent," an introduction by the Nebraskan, and the reproduction of a number of cartoons relating to his newspaper activities at Chicago and his political activities at Baltimore. While the volume contains the platforms of the three important conventions, and some of the notable speeches given at them, it cannot be highly praised as an account of the proceedings. Naturally, the noted correspondent left the routine story of each day's happenings to less famous hands, and spent his energy upon the broad outlines of the unfolding drama. This was proper enough, but what one wants in the way of a reference book is facts and figures, not rhetoric or ethical disquisitions. Mr. Bryan's volume does not contain a single table, it does contain, apparently, all of its author's speeches at Baltimore. From this general criticism should be excepted one interesting computation found in a footnote, that of the number of telegrams received by delegates to the Baltimore Convention "from home," which are supposed to have played an important part in the nomination of Wilson:

> These telegrams were so numerous that an effort was made to ascertain just how many there were. About 110,000 messages are known to have been received by delegates. Some were signed by many persons. Mr. Bryan himself received 1,128 telegrams from 31,331 persons in forty-six States

Science

William Wallace Campbell, director of the Lick Observatory, is bringing out, through the Yale University Press, his lectures delivered on the Silliman Foundation in 1909-1910. The book bears the title, "Stellar Motions."

The same press will issue "Irritability," by Prof. Max Verworn.

Fannie Merritt Farmer is bringing out, through Little, Brown & Co., "A New Book of Cookery."

As agents for the Cambridge University Press, the Putnams announce: "The Method of Archimedes" (recently discovered by Heiberg), a supplement to the "Works of Archimedes," 1897, edited by Sir Thomas L. Heath, and "Analytical Geometry," a first course, by C. O. Tuckey and W. A. Nayler.

"Stuttering and Lisping" are discussed by Dr. E. W. Scripture in a book announced by Macmillan.

"Prevention and Cure" (Dutton), by Eustace Miles, treats a great variety of conditions (fatigue, old age, kidney troubles, hurry, and nearly a score more) which are mostly not diseases in a very definite sense. On these subjects the author gives much and varied advice, in which fact and fancy are freely mingled; advocating many restrictions of diet; he has some special ideas about exercise and physical culture. He also incidentally manifests a kindly feeling for many "isms" and their founders. Mr. Miles not many years ago had a considerable reputation in several forms of athletics, but now he busies himself with the problems of health as it concerns the individual. Besides inventing many things, as far a part as chair-rests and "safety-fryers," and publishing restaurant recipes and a system of physical culture, he is the principal of a "normal physical school" and the manager of the "Eustace Miles Restaurant (Proteid Foods, Limited)." He also edits a magazine called *Healthward Ho!* and lectures at his "salons in Chandos St." and elsewhere. This book is in part made up of such lectures in which he tried to attract hearers by considering some definite ailments rather than health in general, and found that larger audiences came to listen to him. His main contention seems to be that besides a general cultivation of cheerfulness, it is desirable to practice simple exercises and deep breathing, and to give up flesh foods, for which may be profitably substituted the proteid food called "emprote" and the "training biscuit," such as his company apparently prepares and sells.

G. Stanley Hall's "Founders of Modern Psychology" (Appleton) is an "amplification" of six lectures upon Zeller (who would doubtless be surprised to find himself among the "founders of modern psychology"), Lotze, Fechner, Von Hartmann, Von Helmholtz, and Wundt—these being the giants of the writer's student days in Germany, a generation or more ago. The meaning of "amplification" would furnish an interesting summer problem in textual criticism. We may guess that it consisted in interpolating between the biographical sketch and the critical estimate which constituted each original lecture, and which were carefully and well written, an indefinite amount of perfunctory digest of works and running commentary, more or less from the lecturer's "barrel"; and it is only polite to assume that the task of making the book was entrusted to an assistant—who did not know that the commentator of Kant is not Veihinger, that the mediæval mystic was not Eck*er*hart—and many such; nor that it was Diogenes Laertius who wrote "The Lives of the Philosophers," and not Diogenes who wrote "Laertius" (pp. 45, 50); nor, again, that Von Hartmann and Nietzsche are both dead and that Nietzsche, "the brilliant philologist," repudiated his endorsement of Wagner long before his death. For, while the present tense in the criticism of Von Hartmann (206) might conceivably be historical, it seems clear that the page on Nietzsche (210) cannot have been read by the author since he wrote it, say, twenty-five years ago. By such workmanship an attractive design for a volume of biographical essays is spoiled in the execution. Nor has the author's personal acquaintance with his subjects counted for much towards making their portraits intimate and familiar. Apparently he has few advantages over those who know them only through their works. Yet, from this point of view, it will be admitted that his estimates of the men are, on the whole, sound and just, and it is a pity that such excellent critical work should be buried under a mass of slipshod "amplification."

Dr. James J. Walsh of Fordham University is already well known for his interesting contributions to the history of medicine and for his insistence that the attitude of the Roman Catholic Church has been more favorable to scientific research than some other writers have declared it to be. His last book, "Old-Time Makers of Medicine" (Fordham University Press), deals with the students and teachers of medical science in the Middle Ages or for about a thousand years before the discovery of America. The material has been largely gleaned from other writers, who have made special studies in this field. Dr. Walsh makes no claim to have attempted original research in this direction, and has already used much of the substance of the book in occasional addresses and other publications, but the reader will easily see that he has much more than a mere compilation before him. The author seeks to show that the medical knowledge, or more particularly the surgery, of this period was far less crude and unscientific than it is commonly supposed to have been, and that much now regarded as very modern and commendable was already known in those days and then forgotten. Many things are brought forward to demonstrate that even in surgery the sun shines on nothing new. The careful reader, however, will still feel sure that modern medicine is richer and better than that of early times, and will recognize that the entire structure of medical progress rests now on a different and much firmer foundation and one infinitely more promising for further advance.

What Dr. Walsh's book does show, and what it is well worth while for the modern man to know and appreciate, is the fact that the men of these darker times, and many women, too, did not live in utter darkness, blind followers of vague traditions and methods, but were often as keen and progressive as the best of the moderns. It is easy, however, to magnify their insight and to attribute to them ideas and purposes which they did not really have, and which only the knowledge of much later times could make possible. What is said about anæsthesia, antisepsis, and dentistry easily leads to an exaggerated estimate of their attainments. To say, for example, that "very little has been added to the microscopic anatomy of the teeth since Eustachius's time" is surely misleading. Incidentally, the book carries much biographical detail, and in the appendix touches other points, as the question of St. Luke the physician and the real character of the early universities. Dr. Walsh promises another volume on "Our Forefathers in Medicine," which shall treat of Paracelsus, Vesalius, Servetus, Sylvius, and other worthies of the next period, the sixteenth century, a time of great importance and the deepest interest, the early period of modern medicine.

Drama

The Poetical Works of William B. Yeats. Vol. II, Dramatic Poems. New York: The Macmillan Co. $2 net.

This volume contains half a dozen of the best known of Mr. Yeats's plays, all of which are in the repertory of the Abbey Theatre, Dublin. Wholly apart from their dramatic value, which is not inconsiderable, they have a special significance as constituting a solid foundation for a national drama. Mr. Yeats, Mr. Synge, Lady Gregory, and a few more Irish enthusiasts, strong in the kind of faith that is manifested in works, have given reality to an enterprise which in England and America has taken shape only in the domain of dreams. It is a remarkable accomplishment, carrying with it the obvious lesson that the best assurance of ultimate fulfilment lies in an actual beginning, however small that beginning may be.

The history of the Irish National Theatre is too well known to all persons interested in such subjects to need relation here. Of the pieces in this book two only, "The Countess Kathleen" and "The Land of Heart's Desire," are familiar to theatregoers in this country. The others, "The Shadowy Waters," "On Baile's Strand," "The King's Threshold," and "Deirdre," have been known here only in their printed form. All of them now appear in new guise, having been partly reconstructed and largely rewritten. They are better adapted than before to theatrical representation and far richer in literary beauty and imagination.

But the main object of this notice is to direct attention not so much to the plays—whose peculiar merits were recognized long ago—as to certain pregnant matter in Mr. Yeats's "Appendix IV," enunciating the principles of the Irish National Theatre Society. In this he touches upon some of the most potent causes of the decadence of the modern theatre. When he first began working, he says, upon the Celtic Renaissance, he perceived that there was still even in English a sufficient audience for song and speech. He saw that the theatre was a natural centre for a tradition of feeling and thought, but that, to succeed, it must have the appeal of oratory. This meant that he had to create a theatre of speech, romance, and extravagance. He had to get nearer to human life and instinct—to which, it may be added, nothing is much more foreign or antagonistic than much of the so-called naturalism of to-day. So he looked for the mainspring of his art in speech, where the players of Shakespeare found it, whether in the mimicry of peasant talk, or in that idealized utterance in which poets express what men think but do not say. He aspired to exercise once more the spell of musical language. Often, he says, he has wondered, when listening to some excellent man reading a poetic passage, what meaning poetry could have for the majority of mortals. "There is no poem so great that a fine speaker cannot make it greater, or that a bad ear cannot make it nothing." Truer word was never spoken. The contemporary theatre, he goes on to argue, in its elaboration, develops the player at the expense of the poet, and the scenery at the expense of the player, always specializing more and more, doing what is easiest at the expense of what is most noble, and creating a theatrical instead of a vital and human excitement. And he might have said further that it is just because of this substitution of the theatrically unreal for universal realities—the mockeries of life that momentarily intoxicate and then sicken—that the theatre has become a synonym for furious or vulgar futility. The moral should be taken to heart also in the Irish Theatre.

Mr. Yeats is not always logical. That, perhaps, under the circumstances, is a virtue which ought not to be expected of him. He is right enough in saying that the functions of the reciter and the actor are not identical. But they are not, as he seems to suppose, always and inevitably separated by an artistic gulf. The illustration which he quotes in support of his argument—the recitation of Hood's "Eugene Aram," presumably by Henry Irving—is peculiarly unhappy. He could see in that remarkable achievement nothing but a young man in evening dress who had become unaccountably insane. And yet, by general critical agreement, there has rarely been a more convincing demonstration of the power of a great actor to create a vivid illusion, without the aid of theatrical paraphernalia, by means of voice, gesture, and facial expression. As a matter of fact, recitation is an integral part of the art of acting. In poetic drama, in the case of the Ghost in "Hamlet," for instance, as in many of Mr. Yeats's own characters, the actor must perforce become the accomplished reciter if he is to produce the designed effect. Mr. Yeats says of the reciter that "he may speak to actual notes as a singer does, if they are so simple that he never loses the speaking voice, and if the poem is long he must do so, or his own voice will become weary and formless." This applies with equal force to the actor of poetic parts, and it is largely because the modern player does not know how to voice the melody of blank verse—which he grinds out in a monotonous sing-song—that Shakespeare can no longer be interpreted fittingly. It is time that our theatrical reformers should be reminded that there may be as much potential truth in purely imaginative works as in photographic realism, and that the almost illimitable scope of the ideal stage includes the cultivation of a refined public taste among its possibilities. The art of speech, one of its most important faculties, is perishing of neglect. Mr. Yeats, whose plays prove that his ears are delicately attuned to the music of words and phrases, hopes to revive it. It is a noble ambition, and the success of the Irish Theatre is sufficient proof that it is not entirely visionary.

"The Presentation of Time in the Elizabethan Drama" (Yale Studies in English, XLIV; Henry Holt & Co.), by Mable Buland, is a useful monograph. The main subjects of discussion are dramatic condensation of time and "double time," as it is called—that is, the adoption of two inconsistent time-schemes within the same drama. The latter, as Miss Buland remarks, is really a corollary of the former.

Having accepted the one convention, the theatre-goer or reader finds little difficulty in accepting the other—in fact, is rarely conscious of the employment of double time. This latter convention, if we may so term it, was first pointed out in Shakespeare's plays by Nicholas Halpin and John Wilson some sixty years ago—in "Othello" it is especially manifest—but Miss Buland shows by her analyses that it is observable also in nearly all the Elizabethan dramatists—once at least even in the classicist, Jonson. How far these dramatists themselves were conscious of it is uncertain. Shakespeare's use of it, however, is so definite that it is hard to believe that he did not deliberately adopt this dramatic device. One time-scheme is that naturally required by the action, the other is adopted for the impression of dramatic rapidity. Miss Buland says generally of Shakespeare's handling of time:

> The methods of Shakespeare in representing time are distinguished from those of his predecessors by the concreteness of his allusions to hours and days, by the appearance of close continuity in the succession of his scenes, and by the frequency with which the phenomenon of double time occurs in his plays.

Besides detailed time-analyses of a large number of representative Elizabethan plays, the appendices include notes on the time-element in the Greek tragedians and in Aristophanes. Here, as, for example, in the "Œdipus at Colonus" and Euripides's "Suppliants," there is dramatic condensation of time—especially in connection with the chorus—although no double time apparently, owing to the simple structure of plot. Miss Buland passes over Plautus and Terence with a few words and dismisses the Greek New Comedy in a single sentence. But it is interesting to observe in the latter, to judge by the extant fragments (more extensive than Miss Buland seems aware of) and by the Latin comedy derived from it, that the monologue, which took the place of the chorus of earlier tragedy and comedy, inherited from it the convention of indefinite length of time; during its recitation (as in the case of the chorus) hours might be supposed to have elapsed. Moreover, Plautus's "Captivi," based, of course, on a production of the New Comedy, offers a distinct example of double time. In the course of this play Philocrates makes the voyage from Aetolia to Alis and back which would require several days, yet the speeches of other characters near the end of the play imply that the action has lasted only a day.

No doubt "The Daughter of Heaven," by Pierre Loti and Judith Gautier, has in the French more literary distinction than is apparent in the English version (Duffield & Co.), made by Ruth Helen Davis. However this may be, the English form makes it clear that the French play is a tragic romance of uncommon imaginative and dramatic quality, with high ideals of love and patriotism, a powerful climax, and a poignant and sympathetic catastrophe. How far it is in accordance with historical fact is not a matter of moment. Much of it, certainly, is pure fiction, but it is thoroughly oriental in atmosphere, and doubtless reflects with accuracy certain phases of Chinese character and spirit.

The play tells how a certain Manchu Emperor, inexpressibly weary of his secluded and impotent grandeur in his Peking palace, leaves a dummy prince to act as his substitute, while he goes in disguise to woo the Chinese Empress, who holds her rebel state in Nanking. He falls in love with her, and she with him; but before he can declare his passion the Manchu armies, acting under orders given in his absence, bring fire and slaughter to the gates of the Empress's palace. Compelled to flee, he presently, having assumed command of his troops, returns as an envoy offering peace and pardon, but she, inspired by ancestral devotion, prefers death to submission, and prepares to die with the few survivors of her soldiers. Nevertheless, he is enabled to capture her, and convey her to Peking, where he implores her to become his Empress, and thus inaugurate lasting peace between the rival dynasties. But she, while confessing her love, resolutely refuses to outrage the spirits of her ancestors by union with a Tartar, and he, despairing, but reverencing her loyal piety, supplies her with poison that she may win the death she craves. Then he summons his court to do homage to her dead body. In its closing scenes, the play is tragedy of a high and moving sort, while its earlier acts vary romantic intrigue and patriotic sentiment with effective incident.

After a year's preparation, another English version of this piece, ascribed to "George Egerton," has been produced in the Century Theatre, upon a scale of great spectacular magnificence, with what can only be described as disastrous results. The pictures are extraordinarily fine, and in all material details indisputably characteristic. Much thought and money must have been expended upon them. But no indication of elaborate forethought is apparent in the acting, which is so commonplace and—in spite of such traditional Orientalisms as were revealed in Gilbert and Sullivan's "Mikado"—Occidental, that all the finer exotic flavor of the piece, to say nothing of its subtler significances, is lost, the general representation never rising above the level of pictorial melodrama. Moreover, a stirring story becomes dull and tedious, through the utter inability of the players to deal with dialogue demanding some exercise of interpretative imagination. It is incredible that Pierre Loti, who knows his East, as the play itself proves, could have expressed, as has been reported, his enthusiastic delight in a representation so utterly conventional and uninspired. The inevitable result of it upon the ordinary spectator will be wonderment that an author of his repute—Judith Gautier, of course, has been less widely advertised—could be responsible for a play so pretentious and so shallow. The few who listen, and do not only look—who use their brains and ears as well as their eyes—will appreciate the fact that it is full of noble national aspiration, keen characterization, and poetic fancy. If the management had spent upon the actors a tenth of the money paid for the spectacle, they might have achieved something worth doing. Now they have only succeeded in giving a brilliant panorama, and covering a notable work with discredit.

The repute of several of the most advanced of modern dramatists rests largely upon the ridiculous assumption that a disregard of decent conventions is necessarily a sign of genius. It was some notion of this sort, probably, that induced Winthrop Ames to produce a more or less expurgated version, by Granville Barker, of Arthur Schnitzler's "The 'Affairs' of Anatole" in his Little Theatre. The result is not valuable either as an exposition of Schnitzler, whose dialogue must have lost much of its peculiar savor in translation, or as a contribution to modern dramatic art. The pretence that the piece, in its present shape, reveals any new view of life or its philosophy and is entitled to special credit on that account, is insupportable. Its chief merit, for stage purposes, is an undesirable frankness in dealing with notorious and widespread conditions in the relations of the sexes, its general motive being the humor of mutual infidelity. In its present shape it is a sordid show, whose insistence upon one theme becomes depressing, and whose few brighter moments are powerless to counteract its disagreeable features. The acting is indifferent, but the mounting is exquisite. Apparently the artistic theatre is still a long way off.

The old Princess's Theatre, in Oxford Street, London, which has sheltered some famous players in its time, is about to disappear. It was there, in 1856, that Ellen Terry made her first appearance on the stage. The house was then under the management of Charles Kean, and her part was that of Mamillius in "The Winter's Tale." Many public favorites of past years had been in some way identified with the famous theatre. George Vining ruled there for years, and it was there that Dion Boucicault won his earliest triumphs as playwright and actor. Mrs. Langtry was seen there in "Antony and Cleopatra"; Miss Grace Hawthorne played in "A Royal Divorce"; several of Mr. Hall Caine's melodramas were played there; Charles Warner made his great hit in "Drink," and Wilson Barrett triumphed in "The Silver King."

Music

From Mendelssohn to Wagner. The Memoirs of J. W. Davison. Compiled by Henry Davison. London: William Reeves.

It can hardly be said that Henry Davison has done his father a service by compiling and publishing this account of his life. James William Davison was the musical critic of the London *Times* for four decades (beginning with 1846), and for many years he was also a regular contributor to England's leading musical paper and to several prominent literary periodicals. As such, he wielded an influence second to that of few writers in any department of journalism. In his days, the *Times*'s power was great. The leading European composers, especially Meyerbeer, Rossini, Auber, Gounod, were flattering in their politeness to its musical critic. Singers and players bowed to the ground before him. Berlioz begged him to be kind to his protégés; Théophile Gautier, in commending a singer in whom he was interested, implored him to "make her fortune with three lines." With his unequalled opportunities Davison might have done a great deal to hasten the progress of musical appreciation not only in London, but throughout England, for as one artist wrote to him, "Do not forget, I pray you, how far your paper goes, and how much especially the provincial towns are wholly influenced by your opinion." Unfortunately, his attitude usually was that of depreciation of the best contemporary art; and while he was by no means so well-informed or so brilliant and witty as Dr. Hanslick, his influence on England was as unfortunate in its results as Hanslick's was in Austria and Germany.

It seems strange that a journal so ably edited as was the London *Times* should have tolerated on its staff a critic who could write such ignorant rubbish as the statement that Richard Wagner regarded "every musician, ancient and modern, himself excepted, as either an impostor or a useless blockhead"; or dismiss the "Tannhäuser" overture as "a commonplace display of noise and extravagance." Schumann fared almost as badly. Davison found his music "incoherent and thoroughly uninteresting." In Schumann, as his son tells us, "he saw the representative of a movement which threatened to upset the old order of things," and against his music he set his face from the beginning, though it had to struggle against heavy odds in making any headway at all in England. Verdi, Italy's greatest genius, did not please the *Times* critic, and Meyerbeer, too, fared none too well with him. Chopin was beyond his comprehension: "Compared with Berlioz, Chopin was a morbidly sentimental flea by the side of a furiously roaring lion" and "a great musical thinker." As for Gounod, he did not admire even his "Faust." There was some ground for the belief that Davison had kept his music out of England as long as he could, notwithstanding that Frenchman's diplomatic efforts to get into touch with him.

By far the most interesting pages in this volume are those in which Gounod's correspondence with Davison is printed. Gounod lived several years in London, where he had his own choir and concerts, as well as a periodical devoted to his cause. Davison having written that he should highly prize his friendship, Gounod in reply called his attention to the fact that that friendship was only five minutes' walk distant, and would be delighted to open its doors to him; but Davison retorted that he lived rather like a bear in his den and went nowhere. Later on, Gounod slily endeavored to interest the bear by asking to see some of his compositions, which Sir Julius Benedict had told him included some "superb sonatas." This evoked a lengthy reply in which the critic acknowledged that he had perpetrated some music in a former period, but that he had bought the plates and given them to his brother, "who used the other side of them to print some compositions worse even than mine (which is saying a good deal), but which, on the other hand, were very popular." In a postscript he adds that one of his friends had written these lines on him:

There was a J. W. D.
Who thought a composer to be,
But his muse wouldn't budge
So he set up as judge
Over better composers than he.

It was unwise of Gounod to annoy the powerful critic by analyzing some scores of his idol, Sir Julius Benedict, and showing up "impossible" things in them; admitting, also, that he had been bored consummately by the same composer's "Maid of Orleans." In another letter he says: "You implore me not to become Wagnerized! Do I show any signs? I should very much like to be informed: I would call in a doctor at once, in order to be Wag-cinated." There are German musicians, he declares, "whose music is fit for the dust-bin, like their systems of philosophy." But Gluck, Mozart, Beethoven, were among his idols:

> I was fourteen when, for the first time, I was thrilled with happiness at hearing, in the same winter, the Pastoral Symphony and the Ninth Symphony. . . . You mention "Don Giovanni!" Ah! ah! *There is the Divine.* The trio in A major coming after the little quarrel in G at the beginning of the second act is *the most absolute marvel in the art of music.* You might burn every score in the world, and, with that single piece saved, all art would be found again.

Davison's indifference or aversion included some of the leading singers and players. He was unable to discover in Liszt and Rubinstein anything deeper than brilliant virtuosi. "One Liszt is amusing enough; and one Rubinstein may be tolerated; but a swarm of Liszts and Rubinsteins, mushroom and full-grown, is no more to be desired than a renewal of the plague of locusts." Davison's attitude towards music is summed up in this sentence from a note to Macfarren: "I'd rather go to the devil with Bennett and Dussek than go to heaven with Rubinstein and Raff." It is for mediocrities like Bennett and Dussek, and the man to whom this note was addressed, that the *Times* critic usually reserved his enthusiasm. Great singers—among them Albani and Gerster—did not fare well at his hands, and it was on such occasions that he was himself subjected to criticism. The editor of the *Times*, J. T. Delane, seldom called him to account except on matters of style or policy, or for being too late with copy; but his colleague, Mowbray Morris, had opinions of his own on matters musical and the duty of critics which he expressed in frequent notes, some of which must have proved rather irritating. Once Morris wrote:

> It is not, in my opinion, within the province of a newspaper critic to sit in judgment on the general merits of performers, or to assign them their respective places in the ranks of fame. It is his business to give a plain and honest judgment of what he sees and hears on each particular occasion, leaving the public to make their own comparisons and draw their own conclusions.

While we must repeat that Mr. Davison has not done his father a service by issuing this account of his ideals, his idols, and his aversions, it is nevertheless apparent, from what has been said about the book, that it contains a considerable amount of interesting material, including letters from eminent composers, such as Mendelssohn, Berlioz, Bennett, and others, some of them in facsimile. The title of the book is partly justified, in so far as, after Davison's acceptance of the post of *Times* critic, the story of his career is the story of music in England from the time when Mendelssohn reigned supreme to that when Wagner made his way. In favor of Davison it may finally be said that, although, as his son points out, "he combated the new ideas to the last, when to do so had become a losing fight," he nevertheless began to see light when he went to Bayreuth in 1876 to write up the Nibelung festival. His account of this festival is printed in this volume, together with a number of his other writings; they confirm the impression that he owed his fame and power very much more to his being a member of the *Times* staff than to any special critical or literary ability. His successor was Dr. Hueffer, the great champion of Wagner and Liszt. One cannot but think that, had he been in Davison's place two decades sooner, musical progress in England would have been accelerated greatly.

The Metropolitan Opera season begins this year as early as November 11, and will last twenty-three weeks. There will be the usual Monday, Wednesday, Thursday, and Friday evening and Saturday afternoon performances, besides a certain number of representations at popular prices on Saturday evenings. "Parsifal" will be sung repeatedly, and there will be an afternoon Nibelung cycle. The conductors will be Toscanini, Hertz, Sturani, and Polacco. Besides the operas usually on the list, there are named a dozen novelties and revivals: Boito's "Mefistofele," Damrosch's "Cyrano," Leroux's "Chemineau," Mascagni's "Iris," Meyerbeer's "Huguenots," Moussorgsky's "Boris Goudonoff," Mozart's "Magic Flute," Offenbach's "Contes d'Hoffmann," Puccini's "Manon Lescault," Rossini's "Tell," Saint-Saëns's "Samson et Dalila," Wolf-Ferrari's "Suzanna's Secret." The ballets to be given are "Coppelia," by Delibes, and "Javotte," by Saint-Saëns.

The New York concerts of the Kneisel Quartet will be given at the new Aeolian Hall. The series will open on November 12, the remaining dates being December 10, January 14, February 11, March 4, and April 8. The arrangement of seats in the new hall differs somewhat from that of Mendelssohn Hall, but subscribers have been placed as nearly as possible in their former locations. Those who had seats in the balcony of Mendelssohn Hall, who were assigned at the back of the orchestra at the Hotel Astor last year, will now be placed more advantageously in the balcony.

Edgar Stillman Kelley is to be represented on the programmes of the Liszt festival to be given at Sonderhausen during the third week of this month, his quartet having been chosen for performance by the committee.

Art

Holt promises shortly F. Weitenkampf's "American Graphic Art."

Helen Churchill Candee's "The Tapestry Book" is in the press of Frederick A. Stokes Company.

Two works in art are among the announcements made by Putnam for the Cambridge University Press—"An Account of Medieval Figure-Sculpture in England," by Edward S. Prior, and "A Bibliographical List Descriptive of Romano-British Architectural Remains in Great Britain," by Arthur H. Lyell.

"Mediæval Church Architecture in England," by Charles H. Moore, is in the press of Macmillan.

The Century Co. is bringing out this month "By-Paths in Collecting," by Virginia Robie, and "Prints and Their Makers," a collection of essays on engravers and etchers from the fifteenth to the nineteenth century, written by various hands and edited by Fitz Roy Carrington.

Corrado Ricci, in his "Baroque Architecture and Sculpture in Italy" (Dutton), offers a book of great interest. It contains no less than 274 beautiful photographic plates illustrative of an admirable introduction, which covers less than nine pages, but which shows in every line the value of the author's training. The "Baroque" is still a term of opprobrium, as the "Gothic" was originally; but our author shows that the architectural works of the period harmonized thoroughly with the spirit of the age, and that many of them were of great and enduring value. That its leading architects could, when it seemed to them appropriate, lay aside the effort to surprise, which, as our author says, was so clear an aim among all artists of the era, is evidenced in the Collonade of St. Peters in Rome, by Bernini, and the Church of S. Maria della Salute at Venice, and by Longhena, to mention no other works.

Julius Baum's "Romanesque Architecture in France" (Dutton) is a work of the same general character in another field. The 226 photographic plates are exceptionally fine, and are again illustrative of the author's introduction. This is devoted to a brief but interesting and valuable review of the influences which led to the development of the Romanesque and Gothic styles, in relation to the latter of which, however, our author, with true loyalty, discerns much more influence from Teutonic sources than is generally accepted.

In "Modern Cottage Architecture" (Lane), Maurice B. Adams gives us a revised and enlarged edition of an earlier work on the "Cottage Architecture of England," with eighty-three photographic plates, which display as many different buildings, few of which are worthy of serious study. If we may judge by this book, modern English cottage architecture lacks simplicity and spontaneity. "Architectural Styles for Country Houses" (McBride, Nast), which is edited by Henry H. Saylor, deals with the same class of buildings in America. He has gathered together ten essays by practicing architects on diverse types of smaller houses which are finding favor among us, and the work he illustrates is both interesting and well presented. That the editor is able to show the development of our cottage architecture along ten diverse lines shows how far our people are from the attainment of architectural conviction.

In a pretty quarto, printed and bound after the Japanese manner, Dora Amsden and J. S. Happer discuss "The Heritage of Hiroshige" (Paul Elder & Co.). Mr. Happer communicates the interesting discovery that many of the Hiroshige prints are dated. The upshot of the matter is that most of the upright compositions which a skeptical criticism has ascribed to Hiroshige II are by the earlier and greater master. Hiroshige II is merely Shigenobu, who, in 1859, after the death of Hiroshige, assumed the more ambitious style. The criticism of this discovery would require a minute scholarship which your reviewer does not command. The plain statement of the case, however, is entirely reasonable, and inspires confidence. It is consonant with a conviction which we have several times expressed that the marked difference in quality among Hiroshige prints implies rather grades of woodcutting, paper, printing, and pigment than difference of authorship. The appreciation of Hiroshige's genius is cast in terms of somewhat rhapsodical, but not excessive, eulogy. Surely, the brief sketch of Japanese painting before Hiroshige is superfluous, since no designer of genius was less a follower of the native tradition. His real beginnings are in Toyoharu's imitation of European illustrations. It is the failure to discriminate the degree of assimilation of native and alien strains in Hiroshige that constitutes the critical weakness of a charming essay. Precisely there lies the main issue. He effected with success the compromise towards which Japanese painting has been uncertainly tending ever since. He achieved the just balance of Far Eastern schematism with Western realism for which European painting is still struggling. There could be no more prophetic figure. Whistler in the nocturnes is often Hiroshige's timid plagiarist. A word on the exquisiteness of Hiroshige's painting as compared with even the finest of the prints would not have been amiss.

Some Turkish workmen, while digging a canal near the mosque of Mohammed the Conqueror, in Stamboul, unearthed a number of remains which have been identified as belonging to a Byzantine temple. Well-preserved capitals with reliefs of Greek crosses were found, as well as a number of columns, and parts of the walls of the temple. The digging went on for a number of days without competent supervision, and when the director of the Museum was at last informed of the discoveries, it was found that a number of valuable objects had already disappeared.

Finance

MARKETS AND BALKAN WAR.

Whether because of apprehensions regarding the results of the war itself, or because Europe's financial markets were in vulnerable condition as a result of recent speculative excesses, or because the world's money market situation was such as to render the business community unusually sensitive—whichever may be the larger cause, the shock which Bulgaria's defiance and Montenegro's invasion of Turkey have caused to the stock exchanges has been very great. Declines of a full point, in securities of first-class governments, are always taken as reflecting grave disturbance. But since the last day of September, when the war rumors first assumed formidable shape, prices of such securities have fallen much further than that. The extreme declines, up to the early days of the present week, were 1½ point, even in public bonds like British consols and German 3 per cents. French Government rentes fell 2¾ and Russian 4 per cents 7 points. As for the belligerent Governments, the public securities of Turkey have dropped 11 points; of Servia and Bulgaria, 8½ each; of Greece, 5.

Our own stock market, in the same interval, broke 2 to 5 points for shares which are dealt in on the international market. That reaction was, however, not in any respect a sign of diminishing confidence of investors in our home financial position, but the necessary result of the heavy selling of our stocks by London, Paris, and Berlin. These sales our international bankers are now estimating as having amounted, for the fortnight past, to as much as thirty or forty million dollars.

Money rates, meantime, have tightened throughout the European Continent; an advance in the Bank of England's official discount rate was momentarily expected, and the gold imports to New York from Europe have abruptly stopped. On the other hand, the weekly New York bank statement of last Saturday showed the strongest position, as regards surplus reserve, of any week since the close of August—an improvement partly due to European gold already delivered in this market, but chiefly to the curtailment of loans by the New York banks, not through withdrawal of facilities from the borrowers, but through the wholesale transfer of those outstanding loans to European banks and our own interior institutions.

This is at once the strength and the

weakness of the New York position. That market is at the moment dependent for its supply of credit, first, on markets which are shaken by the Balkan war-scare; secondly, on markets whose resources are likely to be increasingly absorbed by home demands. It is at least conceivable that a very high bid for money by New York will be necessary to keep the loan account in its present shape, or else that actual curtailment of local credit facilities will be indispensable.

It is in this regard that the European war-scare will hereafter chiefly interest our market. Thus far, our financial concern in the matter has been limited to the extremely heavy liquidation of American stocks by Europe, which has had the natural effect of beating down prices on our Stock Exchange. If the foreign war-scare continues to extend, we shall feel it in the money market.

Will it extend? The question confronting financial Europe and ourselves is a somewhat curious one. Nobody fails to understand that the real cause of apprehension is, not whether Servia and Bulgaria and Greece will go to war, nor even whether Turkey may not be whipped by the Balkan soldiers, but whether Russia or Austria or the other larger Powers may not be drawn into the fight. It is this vague notion of a "European Armageddon" which has stood behind all these successive frights over international collisions.

Armageddon has been impending at rather frequent intervals; as yet, however, it has not only failed to put in an appearance, but it has been easy to understand, when the preliminary chapters of each war episode were over, why there was never any chance of it. The apprehensive watchers discerned it plainly when Admiral Diedrich involved the German fleet in some gross impertinences towards our warships at Manila, and when certain counter-assurances were received from Admiral Seymour and the British fleet. Armageddon opened up promptly when the Kaiser sent his message to Kruger, after the Jameson Raid in 1896; when Capt. Marchand was stopped on the path to Fashoda in 1898; when the Boxers killed the German Ambassador in 1900, and when Admiral Rozhestvensky fired on the British North Sea trawlers in 1904.

There is, in fact, always an imitation Armageddon at one particular stage of every war. Most people will remember that February Saturday at Paris, barely a week after the Japanese attack on the Russian fleet, when the Bourse was informed that the British Ambassador had left Paris in a tantrum and that the German Ambassador had thrown up his hands in complete despair. There was also that day in 1870, when every London correspondent was running about to hunt down the ultimatum of British intervention between France and Prussia. But Armageddon not only on each occasion faded into mist on closer scrutiny, but turned out, in the light of later investigation, never to have been in sight at all.

Whenever Turkey is driven incontinently into Asia Minor, and the practical question arises, who is to inherit Constantinople, there will doubtless be presented the elements of a first-class international dispute. But no one has yet accused Montenegro or Bulgaria or Servia or Greece of that Napoleonic purpose. The most that the watchers for Armageddon have as yet been able to produce on the present occasion, is the inviting argument that the little principality which has invaded Turkey is a protégé of Russia, and that therefore M. Sazonoff's voluntary leadership, in the harmonious concert of the Powers, must have been the blackest Machiavellianism.

Perhaps what American observers will recognize as one of the most singular aspects of the financial shake-down which has accompanied the Balkan war scare, is the fact that the money-market shock and the European liquidation should have come when our market was in a position admirably suited to sustain them with serenity. Considering Wall Street's recent gloomy attitude towards trade revival, it is much to the credit of human nature that we have not yet heard any prophecy of "the Balkans" blighting all hopes of returning American prosperity.

There are, at all events, some interesting precedents to recall. The great trade revival which began in the autumn of 1897 was immediately preceded by a war between Greece and Turkey. It was promptly accompanied by a war between the United States and Spain. Since that did not arrest the trade revival, we had the "Boer War panic" of 1899, a prodigious emptying-out of American securities from British strongboxes, a sudden pulling-away of English capital from America, and a 186 per cent. call money rate in Wall Street. When the commotion of those early winter months was over, the American trade revival was resumed, and our bankers calmly proceeded, for the first time in financial history, to underwrite the British Government's war loans.

Pygmies and Papuans

The Stone Age of To-day in Dutch New Guinea

By A. F. R. Wollaston, Author of "From Ruwenzori to the Congo." With appendices by W. R. Ogilvie-Grant, A. C. Haddon, F.R.S., and Sidney H. Ray.

This volume, entertaining as a book of travel, and scientifically informing, is an account of a scientific expedition made in 1911 under the auspices of the Royal Geographical Society and the Ornithologists Union to the Snow Mountains of Dutch New Guinea. The adventures and the scientific results of this expedition are here presented, and the book offers new and important matter to naturalists, geographers, anthropologists, philologists, and others. The appendices offer matter of special and detailed value to scientists. *Octavo. Profusely illustrated in color and black and white, and with maps.* $4.00 *net.*

Outlines of the History of German Literature

By J. G. ROBERTSON.

Professor of German in the University of London.

12*mo.* $1.35 *net. By mail,* $1.50.

It has been the plan of the author to lay down several lines of the development of German Literature, rather than to heap up biographical or critical detail. The volume has been provided with somewhat extensive chronological tables; the reader will find the parallel tabulation of events in English and other literatures useful in helping him to "place" the phenomena and movements of German Literature.

The Home Book of Verse

AMERICAN AND ENGLISH (1580-1912)

Compiled by BURTON E. STEVENSON

Collects the best short poetry of the English language—the masterpieces and the "favorites." 3742 pages. India paper 1 vol., 8vo., complete author, title and first line indices, $7.50 net: carriage, 40 cents extra.

The most comprehensive and representative collection of American and English poetry ever published, including 3,120 unabridged poems from some 1,100 authors.

It brings together in one volume the best short poetry of the English language—not only the poetry that everybody says is good, but also the verse that everybody reads—from the time of Spenser, with especial attention to American verse.

The copyright deadline has been passed, and some three hundred recent authors are included, very few of whom appear in any other general anthology—such as Lionel Johnson, Noyes, Housman, Mrs. Meynell, Yeats, Dobson, Lang, Watson, Wilde, Francis Thompson, Gilder, Le Gallienne, Van Dyke, Woodberry, Riley, etc., etc.

The poems are arranged by subject, and the classification is unusually close and searching. Some of the most comprehensive sections are: Children's rhymes (300 pages); love poems (800 pages); nature poetry (400 pages); humorous verse (500 pages); patriotic and historical poems (600 pages); reflective and descriptive poetry (400 pages).

No other collection includes so many popular favorites and fugitive verses.

Three complete indices (author, title, and first line) include over 11,000 entries.

The use of India paper makes possible a single column to a page instead of the two-column arrangement of the older anthologies, and gives a compact, handy volume for reading or the shelf instead of an unwieldy book merely for the table.

This one volume is the equivalent of a ten-volume set of octavo volumes, each of 374 pages.

The Pioneer Series of New Books For the People

THE HOME UNIVERSITY LIBRARY

On Living Issues by Living Men and Women

Each volume complete in itself, and sold separately. Each is absolutely new, and specially written. There are no reprints.

Cloth bound 50c. Per vol., net, by mail 56c.

The volumes are by experts of the very first rank, and bring within the reach of all the ablest obtainable statements of certain important fields of knowledge.

Personal Traits of Abraham Lincoln

By HELEN NICOLAY.

A Lincoln volume which every lover of the great American will prize for the new light it throws on Lincoln the man, and for its intimate, sympathetic touch, based upon material gathered during many years by John G. Nicolay, one of Lincoln's private secretaries. A delightful and illuminating record whose interest will endure.

Reproductions of handbills, invitations, letters and documents in Lincoln's own writing. Tall 12mo, 387 pages. *Price $1.80 net; postage 14 cents.*

Why Go to College

By CLAYTON SEDGWICK COOPER.

A sane, convincing, and suggestive discussion of the American college man and American college problems to-day. A notable contribution toward solution of the problem of preparing the young men of our nation for leadership and useful citizenship.

Attractive and interesting full-page illustrations from etchings and drawings by Thomas Wood Stevens, Helen B. Stevens, Henry Raleigh, and Katherine Merrill. 8vo, 212 pages. *Price $1.50 net; postage 13 cents.*

Prints and Their Makers

Edited, and with an introduction, by FITZROY CARRINGTON.

Essays on engravers and etchers, old and modern, by notable authorities, discussing with authority various phases of etching and engraving from the time of Dürer.

The plates for the illustrations (197) have all been made with much care from original etchings, and form an interesting and valuable collection.

A royal 8vo, 275 pages of text.
Price $3.50 net; postage 21 cents

PUBLISHED BY

THE CENTURY CO UNION SQ., NEW YORK.

On the Art of the Theatre

By EDWARD GORDON CRAIG

8vo, boards, with illustrations, $2.00; by mail, $2.14

The most important book about the theatre published in years.

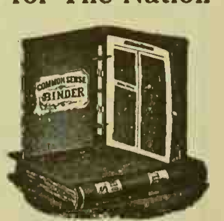
Charles H. Sergel & Co., Chicago

"I have read your last book with solid satisfaction and it shall be one of my pleasures to make as many people read it as I can reach. It is full ripeness and mellowness—worth tons of ordinary socialist prattle on that subject," writes John Graham Brooks to Charles F. Dole, author of "The Burden of Poverty." *Postpaid 55 cents.*

B. W. HUEBSCH, 225 Fifth ave., New York

Reading Case for The Nation

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with The Nation stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.



ADDRESS

THE NATION, 20 Vesey St., N. Y. City

The House of Cassell
Established 1848

Sixty years of editorial experience in the selection of books is your guaranty that nothing unworthy in fiction or unreliable in general literature is published over the Cassell imprint.

History

The Story of the Renaissance

By William Henry Hudson

Author of "An Introduction to the Study of Literature," "Rousseau and Naturalism in Life and Thought," etc. In this handsome volume of over 250 pages the author tells the story of the Renaissance in a delightful, historic narrative, beginning with a chapter on the Renaissance in general, followed by chapters on The Age of Inventions and Discoveries, The Revival of Learning, The Renaissance in Religion, Philosophy, Education, Art and Literature. Handsomely illustrated with 8 full-page plates from half-tone engravings. *Net*, $1.50 (*postpaid*, $1.63)

A History of the Modern World

By Oscar Browning, M.A.

Late Fellow of King's College, Cambridge, and University Lecturer in History. The civilized world of the last hundred years—the period covered by this work—has been prolific of great men, who have influenced their own and other nations, both for good and ill. Professor Browning has written from this point of view. It is the men who dominate this story of the last hundred years. Great monarchs, statesmen, soldiers, the men of giant intellect pass before us, and we see at once in these pages how their conduct has shaped the nations of the world as we know them to-day. Not only the history of England and the Continental nations is reviewed, but also that of our own country. In two volumes, 8vo, cloth. *Net*, $7.50 (*postpaid*, $7.95)

First Sketch of English Literature

By Henry Morley, LL.D.

This standard work, first published in 1873, has been thoroughly revised and brought down to the deaths of Swinburne and Meredith. It is a comprehensive authoritative work of nearly 1,200 pages, treating of the history of English Literature from the earliest times to the present day. *Net*, $2.00 (*postpaid*, $2.22)

Biography

The Life of Charles Dickens

By His Eldest Daughter

THE PREFACE.

"I have written this short biography of my father at the request of Messrs. Cassell and Company, expressly for the young. I have little that is new to tell, the subject having already been exhaustively treated in Mr. Foster's 'Life,' and in our own published 'Letters.' I have tried to collect every incident which will be most likely to interest and to appeal to young people; and whenever I have been able to use my father's words, I have done so. If the reading of this little book be the means of making any boys and girls love and venerate the Man—before they know and love and venerate the Author and the Genius—I shall have accomplished my task with a thankful and a grateful heart."—*Mamie Dickens.* *Net*, $1.00 (*postpaid*, $1.08)

Thackeray

By Sidney Dark

This little book is an intimate and illuminating account of the life of the great English novelist by one who has made an exhaustive study of this subject. *Net*, 50c. (*postpaid*, 58c.)

The Life of Tolstoy

By Paul Birukoff

Existing biographies of the great Russian teacher are, to a certain extent, unreliable. This unreliability arises from the false manner in which the biographers regard, and try to explain, important facts of Tolstoy's external and inner life. The need, therefore, for a Life of Tolstoy written by a thoroughly friendly and intelligent hand is evident. Such a book is the short and interesting "Life" by Paul Birukoff, now translated by a Russian scholar, well versed in the English language. No complaint can be made that the facts of Tolstoy's external and inner life are here overstated or under-emphasized. Tolstoy himself actually collaborated with the author in the present work, and collected personally the letters and other documents from which extracts have been quoted. With photogravure frontispiece and 16 full-page illustrations. *Net*, $1.50 (*postpaid*, $1.60)

Religion

The Man of No Sorrows

By Coulson Kernahan

The author has produced in this book a striking allegory. In his dream, he sees the coming of another Christ—a Christ without suffering, without a cross, only joy. *Net*, 50c. (*postpaid*, 58c.)

The High Road to Christ

By Rev. Richard Roberts

Author of "The Renaissance of Faith." Mr. Roberts gives the broad, essential outlines of the faith of the Gospels as he holds it to-day, and the main reasons for his belief. The author has been "through the mill" of doubt and difficulty himself and faces big problems from the standpoint of actual life. *Net*, $1.00 (*postpaid*, $1.10)

Personal Power

By Keith Thomas

An inspiring and helpful volume on the development, use, and pleasure of exercising one's personal powers. "The Sense of Power," "Dare To Be Yourself," "How To Get Good Luck," "Success and What It Is," are some of the suggestive chapter headings. *Net*, $1.75 (*postpaid*, $1.86)

Travel

The Desert Gateway

By S. H. Leeder

This book is the record of a long sojourn at Biskra—a beautiful oasis of that illimitable desert which has for thousands of years held the Arab in thrall with its mysterious fascination. It is the only accessible work of its kind on the region described in "The Garden of Allah." Beautifully illustrated *Net*, $1.75 (*postpaid*, $1.87)

The Land of Veiled Women

By John Foster Fraser

This book is broader in its scope than its title indicates. It is a vivid portrayal of conditions of life in those countries—the life of both native and foreign residents. For example, one chapter is devoted to "The Foreign Legion" now quartered in Algeria; one chapter to Biskra, wherein lies the Garden of Allah, etc., etc. With 24 illustrations in color and black and white. *Net*, $1.75 (*postpaid*, $2.00)

The New Garden of Canada

By F. A. Talbot

The eyes of the Twentieth Century are fixed upon Canada, "the Country of the Future." On the back of a pack horse the author traveled through undeveloped New British Columbia, and in this book brings the reader face to face not only with new wonders of Nature, but with enormous riches, agricultural, mineralogical, forestal, industrial—all lying dormant, and silently calling to the plucky and persevering. With 48 full-page plates and a map of the author's route. *Net*, $2.50 (*postpaid*, $2.65)

We urge you to ask for our publications of your bookseller. Telephone if more convenient, should you find any difficulty in securing them promptly, we will gladly supply them direct. Send for our descriptive catalogue.

CASSELL & COMPANY, 45 East Nineteenth Street, NEW YORK

"We have found it of immense advantage to be able to procure these classics in editions at once accurate, well printed, and most moderate in price," Prof. R. M. WENLEY, Head of the Department of Philosophy, University of Michigan, writes to The Open Court Publishing Co.

University of Michigan
ANN ARBOR

18th Sept., 1912.

THE OPEN COURT PUBLISHING COMPANY,
Chicago, Ill.

GENTLEMEN:—As you are aware, volumes issued in your "Philosophical Classics" series have been used with great profit in the classes of the Philosophical Department of the University of Michigan for many years. In conversation with me only last week, one of the local booksellers informed me that "he could hardly keep enough of your books in stock to supply the demand." As the Department enrolled just over 1,500 students last year, he was, no doubt, stating a fact. Berkeley's "A Treatise Concerning the Principles of Human Knowledge" and Hume's "Enquiry Concerning Human Understanding" are read by the hundreds of students who elect Course I, and we have found it of immense advantage to be able to procure these classics in editions at once accurate, well printed, and most moderate in price. In other classes, we use Kant's "Prolegomena," "Aristotle on His Predecessors," "The Metaphysical System of Hobbes," Locke's "Essay Concerning Human Understanding," and Leibniz's "Discourse on Metaphysics." You are enabling us to send students directly to the sources in books which it is no hardship to them to purchase and to use as their own. You are thus serving the cause of sound learning with excellent facilities.

R. M. WENLEY, D.Phil., Sc.D., Litt.D., LL.D., Head of the Dept. of Philosophy.

The item of expense for text books is a heavy one for many students, and we publish this splendid endorsement of the work of The Open Court Publishing Company in the hope that other Universities will follow the example of Michigan in providing their students with excellent books at lowest cost.

The Philosophical Classics (16 in number) will be sent for examination, postpaid, on request from the Department of Philosophy of any College or University.

Verified in essential facts both by American and European Bankers

UNSEEN EMPIRE

By DAVID STARR JORDAN

Dr. Jordan here shows that civilized nations are all in their degree under the domination of a power stronger than kings or parliaments, more lasting than armies or navies, the unseen Empire of Finance. He further shows that this mastery is not now in the hands of individual men, however powerful, but that it has passed over into an impersonal Empire of Debt. Many of the essential statements which Dr. Jordan makes have been verified by leading bankers both in this country and abroad. There is an "unseen empire" that can to a certain, and perhaps to a large, degree sway the destinies of nations, and the method, if not the exact extent of it, is told in this highly informing and suggestive volume.

The American Commonwealth of that period

For descriptive matter, address the Publisher, WILLIAM J. CAMPBELL, 1623 Chestnut St., Phila.

New Books of Permanent Value

Joseph Pennell's Pictures of the Panama Canal

The wonderful series of lithographs of Panama and the Canal, and done on the spot by Mr. Pennell during the past winter, are here reproduced in book form. Of the lithographs themselves only a few impressions will be pulled and sold separately in the print shops. A set of the original lithographs costs about $100.00. All are given here in reproduction preserving all the detail of the originals.

Twenty-eight illustrations, with Mr. Pennell's introduction, giving his experiences and impressions and full description of each picture. Volume 7¼x10 inches. Beautifully printed on dull-finished paper. Lithograph by Mr. Pennell on cover.

Large 8vo. Cloth inlaid. $1.25 net. Postpaid, $1.40.

MASTERPIECES OF THE SEA.

William T. Richards

A Brief Outline of his Life and Work.

By HARRISON S. MORRIS.

Everybody knows "a Richards," with its magnificent surf and towering cliffs, but nobody knows much about the artist himself. This is remedied by this brief, sympathetic biography. Richards's life was full of charm and action, and deeply connected with the new currents of American painting. Every American who is proud of native art will want this collection of reproductions of the finest examples of his art.

18 illustrations in duotone. Cloth, $1.00 net. Postpaid, $1.10.

An American Glossary

Being an Attempt to Illustrate Certain Americanisms Upon Historical Principles.

By RICHARD H. THORNTON.

This invaluable work contains more than 13,000 quotations arranged according to their dates. No attempt is made to register the voluminous outpouring of modern slang, but it includes some modern slang expressions which are too characteristic to be left out; also others belonging to the period of the hunter and the backwoodsman. This important work fills a particular need, as at the present time there is no dictionary of Americanisms compiled upon historical principles.

Two vols. 8vo. Cloth, $7.50 net.

The Flowing Road

Adventuring on the Great Rivers of South America

By CASPAR WHITNEY

Mr. Whitney has gathered in this volume the experiences of five separate overland and river expeditions into the heart of South America, beginning in 1902. Largely these were by canoe and chiefly on streams more or less connected,—hence the significance of the title "The Flowing Road." Two of the author's most prolonged journeys were taken with the object of visiting savage and unknown natives in the southeastern corner of Venezuela. There are startling adventures with animals of various kinds, and the author's trip alone with one of the natives, to reach the unknown land at the bead of the Orinoco through the midst of hostile Indians and alomst impassable natural barriers, is a chapter in travel adventure which has rarely been equalled. There is a chapter devoted entirely to the subject of preparation for travelling in tropical regions with directions as to clothing, cooking utensils, food, etc.

Twenty-four inserts and maps. 8vo. Cloth, $3.00 net. Postpaid, $3.20.

Modern Dancing

By J. E. CRAWFORD FLITCH, M.A.

This book is an original treatment of modern dancing—of dancing, that is, since the ballet of the Renaissance, with special attention to the dancing of to-day. The author considers dancing only in so far as it can be taken seriously as an art. He writes critically of the various kinds of dancing—the rise and fall of the ballet, skirt dancing, serpentine dancing, etc.

With eight illustrations in color and forty in black and white. Large 8vo. Cloth, gilt top, $3.75 net.

Our English Cathedrals

By the REV. JAMES SIBREE.

Many books have been written about our English cathedrals, but Rev. James Sibree has nevertheless found something fresh to say about them, and what is just as much to the point, he has succeeded in saying it in a fresh and interesting manner. The volumes are based on half a century's study of English ecclesiastical architecture.

Fully illustrated by photographs and block plans. Two volumes. 8vo. Cloth, $2.50 net.

A VALUABLE CONTRIBUTION TO CIVIL WAR LITERATURE.

General Jubal A. Early

Autobiographical Sketch and Narrative of the War Between the States. With Introductory Notes by R. H. Early.

General Early was urged by many well-known Southern Leaders to write this account of the War and the part he took therein from the time he was appointed Colonel in the Volunteer Service of Virginia, following the fall of Fort Sumter, to the end. He entered the Civil War well equipped to organize and lead, and the value placed upon his services is shown by the letters received from Jefferson Davis, Robert E. Lee, Charles S. Venable, and many others, reproduced in connection with his narrative. This is given in the straightforward, conscientious style, true in every detail, that would be expected from the pen of this veteran. There are phases of the War, manœuvres of the troops, and plans of the leaders which no work has heretofore covered.

Illustrated. 8vo. Cloth, $3.50 net. Postpaid, $3.75.

FINE LIMITED EDITIONS

The Colonial Homes of Philadelphia and Its Neighborhood

By HAROLD DONALDSON EBERLEIN and HORACE MATHER LIPPINCOTT.

This work describes Philadelphia's colonial homes and family history, giving a picturesque account of the period.

70 illustrations. 8vo. Cloth, $5.00 net. Postpaid, $5.25.

Old Time Belles and Cavaliers

By EDITH TUNIS SALE.

A collection of intimate life histories of the lovely women and high-born men who were the backbone of our nation in Colonial Days. This volume might be termed "A Family History of Colonial America." These stories of the staunch devotion and stalwart patriotism of our forefathers are inspiring reading.

62 illustrations. 8vo. Cloth, $5.00 net. Postpaid, $5.25.

New Fiction

THE LADY DOC

By

CAROLINE LOCKHART

Author of

"ME-SMITH"

A Breath of
Vigorous Life
from the
New West

"Me—Smith," the big Western novel of 1911, ran into seven large editions. "The Lady Doc" will be even more popular. There is the humor and excitement of breezy Western life; and the strong personality of the Lady Doc dominates every scene until the big climax. Illustrated. Cloth, $1.25 net. Postpaid, $1.37.

The First Hurdle

AND OTHERS

By JOHN REED SCOTT, Author of "The Last Try." Frontispiece in color by James Montgomery Flagg. Cloth, $1.25 net. Postpaid, $1.37.

These stories are full of dash and go, witty dialogue, and clever character drawing.

A Jewel of the Seas

By JESSIE KAUFMAN. Illustrated in color by Gayle Hoskins. Cloth, $1.25 net. Postpaid, $1.37.

An enchanting novel of Hawaiian social life.

The Ordeal

By CHARLES EGBERT CRADDOCK, Author of "The Raid of the Guerilla." Frontispiece in color by Douglas Duer. Cloth, $1.20 net. Postpaid, $1.32.

An impassioned romance of a strong man's reawakened love for the woman who jilted him, now the widow of another man.

THE BOOK OF THE WOMAN QUESTION

The Advance of Woman

By MRS. JANE JOHNSTONE CHRISTIE

This remarkable volume treats of the rise of the feminine from the earliest times down to the present. It is not an argument for woman's rights, but it is a most convincing picture of her proper place in the whole scheme of things. No man or woman who favorably or unfavorably regards the present agitation seriously can afford to ignore this volume. 12mo. Cloth, $1.50 net. Postpaid, $1.65.

"Jung Deutschland" presents as much simple idiomatic reading and as much grammar as an average student can cover during one year in high school. It teaches the fundamental principles of German grammar in and through the language itself. In very simple German the pupil is introduced to his everyday surroundings and happenings. The subjects have been chosen with a view to strengthening vocabulary, and also on account of their adaptability to teaching grammar. Oral work is considered the most important feature of the first year's course, in its attempt to inspire the pupil with confidence and with ease of expression through the German.

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net postpaid.

THE COURTS THE CONSTITUTION AND PARTIES

Studies in Constitutional History and Politics

By Andrew C. McLaughlin

Professor of History in the University of Chicago.

The work consists of five papers, the first of which discusses the power of a court to declare a law unconstitutional. It examines into the historical growth of the judicial power, and seeks, by reference to the writings of American statesmen of early days, to trace the idea of fundamental law.

Two of the papers deal with the growth and essential character of political parties, and are followed by one on the history of differing theories of the federal Union. The work fittingly concludes with a discussion of the written constitution in some of its historical aspects.

The work is a sane and illuminating contribution—of extreme value to lawyers and sociologists, but equally adapted in tone and scope to all who take an interest in the maintenance of a popular form of government.

Verified in essential facts both by American and European Bankers

UNSEEN EMPIRE

By DAVID STARR JORDAN

Dr. Jordan here shows that civilized nations are all in their degree under the domination of a power stronger than kings or parliaments, more lasting than armies or navies, the unseen Empire of Finance. He further shows that this mastery is not now in the hands of individual men, however powerful, but that it has passed over into an impersonal Empire of Debt. Many of the essential statements which Dr. Jordan makes have been verified by leading bankers both in this country and abroad. There is an "unseen empire" that can to a certain, and perhaps to a large, degree sway the destinies of nations, and the method, if not the exact extent of it, is told in this highly informing and suggestive volume.

The Letters of George Meredith

EDITED BY HIS SON.

The two volumes have been in process of selection and preparation since his death, in 1909, and will be found one of the most varied, interesting, and revealing of such autobiographical collections.

Two volumes. With portraits. 8vo. $4.00 net; by mail $4.38.

The Poetical Works of George Meredith

With some notes by G. M. TREVELYAN.

George Meredith was one of the great poets in the succession of English poetic masters. It is therefore right that all of his poetry should be made available in one volume by which his eminence can be appreciated and judged.

With portrait. $2.00 net; by mail $2.19.

The Call of Brotherhood

and other Poems

By CORINNE ROOSEVELT ROBINSON.

The poems by Mrs. Douglas Robinson, appearing from time to time in the magazines, have attracted the attention of those who love serious thought expressed in melodious verse. The author classifies them under four divisions—Life, Heroism, Love, and Grief.

Plutarch's Nicias and Alcibiades

Newly translated with introduction and notes.

By BERNADOTTE PERRIN,
Professor in Yale University.

Another volume of Plutarch's Greek Lives, translated and edited with the same distinguished scholarship and fine literary quality that made PROFESSOR PERRIN's earlier volumes so remarkable. With its publication the author completes his design, begun in "Themistocles and Aristides" and advanced in "Cimon and Pericles," of presenting in popular form material for the critical study of "the greatest century in the history of Athens."

A Camera Crusade Through the Holy Land

By DWIGHT L. ELMENDORF.

By writing his first book, he has preserved in a permanent and accessible form those qualities—hitherto limited by the walls of the lecture hall—which made his lectures famous. He gives the fresh narrative of a journey on horseback from Hebron on the south to Dan on the north, with excursions to Damascus and Mount Hermon.

Nor have the one hundred beautiful photographic illustrations been visible elsewhere; they are a selection from the total of two thousand he made on the journey. Each is accompanied with a list of biblical references it especially illustrates.

Price $3.00 net; by mail $3.27.

The Last Frontier

By E. ALEXANDER POWELL, F.R.G.S.,
Late of the American Consular Service in Egypt.

"Morocco, Algeria, Tripolitania, Equatoria, Rhodesia, the Sahara, the Sudan, the Congo, the Rand, and the Zambesi, . . . with your permission I will take you to them all, and you shall see, as though with your own eyes, those strange and far-off places which mark the line of the Last Frontier, where the white-helmeted pioneers are fighting the battles and solving the problems of civilization."

Splendidly illustrated with photographs. $3.00 net; by mail $3.26.

New Trails in Mexico

By CARL LUMHOLTZ, M.A.,
Author of "Among Cannibals," "Unknown Mexico," etc.

Dr. Lumholtz, whose discoveries in Australia and Mexico have been of equal scientific and romantic interest, records valuable explorations during 1909 and 1910 in the almost unknown country along the upper part of the Gulf of California, east of the Colorado River—the region designated by the early Spanish chronicles as the Papagueria after the indigenous Indians, the Papagoes.

With numerous illustrations, including 2 color plates and 2 maps. Large 8vo. $5.00 net; by mail $5.48.

German Memoirs

By SIDNEY WHITMAN,
Author and Journalist.

The writer, a noted journalist, knew almost all the great Germans of the time, including Moltke, Bismarck, Lenbach, Mommsen, Buelow, entered into the social and artistic life of Berlin, Dresden, etc., and studied every aspect of the nation's power and prosperity.

Handsomely illustrated. $2.25 net.

CHARLES SCRIBNER'S SONS 153 FIFTH AVE., NEW YORK

The Nation

NEW YORK, THURSDAY, OCTOBER 24, 1912.

The Week

The President's order putting under the rules of the classified service the 35,000 fourth-class postmasterships which remained outside is of great importance and in keeping with his whole policy in regard to the civil service. So far as numbers are concerned, the Federal offices are, by this act, brought almost completely under the operation of the merit system; but it would be a mistake to suppose that there are not important extensions of that system still to be made in the Federal service. The higher posts, while the number of them is small in comparison with the vast aggregate of offices, are of an importance which cannot be measured by numbers; and this not only because the duties of these posts are of great moment, and because of their tempting character as political prizes, but also for a reason profoundly affecting the service as a whole.

A few offices, involving questions of governmental policy, should always remain subject to untrammelled appointment by the executive head of the Government; but purely business offices of high order, such as the first-class postmasterships, should become the natural goal of the men filling the lower places in the same branch of the service. Only so can the Government service in general become a true career for men of ability; and the effect of its being such a career would be felt in a most beneficent way throughout all the grades. President Taft has urged upon Congress the most comprehensive legislation to this end; in default of such legislation he can do nothing, since the offices in question are, under the law, filled by the President "by and with the advice and consent of the Senate."

From many parts of the country comes evidence that the Republican managers have not the slightest hope of winning the Presidential election, and are working hard mainly for the sake of making such salvage as is still feasible. This accounts for the effort to assure the party "second place" in as many States as possible. With this would go the advantage of position on the official ballot, the right to appoint poll clerks, "watchers," etc. There is also the natural desire to knit the organization together so as to prevent the Progressives from raiding it and capturing it in the course of the next four years. It seems also to be the case that the general confusion and uncertainty into which the party has fallen are leading, in some places, to arrangements by local bosses and aspirants for office to save themselves at all hazards, no matter what may happen to others. Thus a political correspondent of the Philadelphia *Record*, writing from Delaware, describes the Republican leaders in that State as acting like men in a shipwreck, struggling to save a few of their personal belongings. In particular they are working to carry the Legislature, even at the cost of losing the Governor and sacrificing the national ticket. This is naturally interpreted as meaning that Mr. T. C. du Pont, National Committeeman for Delaware, hopes to be elected to the United States Senate as successor to Richardson.

The present campaign has been unusually rich in humorous situations, but it has been reserved for the State of Lincoln and Grant to contribute the masterpiece of incongruity. Here is the eloquent analysis of existing conditions as made by a speaker in Chicago a few evenings ago:

> The Republican ship is lying helpless without a man at the helm. The crew has jumped overboard, and there is no one to guide her head into the wind. On one hand you have the pirate ship of anarchy with the red bandanna handkerchief at the masthead, and on the other the privateer of Socialism. It is up to us Lincoln Republicans to take the leadership and save the ship from destruction.

The "privateer of Socialism," of course, is the Democratic party, but who are "us Lincoln Republicans"? Well, they are the same devoted band that, under the intrepid leadership of William Lorimer, the author of the statesmanlike utterances we have just quoted, went down to defeat in the primaries last spring, dragging Mr. Taft with them. But they are not daunted.

Mr. Amos Pinchot, in his pamphlet, "What's the Matter with America?" traces the Progressive party back to Columbus, Copernicus, and the Renaissance. That is comparatively modest. Some thinkers have carried the Progressive movement back to the primitive home of the Aryans. On the way they have paused to point out phenomena like the recall of Louis XVI by the Jacobins, the recall of the Jacobins by Napoleon, the recall of Napoleon by the Powers of Europe, etc. Logically there should have been some mention of the recall of Abel by Cain. The astounding thing, however, is that the onward life forces of human history should have run their course without being conscious that they were tending towards their culminating point at Chicago in August, 1912. It was the Progressives who liberated this country from the yoke of George III and fought the Civil War, whereas the ancestors of the present Republicans and Democrats favored taxation without representation and negro slavery. From the dawn of history there has been a chosen band that has worked for the betterment of this world, passing on the heritage of service to their children, set apart from the rest of humanity, but knowing themselves by no separate name. That was to come only in our own days. Even in our own days—such are the mysterious workings of history—they would not have found out that they were Progressives if a score of Taft delegates had been persuaded to flop.

Rear-Admiral Stockton's paper on "Panama Canal Tolls" has been reprinted from the Proceedings of the United States Naval Institute. He holds that the language of the Hay-Pauncefote treaty binds us to make no "discrimination in favor of that country which constructs and owns the canal, but which of its own volition yields any claim for preference." It follows, in his opinion, that the making of the Canal free of tolls for American coastwise vessels would be a violation of our treaty obligation. But he has a remedy to suggest. It is the amendment of our shipping laws so as to admit foreign vessels to that part of our coastwise trade which passes from one ocean to the other via the Canal. This would correspond to what the French laws call "Grand Cabotage," as distinct from the "Petit Cabotage" which consists in plying from port to port along the coast. The latter would still be reserved for ships of American register, though foreign vessels would be allowed to take cargoes from New York through the Panama Canal to San Francisco or Seattle or Honolulu.

Admiral Stockton points out the advantages in the way of competition that would result from such a change in our navigation laws, as well as the relief from the charge of deliberately violating a treaty which could be obtained in that way. He takes note as follows of the argument that it is necessary to retain a complete monopoly of the coastwise trade in order to "build up a merchant marine for the United States":

> In answer it can be stated that for over fifty years this trade has been in the hands of American-built merchantmen without having had any material results in the creation of an American merchant marine. In fact, our mercantile marine plying on and off our coast has been mainly a subsidiary to our great railway systems, with freight charges so arranged as not to affect its land freight charges when it comes in competition therewith, and really either to feed the lines alone or to give them advantages over competing railway systems.

The contempt with which certain politicians have dismissed the treatment of the big Trusts by the Administration and the courts as futile and laughable has been nowhere more marked than in connection with the Standard Oil case. But here comes Mr. C. D. Chamberlain, secretary and general counsel of the National Petroleum Association, an organization of independent refining companies, and tells us that the fight against monopoly in oil has been anything but futile. In a carefully thought-out discussion of the situation, he makes such statements as that the condition, in regard to the chance open for competitors, "continuously improved during the pendency of the Government's suit, and improvement has continued since the decree of dissolution"; and that, while "too short a period has elapsed since the disintegration of the Standard Oil combination to accurately estimate the full effect" of the Supreme Court's decree, "the independent companies have to-day an unrestricted and uncontrolled opportunity to carry on their business without unfair, secret, and oppressive competition on the part of one great rival that they have not enjoyed for years past."

To charge unrestricted immigration with being one of the principal causes of the present discontent, and to argue in the next breath that the present discontent is the sign of a great moral awakening in the nation, is obviously unfair to the poor immigrant. But whether we call it plain discontent or a movement for moral and social regeneration, it is not out of place to inquire in what sections of the community the present unrest is chiefly localized. The revolt against the old parties and the old ideals has been strongest in the agricultural communities of the Middle West and the Far West, where the competition of immigrant labor is felt least of all. Certainly, the Western farmer has no grudge against the alien masses who have come in to swell the ranks of food consumers and so enriched the farmer in his capacity as food producer. The spirit of discontent, if we take Mr. Roosevelt's popularity as an index, is also strong in industrial communities like the Pennsylvania and West Virginia mine regions, where the bulk of the population is of immigrant origin, a state of affairs which would argue that the foreigner resents being forced to compete against himself.

Mr. Hapgood's resignation as editor of *Collier's* follows evidences of internal dissensions in that weekly, which have been for some weeks plain. This campaign left it in a very unpleasant situation. It had supported Roosevelt, in the hope that he would get the Republican nomination, and it had been filled with praise of Wilson, seemingly in the conviction that he would *not* get the Democratic nomination. The actual result of the Conventions was obviously awkward for *Collier's*. It began by announcing that it would hold the scales even as between Roosevelt and Wilson. Twitted with being "on the fence," it declared that on the fence it would stay. But in actual fact it has found itself first on one side, then on the other—often on both sides at once—but latterly, in its editorial columns at least, more and more strongly leaning to Wilson. But now Mr. Collier is to change all that, and, as editor himself, to make his publication in the future a thick-and-thin Roosevelt organ. With all respect for the powers of the new editor, we doubt if he will be able in two weeks' time to decide the election.

What is termed a plan to complete the nationalization of Harvard is under consideration by the Harvard Club of Chicago. The project is to found scholarships of $300 for freshmen in all States having fewer than four representatives at Cambridge. These States are all in the West and South. The first effort is to be in the direction of finding Harvard alumni in the States concerned who will endow such scholarships, but in the event of failure in this attempt, Harvard alumni clubs elsewhere will be asked to contribute towards a fund for this purpose. That the Chicago alumni are not inviting others to do something which they themselves are unwilling to do, is sufficiently evident from the fact that this club has a fund of $5,000 for the assistance of Illinois high-school students who contemplate entering Harvard. An incidental consequence of this campaign for the "nationalization" of the university will doubtless be to increase the influence of the West and South in its governing boards. These sections of the country have been claiming and obtaining larger representation in the Board of Overseers, and the sending of more students to Harvard from their borders must strengthen the tendency towards the "nationalization" of the body which is directly responsible for its policy.

Not many can have read without a pang of true and keen sympathy of the death of William Rugh, the Gary, Indiana, newsboy who risked and lost his life to save that of a young girl whom he had never seen. One is at a loss to say whether the pathos, the chivalry, and the self-sacrifice of his act are more moving because of its unusual nature, or because of the feeling that it is typical of the quiet heroism which is to be found in thousands of men in the humblest walks of life. Hardly a railway disaster, a perilous fire, an accident on the water, but furnishes its tale of instant courage and self-forgetfulness. But there is something peculiarly touching in this quiet and undramatic sacrifice in the Gary hospital. The girl had suffered extensive burns through an explosion of gasolene in a motor-cycle.

When Rugh, a newsboy with a crippled leg, heard of this, and that only by the grafting of a large amount of cuticle could the girl's life be saved, he offered his crippled leg for amputation. He was warned that the operation might result fatally. "What's the odds," he said, "if it will only save her life? The leg is no good to me, and I have no friends to worry in case I die. Go ahead and cut it off." No heroics in it at all; but many a less knightly act has been embalmed in a hundred poems.

Writing in the *Century* about a certain popular didactic play, Mr. Belasco remarks that if the exceedingly long preachment had not been "somewhat cunningly introduced at the moment of greatest suspense," "the auditorium would have been emptied of its listeners long before the end of the dissertation." This might be passed by as a piece of conventional hyperbole. But if Mr. Belasco had stuck to the actual facts of his supposed case, he would have had to picture the theatre as filled with listeners longing to escape but helplessly glued to their seats. Why should they not escape? Is it not a ridiculous lack of resourcefulness that keeps them there? From the extreme infrequency of actual departures, one would suppose the audience to be under the impression that buying a ticket involves one in a contract to hear a play out. Many people, of course, think that plays are only relatively dull—that any play is better than no play at all. But those who complain afterwards of having lived through an evening of utmost boredom, should be made to ask themselves why they did it. We are too kind-hearted nowadays to hiss, but in "the argument of legs"—to use a happy phrase of Mrs. Gilman's—we have at hand a punishment that exactly fits the crime, and combines the minimum of disturbance with the maximum of effectiveness.

The latest outbreak in Mexico has not been precipitated by revolutionist successes in other parts of the country. On the contrary, in the north there is a decided cessation of rebel activity. The guerrilla campaign that followed the dispersal of Orozco's regular forces has nearly ended. But no sooner does appeasement come in one section of the country than revolt starts up in another section. If we take these successive uprisings as proof of a smouldering general discontent with Madero and his policies, then the Government is indeed doomed. But Madero may yet find his salvation in the fact that the motives of the men who have risen against him are far from irreproachable. The revolution in the north, it is pretty well established, has been financed by followers of Porfirio Diaz. The revolt at Vera Cruz is headed by a nephew of the ex-Dictator. There must be a saving remnant in the Mexican people to whom it is quite clear that the fall of Madero must mean the restoration in whole or in part of the Diaz influence. The present Government has been charged with failing to redeem its promises of reform with regard to the land policy established under the Diaz régime. The reëstablishment of the Diaz influence is hardly the way to bring about that reform.

What is this that Dr. Albert Weidemann, of Elberfeld, Germany, syndic of the chamber of commerce there and managing director of the Rhenish-Westphalian Textile Association—what is this that he is talking about? He had been speaking of the high perfection of organization in American industrial plants, and that is all right; but what does he mean when he goes on to chatter as follows:

> We were greatly surprised, too, to see the extensive provision made everywhere for the comfort and welfare of the employees. The large number of rooms, gardens, playgrounds, and other devices for recreation were things which we did not most of us realize that America possessed.

Herr Dr. Weidemann is behind the times. The sort of thing he is telling us would have passed current in this country a few years ago, and indeed would have been regarded as a natural acknowledgment of the fortunate conditions to be found in our favored land; but we have got beyond all that now. Don't we all know that America is sadly behind all other countries, and especially behind Germany, in everything that pertains to the welfare of the working people? Does Dr. Weidemann expect to pull the wool over our eyes, and make us believe that there is any possible source of benefit for the masses other than the paternal care of a strong central government?

Mrs. Pankhurst wants war to break out in England as well as in the Balkans. It may be that her fervid declaration, "I incite this meeting to rebellion," is only an echo of the recent bellicose talk of the Conservatives in Ulster. If Sir Edward Carson is to be hailed as "King," Mrs. Pankhurst ought to be dubbed "Queen." But seriously, her summons to her followers to indulge in every form of violence except attempts to take life, will only alienate still more of her former associates, and do her cause great harm. One thing is certain: if the militant suffragists set out deliberately to violate the laws and defy the authorities, they cannot complain when punishment is inflicted on them. You can't be a willing martyr and at the same time cry out against the hardships of the martyr's lot.

Every broad-minded American will rejoice at the part which this country has played in bringing about a good understanding between Japan and Russia, even though it has involved a series of rebuffs to our Government from both the others. The initial repulse has just come to light in an address by a Japanese which is dignified by publication in the *Eastern Review.* It was nothing less than the refusal of Russia to enter into an alliance with us. This event occurred in 1907, when Mr. Taft, then Secretary of War, paid a visit to St. Petersburg by way of Siberia. A few journals suggested at the time that he had important objects in view, but their "voice was too weak to attract the attention of the people in general." This wise man of Tokio, however, was not to be caught napping. Soon after Mr. Taft had left the Russian capital, this Japanese made a journey to Southern Russia, where he, "strangely enough, learned that Russian officers there were busy studying English." The significance of this was plain. "If Russia, from sheer enmity towards Japan, had jumped at the proposed hand, who knows what would have been the effect on the Far East? But she refused." Then came the rejection by both Russia and Japan of Mr. Knox's proposal for the neutralization of the Manchurian railways, and now has followed "Russia's abnegation of the Russo-American treaty" regarding the equal treatment of all American citizens. These disclosures may take away Mr. Taft's last hope of reëlection, but he can solace himself with having unconsciously contributed to the peace of the Orient.

THE "MONOPOLY ISSUE."

From the long explanation put forth on Saturday by Mr. Roosevelt, regarding his position on Trusts and monopolies, it is evident enough that he has become aware of how the public feels about licensing monopolies. He is accused, he says, by Gov. Wilson and Mr. Brandeis, of "endeavoring to legalize monopolies by a commission, which would have police power to say to a favored corporation, 'You are legal,' and to an unfavored corporation, 'You are illegal.'" This, Mr. Roosevelt proceeds, is not only not his position, but the antithesis of his position. He adds:

> I am accused of wanting to give the commission the power to fix prices. I do not want to provide that. I fancy the commission would be so busy for a time in enforcing laws that it would not want to concern itself with prices.

This last statement looks a bit like begging the question; but let that pass. What Mr. Roosevelt did say in his speech of August 6 to the Bull Moose Convention at Chicago—we quote the reprint of that speech given out from the Progressive headquarters—was that "any corporation voluntarily coming under the commission should not be prosecuted under the Anti-Trust law, so long as it obeys in good faith the orders of the commission." "Any corporation" is a fairly broad term. What Mr. Roosevelt said in his address to the Ohio Constitutional Convention, last February, was that, where regulation by competition proves insufficient, "we should not shrink from bringing Government regulation to the point of control of monopoly prices." The same declaration, in almost identical language, was made in his widely quoted *Outlook* article of last November.

This little inconsistency of Mr. Roosevelt's is only one of the signs that the Third Party has found its plank on Trusts and monopolies a serious handicap to its campaign.

From the first appearance of the "Trust movement," in its shape of the last dozen years, the American citizen has protested against control of the fortunes of any industry by a corporation or body of corporations, built up by the capital of promoters with the purpose of suppressing competition. He has heard, especially these last two or three years of Anti-Trust law prosecutions, a good deal to the effect that the "era of competition is dead" and that its death was essential for industrial welfare. But he has had in his inmost heart the conviction that these assertions were the last line of defence for the very monopolies or potential monopolies which he dreaded.

In the light of this conviction, he formed his opinion on the subsequent propositions. When the chairman of the United States Steel Corporation, two years ago, urged continued dominance by such huge trade combinations—subject, however, to restraint, through a Federal commission, on the raising of prices for their commodities too high—the ordinary American was quick to express his double inference, first, that this proposal was an expedient to perpetuate exactly those conditions which he feared, and secondly, that, if adopted, it would lead the nation far along on the path to the system of state socialism which he detested. He may have had momentary doubts as to whether, for the sake of preserving trade prosperity, the idea of licensed monopoly might not have become inevitable. But he has listened since then to ex-Senator Edmunds's exposition of the probability that such a commission, instead of controlling the Trusts, would itself be controlled by them through the politicians. He has read Mr. Brandeis's demonstration that, in point of fact, economies in production and capture of neutral markets have been achieved, not by the Trusts, but by independent competitive producers.

His plain common sense taught him that both these views were right. To an electorate in this state of mind came the Progressive party, with its platform advocating precisely that relation between government and monopoly, and with its early campaign speeches reiterating the assertion that the era of competition was and ought to be at an end.

In last week's *Independent*, Prof. John B. Clark of Columbia writes on "The Parties and the Supreme Issue." He vows himself a Republican and the descendant of a long line of Republicans. But on what he regards as the real issue of the campaign, he aligns himself with the Democratic party. That overshadowing issue, he declares, is the treatment of the great business corporations. He rejects the Republican party's programme on this matter, because those protective duties which "make exorbitant prices possible in the American market, and leave a Trust free from danger from foreign rivals and able to use its resources in crushing competitors at home," are upheld by it. Turning to the Third Party, he takes up its notion of letting "good Trusts" alone and regulating prices of their products through an administrative commission.

The complexity and difficulty of the plan, its "chances of error and of corrupting influence," every one can recognize. But there is a far more serious objection:

> With the world crowding itself more and more densely with people, the art of extracting a living from it must be practiced more and more effectively. We must invent new machinery, discover new raw materials, use new motive power. . . . Otherwise humanity will grow poorer with every passing decade. The only thing that can guarantee such progress is competition.

The evidence is readily at hand. What motive has monopoly—especially monopoly licensed by law but regulated as to prices—for progress of this sort? When a producer, under such régime, lowered the cost of his product, he would merely be inviting reduction of the price of it. The spur of competition gone, the motive for progressive economy would vanish with it. The instinct of such "regulated monopoly," with competition dead, would be to "adhere to old methods and keep its antiquated appliances." Monopoly, by the nature of the case, "is hostile to progress"; the promises of the Progressive platform may easily "amount to a surrender to monopoly," and "a proposal of price regulation involves some expectation of thus surrendering."

So much for this economist's verdict on the Third Party's attitude towards that issue. It is coupled with the frank admission that the Democratic party, through its promise of reasonable reform of abuses in the tariff, and its declaration that competition must be preserved and that no corporation should be allowed to become monopoly, offers the single solution of the problem. "The vital incentive to progress," concludes this Republican critic of the Democratic platform, "the hope of large future production, the prospect of a rising level for human life, are staked on this restoration of the force that insures them."

It may be that Professor Clark has merely expressed in words the suspicions and misgivings already pervading every thinking mind. But it is well to have such indictments of a political declaration framed in convincing language—as was done (with almost equal reluctance, because of old associations) by Senator Lodge in regard to the party's judiciary plank, and as might be done, if it were worth the trouble, in regard to its Populistic declaration on the currency. We imagine that when the political history of 1912 is written for the next generation, the student will be invited to consider the extraordinary incident of a party platform, in a year when the whole electorate was crying out at the rising cost of living, calmly inviting that electorate to ratify a plan for licensing monopolies in the necessities of life.

HISTORICAL PARALLELS.

Despite the well-known fact that, as John Morley has put it, "historical parallels are a snare to working statesmen," they continue to be pressed into service. That working statesman, the President of the United States, is the latest to seek comfort in what he supposes to be an analogy between the past and the present. The common opinion to-day is that the Republican party will be beaten in November, if for no other reason, because it is badly split up. But this does not follow, declares Mr. Taft. "Fifty-two years ago," he remarks in a statement of rather forced good cheer, "seceders from the Union thought they were facing a divided North and would win an easy victory." But "history teaches us" that they did not, and in this the President sees a bad omen for the Democrats. It would be just like the latter, however, to affirm that the year 1860 is a particularly unhappy one for the President to cite. For in that Presidential campaign the Republican party faced a divided Democracy, and expected to win, and did in fact win, a victory on account of the dissentions of its opponents. If parallels are to be drawn with fifty-two years ago, this is the one that really applies to the present year of grace. The only alternative is to maintain that Republicans have a monopoly of historical parallels, as of the other good things of life, and that the Democrats cannot win even when they have both history and mathematics on their side.

But does not history repeat itself? Yes, but usually with a difference; and to detect that difference is the great task—we might almost say the despair—of those who seek accurate guidance for to-day from yesterday. Most scientific historians of the present time would agree with Lotze that there is no such thing as a philosophy of history in the sense that it enables us to predict the future. The true function of history is not so much to solve present-day questions as to teach us to examine, to be cautious, to weigh evidence; constantly reminding us that those who are nearest to some great event seldom fully understand it. This is not to deny that historical parallels are highly interesting. They are often very illuminating. But it is always possible that they may mislead us. No two men, however wide their knowledge or keen their insight, will read the moral the same.

Mr. Bryce has touched with his usual mastery upon the fallacies that lurk in historians' parallels. He gave an amusing illustration which has its significance for what is now going on in the Near East. It was in 1876, at the time of the great agitation over the Bulgarian massacres and the course which Great Britain ought to pursue, that Mr. Bryce one day met an eminent professor of history. He was a man very fond of talking about historical knowledge as the only true guide to modern politics. They began speaking of the crisis, and what followed may be given in Mr. Bryce's words:

> I said, "Here is a fine opportunity for applying your doctrines. Party politicians may be divided, but no student of history can doubt which is the right course for the Government to follow towards Russia and the Turks."
>
> "Certainly," he replied, "the teachings of history are plain."
>
> "You mean, of course," I said, scenting some signs of disagreement, "that we ought to warn the Sultan that he is wholly in the wrong and can have no support from us?"
>
> "No, indeed," rejoined my friend, "I mean just the opposite."

It is probable that the break-up of the Whig party, after 1856, with its disappearance in the Republican party, has given more aid and comfort—and brought more disappointment—than any other event in the history of our politics. Innovators and founders of new parties have ever since been arguing and hoping from it. For many years the Prohibitionist party cherished the belief that it would do to the Republican party what the Republican did to the Whig. In the other political camp, the Populists were confident, about twenty years ago, that they were to push aside or absorb the Democratic party. But it was the Populists who were swallowed and became lost to sight; and the Prohibitionists have had to give way to the Progressives as the party that is going to be the death of the Republican, as it was of the Whig. No prediction is more frequently heard from Progressives than that 1912 is to stand with 1856 in our political history. They are fascinated by the parallel, which they imagine to be exact in every particular. But the Republican party has several times before this year refused to break up or die, as in decent consideration for the prophets it should have done, and it may again fool those who are sitting by its bedside and expecting soon to enter upon its estate. If it does die, we may be sure that the cause of death will not be a lethal historical parallel.

To go back to Mr. Taft's parallel, it cannot, of course, be said that a divided party is without exception a beaten party, but the general rule is certainly that way. And in politics men will, after all the subtle reasoning addressed to them, fall back upon what they believe to be experience, averages, and general rules. The thing was neatly stated by Col. Hay in 1896. A correspondent, anxious as he was for the election of McKinley, wrote him with apprehension about the formation of the Gold Democratic party. He feared it would draw many votes that would otherwise go to the Republicans. Col. Hay, in a private letter, said that it might be so; he wasn't much of a politician, and events might be getting away from him; but somehow he couldn't get over the homely notion that you had a better chance when your opponents were divided and quarrelling.

A BAFFLING WAR.

It is hardly an exaggeration to say that the world has stood by with a sense of helpless dismay as Turkey and the Balkan states have plunged into war. The conflict seemed so preventable. For weeks we had assurances that it would be prevented. Diplomacy was to strain all its resources. The financial world was to interpose obstacles. Reason and statesmanlike prudence were to be made effective. Above all, the humane feeling of the nations was to assert itself. It could not be that a war, of which the causes were not clear, and after which the Great Powers of Europe—what Kinglake called the Great Tradition—would not permit even the conqueror to reap the fruits of victory, would burst upon civilization and take it by surprise.

In this attitude of mind attentive observers were strengthened by the activity of the European Governments. It may be that these waked late to the peril, but they bestirred themselves in ways that before have been effective. For our part, we do not question the good faith of these diplomatic efforts. It is easy to throw out hints and suspicions of intrigue and secret countermining in such affairs, but in this instance, at least, the interests of the nations concerned were too much at one with their professions to make it anything but an abuse of skepticism to challenge their sincerity. Germany and England, France and Russia and Austria, labored earnestly and honestly to avert hostilities. On this point, the official statement of Sir Edward Grey in the House of Commons is conclusive. The Foreign Secretary declared that the Great Powers were of one mind in taking steps to preserve peace in the Balkans. They were all agreed, he said, in the representations to be made both at Constantinople and to the Balkan states, and spoke of this fact as almost a "guarantee" of peace. The result is nearly as bitter a comment on the prescience of statesmen as was the breaking out of the Franco-German war just after another English Foreign Secretary, Lord Granville, had assured Parliament that there was not a cloud on the European horizon.

To assert of the diplomatic negotiations which were undertaken to prevent the war that they were serious and in good faith, is not, however, the same thing as saying that they were eminently skilful. The Great Powers had come to an agreement upon two lines of procedure. The first was to impress in the strongest way upon Turkey the necessity of carrying out the reforms promised by the Treaty of Berlin, especially as affects the Christian populations. But a difficulty arose, according to the Paris *Temps*, about the manner in which this pressure was to be brought to bear at Constantinople. The French and Russian Foreign Offices desired that the note should be collectively to the Porte by all the Ambassadors in Constantinople. But Sir Edward Grey objected that this would carry the semblance of a threat, and insisted upon having the representations made individually. To this M. Poincaré and M. Sazonoff finally assented. But the Turk has of old known how to deal with the Powers when they came one by one. The other action agreed upon by the diplomats was to let the Balkan principalities understand in the plainest way that the Great Powers would not permit a war to bring about "any change in the *status quo* in Southeastern Europe." Russia and Austria, as the nations most directly concerned, were chosen to make this representation. If it was strongly made, and the evidence of intention to back it up was perfectly clear, it would indeed seem to take away the motive of territorial enlargement, and by so much to justify the confidence of the diplomatic world that there would be no war.

That war should have been precipitated, in spite of all, no doubt argues great secular causes at work. Deep animosities, of both race and religion, lie behind the outbreak. Nor on either side is the record clean. We have heard much of the wrongs of the Christians in Macedonia, and doubtless they have been grievous. They are put in the forefront of the proclamation of war by the King of Bulgaria, who would give the war the appearance of a sacred crusade. Without denying the grievances and cruelties which he recites, we must yet ask if the skirts of the Christians of that region are entirely clear, and if bloody retaliation, as well as governmental oppression, has not been suffered by Moslems as well as Christians. On this point an educated Turk now in England, Halil Halid Bey, a member of the Young Turkish party, recently said to the Manchester *Guardian:* "I wish I could get people honestly to compare the condition of the Christians in Turkey with that of Moslems in Bulgaria. There are still 600,000 Mohammedans living in Bulgaria, and their condition is intolerable and abominable. We hear little about that."

The feeling of humanity, confessing itself baffled and cast down by the coming of this war, is yet manifesting itself in various ways. The Red Cross is preparing to take the field. Funds are asked to help relieve the wounded and the destitute. Already moving stories are arriving about the suffering witnessed by military correspondents. The Montenegrin hospital service is wholly inadequate. Slackness and filth abound. The surgeons are listless and inattentive. All this, and much more like it, is expected to appeal powerfully to the humane instincts of the civilized world. So it should appeal, and we hope the response may be as generous as the need is great. But we are thrown back by it all upon the original puzzle—why must humanity be compelled to keep on simply relieving the victims of war, and giving shining examples of self-sacrifice amid its horrible barbarities, yet continue powerless to prevent the recurrence of these savageries? The best sentiments of mankind cannot be forever thwarted in this way.

"FREEING" WRITTEN ENGLISH.

In the November *Harper's*, Professor Lounsbury returns to a subject near his heart. To confute the modern purist in English he has a lovely array of bad usage gathered from reputable writers. The confusion of "who" with "whom," and *vice versa*, which one readily falls into in conversation, he finds in the printed page. We infer from the drift of his article that the most flagrant of these instances does not offend his ear. Sir John Mackintosh, writing to his daughters in 1813, says, "I found the whole fashionable literary world occupied with Madame de Staël, whom you know was the author of 'Corinne.'" We are told again of Milton's "than whom," and are assured that the "it is I," for which some of us virtuously hold out against "it is me," is not the "etymologically correct form" at all. If we insist upon being purists, we should say "it am I"! In proof whereof listen to Palemon in Chaucer's "Knight's Tale":

> I am thy mortal foe, and *it am I*,
> That loveth so hotè Emily the bright
> That I will diè present in her sight.

It would not do to retort that possibly Palemon's language is meant to reflect the incoherence of his great passion, for undoubtedly Professor Lounsbury has other examples on hand.

We are not so much troubled about the various "irregularities" for which the writer contends (although many of them seem hardly fair tests, since they are taken from conversation, which even among well-educated people is seldom in the form they use in writing) as we are concerned for the principle involved. It is a small matter that Sir Lucius O'Trigger, in "The Rivals," should ask, "Who the devil is he talking to?" or the mother in "Pride and Prejudice" say, "Who is it from?" Such citations are good arguments to fling at the old-fashioned school-marm. There can, of course, be no strict application of logic to language, with no leeway granted for the growth of idiom. As well might logic be imposed upon English pronunciation. And it is true that those persons who believe in the one principle are likely to attempt the other. Cambridge still talks of the worthy dame from the West who bought her meat from the "män ät the Mänhättän Market," making every "a" as broad as Boston. But we had supposed that the typical pedant was well-nigh extinct, together with his favorite doctrine, "A preposition is a bad word to end a sentence with."

The tendency in teaching has seemed to be much in the opposite direction of late. Time was when grammars were as important text-books as any in the curriculum. Students respected rules for English quite as much as those for Latin. This was the attitude which produced Lowell and Holmes, as well as that slightly stilted but substantial style which nearly every educated gentleman could handle. There is no mistaking it. It looks out sturdily from the majority of volumes of that past generation. Sense of rule, sense of form, guided it and made of it a somewhat conscious medium of art. But recently the study of English composition has largely supplanted that of grammar. Lists of selections form the text, and boys and girls are set to imitating various types and manners. What has happened is that the emphasis has been shifted from one of the usually-held factors of good usage to the other. Rule (which ultimately, of course, gets its authority from the consensus of careful writers) has largely yielded to the sway of immediate precedent. Professor Lounsbury is therefore merely in the advance guard of a movement which has become pretty general. Just at this time when democratic impulses are to the fore, the radical wing of the movement is made to have the look of an emancipation proclamation: Let us sanction as good usage what the majority of the people write. Precedent, in reality, is sought merely to confirm popular looseness and freedom of utterance.

Professor Lounsbury realizes that many persons say "between you and I," and his scholarship reminds him that this construction is to be found in Shakespeare. What better precedent could one desire? "Like I do" is a pretty common error; yet why call it an error when it has perhaps been used by Defoe? The principle is dangerous, for every one knows that an amazing list of awkward and careless expressions could be gathered from the range of English masterpieces. Professor Hill of Harvard was not opening himself to ridicule in noting with a chuckle a mistake here and there in George Eliot, Dickens, and others. If present usage is to be largely controlled by haphazard precedent, the question arises, Where shall we stop? Would Professor Lounsbury reinstate the eighteenth-century "you was"? or would he accept the latest ephemeral vulgarity of the Broadway dialect? The fact is that, if we wish to learn good English, we must go not to the scholar who spends his life cataloguing words and phrases, but to the cultivated man who has trained his sense of language by much familiarity with the standard writers and who has learned to distinguish between what is sporadic and what is normal.

In point of fact, rules for written English appear to us to be needed now as never before, and a bulwark should be thrown up against the encroachment of the colloquial. As matters stand, there is little danger that the written word will drag far behind the spoken word, and therefore fail to reflect accurately the life of the day. We all know how smart it is to fill an article or an essay with the last cry. This cannot go on indefinitely without breaking down the structure of English and destroying its use for complicated and subtle expression. Rules, naturally, will not be tyrants in such a matter as a living language, which must grow with the time. And we have no desire to see hindrances placed in the way of forming those new, robustious combinations which every age has invented. But this is very different from giving sanction to careless thought and speech by recourse to specific example. Such broadmindedness amounts to an inverted sort of pedantry which is itself a slave to rule of thumb.

CORNER MEETINGS.

At eight o'clock sharp the strains of a robust brass band enter the open window and inform the household that, two blocks away where the subway and the trolley lines meet, everybody is doing it. At five minutes past eight a militant fife and drum corps parading the sidewalk gives utterance to the earnest desire that it might immediately be transported to Dixie. The head of the house puts down his evening paper and wonders whether a breath of fresh air would not do him good. The woman of the house, who is busy putting a fretful child to sleep, wishes devoutly that the campaign were at an end. The orchestral prelude subsides, and through the clear October air come the explosive upper notes peculiar to out-of-doors elocution. The householder puts on his hat and goes out. At diagonally opposite corners, where the avenue and the street cross, he finds the rival orators at work. As he approaches, one speaker lifts his finger as high as it will go, leans forward on his toes, and inquires of his audience whether they think it right that all the money in the country should be allowed to accumulate in the hands of a dozen men. Almost simultaneously the speaker on the opposite corner clenches his fists and demands what, with beef at 23 cents a pound, are the people of this country going to do about it? Each speaker is surrounded by an inner girdle of small boys. The adult male population stands a little further back. On the fringe of the crowd are the women, most of whom have paused to listen on their way to the druggist's.

The corner orator is the victim of a misconception. It is quite unjust to describe his efforts as cart-tail oratory with all that this term implies of undignified, violent, unscrupulous, and ungrammatical propaganda. The charge of bad grammar may hold true, but as for the other counts, we need only compare the corner orator's methods with those employed by the big guns of the campaigns, Congressmen, Governors, and United States Senators. It is the men of light and leading who go in extensively for vague declamation and for personal abuse. The corner orator seldom indulges in vituperation. His great strength is in statistics. These he uses with a fluency and a dynamic force that make strong men tremble. His memory is phenomenal. He has at his finger ends the number of children in New England and the North Atlantic States between the ages of six and eleven who suffer from adenoids; the value in millions of dollars of the Columbia River salmon catch under the first Administration of Grover Cleveland as compared with the period since the Spanish-American War; the percentage of decrease in our importation of German cotton goods and Scotch herrings; the annual expenditure on army and navy since 1905; the rise in New York city's tax rate during the same period. The bystanders find it rather difficult to follow him in the details of his statistical analysis; but they add up the value of the salmon catch on the Pacific Coast, the value of German cotton goods, the military and naval expenditure, the municipal tax rate, and the percentage of children with adenoids, and finding that the total runs up into billions they are greatly impressed.

It is only in his climaxes that the cart-tail advocate indulges himself in a bit of the old-fashioned oratory. Having driven the aforesaid total of billions of dollars deep into the minds of his audience, he lifts his finger again as high as it will go, and asks if any reasonable person can entertain the slightest doubt that the only man to deal effectively with the critical state of affairs so clearly revealed, is that sterling patriot, that man of the people, that disinterested patriot, that undaunted champion of popular rights, that courageous, tender-hearted, steadfast patriot, who has always been on the side of the people against the Trusts, who was born and brought up in the district, and who can confidently be expected to see to it that the national heritage of liberty and equality shall be perpetuated—William J. Smith. Sometimes the circle of small boys begins to cheer before the orator pronounces the name of William J. Smith. Sometimes the orator exhausts himself in piling up his climax and loses his breath just as he is about to pronounce the candidate's name. But in either case no harm is done. Behind the speaker is a large lithograph illuminated by kerosene torches, leaving no possibility for mistake as to the identity of the sterling patriot in question. The speaker, with a final injunction to his hearers that the fate of the country is in their hands, sits down, and the band reinforces the point with the announcement that any little girl that's a nice little girl is good enough for the musicians.

In this manner the contest between the diagonal corners continues. Towards ten o'clock most of the small boys have been discovered in the crowd by anxious parents, and led off protesting. The women have finished their errands at the druggist's and have disappeared, except where here and there a young couple disengages itself from the crowd and is lost in the open door of an ice-cream parlor. Groups of male voters, by twos and threes, after drifting back and forth between the two camps, retire to a quiet spot and discuss the issues for themselves. The orators succeed one another rapidly, and give increasing evidence of throat-strain. The patrolman swings his club with growing impatience. At 10:30 the householder turns away, feeling in his pocket for the latchkey. At 10:45, through the open window, he is apprised of the fact that everybody is still doing it, and that the lure of Dixie is as potent as ever with the members of the fife and drum corps. The householder picks up his evening paper, yawns over the editorial page, glances at the weather forecast, and goes to bed.

HERRICK.

Two years ago Professor Moorman of the University of Leeds published a solid volume on Herrick, whose bulk was justified by an excellent chapter on the Lyric of the English Renaissance. Now, from the prolific literary shops of Paris, we have another thick book on the same subject.* M. Delattre is learned and judicious. His indefatigable research has unearthed one or two documents which add a little, a very little, to our knowledge of Herrick the man, and his French training has saved him from the uncritical attitude of laudation towards Herrick the poet, which is too common among English writers. But five hundred ample pages of analysis devoted to so light a theme are an intolerable tax on human patience. A long chapter on Les Idées Morales, a long chapter on Les Idées Religieuses, a long chapter on L'Imitation, etc., etc. —you might suppose you were reading about Aristotle instead of a votary of the "mad maiden" Muse. Really, to *lâcher le mot*, as they say in M. Delattre's own country, this sort of thing is a monstrosity; the French, in their recent studies of English literature, bid fair to make their rivals over the Rhine appear in comparison moderate and sensible.

I.

As for Herrick's life, after all this ransacking of records, we know but little. He was born in London, in 1591. His father, a prosperous goldsmith, "in the Goulsmeth Rowe in Cheap," in the year after Robert's birth "did throwe himself forthe of a garret window in London aforesaide whereby he did kill and destroye himself." After this event, whether suicide or accident, the mother retired with her family to Hampton, where the boy got his first taste of country life. As Mr. Moorman aptly says, "the Hampton scenery is of that quiet sylvan and pastoral character which accords well with the prevailing mood of the 'Hesperides.'"

Where he got his schooling is not known, but in his seventeenth year he was apprenticed to his uncle, Sir William, also a prosperous goldsmith in London. No doubt the jocund life of the 'prentice boys of those days left its mark on the lad, and it is a pretty conjecture that such poems as "Corinna's Going a Maying" were the direct or indirect fruit of that experience. It is more essential to observe that his family associations were with the solid, prudent, home-loving bourgeoisie of Elizabethan London; something of that quality he seems to have kept to the end of his years.

In 1613 Herrick went up to Cambridge, and was enrolled as a fellow commoner at St. John's College, from which he afterwards transferred himself to Trinity. He graduated in 1617, and three years later proceeded M.A. We know almost nothing of his life in Cambridge, nor is it even certain when he gave up residence. The important matter is that he brought back to London a mind steeped in the Latin and, to a less extent, the Greek poets, with the result that scarcely will you find a book of English verse more replete with classical reminiscences. He belonged by right to the "university wits," and could hold his own in the circle over which Jonson ruled uproariously and divinely, an Apollo of shameful girth.

Just when or how Herrick became "sealed of the tribe of Ben" is not recorded, but of his intimacy with the master there can be no doubt. Many of his lyrics, we may surmise, were first heard at

> . . . those lyric feasts,
> Made at the Sun,
> The Dog, the Triple Tun;

Robert Herrick: A Biographical and Critical Study. By F. W. Moorman. New York: John Lane Co. 1910.

Robert Herrick: Contribution à l'étude de la poésie lyrique en Angleterre au dix-septième siècle. Par Floris Delattre. Paris: Librairie Félix Alcan. 1912.

and he was well fitted, by his union of classical taste and convivial joyousness, to obey the famous Laws engraved over the chimney-piece of the chamber in the Devil and St. Dunstan. In some respects he carried out better than any other of the Caroline poets the Elizabethan tradition as it was modified by the critical dictator; certainly no one of the younger men was more loyal to the great name or celebrated it in sweeter measures:

> When I a verse shall make,
> Know I have pray'd thee,
> For old religion's sake,
> Saint Ben to aid me.

That, manifestly, was the real religion of Herrick—a pretty paganism masquerading in Christian forms and with no sense of the incongruity in such a mixture. We are to-day, perhaps, unduly impressed by this contamination (in the technical meaning) of blending Apollo and Jesus, Saint Ben and St. Paul, because the contemporary religious poets were turning for their inspiration to a pure Platonic Christianity, and because Herrick was a priest of the church in good and regular standing. Again we are quite ignorant of the reasons which led him to take orders and of the time of his consecration. The most surprising thing in his life is suddenly to hear of him as chaplain in Buckingham's army on the ill-fated expedition to the Isle of Rhé in 1627. Two years after this he was presented to the vicarage of Dean Prior in Devonshire, and we have henceforth to think of our votary of the Muses as a country parson. There is evidence a-plenty that he had moments of rebellion against this exile from Fleet Street. The pretty stream that bounded his parish he hated for its "warty incivility," and his plain parishioners were

> A people currish, churlish, as the seas,
> And rude almost as rudest savages.

There is in his verse not a trace of that feeling of high consecration in office which made the very presence of Herbert on the roads a benediction to the men laboring in the fields; there is nothing of that love of solitary nature which changed the exile of Vaughan into a sojourn, as it were, with the spirit of God on the Delectable Mountains; but, on the contrary, no poet has preserved kindlier memories of the customs at harvest-home and Christmas and at other times of wassail and good cheer. One suspects that he never got close to the heart of the people about him or understood their more intimate joys and sorrows, just as the diviner aspects of the hills had no meaning for him. His imagination is "for sports, for pageantries, for plays," and his mind rarely rises higher than the prettiness of a flower. Not often is he as serene and large as in this praise of the fields:

> This done, then to the enamell'd meads
> Thou go'st; and as thy foot there treads,
> Thou seest a present God-like power
> Imprinted in each herb and flower;
> And Smell'st the breath of great-eyed kine,
> Sweet as the blossoms of the vine.

Apparently Herrick felt relief when, in 1647, Cromwell's men ejected him from Dean Prior, yet in 1660 we find him making petition to "the Lords in Parliament Assembled" to be restored to his living, and two years later he returns to his old charge. His burial is noted in the parish register under the date of October 15, 1674, but no stone marks his place of rest in the village churchyard.

II.

At earlier dates Herrick had published one or two poems in collections of the day, but the only book entirely from his pen was brought out in London the year after his ejection from Dean Prior. This volume is composed of two parts: the first, with the general title page, "Hesperides: or, The Works Both Human and Divine," contains only the secular poems and is dated 1648; the second, with a separate title page, "His Noble Numbers; or, His Pious Pieces," bears the date 1647. Just why the book was published in this form we cannot say, and, indeed, the whole composition of the volume is something of a mystery. There are indications that the order of the poems is not entirely without design, but for the most part, with the exception of the main division into secular and sacred, they are jumbled together in the most "admired disorder."

As for the critical estimation of the book, I confess that I give my opinion with diffidence and some uneasiness, for when I read what has been written of Herrick by competent judges, I am left in a state of bewilderment. Thus Lowell thought Herrick "the most Catullian of poets since Catullus"; yet certainly the spirit of these two poets is totally estranged. In fact, Professor Moorman has brought out this estrangement by an apt comparison:

> Herrick reproduces the somewhat fanciful lines:
>
> Da mi basia mille, deinde centum;
> Dein mille altera, dein secunda centum;
> Dein usque altera mille, deinde centum—
>
> cleverly enough:
>
> Give me a kiss, and to that kiss a score;
> Then to that twenty add a hundred more;
> A thousand to that hundred; so kiss on,
> To make that thousand up a million.
>
> But, unmoved by the passion and poignancy of the foregoing verses—
>
> Soles occidere et redire possunt;
> Nobis, quum semel occidit brevis lux,
> Nox est perpetua una dormienda—
>
> he substitutes for them some of his grossest lines.

That is well put, yet Professor Moorman proceeds to institute a comparison of Herrick with Horace which appears as far strained as that with Catullus. It would be easy to show that "His Age" misses the gravity of the Horatian *Eheu fugaces* just as completely as the Catullian imitation missed the passion and poignancy of its original. And what shall be said of such epithets as "a certain massiveness, a resonance, and an august, imperial splendor," even though Professor Moorman applies them to the exceptional poem in the "Hesperides" and not to the mass? Or what shall we say of such a phrase as "dreamy reverie" used by the same writer to characterize the love-songs? Our other biographer of Herrick, M. Delattre, finds in him many points of resemblance with La Fontaine. Palgrave, though his critical estimate of Herrick is in some respects excellent, yet goes out of the way to liken his spirit to Alfred de Musset's, and even associates him with Homer and Dante. Edmund Gosse thinks that "as a lyrist generally he is scarcely excelled, except by Shelley." Professor Saintsbury exclaims that "there is nothing in English verse to equal [the 'Litany'] as an expression of religious fear; while there is also nothing in English verse to equal the 'Thanksgiving,' . . . as an expression of religious trust." And to Swinburne the whole lyric movement of the age "culminates in the crowning star of Herrick!"

Now all these critics, unless it be the alliterative last, show true discernment at times in their judgment of Herrick, but to such comparisons and laudations as these here brought together, I for one can only respond with a *Non possumus*. I simply cannot feel these raptures in the "Hesperides"; I cannot perceive these qualities. A passage from Professor Moorman's chapter in the "Cambridge History of English Literature" (VII, 17) seems to me, both by its truth and by its error, to point to a sounder estimate:

> He [Herrick] lacks, it is true, the highest gift of all—that of touching the deepest chords in human nature, and of rousing men to high purposes and high enthusiasms. But this lack of intensity is common to him and to the renascence lyrists as a whole. For the renascence song is that of a nation still in its childhood, unconscious, as yet, of conflicting emotions, or complexity of thought, and knowing nothing of the burden of modernity.

The error here is flagrant. To say that the lyric poets of the seventeenth century, because they were unaffected by the burden of modernity, did not touch the deepest chords in human nature, is merely to write one's self down a victim of that conceit of the present which is starving so many souls in our generation. He who discovers something deeper in the enthusiasm of Shelley, as do Professor Moorman and others of his school, than in the ancient passions of love and beauty and death and the glory of everlastingness, belongs in reality in the same class with that eighteenth-century critic of Herrick, honest Nathan Drake, who, in one of his essays, extends the happy content of *his* modernity so far as to announce that "lyric poetry may be said to have had no existence among us before Dryden composed his celebrated ode." But Professor Moorman, on the other hand, is right in saying, as others have said, of Herrick in particular, that he lacked the highest gift. Indeed, I suspect that the real key to the secret of the "Hesperides" is to be found in this failure to touch the deepest emotions combined with a singularly high level of technical excellence.

III.

As a whole, the lyric poetry of Herrick's age is marked by three characteristics: the repetition of conventional themes, a general amateurishness of execution, with the occasional elevation to supreme beauty of form and intensity of emotion. By the first of these traits nothing derogatory is meant. All ages of creative power have their peculiar round of themes, and it would scarcely be going too far to say of any period that its measure of greatness is almost in proportion to its loyalty to a convention in selecting the material of art. As for the Jacobean and Caroline lyrics, I have often thought that a most interesting and instructive anthology could be made by grouping together the principal pieces under easily defined topics. Two things, I think, would appear from such an anthology. In the first place, in almost every subject we should find that Herrick had risen high, but had not quite reached the perfection of some one poem of another author. In the general field of love he has written much and well, but there is no number of his which has qualities worthy to stand beside the supreme loveliness and pathos of Jonson's "Drink to me only with thine eyes." Yet Professor Moorman can say without reserve that "at every point the disciple transcends the master," and can with complacency quote the words of Swinburne, than which no critical statement could be more fatuously wrong: "So we turn from Jonson to Herrick; and so do we recognize the lyric poet as distinguished from the writer who may or may not have every gift but one in higher development of excellence and in fuller perfection of power, but who is utterly and absolutely transcended and shone down by his probably unconscious competitor on the proper and peculiar ground of pure and simple poetry." It is time that the truth were said and known: Swinburne as a critic is mere sound and fury, signifying nothing; to quote him as an authority is to stultify one's self.

But that is by the way. If we turn to the more specific expressions of love we shall see that here also Herrick rises high, but never quite to the summit. Thus he has written his verses "To the Rose":

> Go, happy Rose, and interwove
> With other flowers, bind my Love.
> Tell her, too, she must not be
> Longer flowing, longer free,
> That so oft has fetter'd me.

It is a fair rendering of a theme as old as the Greek Anthology and much affected by our Caroline poets, but place beside it the lines of Waller:

> Go, lovely Rose!
> Tell her that wastes her time and me,
> That now she knows,
> When I resemble her to thee,
> How sweet and fair she seems to be.

The one is pretty; the other has that indescribable thrill of emotion, that swift hint of some obscure connection between things on the surface and the deepest privacies of the heart, which marks the great lyric. You will search in vain through the whole of Herrick for any mate to the second line, so simple in expression yet so complex in meaning, of this stanza of Waller's.

For the rest I can only indicate the points of comparison. Herrick has written of the bracelet that was to bind two lovers together; again he is pretty, but what a world of feeling lies between that prettiness and the passion of Donne's "bracelet of bright hair about the bone"! Herrick has played on the conventional fancy of cherry-red lips:

> Cherry-ripe, ripe, ripe, I cry,
> Full and fair ones; come, and buy.

Who does not feel the difference between such easy, fluent lines and the lyric ecstasy of Campion whom he has imitated?—

> Her Eyes like Angels watch them still;
> Her Brows like bended bows do stand,
> Threat'ning with piercing frowns to kill
> All that attempt, with eye or hand,
> Those sacred Cherries to come nigh,
> Till Cherry ripe themselves do cry.

Again Herrick has touched on the common theme of flowers dying and having their resurrection in the beauty of a woman's face, and again he has missed the supreme alchemy of such lines as those of Carew:

> Ask no more where Jove bestows,
> When June is past, the fading rose;
> For in your beauty's orient deep,
> These flowers, as in their causes, sleep.

He has catalogued with wanton dalliance the charms of his mistress's body, but something of the full luxury of the flesh seems still lacking when we compare his verse with Donne's twentieth "Elegy" or Carew's "Rapture." He has boasted the free joys of inconstancy, but beside the splendid audacity of Suckling how timid he appears. And so one might go on through almost the whole range of the lyric convention of the day. Even where, as in one or two of his religious poems, he rises above the level of his daily Muse, these comparisons will crowd into the mind. I would say nothing to deprive his Noble Numbers on "Eternity" and "The White Island" of their fair and calm loveliness, yet withal it cannot be denied that they move on a lower plain, that they have less of the sheer exultation of glory, than Vaughan's blinding vision of the World of Light. I feel the same lessening of things divine in the famous "Litany":

> When the house doth sigh and weep,
> And the world is drown'd in sleep,
> Yet mine eyes the watch do keep,
> Sweet Spirit, comfort me!

I would not charge this prayer or any of Herrick's religious poems with insincerity; as far as he felt, the words are true; nevertheless something has been left out of the writer's imagination. That word "comfort" which sings so deeply in other poets of the age, seems here to be verging towards its later sense of physical ease. Who, for instance, can feel in it the spiritual strength and peace that John Winthrop meant to convey when on sailing for America he wrote to his home: "I shall parte from thee with sorrowe enough; be comfortable my most sweet wife, for God wilbe with thee"?

IV.

It should be plain enough that Herrick sang in a lower key than the other great lyric poets of the age when the breath of the gods blew upon them. But there is a compensation. It is equally characteristic of Herrick's contemporaries that, when the instantaneous inspiration failed them, they too often fell into heaviness and awkwardness. The bulk of their work is marked by a curious negligence and amateurishness of manner, as becomes men who were untrained in their art and, as gentlemen, rather despised the painful discipline of their trade. And here Herrick not only differs from his age, but goes beyond it. Take away his epigrams, which are for the most part either feeble or gross or both, and which show a mistaken ambition to rival Martial, and the rest of his work is distinguished by a singular evenness of achievement. He is rarely dull or cumbrous or careless; he is almost always the cunning craftsman, and never the fumbling amateur. In a word, he is literary, and by that quality stands at once both above and below his great compeers. Here it is needful to distinguish. I would not call him literary in the sense that Jonson and Milton were such, in the sense that he felt the sway of true authority, and deliberately sought to fashion the utterance of his inner life on the models of antiquity, making their mastery his own. He was literary in another and lower way than that, in so far as his emotions and ideas were themselves secondary and derived from others, and, coming to him from literary sources, fell easily into the refinement of literary form. No doubt he knew, as other men know, the pangs of love, the attractions of beauty, and the consolations of religion; but, apparently, he felt these things not very keenly, and in his poems wrote largely from the impulse of what other men had lived. Hence a certain detachment of art in his work, which pleases the reader but never quite touches the springs of emotion; and hence, in the end, a certain monotonous level of exquisite mediocrity.

But I would not exaggerate. It is true, that even at his highest moments, there is generally heard, if one attends closely, some note that lowers the key. But I would not say that all in him is "dead, and closed up in ivory," nor that he always sings "without the sweet concurrence of the heart." There are lines and stanzas scattered here and there which speak of direct communings with larger things:

Show me that world of Stars, and whence
They noiseless spill their Influence.

There are two or three poems on the lessons of brevity to be drawn from flowers and other fading symbols of life's allurement, that almost, but not quite, raise Herrick into the blessed choir. And there is one whole range of subjects in which I seem to hear the very pulse of the man beating, and no echo of the heart of others.

If Herrick was to his finger-tips literary and a child of Jonson, he belonged also by birth and breeding to the strong, home-keeping, prudent bourgeoisie of Elizabeth's England. Something of this, too, has gone into his verse, along with the licentious influences of the Renaissance. Indeed, I think we nowhere else come so close to his real, unborrowed feelings as we do in those humbler poems which tell of the physical peace and comfort of a quiet home. The superb scenery of Devon awakened no wonder in his breast; his sympathy with the rural customs of his parish was, I suspect, that of a bookish and amused man from the city; but when he turns to the homely treasures of "His Grange, or Private Wealth," then speaks the man himself. He may be marvellously graceful when he praises his "many fresh and fragrant mistresses," yet withal leave with us the impression of Drummond's line: "Though in love's library yet no lover's he"; but so soon as he turns from his Perillas and Antheas to his servant and housekeeper, Prudence Baldwin, we know at least that we are in contact with a delicious reality. In a way, one is prepared to assent to Edward Phillips's charge that Herrick was "not particularly influenced by any nymph or goddess except his maid Prue"; we may even admit in a fashion with James Grainger, "from the effects of her inspiration, that Prue was but indifferently qualified for a tenth muse." The praise of this woman who made the comfort of the poet's home may not lift us very high, but we feel at ease with her, we grow to love her faithfulness and pleasant ways. Perhaps, the last image we take from the "Hesperides" is no picture of a venturesome explorer of far poetic seas, but of a rather timid gentleman of middle age, sitting by the fire in a snug and modest country parsonage, with Horace in his hand, and the willing Prue—how loved, and how well loved, who shall say?—at hand to fetch the desired cup of that sack which he had learned to praise, and perhaps to drink, long ago under the tutelage of the great Ben. I, for one, have no contempt for that picture.

And so also of Herrick's religion, we will not say it was insincere or hypocritic because the gods of Anacreon were as real to him as the God of the Gospels; but we may think he came nearest to his real sense of worship, not in the "Litany" or "The White Island," beautiful as are those chants, but rather in his "Thanksgiving to God for His House":

Lord, thou hast given me a cell
Wherein to dwell;
A little house, whose humble roof
Is weather proof;
Under the spars of which I lie
Both soft and dry;
Where thou, my chamber for to ward,
Hast set a guard
Of harmless thoughts, to watch and keep
Me, while I sleep. . . .
Some brittle sticks of thorn or briar
Make me a fire,
Close by whose living coal I sit,
And glow like it.
Lord, I confess, too, when I dine
The pulse is thine,
And all those other bits that be
There placed by thee;
The worts, the purslain, and the mess
Of water-cress,
Which of thy kindness thou hast sent;
And my content
Makes those, and my belovèd beet,
To be more sweet. . . .

Here we might end, but the picture would not be complete without a word on Herrick's love for children, which also is a part of his homing instinct. He did not marry; he even carried his bachelorhood with a boast; but he never writes with a sweeter pathos than in his brief songs to the infant Jesus, or to some child of more familiar parentage. I may perhaps be accused of preferring low things to high, and simple things to proud, but if I had to name the poem of Herrick's that seems to me the most perfect in witchery of language and that I oftenest repeat to myself without reservation of praise or diminution of pleasure, it would be the unassuming "Grace for a Child":

Here a little child I stand,
Heaving up my either hand;
Cold as paddocks though they be,
Here I lift them up to Thee,
For a benison to fall
On our meat, and on us all.

P. E. M.

NEWS FOR BIBLIOPHILES.

There lies before me on the table, as I write, a soiled and time-stained pamphlet, which is now one of the rarest of rarities. It is an octavo of twenty-four pages, and the title: "Occasional Papers, by the late William Dodd, LL.D.," is followed by a vignette of a basket of flowers with two bees hovering over it, and by the imprint: "London: Printed for G. Kearsley, at No. 46 in Fleet-street. M.DCC.LXXVII. Entered in the Hall-Book of the Company of Stationers."

But it was never published. A former owner has written an explanation:

> This pamphlet was printed by Dr. Johnson's direction, but on the day before the intended publication Mrs. Dodd, for whose benefit the sale of it was intended, conscious that the contents were not all her husband's writing, thanked Dr. Johnson in most grateful terms, but begged it might be suppressed, her request was granted, and the whole impression of 500 copies were cancelled, two or three excepted of which this is one.

This statement is confirmed in a passage of that "Life of Samuel Johnson, LL.D.," by Sir John Hawkins, which few even of the "true Johnsonians" now-a-days take the trouble to read. It is nevertheless worth reading, and as Boswell has painted himself in his famous biography, so Hawkins reveals himself—pompous, dull, and complacently self-satisfied—in his forgotten book. The book unlike the man is not dull.

The Rev. William Dodd, whose life was written forty years ago by Percy Fitzgerald, was the son of a Lincolnshire clergyman, and was born in 1729. He was sent as a sizar to Clare Hall, Cambridge, and after taking his degree was for some time a man about town making a scanty living by writing for the press. He entered holy orders, and in 1752 was lecturer of West Ham, and gradually became a popular preacher, while continuing his interest in literature. He took a warm interest in some charities, but his private life was marred by heedless extravagance and stained by vices which seemed all the blacker in a man of his pulpit piety. In 1774 his name was removed from the list of the King's chaplains in consequence of an attempt to bribe the Lord Chancellor in order to obtain the living of the Parish of St. George, Hanover Square. The end came in 1777 when pressed by his creditors he forged the signature of the fifth (not the famous fourth) Earl of Chesterfield, whose tutor he had been, to a bond for £4,200. The crime was detected almost by accident. The bond was disfigured by a blot of ink, and after it left Dodd's hands the holder wrote out a new bond and took it to Lord Chesterfield for a fresh signature. He at once repudiated it, and Dodd was arrested while at table with some of his gay friends. Forgery was then punished with death. After Dodd's conviction the greatest efforts were made to obtain a pardon for him. The Countess of Harrington, a daughter of the Duke of Grafton, wrote to Dr. Johnson, who did all that was possible to soften the heart of the King, but in vain. Johnson wrote papers in the criminal's interest, and also some to which Dodd's name was attached as author. Thus the suppressed "Occasional Papers" include "Letters to two noble Lords of his Majesty's most Honourable Privy Council" (*i. e.*, Bathurst and Mansfield), "A Petition to the King," "A Petition to the Queen" (presented by Mrs. Dodd)—all from the pen of Johnson. He also wrote in the newspapers observations on the Petition, signed by 23,000 persons, and the Petition from the City of London. Still more curious is it to know that he wrote most of the sermon preached by Dodd in the Chapel of Newgate Prison, and published under the title of "The Convict's Address to His Unhappy Brethren." "Dr. Dodd's Last Solemn Declaration," delivered to the Ordinary of Newgate, before execution at Tyburn, June 27, 1777, was also written by Johnson. Dodd must have had some elements of goodness or else he had a genius for friendship, for seldom have such strenuous efforts been made to save a man from the legal punishment of his crime.

There is no copy of the suppressed edition of the "Occasional Papers" in the printed catalogue of the British Museum, but they were reprinted as an appendix to the anonymous "Life of Johnson," issued by Kearsley in 1785.

Boswell quotes a portion of Johnson's epilogue to the "Occasional Papers," but he omits the concluding paragraph:

> Whatever assistance his anxiety might prompt him to solicit in forming the petitions (which, however, he must be considered as confirming by his name), the account of his past life, and of his dying sentiments, are the effusions of his own mind, consigned to paper without a prompter, and copied from his manuscript. Those who read them with the proper disposition will not read in vain.

This certificate of genuineness from Dr. Johnson adds force to Dodd's final words:

> I sincerely lament all I have done wrong. I love and ever did, religion and goodness. I hate and abhor vice, and myself for ever having committed any. I look with peculiar detestation on the crime to which I am at present obnoxious; and I wish before I die, of all things, if it be possible, to make amends—by the most sincere and full confession and humiliation of myself.

It is on record that the "macaroni parson," as Dodd was nicknamed in his butterfly days, was once told by a gypsy that he would end on the gallows. In the multitude of the unfulfilled we are not unwilling to credit the Romany with this accomplished prophecy. Dodd was a prolific writer, in prison as well as out, but it was an ironical stroke of Fate that made him the preacher of a sermon on "The Frequency of Capital Punishments Inconsistent with Justice, Sound Policy and Religion," which was printed in 1762, sixteen years before his own career ended on Tyburn tree.

WILLIAM E. A. AXON.

Correspondence

PANTISOCRATS ON THE SUSQUEHANNA

TO THE EDITOR OF THE NATION:

SIR: In your issue of October 10, Professor Harper asks what suggested to Coleridge and Southey their project of establishing a colony in America, and why they chose the banks of the Susquehanna as its site. He says: "I am not aware that a satisfactory answer has ever been given to the first of these questions, and delightful as is the guess that they picked out the name 'Susquehanna' because of its musical sound, I feel that a weightier reason must have moved the young adventurers." He offers—apparently as the answer to both questions—the example of a band of French émigrés, who formed a company on April 22, 1794, and whose colony on the Susquehanna was advertised in the *Gentleman's Magazine* for June, 1795. As for the first question, does not Professor Harper suggest a problem where none exists? And does his solution fit either the one question or the other?

I had supposed till I read Professor Harper's letter that in 1794 suggestions for a pantisocratic project in America were as plentiful as blackberries. As a standing argument for turning towards America, Southey and Coleridge had the precedents of all the discontented English who since 1492 had anticipated the advice of Horace Greeley—including John Rolfe, William Bradford, George Fox, William Penn, and Ann Lee, who in 1774 received a divine injunction to plant the Shakers in the New World—an injunction from which we may infer that Providence keeps an eye upon historical precedents. As a source of Utopian suggestions, they had an enormous range of reading outside the *Gentleman's Magazine;* into minds saturated with Plato's "Republic," Plutarch's "Morals," More's "Utopia," Montaigne's essay on the "Cannibals," Bacon's "New Atlantis," Milton's pamphlets, Harrington's "Oceana," Mandeville's "Bees," Rousseau's "Discourses" and "Social Contract"—into this smoking tinder had been flung in 1793 the firebrand of Godwin's "Political Justice." As special public reasons of the period, they had a detestation of the government of George III; enthusiasm for the principles of the Revolution across the channel, qualified by the September massacres, and the war in 1794 between France and England; unqualified admiration for George Washington, who was elected to his second term in 1792, and a belief that the United States had set up the best government yet instituted on the earth. Finally, they were both in the first sanguine flush of youth, both unestablished, both poets, both poor, and one of them—Coleridge—was hopelessly lazy, in debt, sore from recent disgrace, and involved in embarrassing love affairs.

Under these circumstances there would have been something to explain if they had *not* at one time or another projected a colony in America. Even if the argument for the French émigrés were valid it would be superfluous.

But in suggesting that this notice of June, 1795, "would be quite enough to inflame their imagination," Professor Harper seems to have overlooked the dates in the rise and fall of the Pantisocracy. The flame of their imagination was at its height long before June, 1795. At that date it was rapidly expiring, never to be reanimated. As early as November 13, 1793, Southey writes to Bedford as follows: "If this world did but contain ten thousand people of both sexes, visionary as myself, how delightfully would we repeople Greece, and turn out the Moslem. . . . It was the favorite intention of Cowley to retire with books to a cottage in America, and seek that happiness in solitude which he could not find in society." On December 14, 1793, he writes again to Bedford. "Now, if you are in a mood for a reverie, fancy only me in America; imagine my ground uncultivated since the creation, . . . after a hard day's toil, see me sleep upon rushes, and, in very bad weather, take out my casette and write to you, for you shall positively write to me in America." In April of the following year, 1794, Coleridge was discharged from the Light Dragoons, and in June of the same year met Southey, and almost at once the dream of the Pantisocracy was launched. By July 20, 1794, Southey writes of the plans for migration. "Many of my friends will blame me for so bold a step, but as many encourage me; and I want to raise money enough to settle myself across the Atlantic." On September 18, 1794, Coleridge's enthusiasm is at high tide: "My God! how tumultuous are the movements of my heart. Since I quitted this room what and how important events have been evolved! America! Southey! Miss Fricker! . . . Pantisocracy! Oh, I shall have such a scheme of it!" ("Letters of Samuel Taylor Coleridge," Boston, 1895, 2 vols.) At that time they planned to depart for America in the following March. But before the end of 1794 Southey is proposing that they go to Wales and experiment on a small scale; Southey, for various good reasons, is backing out; the bubble is about to burst. In December, 1794, Coleridge writes to Southey, "If it be determined that we shall go to Wales (*for which I now give my vote*), in what time?" From that date the history of Pantisocracy is simply the tale of the abandonment of a Welsh farming project in which neither of the principals seems to have been intensely interested. On November 13, 1795, Coleridge bids his long and famous farewell to Southey's friendship; the whole affair is now a matter of history, and the Susquehanna project had received its death blow six months before the appearance of Professor Harper's notice in the *Gentleman's Magazine.*

Now for the choice of the "banks of the Susquehanna." If the reader will turn to the first volume of the "Life and Correspondence of Robert Southey" (London, 1850, 6 vols.), he will find the following explanation in a letter from Coleridge to Southey:

> Every night I meet a most intelligent young man, who has spent the last five years of his life in America and is lately come from thence *as an agent to sell land* [my italics]. He was of our school. I had been kind to him: he remembers it. . . . He says £2,000 will do. . . . That twelve men may *easily* [Coleridge's italics] clear 300 acres in four or five months; and that, for 600 dollars, a thousand acres may be cleared, and houses built on them *He recommends the Susquehanna* [my italics], from its excessive beauty and its security from the Indians. *Every possible assistance will be given us; we may get credit for the land for ten years or more.* . . . [my italics]. That literary characters make *money* [Coleridge's italics] there. . . . The mosquitos are not so bad as our gnats; and, after you have been there a little while, they don't trouble you much.

Why seek for another reason for the choice of the banks of the Susquehanna!

S. P. SHERMAN.

Urbana, Ill., October 16.

A DIFFERENCE.

TO THE EDITOR OF THE NATION:

SIR: Pray tell me why you regard the mere wounding of Col. Roosevelt as less humiliating to the patriotism of the Americans than the killing of him, as your words in the following passage (*Nation*, October 17) undoubtedly imply: "Yet we all felt a sort of patriotic humiliation when Garfield and McKinley were shot, and it is a profound satisfaction not to have to go through that again."

What difference is there in this case between the mere wounding without fatal result and the successful killing, as long as Schrank's intention was to kill Mr. Roosevelt? Our patriotic humiliation is the same.

K. V. ROEDERN.

New York, October 20.

COMPULSORY SERVICE.

TO THE EDITOR OF THE NATION:

SIR: The letter of Professor Francke, in your issue for October 3, illustrates a persistent drift in social thinking—the tendency to over-value the accidental concomitants of a social movement and minimize its direct consequences. Whatever valuable results might follow compulsory service in the militia, the main fact is that, in the eyes of a not inconsiderable portion of the American people, the thought of militarizing their children is utterly abhorrent. Two expressions of opinion which I have but recently heard illustrate this feeling: "We know that a strictly military community is of all the most intolerable; it is bearable only in the measure it is modified by civilian influences." Again, "The attitude which military organization forces upon its units in their relationship towards one another is not strictly that of a fine and gentlemanly mind. I should not care to be commanded as a private; and I could not give orders as an officer."

OSCAR WOODWARD ZEIGLER.

Baltimore, Md., October 14.

CYNTHIA'S REVELS.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call your attention—in connection with your review (*Nation*, September 26) of a recent edition of "Cynthia's Revels"—to the fact that the editor seems to have misunderstood the following passage in the fifth scene of the third act:

> I, sir, the Emperour Alicandroes daughter and the Prince Meridians sister [in the *Knight of the Sunne*] shee should have beene married to him, but that the Princesse Claridiana—

Everybody who has read the "Mirror of Knighthood" will easily understand that "to him" means to the Knight of the Sun and not to Meridian, as Mr. Judson seems to think in his note to the passage. The words "the *palace* of your *pleasure*" in the same scene may be after all a reference to the following piece of poetry:

> Once I thought, but falsely thought,
> *Cupid* all delight had brought,
> And that Loue had been a treasure,
> And a Pallace full of pleasure,
> But alas! too soon I proue.
> Nothing is so sower as Loue,
> That for sorrow my Muse sings:
> Loue's a *Bee*, and *Bees* have stings.
> When I thought I had obtained
> That deare sollace, which if gained
> Should have caus'd all Joy to spring,
> (View'd) I found it no such thing:
> But insteed of sweete desires,
> Found a Rose hem'd in with Bryers.
> That for sorrow my Muse sings:
> Loue's a *Bee*, and *Bee's* have stings.

(The Eighth Booke of the Myrror of Knighthood, Being the third of the third Part, Englished out of the Spanish tongue. London. Printed by Thomas Creede, for Cuthbert Burbey. 1599. Sig. L.)

JOSEPH DE PEROTT.

Worcester, Mass., October 16.

DECORATING WASHINGTON.

TO THE EDITOR OF THE NATION:

SIR: In your issue of October 10, you speak of the "real distinction" of the success of Gov. Wilson at Baltimore as being "the triumph of the amateur." Might not the "success of the amateur," in the event of the election of Wilson especially, be applied also to the decorations of the city of Washington at the time of the inauguration? Would not the good taste of the thinking people of the country welcome such decorations as are really in keeping with the dignity of the occasion—and of the man? What is the significance of baskets of paper flowers exposed to the blizzards of the 4th of March, and of numerous little posts put up where there is no rhyme or reason for their being, except to look "unusual," and, therefore, to serve as a decoration?

If the College Men's League, or people of that type over the country, should take up the matter of making the city of Washington look suitably festive for the reception and welcoming of the new Chief Executive, we should certainly have more pride and satisfaction in the results of the efforts of these "amateurs" than we have sometimes had in the past, when, presumably, experts managed the business.

MARY SIBLEY EVANS.

Literature

SOUTH ARABIA.

The Land of Uz. By Abdullah Mansûr (G. Wyman Bury). New York: The Macmillan Co $2.75 net.

It is always a pity when the title of a book gives no clue to its contents, and especially so when the title is geographical and actually suggests to the reader a false trail. "The Land of Uz" for every one, including Abdullah Mansûr (p. xiv), is the country of Job, and Hebrews and Arabs alike have placed Job among the Sons of the East on the mountain plateau beyond Jordan. An even more narrow site is often pointed out, due east of the Sea of Galilee, which still bears his name and is locally the seat of his legend. It is probable that Mohammed himself had passed it on his journeys into Syria and knew it as the abode of the Prophet Aiyub, the Tested One, whose story the Koran was thereafter to tell. With no other situation is he associated in Moslem tradition.

But geographically Abdullah Mansûr's Uz is south Arabia (pp. ix, xxiii, 343), and there Uz is really connected with a legend, but a legend quite different from that of Job. One of the fixed themes in Arabic stories is the legend of a city still existing in almost inaccessible deserts, built long ages ago as an Earthly Paradise, bereft of its idolatrous and impious inhabitants by the sudden vengeance of Allah, and known only by the report of a solitary and straying traveller who has stumbled upon it. This city in the Koran is called "Irem of the Columns," and in the line of an Arab poet, "Irem round which the Jinn hover." It was built in the deserts of Aden by Sheddad, the son of Ad, the grandson of Aus, and so, possibly, the whole country might be called the Land of Aus or Uz. On the story in general the quickest reference is to the commentators on the Koran, lxxxix, 4. It has found its way also into the current or Egyptian recension of the Arabian Nights, and was, of course, known to Abdullah Mansûr (p. xxiii). But within the reading of the present reviewer "Uz" is always the name of a man—this grandfather of Sheddad—and is never a geographical term, and further (ii), this south Arabian "Uz" is never connected with Job. It would be exceedingly interesting—for many reasons, Biblical and otherwise—to know if there is a legend of Job actually domiciled in the deserts near Aden.

But leaving history and legend for the life and situations of the present, this is an extraordinarily vivid and real book. There is not a scrap of humdrum travel-talk in it, and the writer has a quite peculiar gift both as describer and *raconteur*. He evidently fears an accusation of anecdotal flippancy, but has most fortunately taken his risks. His vocabulary is picturesque and is used judiciously; there is no fine writing, but he makes his points. He records here ten years spent at Aden as a British "political," in this case a subordinate official whose business it was to know all about the neighboring Arab tribes and to deal with them, personally and by correspondence, in every way short of military force. That involved friendly journeys of diplomacy and exploration into the interior, even a crossing of the southwest corner of the Empty Quarter itself—one of the great blanks lamented by geographers. In punitive or boundary expeditions he had also a part, being in charge up to the firing of the first shot, when the military officer commanding would step in.

With such opportunities he learned to know the people thoroughly; their tribal constitutions from the great sultanates down in their tangle of feuds and alliances; the different types of the population, from the tribal fighting caste in their fortified eyries to the soft pacific traders of the coast and the unwalled towns. The life of children and women even was open to him, for womankind among the free Arabs have a very different standing from what is theirs elsewhere in Islam. We have sympathetic little vignettes of girls of the upper classes in hill fastnesses and of little shepherdesses of the masses on the mountain sides; of haps of love and marriage and even of the social status and influence of nautch-girls. Of business and agriculture, trades and industries, too, he treats, and there is far more of these than the traveller in northern or central Arabia would guess at. Arabia Felix was no grim Latin jest, and it still bears more than frankincense and coffee. On religion he touches, but what he knows of it was picked up most casually. Evidently the fewer the theological questions started on either side, the better. His people took him for granted and he did not disturb them. But on superstitions, from saints in their graves and the gifts they can still bestow, through tales of Bahlul—would he had told us more about *him!*—to snake-charms and magic snakes with their deadly jewels, the virtues of cold iron—not steel—and appearances of the Jinn, he is strong. It is curious to observe how he, like all long dwellers in the East in intimate touch with the people, is coming to have the Oriental openness of mind on such things. This is not to his discredit; rather, when carefully guarded, to his credit and great advantage. He is quite sure that some of the Séyids—descendants of the Prophet—have occult powers which no legerdemain or hypnotic feats could explain. In this, of course, he is not reckoning with that strange defect in human watchfulness which, as we now know, is so hard to eliminate. One Séyid gave him a *baraka*, "blessing," here profanely but pretty closely translated "mascot," in the form of a strip from his sacred banner. On the Jinn he is not so explicit. The panic terrors which they strike are evidently hard to explain, but he gives malaria its full weight as the wreaker of their vengeance.

A subject on which we would gladly have heard more is that of the desert poems of the present day. Elsewhere in Arabia we know that the tradition of subject, form, and manner—even of mannerisms—has run unchanged from before the time of Mohammed. Here we learn only that the South Arabian dweller in the desert is expected to be able to improvise in correct blank (?) verse on any subject (p. 314). Otherwise he is regarded as imperfectly educated. No real specimens of such verse are given; only two or three tags. But again and again we have pictures of just such thunderbursts in the hills and of the wadies coming down full from bank to bank in roaring spate that the old poets painted so often and in such detail. A genuine Song of the Well, too, is given (p. 200); as the Israelites in the wilderness, so the tribes still sing to the desert source of life.

Another obscure point is the south Arabian use of the word "dervish" to mean a confirmed bachelor (pp. 174, 271 ff.). For if there is one thing that holds of dervishes elsewhere in Islam, it is that they are in no way necessarily celibate and that "dervish" has no such association for the Moslem as "monk" or "friar" for us. That it means also "wanderer" suggests that the "tertiary" dervishes, so common elsewhere, are not found in the south. Among the tribes round Mecca are multitudes of Senusite tertiaries.

On one side only is the book irritating and unsatisfactory. The precision of the trained philologist is not to be looked for in a man who has learned his Arabic on the ground. But it is fortunately seldom that so good a book has so hopelessly bad a system—if it is a system—of writing Arabic words.

CURRENT FICTION.

[NOVELS OF DISILLUSION.]

A Woman of Genius. By Mary Austin. New York: Doubleday, Page & Co.

A Man's World. By Albert Edwards. New York: The Macmillan Co.

The autobiographical form is among the most ancient implements of the story-teller. There is no better way of beginning a tale than "Once on a time there dwelt at Bagdad. . . ." unless it be "I was born in the City of York, of a good family, though not of that country. . . ." The first person singular, if skilfully employed, is capable of covering a multitude of improbabilities in fact, and crudities in structure. Where such faults do not exist it is commonly an asset. What would Sherlock Holmes be without his Dr. Watson? And what Allan Quatermain as interpreted by a mere author? Allan Quatermain, Henry Esmond, John Ridd, belong to the older type of interlocutor. The business of their pens, as of their lives, is romance. But the present generation is bringing us a more subtle and sophisticated type of autobiographical story. It is the product of naturalism, but not of that robust and cheerful naturalism which belonged to "Moll Flanders" or the "Memoirs of a Lady of Quality." The new note is plaintive, elegiac even. I have lived, more or less, I have loved, after a fashion, and what does it all amount to? What is the meaning of the riddle? What is the use?

One striking fact about this mood, as echoed for example in the two narratives now before us, is that it is represented as a mood of maturity and not of age. It is the cry of the person of exceptional ability who has succeeded in the chosen task, and, at the very moment of success, finds that all is vanity, that real happiness, positive success, has somehow been missed. The story of "A Woman of Genius" is in outline much like Theodore Dreiser's "Sister Carrie." A girl is born into a provincial American community with a genius for acting which in time brings her to the top of her profession, love and domestic happiness being left by the way. But Mrs. Austin's Olivia is a far more intellectual person than Mr. Dreiser's Carrie, and suffers proportionately in the end. She is, we are to understand, the victim of her genius. From the moment when her consciousness of it emerges, everything else becomes secondary. For its sake she loses the husband of her youth, and the lover of her prime whose mistress she has preferred to be rather than sacrifice her art. He wants a wife, and finds one, leaving Olivia forlorn as a woman, but made as an artist. "If I had married Helmeth Garrett," she says, "I might have grown insensible to him; as it was, I seemed to have been fixed, though by pain, in the fruitful relation. The loss of him, the desperate ache, the start of memory, are just as good materials to build an artistic success upon as the joy of having." So she goes on with her building, and the house of art has no secret chambers for her. "Whatever else has happened to me, I am at least a success," is her summing up. It is left for her to patch up a marital arrangement with a fellow-being who finds himself in the same boat—a playwright whose "fruitful relations" are many, but who is no danger of demanding that she give up her career.

In "A Man's World" the plaintive and irresolute tune is even more distinctly audible. This is not, as the title might suggest, a story about the wrongs of woman. As in "A Woman of Genius," sex plays a somewhat disproportionate part in these reminiscences, because the normal outlet of a happy marriage has been unattained. This is as undisguisedly the fault of the narrator in the man's case as in the woman's. And the man lacks that excuse of the torch-bearer which belongs to people of real or fancied genius. Arnold Whitman, like Olivia, progresses from a narrow rural upbringing to the life of cities. He comes to New York as a bookworm and bibliographer, and remains as a criminologist, with an official position at the Tombs which makes him of great service in the cause of decency and justice. At this post we leave him, a man of practical achievement in a difficult field. But we leave him whining, a man of fifty whose life is over, who believes that all the world's a stage, and that the play is a foolish one. "I have little ardor left. The youthful questing spirit is gone—and I have not found the Holy Grail. . . ." "I am as much at loss to-day in regard to moral values as I ever was. I have little hope left of succeeding. . . ." Vanity of vanities! The trouble, as we have intimated, is a trouble of sex. Arnold Whitman has never thought of marriage as a part of the business of life. He has been the lover of one woman—who has preferred a career to marriage—and has gone so far as to wish that he might wish to marry another. And he apparently does not know what is the matter with him in the end. We wonder if his author does!

Between Two Thieves. By Richard Dehan. New York: Frederick A. Stokes Co.

"As for England—I tell you, Peter Michailowitch!—between Louis Napoleon Bonaparte and her army contractor, she will yet climb her Calvary with her cross upon her shoulders—we shall see her crucified between two thieves!" Thus Nicholas I to his general-in-chief. In the light of which metaphor the story of the Crimean War is set forth at very great length. Villains on both sides of the Channel are drawn with heavy strokes. Nothing could be more unpleasant than the "dough-colored" countenance of the lesser Napoleon and the "deep and dark and secret workings of his strange, cold, snaky mind"—as here depicted—unless it were the bloated Jowell, who is hideously swollen "with the golden life-blood of the British ratepayer." "Conditions," too, are painted with liberal brushfuls of color. Boudoir scenes under the Second Empire are only less scandalous than British barrack scenes in the fifties. The trouble is that the multitude of these revelations, and especially the manner of them, call for much more horror than the average reader has "on tap." By the time we are introduced to the seat of war and hospital horrors at Scutari, dismay has lapsed into cynicism, and we are much too tired to care.

But that is not the whole story, no, not by an ordinary bookful. There is a hero, son of a marshal under Napoleon I and a Carmelite nun. To him many notable affairs are ascribed—provoking the fusillade that unseated Louis Philippe, carrying to London an official warning of the *coup d'état* of 1851, preparing the field maps used by the French in the Crimean War, and founding the Society of the "Crimson Cross." The bad angel of this useful gentleman is a former mistress and stanch adherent of Louis Napoleon's; his good angel, the "Ada Merling" to whom the author has attributed all the activities of Florence Nightingale, plus many sentiments of her own devising.

The Joyous Adventures of Aristide Pujol. By W. J. Locke. New York: John Lane Co.

Another is hereby added to Mr. Locke's company of irresponsible heroes. M. Pujol is quite as amusing as his predecessors: a Frenchman of Provence, whose life is a series of casual and cheerful adventures in Europe and England. He is a soldier of fortune without fear or reproach—a vagabond, but not a rascal. He is successful in such varied industries as peddling, promoting, playing the drum in an itinerant band, teaching in a girls' boarding-school—and making love everywhere. He is an "electric personage," a "human dragon-fly," and these pages through which he darts and flashes can by no possibility be dull. His adventures are not recorded in chronological order, but they make a sort of progress, leaving us at the end the picture of a tamed and domesticated though by no means dispirited Aristide. The stories, taken separately, are somewhat uneven in merit.

AN APOSTLE OF WAR.

The Day of the Saxon. By Homer Lea. Harper & Bros. $1.80 net.

The California undergraduate who, some years ago, disappeared, to emerge in China in high military command, here renews his comment on the present martial balance of the world. America's military destitution was the subject of "The Valor of Ignorance." England's future as regards Germany and Russia is now the particular theme. The double peril impending over the island Empire is outlined with grim and logical imperturbability. At first, one is tempted to resent General Lea's display of axioms, as also an apocalyptic tinge in the rhetoric, but gradually admiration grows at the tenaciousness and compactness of the argument; irrespective, be it said, of its validity. In its way, the book recalls the stately and gloomy determinism of Machiavelli himself. We are in a world, not of reasoning people, but of inconscient forces called nations, urged by elemental considerations of food supply, stress of population, scorn of weaker neighbors, desire for sun and seaports. So tense and perilous a balance must from time to time be broken. Statecraft cannot avert these periodical Armageddons. In fact, the whole duty of a statesman is military, to foresee these tests and meet them preparedly in his own time and on his own terms. Such a ruler must be supported by a martial folk. Democracy and immigration are hostile to martial solidarity, and only the German and Russian Empires to-day, with the Japanese, can seriously be reckoned as military powers.

All three of these Powers must soon expand, and in every case expansion means conflict with England. She has put herself meanwhile in the poorest position to meet these inevitable clashes. When she failed Denmark in Schleswig-Holstein, she sacrificed in a day the prestige won at Trafalgar and Waterloo. Here Gen. Lea echoes the contemporary verdict of Lord Salisbury, who remarked that "to be despised by the minor states of Germany is, perhaps, the lowest depth of degradation to which a great Power has ever sunk." Since then England has kept her army stationary, while Russia, Germany, and Japan have stepped into the first rank. Even on the sea Japan and Germany are pressing her. The Pacific has already passed irrevocably from her control. And the conflicts which were remote and potential a generation ago are now urgent. Russia, with her momentum towards India merely steadied and concentrated through the Manchurian rebuff, is quietly annexing Persia. Japan looks eagerly to Polynesia. Germany chafes on every sea for colonies and coaling stations. Against these rivals, what can England interpose? Merely an illusory and shrinking naval superiority.

The military capacity of every nation ultimately comes down to its power to weaken the enemy at home. Thus, if England should sink the German navy, England would be little the better off. Unable to follow up a naval success on land, the campaign would end in a stalemate most costly on the whole to the apparent winner. In short, a navy, except when two insular Powers are at war, is purely a subsidiary defensive arm, whereas an effective aggressive on land is ultimately the only real defence, all others being mere postponements. It is true that without her present naval superiority, England would be exposed to quick subjection. With her preponderant navy, but without real expeditionary armies, she merely offers herself to slower disintegration. Imagine the plight of Japan if the late war had ended without the Manchurian victories, and the case is clear.

Bad diplomacy has since hastened what military neglect began. Island Powers are natural rivals, and alliances between them unsound. England's pact with Japan merely ousted herself from the Pacific. Natural allies are insular and continental powers; in the case before us, England with China, and Japan with Russia, would have been the correct alignment.

To meet the desperate plight in which she finds herself, England must first put herself on an expeditionary basis as regards Germany in Europe and Russia in Asia. This can only be done by Imperial consolidation with compulsory military service. At the earliest instant England should seize and hold her true strategic lines, the Belgian-Holland frontier, and the Teheran-Herat line. Having issued his formal warning, Gen. Lea seems to doubt that it will be heeded. In fact, it would be an amazingly transformed Britain that should either make the necessary military preparations, or, having made them, begin war with ruthless forethought.

Are the days of the Saxon then numbered? How serious is this book? Not necessarily, yet the book is serious enough. Its analysis of the limitations of sea power is admirable and most timely; all the conflicts it foresees are easily within the realm of possibility. If national expansion is indeed unconscious and determined, and statecraft merely a higher militarism, something like Gen. Lea's apocalyptic vision may well take place within the lifetime of some readers of these words. Give him his axioms, and the rest follows. But these very axioms ignore important considerations. Japan, Russia, and Germany are treated as military constants. As a matter of fact, they are all exposed to social discontents that may eventually reduce their military efficiency. Nor is the postulated pressure of population a constant. There are indications that population will increase much more slowly in the future in all civilized nations. France in this regard may not be so much a decadent as a prophetic state. Moreover, scientific agriculture will do much to relieve any distress from existing pressure of population. Nor is Gen. Lea's contention that the mixed populations of nations fed by immigration are hopelessly unmilitary consonant with the facts. His ideal, thoroughbred, military power, indeed, has never existed, except on the small scale of Lacedæmon and Macedon. Finally, the possibilities of arbitration are not so negligible as they seem to him. The libel suit has, after all, replaced ordeal by combat. England and France, Argentina and Chili, by rational negotiation, have settled outstanding difficulties that more than once have threatened war. It is difficult to see that the conflicting aspirations of England and Germany necessarily defy peaceful adjudication. Theoretically, one may imagine purchases and readjustments that would satisfy the legitimate maritime aspirations of Germany without seriously weakening England. In fact, an over-extended Power like England might actually gain by conversion of superfluous territory into cash. Russia did not hesitate to alienate for good reason a potential empire in Alaska. That such negotiations and sacrifices are difficult does not prove them impossible. We believe the time approaches when a sense of justice in nations will modify greatly those insensate instincts which Gen. Lea finds all-powerful. His general contention that England is far from prepared to hold her traditional world-prestige is unquestionably sound. It behooves her to arm, and more particularly with that political foresight that is the nerve of armies. A resolute facing of the whole international situation in the interest of a permanent and equitable settlement might do more to strengthen the British Empire than the recruiting of great expeditionary forces and the seizure of strategic positions beyond the North Sea and the Himalayas.

Essays on Questions Connected with the Old English Poem of Beowulf. By Knut Stjerna. Translated and edited by John R. Clark Hall. Viking Club, Extra Series, Vol. III. London: Curtis & Beamish.

Several dissertations relating to archæological aspects of "Beowulf" have been published on the one side of the ocean or the other, but novice work of this kind cannot weigh in the balance, of course, with the book that now lies before us—the production of one of the ablest authorities in the field of Scandinavian archæology, and Reader in that subject at Upsala for some years before he was snatched away by an untimely death in 1909 at the early age of thirty-five. There was no similar work in existence before, so that the present volume is undoubtedly a contribution of great value to the study of "Beowulf."

The essays here translated all appeared in various Swedish publications between the years 1903 and 1908; they were consequently inaccessible to the great majority of the students of the Anglo-Saxon poem and such students will accordingly have reason to be grateful to Dr. Hall for undertaking the execution of the strongly cherished wish of the author that his papers relating to "Beowulf" should be collected and published in English. The writer's conclusions will not, of course, always commend themselves to the acceptance of Anglo-Saxon scholars, but even in such cases the evidence which he has collected is of high interest, especially as the archæological material is set clearly before us in the copious illustrations—one hundred and twenty-eight in all—that adorn the book. As the editor remarks, this material is virtually exhaustive for the three Scandinavian countries during the period with which students of the Anglo-Saxon epic are concerned.

Particularly good are the essays on "Swedes and Geats during the Migration Period," "Scyld's Funeral Obsequies," "The Dragon's Hoard," and "Beowulf's Funeral Obsequies." In the first of these he brings out how Beowulf's tribe, the Geats, took part in the great movement of the Germanic tribes to the south of Europe and how the consequent drain on its fighting strength and the introduction of southern culture led to the overthrow of the Geatic kingdom by the Swedes—the great event of the Migration Period for Scandinavia. By the plausible interpretation of the archæological evidence, Dr. Stjerna thus enables us to penetrate the darkness which has surrounded the history of the tribe to which the hero of the poem belonged. As Dr. Hall, however, remarks in the excellent introduction which summarizes the results of our author's researches, 500 A. D. is too early a date for the downfall of the Geatic Kingdom. Indeed, in view of the well-attested historical fact that the Geat king of the first part of the poem was not slain until the second decade of the sixth century—in his raid against the Franks—it is singular that Dr. Stjerna should have adopted so early a date for that event. Moreover, his theory that East Götland rather than West Götland was the main seat of the Geatic power, and that the island of Öland may have been the political centre of the kingdom—so the place from which Beowulf starts on his expedition against Grendel—is open to grave objections. It does not accord with the topography of the poem or with the current identification—not likely to be shaken—of the site of Heorot, the hall of the Danish King, with the modern village of Leire near Roeskilde in Zealand.

The essays on the "Funeral Obsequies" of Scyld and Beowulf, respectively, are the most important studies of Germanic burial customs in their bearing on the Anglo-Saxon epic that have yet been published. The idea of a journey by water after death, which is illustrated by the account of Scyld's burial in "Beowulf," Dr. Stjerna supposes to have been derived from Southeastern Europe, making its appearance in the north as early as the fourth century. In this he is opposed to Olrik, who is inclined to ascribe the custom to the influence of Celtic conceptions. It is the death-journey, moreover, which he regards as the feature of primary importance in the narrative concerning Scyld, not the hero's arrival from an unknown land, as Olrik maintains. But may not the boat-burial here represent simply a modification of the conception found elsewhere in folktales of the hero who comes from a land of mystery and later returns thither? With regard to the account of Beowulf's obsequies, Dr. Stjerna explains the inconsistencies on the supposition of originally duplicate lays being combined in the poem. Especially interesting here is the close agreement which he brings out between the description of Beowulf's burial and the testimony of the remains discovered in the burial mound at Old Upsala, known as Odinshög. From a detailed discussion he concludes that the Odinshög was constructed about 500 A. D., and so the Beowulf burial corresponds to Scandinavian custom of that date. In "Beowulf," as in the Homeric poems, the archæological data constantly point to a much older period than the actual date of the poem.

Another essay, "The Double Burial in Beowulf," supplements these extremely interesting discussions of early Germanic burial customs. To be sure, this last-named essay is based on a false interpretation of a passage in the Finn episode of the Anglo-Saxon poem. Nevertheless, it contains much valuable information on the subject indicated by the title and also on the mutual obligations of foster-brothers among the

Germanic tribes. The inconsistencies in the narrative of the Dragon's hoard Dr. Stjerna interprets as due to a modification of the original lay in which the discovery of the hoard was a moor-find of treasure such as was not uncommon in this early period—the modification being the result of a later conception when such deposits were made (in secrecy) by individual men, but not wholesale by the tribe. Elsewhere regarding this episode our author makes the interesting comment that the hall where the treasure was hid, with its arched roof of stone resting on pillars, could not have belonged to the original Scandinavian lay, but must have been introduced by an Anglo-Saxon poet familiar with Roman architecture.

In conclusion, we will say that the book confirms in the strongest manner the belief already so general, that "Beowulf" is of Scandinavian origin. It should seem that, in Dr. Stjerna's opinion, the poem, as we have it, was worked up from Anglo-Saxon lays which were brought to England during the sixth century by the migrating tribes—these lays in turn being based on Scandinavian lays. On the whole, this may be described as the view now most generally held in regard to the origin of the poem, but it seems incredible that every detail of Scandinavian saga and archæology should have been preserved so perfectly during these long years of oral transmission, and the suspicion will not down that the English poet—for we may now assume a single authorship—was drawing directly from Scandinavian sources.

Some German Women and their Salons. By Mary Hargrave. New York: Brentano's. $2.75 net.

Every book should have its *raison d'être*. The justification of the present book lies, we suppose, in the attempt to sketch for the English reader the social status of certain cultured German women for about a half-century, say, from 1780 or 1790 to 1830. The period was one of upheaval in every direction and in this upheaval women played their part. To appreciate such influence is therefore right and proper in itself; success will depend, however, upon one's qualifications. Has our author the qualifications? We doubt it.

To begin with, the mere title of the book is misleading. "Their salons" implies that each of the women here represented had her salon. Yet, in all frankness, not one of the so-called salons here sketched is a salon in the genuine sense, comparable, for instance, to that of Madame Récamier. We are not so rash as to undertake to define a salon. Only on the negative side will we venture to maintain that the genuine salon is characterized by the absence of two disagreeable qualities: provincialism and didacticism. In the matter of provincialism, will any student of history assert that Berlin, even as late as 1830, was not a provincial capital? Vienna might have had a salon; not Berlin. As for the didacticism, it crops out at every turn. Guests met in the reception rooms of Henriette Herz, Rahel Varnhagen, Bettina von Arnim, not solely for the glorious democratic give and take of *esprits faits;* quite as often as not they met "to learn something."

Goethe's mother fills fifty pages of the book. Yet her quiet, modest home in Frankfort bore not the slightest resemblance to a salon; it was merely a pleasant, convenient meeting-place where the young might drop in for a friendly chat or a word of cheer. Every town in every land has, or may have, such a home. True, not every old lady can be a Frau Aja; but the homelike atmosphere will be the same.

Then there is the Queen of Prussia, the famous Königin Luise. Shall we not say, once for all, that a queen, precisely because she is a queen, must have a court but cannot possibly have a salon? In fine, our author should have entitled her book "Some Notable German Women" and let it go at that.

With the substance of the book it is not worth the while to quarrel. We question the author's accuracy in German and French. Perhaps the printer is to blame for the marvellous word-breaking (p. 199): "Bettina's Frühling-skranz"! And for Toeplitz, instead of Teplitz, p. 102. But the long-suffering printer can scarcely be held responsible for "Briefwechsel zwischen Ilius Pamphilius und die Ambrosia." How Goethe's line, "Und das ist schon Gewinn des Lebens" came to be set up "Gewinn des Lebéne," is to us a conundrum.

Whether the author has gone very deeply into German literature, may be questioned. The period which her book covers coincides—in the main—with the career of the Romantic School. Now, this literary movement has been thoroughly studied and, we add, thoroughly *discounted*. Yet, though ephemeral and artificial, it seems to our author something spontaneous, vivifying. More remarkable still, Goethe is represented as the idol of the school. This is exaggeration. Some of the school accepted Goethe, others did not. Anyhow, the full recognition of Goethe came later. As for Bettina and her "Briefwechsel," we have long grown weary of them. Bettina was at best only the *enfant terrible* of her day, and her Briefwechsel is far more fiction than fact.

In our opinion, the author would have done better, had she concentrated her efforts upon Rahel Varnhagen and Henriette Herz, the most influential literary characters of the period, but scarcely known in this country. Frau Aja has of late been done to death, and the noble Königin Luise is a figure not in German letters, but in German politics.

The illustrations so-called are the most irritating feature of the book; for they do not illustrate! Opposite the title-page is a medallion portrait of Rahel Tieck, yet the Tiecks nowhere figure in the text. Henriette Herz's beauty is mentioned frequently, but her portrait fails to convey a suggestion of beauty. Last, there is no portrait of Bettina; instead we get the well-known sketch of Goethe on his death-bed, presumably because it appeared in Bettina's "Tagebuch"! This is picture-making run mad.

Notes

The latest study of the well-known Dante scholar, Edmund Gardner, is in the press of Messrs. Dent. Its title is "Dante and the Mystics."

Mr. Huebsch will very soon issue "Human Quintessence," by Dr. Sigurd Ibsen, son of the dramatist. The book is said to touch many subjects and to show sturdy reflection throughout.

October 26 is the date set by Houghton Mifflin for the publication of the following books: "Linda," a novel by Margaret Prescott Montague; "Americans and Others," essays by Agnes Repplier; "Our House: And London Out of Our Windows," by Elizabeth Robins Pennell, holiday edition; "Gutter-Babies," by Dorothea Slade; "Citizens Made and Remade," a short account of the George Junior Republic, by William R. George and Lyman Beecher Stowe; "Romance, Vision and Satire," modern renderings by Jessie L. Weston; "Poems and Ballads," by Herman Hagedorn; "A Dome of Many-Coloured Glass," poems by Amy Lowell, and "How England Grew Up," a book of English History from King Alfred to the present time, by Jessie Pope.

The following are among the announcements for early publication by Longmans, Green & Co.: Mrs. William O'Brien's "Unseen Things," being studies of women who have played a noble part in the world's history; the long-expected "Life of Father Tyrrell"; a two-volume work on "Railroads," by Professor Ripley; "Miriam Lucas," a novel by Canon Sheehan, and Andrew Lang's 1912 annual, "A Book of Saints and Heroes."

Henry Holt & Co. will bring out the authorized English translation of Edouard Le Roy's "Une Philosophie Nouvelle: Henri Bergson," and Laurence Housman's "John of Jingalo," which is taken to be a satire on modern English political life.

Norman Duncan has completed a new sea story which Revell will shortly publish. It bears the title, "The Best of a Bad Job."

"Landmarks in the History of the Welsh Church," which Mr. Murray, of London, will shortly publish for the Bishop of St. Asaph, is a timely book, considering the discussion now on in Parliament over Disestablishment.

We are to have this autumn from the Pilgrim Press the following religious or soological books: "At the Crossing with Denis McShane," by William Allen Knight; "On the Way to Bethlehem," the same; "Man or Machine—Which?" by Al Priddy; "Through the School," the same; "The Green Devil, a Romance of Thornton Abbey," by Arthur Metcalf; "The Even Hand," by Quincy Germaine; "The Problem of Religion," by Prof. Emil Carl Wilson; "The Culture of Religion," the same; "Mrs. Mahoney of the Tenement," by Louise Montgomery; "The Ladder of Christ," by Reginald J. Campbell; "The Temper of the American People," by George T. Smart; "Shall a Man Live Again?" by Wilfred T. Grenfell; "The Evolution of the Country Community," by Warren H. Wilson; "The Person of Christ in Modern Thought," by E. Digges La Touche; "Eucken and Bergson, Their Significance for Modern Thought," by E. Herman, and "The Life of the Soul," by J. Brierly.

S. A. and C. A. Williams have written three books for juveniles which Stokes will issue next month: "The Magic Book," "The Treasure Trunk of Dollies," and "Animal Stories."

The Rev. John H. Harris and Mrs. Harris were sent out last year by the Anti-Slavery and Aborigines Protection Society of England, with the special object of studying conditions in West Central Africa. Their report is embodied in a book which Smith & Elder have in press—"Dawn in Darkest Africa." Lord Cromer contributes an introduction.

The awakening of the Turkish mind is shown by the diversity and extent of its literature at the present time. Numerous translations of scientific works, on medicine, chemistry, physics, military science, and even aeronautics, are coming out, and also a large number of independent works on these and like subjects by Turkish authors. In order to foster a patriotic feeling new and well illustrated editions of some of the Turkish classics are being published, as well as several magazines with articles on current events and literary topics. Few translations have been made of purely American literature, but our detective stories are exceedingly popular with the young Turk.

Education is making steady progress in China. An educational conference recently held in Peking urged the establishment of three new universities in addition to the four now existing, and of primary schools in every city, town, and village. It is said that eight students will be sent to Great Britain to study naval matters, six to Germany for military science, twenty to Belgium for mineralogy, eight each to Italy for mathematics, France for law, Japan for politics, and ten to this country to study industry. At examinations held at Tsinanfu in August for students for a college education in the United States there were 130 applicants, four of whom were successful.

The most provocative chapters in Clayton Sedgwick Cooper's "Why Go to College" (The Century Company) are those in which he attempts to analyze and interpret to us that highly puzzling entity, the soul of the American undergraduate. It cannot be said that he has succeeded. Mr. Cooper confines himself largely to assertions that are either obvious or unsupported. His general thesis is that the college student is not what he seems; which may be said of most of us in college or out. The American undergraduate may seem lightminded, but at bottom he is not. He may appear to be averse to study, but he really is not. He may be unbalanced on the subject of athletics, but at heart he is not. He may seem deficient in spirituality, but in his innermost being he cherishes great dreams. He may cut chapel with extraordinary persistence, but if you examine him closely he has a strongly developed religious sense. To uphold his assertions Mr. Cooper gives us anecdotes instead of facts. The anecdotal method runs riot in his pages. We cannot help thinking that Mr. Cooper could have made out a much better case for the college student if, instead of arguing that the raw, loud-mouthed, overdressed, idle college youth is not the barbarian he seems to be, he had rather maintained that this "representative" undergraduate is not representative at all. He concedes much more than is necessary when he allows us to carry away the impression that the undergraduate who cheers his football team to victory is the undergraduate who celebrates victory by dancing the serpentine on the field and finishes by beating up policemen and tearing down front gates. The fact is that out of 5,000 men who cheer at football games, only 500 dance the serpentine and only 50 beat up policemen. It is the minority in college, as in life, that gives a social group its undeserved reputation. The great majority of college undergraduates do their work honestly, dress quietly, and know why they are at college.

"The Truth About Oregon" would hardly be too pretentious a title for Allen H. Eaton's little book, "The Oregon System: The Story of Direct Legislation in Oregon" (McClurg). "I have friends," he says in a delightful and illuminating preface, "who have come to Oregon because the people rule; I have friends who have moved out of Oregon for the same reason." The promise of "an unprejudiced examination of the work which the people of Oregon have done since the adoption of the initiative and the referendum in 1902" is to all appearances redeemed. He discusses in some detail the thirty-three measures that the voters have rejected in the ten years, and the thirty-one measures that they have adopted. There is much that will amuse, disgust, or alarm, as well as much that will be approved, in the record. But it is the possibilities more than the actualities of the "Oregon system" that constitute the ground on which it will be judged by the thoughtful. Here, too, Mr. Eaton's chapters are valuable. We quote them briefly on two significant developments that have already appeared in Oregon: "We pass constitutional amendments now as readily as we pass statutory laws"; "As to the initiative and the referendum, I do not believe they were intended to supply a few individuals with the power to set up a rival Legislature. They were adopted as reserve measures to be used only when needed and to supplement and improve the work of a Legislature already established." As to possibilities, he goes so far as to say: "Unless the people and their representatives resolve to work together the time is not far off when there will be a new issue in Oregon, and that issue will be the abolition of the Legislature." Yet his conclusion is hopeful. "The people of Oregon are to be trusted. The principle of the initiative and referendum is safe. But the machinery of direct legislation is crude and weak in many places." Towards the locating of these places and their improvement, his calm and well-reasoned presentation should contribute.

Miss Maud Thornhill Porter's "Billy" (Mosher Press) is a little book of 53 pages, to which it is difficult to do justice in words that will not seem extravagant in relation to so small a work by a writer entirely unknown to the public. It is marked by a rare simplicity and perfection of expression, but this is not its greatest excellence; the vividness of the pictures presented, the penetrating sympathy, the depth of feeling just sufficiently set off by a charming vein of humor, give the little story a unique quality. It is only "the true story of a canary bird," but it is a literary gem of a very high order. Full of delicate observation and graphic presentation, the story at first interests the reader simply as a pleased onlooker at pretty scenes; but gradually—and without a trace of mawkishness or sentimentality—it grips his heart, and at the climax it is poignantly moving. Nor is the descent from the climax to the tranquil and philosophic closing stage of "Billy's" life less admirably done. To state more explicitly wherein the little drama consists would be to lessen somewhat the effect of it on those who will go to the book itself.

Further indication of the popularity of the philosophy of Rudolf Eucken, now exchange professor at Harvard, is furnished by the fact that "Main Currents of Modern Thought" (Scribner) is the fifth title, and the fourth large volume, to appear in English translation, or new edition of translation, during the present year. The book is Meyrick Booth's translation of the fourth German edition (1909) of "Geistige Strömungen der Gegenwart," one of Eucken's earlier works, which may be said to mark the transition from the philosopher of history to the teacher of religion. Like his later works it is an elaboration of the one idea of "the independence of the spiritual life." Here, however, the idea wears the bloom of freshness, and is invested in a wealth of historical reference, derived from the author's really extensive learning, which is a gain both in substance and in interest.

For the Macmillans' military text-book series, Col. Charles Ross has undertaken a history of the Russo-Japanese War, of which the first volume, carrying the narrative through the battle of Liao-yang, is now published. To-day there is plenty of material for a writer on the war in Manchuria to draw upon. The Japanese General Staff has published its official history of the war. There is an official German account. There are Gen. Kuropatkin's Memoirs. On a smaller scale we have such first-hand contributions as Politovsky's "From Libau to Tsushima," Semenoff's "Rasplata," and Nojine's "The Truth About Port Arthur." Col. Ross has made use of all these sources. The book has the method and clearness that a well-ordered text-book should possess. Its array of dry statistical matter is supplemented by comment on the strategic and tactical principles involved, with due attention to the psychological factors that enter into the winning of victories. If the author pauses now and then to point a moral for the patriotic British reader, the practice is not out of place in a book of this nature.

Writing as a cautious student and half a dozen years after the event, Col. Ross shows few signs of being affected by the legend of miraculous achievement that encompassed the Japanese while the world was still under the spell of their victories. This does not mean that he has gone to the other extreme. On the contrary, he pays full tribute to the fine fighting qualities of the Japanese soldiers and to their excellent leadership. But he shows that the Japanese, too, were capable of error, and that only the severe handicaps under which their opponents labored prevented the Russians from taking advantage of such mistakes. Among the factors responsible for the defeat of the Russian forces were the natural difficulties of the task, their over-confidence at the beginning of the war, and the weakness of the Russian intelligence service throughout the war. The Japanese nearly always knew what confronted them, whereas Kuropatkin was frequently groping in the dark. Finally, there was the evil of divided counsels in the Russian camp. Kuropatkin did not have a free hand at the beginning. When he assumed supreme control of operations it was too late; the unbroken succession of Japanese victories had undermined the morale of the Russian army. The Russians fought bravely to the last, but without confidence in themselves. In spite of the detailed presentation of military statistics, Col. Ross's deductions are cast in such broad form and presented with such admirable clearness as to make them easily intelligible to the non-professional reader.

In "An Outline of the History of Christian Thought Since Kant" (Scribner), Prof. Edward Caldwell Moore of Harvard continues the sketch of the reformed theology begun by Dr. McGiffert in his "Protestant Thought Before Kant." Both volumes are in the series entitled Studies in Theology. The chapters fall principally into three sections: the destruction of the scholastic theology and the development of idealism from Kant to Ritschl, the critical and historical movement from Strauss to Harnack, and the results for theology of modern science as represented by Darwin, Spencer, and Huxley. A final chapter, The English-speaking Peoples: Action and Reaction, sketches briefly the men who have started movements, either progressive or reactionary, in England and America, from Coleridge to William James. Professor Moore is a sympathetic critic, generous in appreciation of the merits of the most diverse systems and thinkers, keen in his sense for the salient and the causative, just in apportionment of influence, and always clear and forceful in style. He handles skilfully his wealth of material, and few of his pages are overburdened by superabundance of fact. He is most at home in the discussion of the historical criticism of the last fifty years. One misses a summary of the entire movement of Protestant thought from the rise of idealism to the present, with estimate of the results achieved, and analysis of the loss and gain. The volume is readable, an excellent hand-book for the student, and valuable in supplying perspective for a view of the religious movements from which we are now emerging.

Not many Blue Book reports have been reprinted in handsome editions. This honor is now conferred upon Lord Durham's "Report on the Affairs of British North America" (3 vols.; Clarendon Press, Frowde), which is edited with an introduction by Sir C. P. Lucas, K. C. B. The work is interesting and important from many points of view. It is a valuable source of information for the student of Canadian history. It contains observations on colonization and the government of colonies which, though referring to conditions in Canada at the close of the rebellion of 1839, are still well worth reading by any one interested in those subjects. More particularly, it had in its day a marked influence upon British policy and upon political thinking in England. Not only was it a prime factor in effecting the establishment of responsible government in Canada, but it gave a decided impetus to those liberal tendencies which, in the middle of the nineteenth century, were so radically changing the character of English political institutions.

The value of the new edition of the report is enhanced by the excellent introduction of Sir C. P. Lucas, which fills the first volume. The editor brings to his task, not only thorough familiarity with the report, but wide and discriminating knowledge of the history of colonization, and particularly of English colonization. Opening with a brief chapter on the conditions in England at the accession of Queen Victoria, he passes on to a careful discussion of the conditions in Canada, the powers and instructions given to Lord Durham, and the "scope, character, and substance" of the report. The introduction is no mere summary; it undertakes to determine to what extent the conditions were as Lord Durham represented them, and to what extent his recommendations for Canada and his forecast of the future of the British colonies have been justified by the course of events since his time. The conclusion is that Lord Durham misjudged the French Canadian, that he was unfair to the English Government because he judged its past methods too much in terms of the liberal principles of his own day, that he did not foresee or desire for Canada the measure of independence which it now possesses, and that he was not concerned with colonies in the abstract, but only with a particular kind of British colony. The significance of the report is that it outlined a wise policy for dealing with the situation in Canada at that time, and in doing so pointed the way which has led to the relatively complete emancipation of British colonies of the self-governing type. While conceding the great importance of the report, the editor is chiefly concerned to dispel the illusion that Lord Durham was the bearer of a Heaven-sent gospel embodying principles of universal applicability.

It is particularly worth while to reprint this report now, when the question of colonial policy is again becoming of vital import in English government. In the fifth decade of the nineteenth century the current of opinion was strongly set towards liberalism; the report of Lord Durham, restrained and guarded as it was in its recommendations, was nevertheless in harmony with the prevailing sentiment. The result was that it was more liberal in its effects than in its character; many thoughtful men, towards the middle of the last century, were persuaded that the inevitable conclusion of Lord Durham's recommendations was the gradual disintegration of the Empire. This was not the belief of Lord Durham himself, and it would be curious if, at the opening of the twentieth century, his report should be found to contain suggestions pointing the way to more effective imperial union.

In commemoration of the one hundredth anniversary of the founding of Princeton Theological Seminary, the members of the faculty send forth a collection of "Biblical and Theological Studies" (Scribner). The first essay is by Dr. Francis L. Paton on "Theological Encyclopædia." The author's keen analysis and love of order find ample scope in the systematization and definition of the various subjects of the traditional theological curriculum, in which he assigns to dogmatic theology the highest place. Prof. Benjamin Breckinridge Warfield contributes a paper on "The Emotional Life of Our Lord"—not a happy choice of theme for an unemotional Westminsterian Calvinist. In speaking of Christ as "a Being whose subjective life is depicted as focusing in two centres of consciousness" he is not entirely in accord with Athanasius and makes himself liable to a charge of heresy. Prof. John D. Davis, however, deduces the essential articles of the Athanasian creed from a verse or two of the prophet Isaiah, in an essay on "The Child whose Name is Wonderful." More modern is a sympathetic study of Jonathan Edwards, appropriate in a Princeton volume, by Prof. John DeWitt. A discerning analysis of a number of extra-creedal beliefs which have had considerable influence in the popular Christianity of England and America is found in the chapter on "Modern Spiritual Movements" by Dr. Charles R. Erdman. Other essays are "The Supernatural," by Prof. William Brenton Greene, jr.; "The Eschatological Aspect of the Pauline Conception of the Spirit," by Prof. Gerhardus Vos, and "The Aramaic of Daniel," by Dr. Robert Dick Wilson. There are fifteen essays in all, and the volume extends to above 600 pages.

In our obituary of the late Bradford Torrey (October 10) we stated that he was at one time editor of the *Youth's Companion*. Our attention is called to the fact that Mr. Torrey was never editor, but only one of the associate editors of that paper.

Adrian Hoffman Joline, who died last week at his home in New York, aged sixty-two, was a graduate of Princeton, a practicing lawyer until the time of his death, and always an enthusiastic bibliophile. He was the author of "Meditations of an Autograph Collector," "Diversions of a Book Lover," "At the Library Table," and "Edgehill Essays." Mr. Joline was an occasional contributor to the *Nation;* he was also a member of several historical societies.

Miss Geraldine W. Anthony, a writer, died in New York Sunday. After graduating from Barnard College, she wrote short stories and verses and two novels, "Four in Hand" and "The Victim of Circumstance."

The death is announced from Boston of Henry Austin, the author of "The Law Concerning Farms," "American Farm and Game Laws," and "The Liquor Law in England."

Science

The Evolution of the Vertebrates and their Kin. By William Patten. Philadelphia: P. Blakiston's Son & Co. $4.50 net.

"For almost a quarter of a century the problem of the evolution of the vertebrates has been to me a stimulus and a guide," says Professor Patten in his introduction to a masterly treatise on a problem more burning twenty years ago than now. Many another at that period busied himself with the same or similar morphological problems, and left them, without satisfactory conclusions, for the successive and more alluring waves of experimental embryology and zoölogy, of cytology, and of heredity and genetics. Professor Patten, alone in this country and with a few colleagues abroad, has remained true to his first ideas, adding evidence now on one side, now on another, until in this book he gives a completely elaborated theory of the origin of vertebrates based solely on morphology. Students who spend their days over the microscope, or who limit their philosophic speculations to interpreting changes in chains of generations of color patterns, will gain in breadth of view by carefully reading this book and absorbing some of the broad scientific spirit which animates its author.

Professor Patten traces the origin of vertebrated animals back to ancestors like the Eurypterids with arachnid affinities, thence upwards through the little-known Ostracoderms to the primitive vertebrates of dipnoan and amphibian types. A central argument in his theory is the phenomenon of coalescence of body segments to form the head, successive stages being found today in existing types of crustacea, insects, and arachnids. One great difficulty arises in the attempt to explain the reversal of dorsal and ventral surfaces of the arthropods into ventral and dorsal surfaces of vertebrates. He strives to show that the greater part of the arachnid body, with its primitive head, goes to form the vertebrate head, whereas the major portion of the vertebrate body consists of entirely new segments not represented in arachnids. Such a theory involves an enormous number of homologies, each of which is open to discussion, and most of which are so entirely opposed to traditional beliefs that Professor Patten's future would seem to be mortgaged to controversy. The closing of the arthropod mouth, the formation of the new vertebrate mouth the origin and phylogenetic significance of the vertebrate brain, will be particularly difficult for him to harmonize with the current views of comparative anatomists. He is aware of these difficulties and imperfections, and states his position with regard to them in the last sentences of his introduction:

> I would gladly make them less. But to be overconscious of the one, unsteadies the hand and draws the eye away from the open waters, and too long a delay over the inevitable defects means to be surprised by the night, and still unprepared.

Forthcoming are "Farm Management," by Prof. C. W. Pugsley; "The Farm Mechanic," by Prof. L. W. Chase, and "The Satisfaction of Country Life," by Dr. James W. Robertson; they form a part of Sturgis & Walton's Farmer's Practical Library.

The leading feature of the *Geographical Journal* for October is Ellsworth Huntington's article on the fluctuating climate of North America. The ancient ruins in New Mexico and the curves of growth of the giant sequoias seem to him to prove that the climatic changes of this continent were pulsatory and synchronize with those of the Old World. Other subjects treated are modern oceanography by H. R. Mill, a journey in southwestern Abyssinia by Dr. G. Montandon, and a review of the nine years' work of the research department of the Royal Geographical Society by Prof. J. L. Myres. The presidential address of Col. Sir C. M. Watson to the geographical section of the British Association on progress in the Sudan and the international map is also given.

A compactly written volume of 500 pages, including an extended bibliography and a good index, touching themes which could be grasped hitherto only by specialists, is "Distribution and Origin of Life in America" (Macmillan), by Robert Francis Scharff. As a summary of scattered publications upon fossil no less than upon recent forms, its publication will be welcomed; and its review of distributional lore, with digestions and assimilations, will appeal to a wide circle of naturalists. It is curious, by the way, that such a work dealing with American fauna should not have borne the name of an American author; perhaps the reason is that our particular specialist who is wise enough to write upon so difficult a theme was wise enough not to write at all. For, clearly, as one thumbs the present book, distributional puzzles in bewildering profusion arise in nearly every chapter. We are not sure whether Dr. Scharff has given the most satisfactory answer to even most of them, for to judge such a matter one would have to know in detail every individual puzzle. To instance a single example, "Archhelenis," the ill-discovered country from whose limits came South American and African forms: here Dr. Scharff, like von Ihering, Ortmann, Eigenmann, and others, accepts the view that such a land connection must have existed, although the trend of opinion seems now to be taking a turn. For Pfeffer and others, most recently Haseman, bring forward strong evidence for the belief that the forms common in these widely separated localities might have come there either as relics of early migrations in most cases from a northern stock, or as holdovers from groups of general distribution. The fact is that the zoögrapher of to-day is less apt to base his results upon the extension of continents over abysmal oceans—he has found simpler dynamic means at hand for solving his riddles, and the worker of the future will probably juggle less and less with serious subsidences and elevations of land masses than with the findings of experimental zoölogy. The pertinence of this general subject, we may mention, has not been considered by Dr. Scharff. If he had followed this intricate line of inquiry, he might not have collected his widely scattered data, and we should not to-day be reviewing an attractive book. And even should many of the "old-line" theories pass into shadows, we shall now have before us the documents carefully labelled and classified upon which the views of the future will take wholesome root.

Drama

Mr. Horace Howard Furness, jr., who is carrying forward the great Shakespeare Variorum, the life-work of his late father, has the seventeenth volume, "Julius Cæsar," almost ready. It will be brought out early next year by Lippincott.

To the Tudor Shakespeare (Macmillan; general editors, Professors Neilson and Thorndike) the volume of "Othello" has just been added. Considering the numerous interesting problems of interpretation which the play affords, we regret that the editor, Thomas M. Parrott, felt constrained to write an introduction somewhat briefer than the average so far for the series. Though a perfunctory effort is made to find human motive for Iago's conduct, the discussion entirely neglects the relation of this character to other Shakespearean and Elizabethan villains. It is also hard to think of Iago without recalling the doctrines of Machiavelli and their influence upon English thought. We should have been glad to see the matter touched on here.

The tenth volume of Beaumont and Fletcher has now appeared in the Cambridge English Classics (Putnam), bringing to conclusion a notable piece of editing. When A. R. Waller took up this task from the hands of Arnold Glover, who died before even the first volume had been seen through the press, we had the promise that an eleventh volume should be added, giving various notes on the authors and the plays. Unfortunately, Mr. Waller's engagements as assistant secretary to the Syndics of the University Press have prevented him from fulfilling this promise. Each play has a full *apparatus criticus* so far as the early editions are concerned, but of literary or explanatory help there is none. However, as the general plan of the Cambridge English Classics does not really embrace such editorial matter, we cannot feel aggrieved at its absence in this particular case. It is a good deal to have the assurance of a thoroughly accurate text.

"The New Sin," by a new English dramatist, B. Macdonald Hastings, which has just been produced in Wallack's Theatre, is greatly superior to the mass of contemporary drama. It is not mechanically a well-made play, as it starts from exceedingly forced and improbable premises and procures its situations by a series of arbitrary and incredible coincidences. The awkwardness and violence of the construction betray the novice. But the dialogue is forceful, even when it is not altogether judicious, and several of the individual scenes are of enthralling interest. It is not necessary to give the full details of a story whose strength lies in its incidents rather than its plausibility. The problem it presents is the extent to which the Golden Rule should be enforced, how much the capable, provident man is bound in duty to contribute of his energy and substance to the support of less fortunate fellow creatures who cannot or will not help themselves. It is plain that the piece has an allegorical significance, and that the personages are intended to represent classes of society. The hero, a fairly successful artist, is supposed to be the victim of an eccentric and iniquitous will. His millionaire father, whom he has mortally offended, not only disinherited him, but decreed that the vast fortune should not be divided among the other heirs, until after his, the artist's, death. The consequence is that his brothers and sisters, reared in idleness and hopelessly incapable, are sunk in the deepest misery, look to him for aid and pray for his death that they may come into their inheritance. The "new sin" is his persistence in living when his decease would bring such relief.

Occasional scriptural allusions, veiled, but sufficiently suggestive, indicate that the play is in some sort a manifesto against established creeds as well as against modern Socialistic theories. But that phase of it is not prominent and needs no more than this reference. The conscientious and benevolent hero strives to meet all demands upon him until he is bankrupt in health, hope, and purse, when in sheer despair he resolves to kill himself. But his younger brother, a cynical, irredeemable wastrel, commits a murder, of which he, discerning a means of escape in the gallows, assumes the guilt. He is promptly convicted, chiefly upon his brother's evidence, and condemned to die. His innocence is established, however—in a remarkably strong and ingenious scene—and upon his subsequent release, he resolves to play the altruist no longer, but lead his own life, fight for his own hand, and let his abominable kin sink or swim as they may. Here the play should have ended, with a definite, if mistaken, answer to the proposed problem. But in a concluding act the artist, unable to maintain his resolution, agrees to pay his family a definite sum yearly so long as they do not persecute him further. This is a lame and impotent conclusion to a work which, up to this compromise, probably dictated by managerial timidity, seemed charged with earnest convictions and clear purpose. Possibly the author wished to imply that the well-to-do must be just to themselves as well as generous to others, but the world stands in no urgent need of so elastic and comfortable a message. In his discussions of the various social and ethical questions which are cognate to his main theme he speaks with keen perception and no uncertain voice. And many of his conclusions are sound and inspiring. When extravagant, he is not mawkish. A man of his literary, inventive, and descriptive ability, ought to produce something of conspicuous note when his enthusiasms have been tempered by experience.

There does not appear to be much quality in the "Doormats" of Hubert Henry Davies, which has just been produced in Wyndham's Theatre, London. Doormats are patient, enduring folk upon whom harder and more selfish persons metaphorically wipe their boots. The play represents two couples, a foolish, romantic wife with a fond and gentle husband, and a selfish husband with a self-sacrificing wife. Apparently the tale and the dramatic interest are both thin, but Mr. du Maurier seems to have a very congenial character in the abused husband.

George Giddens, who has been engaged for Annie Russell's Old English Comedy Company, has arrived in New York, and will begin rehearsals immediately. He was last seen in New York in "Pomander Walk," at Wallack's. He will play Tony Lumpkin, in "She Stoops to Conquer," which will be the opening comedy; Bob Acres in "The Rivals," and Dogberry in "Much Ado About Nothing." Frank Reicher, who has been "loaned" by Winthrop Ames to Miss Annie Russell, will appear as young Marlow and as Benedick.

Music

Mes Souvenirs. Jules Massenet. Paris. Pierre Lafitte & Cie.

Massenet's memoirs appeared so promptly after his death as to arouse the suspicion that the publishers may have had them ready for a long time to place in the market at the proper moment. There is, however, internal evidence showing that he must have been busy with the manuscript to the last. Of the 352 pages in the volume, 291 are devoted to the reminiscences, and on page 223 there is a reference to an event which happened only a few months before his death—the receipt of a cablegram from New York reading: "'*Cendrillon*' *hier, succès phénoménal.*" The final chapter, moreover, refers to other performances given in 1912. The bulk of the volume is based, as the reader is informed in the preface, on a diary which he began to write in boyhood at his mother's suggestion. This enabled him to recall the joys and sorrows of early successes and failures vividly He recounts them impartially. With pardonable pride he dwells on what was perhaps the greatest day of his life: the day when he met Queen Margherita and was invited to play for her one of his works, which her being in mourning prevented her from hearing in public. On the same day he met the Pope; also the son of Garibaldi. The premières of his operas were not great days for him, but days of doubt and torture, which he spent in rural seclusion, because of his aversion to curtain-calls. What pleased him most was evidence of enduring popularity, such as the 763d performance of "Manon."

Obviously, it was not his intention to include in his Memoirs all of the stories of his career and his operas that he himself or other writers had previously given to the world. There are a number of things related by Louis Schneider, Hughes Imbert, and his American biographer that are not in his Memoirs; nor did he, as he might well have done, include in them the charming autobiographic sketch which he contributed to the *Century Magazine* for November, 1892. On the incidents of his boyhood he dwells briefly, but tells some details that were unknown to his biographers. The disputed point as to whether he ran away from his parents to return to Paris and study music is set at rest; he did depart secretly, but his mother soon forgave him and lived to rejoice in his successes, dying on the eve of the five hundredth performance of "Manon." Her he worshipped. The other idols of his boyhood were chiefly the great French composers of the day, particularly Auber, Berlioz, Thomas, and Gounod. Auber, when Massenet first met him, was sixty-five years old. He used to say he had lived too long, and "*il ne faut jamais abuser de rien.*" In truth, he still enjoyed life very much and took a special interest in Massenet's progress. His habit was to rise so early that his day's work was finished at seven in the morning. Berlioz also had his eye on the young man, who, as a stripling, had once frightened his mother by not coming home till after midnight because he was secretly attending a performance of that composer's "l'Enfance du Christ." As for Ambroise Thomas, he was, from the beginning of Massenet's studies to his own death, a true friend.

When Thomas died, Massenet delivered the funeral address (which is reprinted in this volume), and Thomas's place as director of the Conservatoire was offered to him; but he declined, as he desired to devote the rest of his life to his operatic scores. He had enjoyed the academic eighteen years' teaching of composition; most of the young men now prominent in Paris as writers of music were in his classes, and nearly always the winner of the Roman Prize had come from these classes. But his heart was in his own creative work. Again and again he refers to the joy he felt in composing his operas: "*Avoir terminé un ouvrage, c'est dire adieu à l'inexprimable bonheur qu'un travail vous a procuré.*" The three years devoted to "Hérodiade" were to him "*une joie ininterrompue.*" One is a little surprised, however, on reading that the four works the creating of which gave him the most intense pleasure were the oratorio "Marie-Madeleine" and the operas "Werther," "Sapho," and "Thérèse"; for "Sapho," at any rate, is far from being one of his masterworks. Of all the operas, "Thérèse" (which has never been sung in America) appears to have been his favorite. Never, he writes, was he more deeply touched than when a friend said to him: "If you wrote the 'Juggler of Notre Dame' with faith, 'Thérèse' you wrote with the heart."

The explanation of his ability to write so many operas may be found in his statement that he got up every morning at four and worked till noon, the afternoon (six hours) being given over to his pupils. Six hours of sleep was all he needed. It is interesting to learn that he never made use of a piano to help him in composing. He had to do without one when he was placed in solitary confinement while competing for the Prix de Rome—for the simple reason that he who, in later years, earned above 700,000 francs a year could not at that time afford the twenty francs it would have cost him to hire a piano. At his country place in Egreville, he assures us, he never had a piano, in which respect he was like Verdi. With that great Italian he shared another trait. Calling on Verdi one day, he took along his valise. "I told him that it contained manuscripts which were always with me when I travelled. Seizing the bag brusquely, Verdi retorted that he did exactly the same thing, being loath to separate himself from his work when away from home. How I would have preferred," Massenet adds modestly, "to have his music in my valise in place of my own!"

Those familiar with the story of Massenet's life and the subjects of his operas will not be surprised to find a considerable number of these pages devoted to the fair sopranos who impersonated his characters, from Marie Heilbronner to Sibyl Sanderson, whose story is told at considerable length, to Calvé, Cavalieri, and Lucy Arbell. The last-named he commends specially for having, while impersonating Dulcinée in his "Don Quichotte," introduced the innovation of learning to play her own accompaniments (on the guitar) instead of relying, as other singers do in such a situation, on some musician behind the scenes. He placed much stress on such details, and doubtless his singers and pupils will give the world many more particulars regarding his ways at rehearsals. These rehearsals were not always conducted in Paris. Not a few of his operas had their premières in other cities, especially Brussels and Monte Carlo.

Besides the souvenirs, the book contains the funeral addresses delivered by Massenet at the deaths of Thomas and Frémiet, two orations in honor of Méhul and Berlioz, and other similar papers. These are preceded by three curious pages of "Pensées Posthumes" in which Massenet makes some whimsical predictions as to what will happen when his death is announced.

In one respect the last musical season in New York was the oddest on record. In consequence of Mendelssohn Hall being procured for motion pictures, the givers of vocal and instrumental recitals were driven to all sorts of places, some of which were new to concert-goers, and ill-suited for musical entertainments. This season most of these entertainments will take place in the new Aeolian Hall. There will soon be opportunity to judge if the acoustic qualities and the ventilation of this hall are as good as report says. If so, then music will at last have a home in New York such as it deserves. A beautiful hall, not too large and not too small, and with an abundance of fresh air, has much more to do with one's enjoyment of music than most people suppose.

One welcome feature of the new Aeolian Hall is its large, first-class organ. The organ is called for by a considerable number of compositions, but heretofore we have had little more than makeshifts, and eminent European and American organists have been prevented from giving concerts in this city because of a lack of an adequate instrument.

The Oratorio Society of New York will be conducted this season by Louis Koemmenich, who is said to be a master of his craft. "Elijah" will be sung on December 3 by the society, with Florence Hinkle, Margaret Keyes, Paul Althouse, Clarence Whitehill. At the "Messiah" performances on December 26 and 28 the soloists will be Corinne Rider-Kelsey, Christine Miller, Reed Miller, Herbert Witherspoon. On March 28 will take place the first performance in America of Otto Taubmann's "A Choral Service," with Inez Barbour, Mildred Potter, John Young, and Putnam Griswold as soloists. New readings are promised of the Mendelssohn and Handel oratorios. The Choral Service was written between the years 1893-1895, and had its first full performance with the Berlin Philharmonic Chorus in 1910 under the bâton of the famous Siegfried Ochs. It is scored for a double chorus, solo quartet, chorus of boys, organ, and full orchestra, and has a most serious and deeply musical content. It is exceedingly difficult, requiring the full capacity of a great chorus. The season includes a schedule of seventy-one rehearsals.

The list of soloists who will appear at this season's concerts of the New York Philharmonic Society, in Carnegie Hall, as thus far determined, is as follows: Eugene Ysaye, Mischa Elman, Emfrem Zimbalist, Henry P. Schmitt, Maud Powell, Louis Persinger, Bonarios Grimson, Henri Leon LeRoy, Schumann-Heink, Frances Alda, Marie Rappold, Florence Hinkle, Nevada Von Der Veer, Frederick Weld, Leopold Godowsky, Max Pauer, Ernest Schelling, Rudolph Gans, Josef Lhevinne, Germaine Schnitzer, Leo Schulz, Xaver Reiter, John McCormick, Carl Jörn, Edmond Clement, Reinhold von Warlich, Reed Miller.

The death is announced from Earl's Court, London, of Wilhelm Kuhe, in his eighty-ninth year. He was born in Prague, and went to London in 1845; in 1886 he was appointed professor in the Royal Academy of Music, which post he held until 1904. His "Musical Recollections" was published in 1896.

Art

THE HOLDEN COLLECTION.

Through the generosity of Mrs. L. E. Holden a small collection of Italian primitives has been indefinitely lent to the Metropolitan. Prior to distribution in the galleries the group is being shown in the special exhibition room where, widely spaced between fine Eastern carpets, the pictures form a very handsome ensemble. Only one is of the fourteenth century—a large Madonna on gold ground, with a recumbent nude Eve tempted by the serpent as a lower panel. The picture is chiefly noteworthy for its large dimensions, and for this odd if not unprecedented juxtaposition of the woman who brought sin into the world with her who bore the Redeemer. The piece has attracted the attention of critics. Mrs. Berenson detected the manner of the Sienese Domenico di Bartolo; Dr. Sirén that of Francescuccio Ghisi of Fabriano. The latter attribution is the better, but both are unsatisfactory. The panel betrays all the characteristics of the Bologna-Modena school with distinct Byzantine mannerisms. The composition and forms are exactly repeated in a Madonna at Pausula near Macerata, which is signed Andrea da Bologna, and dated 1372. He should be the author of the Holden panel. To this Bolognese master have recently been assigned, on new documentary evidence, the stories of St. Catherine in the lower church at Assisi.

Various appeals to curiosity or more worthy admiration are made by a quite exquisite Madonna attributed to Botticini, and by a finely executed version of an adoring Virgin of the sort which Mr. Berenson allots to Pierfrancesco Fiorentino. Two vivacious decorative bits are a Horse Race in Old Florence done by a follower of Uccello, and a King with his military escort by the Veronese Bernardino Parentino. This is sombrely splendid in color. But all the fifteenth-century pictures are of small account compared with Lorenzo da San Severino's delicately radiant Madonna enthroned against a gold ground and attended by four earnest saints. In such a work one marks the blending of many strains. Gozzola, Nicolo Alunno, and Crivelli have contributed something to this expression of hieratic purity. Probably the artist has admired as well the austere dignity of Piero della Francesca's Madonnas. Yet the humble imitation of greater men has resulted in a style sufficiently personal. Few pictures represent more appealingly the purity, simplicity, and reverence of early Umbrian art. Aside from devotional considerations, the picture has a distinct and lovely decorative quality. Great areas of black and dull rose are relieved against the gold. The whole is kept discreet, the flesh transparently pallid, as if the hour were before the dawn.

In passing from this exquisite vision to the more material painting of the sixteenth century some revulsion will be felt. In fact, beyond a sterling but dull double portrait by Moroni, and an over-vehement Burial of the Virgin ascribed to Lanziani, there is nothing very striking in this department. A little Madonna of Leonardo's school in former times was seriously championed. J. J. Jarves published it as a Leonardo in his "Art Studies." Unquestionably, a Leonardesque composition has suggested the figures in this attractive picture. The landscape background and what little of original painting remains in the figures suggest to Curator Burroughs Leonardo's imitator, Francesco Napoletano. A vivid and almost grotesque Adoration of the German school, with a charming landscape, has been attributed by Mrs. Berenson very plausibly to Aldegraver. We miss in the exhibition one or two charming Lombard pictures which were illustrated in Mrs. Berenson's article in the *Rassegna d'Arte*. Presumably, they did not fit into the hanging scheme, and will later be shown in the regular galleries.

It seems right to emphasize the personal associations of this little group of old masters. It is a remnant, about a third of the collection that Consul James Jackson Jarves assembled at Florence in the fifties and sixties. The more important part is in the Yale Art School, and has been lately installed in attractive new galleries. A few pictures were sold separately to the Boston Art Museum and elsewhere. Jarves collected with the intention of representing in an historical series the chief schools of the fourteenth and fifteenth centuries in Italy. His means were small, and his intention was to appeal to public-spirited Americans to purchase the entire collection. He brought the pictures back about 1870, in the middle of the black walnut era, fondly imagining that the influence of such critics as Charles Eliot Norton would avail to sell the collection. The pictures were exhibited, and were the occasion of skepticism and merriment. At length Jarves was forced to realize on the collection. Yale University made advances on the major part; his old friend, L. E. Holden, of Cleveland, Ohio, on the rest.

At Jarves's death these debts remained unpaid, the pictures remaining with the lenders. For a while both the Yale collection and that of Mr. Holden were forgotten. Within ten years both have become the object of curiosity and pilgrimage for art historians of many nations. Jarves's taste merely had the fault of being that of the century to come. One could wish that the entire collection of this pioneer might be reassembled, if only temporarily, in New York, where it once was ignored. Such an exhibition would be an artistic event of note, a worthy memorial, and a just expiation.

F. J. M., JR.

Interesting discoveries have lately been made in the Roman Forum, where the south end of the nave of the Basilica Aemilia has been cleared. Three different strata were found: (1) a thin layer of ashes, with coins and remains of wood and iron (the latter belonging probably to the roof) lying on the pavement; (2) a stratum of earth, three feet thick, with marble fragments of the architectural members of the building lying upon it; (3) the west wall of the nave, which fell inward, probably in the eighth century A. D. From this it seems to follow that the building was not restored after the fire of the fifth century A. D., as has been hitherto supposed, with a row of red granite columns along the façade in place of the arcades that had hitherto existed, but that these columns had some other use; and that it was not totally destroyed by fire, but lay abandoned until the collapse of the nave wall already mentioned.

FitzRoy Carrington, well known as an authority on prints and for many years a leading member of the firm of Frederick S. Keppel & Co., has accepted the curatorship of the Print Department of the Boston Museum of Fine Arts. Mr. Carrington will also hold a Harvard lectureship on his specialty. It is understood that Dr. Emil Richter, who for some years has been in charge of the Museum Print Room, will remain as Mr. Carrington's associate. A considerable sum has been contributed to strengthen the collections, and the new curator will make annual trips to Europe in search of rarities. The intention is to bring the collection, which is already the most important in America, into the first rank. Mr. Carrington will continue to edit the *Print Collectors' Quarterly* from Boston.

"Pompeian Decorations" (London: B. T. Batsford), by R. A. Briggs, is a collection of twenty-five plates, about half in color, after Mr. Briggs's careful copies. There is a brief introductory note on the Pompeian styles, and a few lines to explain each plate. Mr. Briggs has been moved by a sense of the great delicacy of this Campanian work, and by justifiable discontent with the standard colored reproductions. The work is indeed of a most gracious gayety and relatively more important, in our feeling, than the pictorial compositions it encloses. Mr. Briggs's copies are sensitive and well reproduced. The collection is a valuable adjunct to the library either of a decorator or of an archæologically inclined reader.

"The Artist's Point of View" (McClurg), by Royal Hill Milleson, is ostensibly letters from an old painter to a beginner. The advice is chatty and sensible. Landscape painting is the theme, and there is especial insistence upon arrangement and consistent color relations. The neophyte is counselled to earn his living as he may while reserving his more personal efforts for the future, to ignore casual criticisms, avoid envy of his colleagues, and accept cheerfully the misdeeds of juries. One's only misgiving about this amiable little book is that it may be superfluous. The sort of painter who will take such advice really does not need it.

Finance

THE SINEWS OF WAR.

In the collapse of prices on the European Stock Exchanges, which began with the Balkan War scare nearly four weeks ago and which culminated in the extreme demoralization of last week, at the time when war had actually been declared, the point of peculiar interest was the fall in Government securities. It is not often that a sudden break of large proportions and wide scope occurs in that quarter of the market. In the first month of the Boer War (which began in October, 1899) Transvaal Republic 5 per cents fell only 1 point and British consols 2. The serious trouble on the markets was to come later, with the British reverses of December; but even then the securities of neutral states moved slightly. During the month after the Manchurian War broke out in 1904, Russian consolidated 4s fell 11 points and Japanese old 5 per cents 12, and in the Paris panic day which shortly followed, consols went down 2 points and French rentes 3; yet even on that occasion only a few Government issues were affected.

Our own 4 per cent. bonds went from 113 to 107 in the month when the Cuban War broke out in 1898, and Spanish 4s, which had sold at 61 at the end of February and at 43½ in the middle of April, got down to 29¾ in the opening week of May, a fortnight after the opening of hostilities; but bonds of the first-class European Powers scarcely moved. Even in the very recent Turco-Italian War, which began at the end of September, 1911, though Italian Government bonds fell 2 points in the next two months, and Turkish 4 per cents declined 10, no other European Government security was at all disturbed.

But how the securities, not only of the expected belligerents, but of neutral Powers, have moved since the Balkan trouble first became imminent at the beginning of October, may be seen from the following table. It gives the year's highest price on the London Stock Exchange; the price at the end of September (the day before the first "Balkan news"); the low price of last week's heavy break, and the price at last week's close:

	High 1912.	Sept.30.	Oct.14.	Oct.19.
British consols..	79 3-16	74	72⅜	73¼
French rentes..	95½	90¾	87⅞	89¾
German 3s	82	77½	76	77
Russian 4s	95¾	92	85	88½
Turkish 4s	91⅝	89	78	80
Bulgarian 6s ..	104½	101	92½	96
Servian 4s	89	86	67½	70
Greek 4s	56 9-16	52	47	49

Such exceptionally general weakness would ordinarily be ascribed to fear of unusual demands on the money markets, such as might compel withdrawal of capital from oustanding Government securities. The sharp rise in European bank rates, on Thursday of last week, indicated this explanation as the most probable. That being so, it is in order to inquire just what financial requisitions may be involved in the Balkan War.

The cost of war is always at the start a doubtful matter of calculation. Even the little Transvaal War cost England, on the average, a million dollars per day; it lasted two years and seven months, and, by the Chancellor of the Exchequer's report, caused a total expenditure of $1,085,000,000, of which $795,000,000 was raised by British Government bonds, sold in the open market. The Manchurian War, which lasted a year and a half, cost something like $2,000,000,000 for the two contestants, or upwards of three million dollars daily, and fully half of this was borrowed from other markets by Russia and Japan. On the other hand, the Turco-Italian War is estimated at Rome to have cost the Italian Government $160,000,000, or only about $420,000 per day, while Constantinople correspondents figure the total expenditure of Turkey at $65,000,000, or only a daily $120,000.

But the nature of the campaign—a desultory guerrilla conflict on Turkey's part in Tripoli, and only a near-by colonial demonstration by Italy—made that necessarily a cheap war. The question is, then, whether a campaign with hundreds of thousands of mobilized troops, fighting pitched battles along the whole line of Turkey's northern border, would not be vastly more expensive. A Vienna estimate, in the current London *Economist*, figures out that the mere bringing into action of the 410,000 infantry and cavalry of Bulgaria and Servia will cost the first of those Governments $460,000 per day, and the second of them $360,000. Continued at that per diem rate, the expenses of those two belligerents would be fifty to sixty millions per month, and it would still be left to reckon up the outlay of Turkey, Greece, and Montenegro. How, then, will the money markets be affected?

Precisely at this point in the inquiry a very curious consideration obtrudes. Bulgaria is the best off financially of the Balkan states; it was in the Paris market, before the war broke out, to raise a $36,000,000 loan for refunding older issues. But Paris now reports its bankers unwilling to proceed with the negotiations, if the proceeds are to be used for war. The Servian debt, like that of Greece and Turkey, is administered by foreign commissioners, and the one loan lately placed was carefully "ear-marked," chiefly for railway-building purposes. Greece has virtually no foreign credit, and Montenegro is believed to have subsisted on subsidies from St. Petersburg and Vienna—largely the military old clothes of its rich relations.

All this presents a curious and in many respects novel situation—especially with financial Europe united in disapprobation of the war. It is quite true that all of the belligerents (perhaps excepting Greece) have been accumulating armaments and stores, and it is also true that even poor nations can sometimes (as with the Boer republics) feed and equip their armies from their own resources, and fight for months without recourse to outside money markets.

But the impending campaign has little or no resemblance to the South African conflict. It is a contest carried on in a locality long familiar for military manœuvres, and, so far as regards the Balkan states, it is a campaign of aggression and invasion rather than defence. As such, it is bound to be immensely expensive, if at all prolonged, and the problem of financing it may provide some new considerations in the financial side of modern war.

For Art Lovers

The Collectors: Being Cases mostly under the Ninth and Tenth Commandments.

By FRANK JEWETT MATHER, Jr., *Art Editor, The Nation.*

Campbell Corot, The Del Puente Giorgione, and other stories of rare things, in a quaint old-fashioned volume. Dr. Mather is a favorite contributor to "The Evening Post" and "Scribner's."

$1.25 *net; by mail*, $1.35.

American Graphic Art

By F. WEITENKAMPF, *Curator of Prints, New York Public Library, Author of "How to Appreciate Prints," etc.*

A history of the reproductive graphic arts (etching, engraving on wood and metal, lithography) and their application to such specialties as illustration, book-plates, posters, etc. The accomplishment of individual artists is considered primarily in its relation to general movements.

Profusely illustrated, $2.75 *net.*

Engraved Gems

By DUFFIELD OSBORNE

Signets, Talismans, and Ornamental Intaglios, Ancient and Modern.

"We know of no handbook in any language that so nearly meets the practical needs of the average person interested."—*The Nation.*

With 32 plates figuring 700 *gems, and numerous line drawings. Large* 8*vo.* $6.00 *net.*

A practical, authoritative and clear book about the Montessori Method

A Montessori Mother

By DOROTHY CANFIELD FISHER, *Author of "The Squirrel Cage."*

Tells just what American mothers, and most teachers, want to know about this new method of training young children.

It gives a simple and wonderfully interesting account of what goes on in a Montessori school, describes the apparatus, possible home additions or substitutes for it, and the principles underlying its use.

Approved by Dr. Montessori, to whom, by permission, it is dedicated.

With pictures of the apparatus and of children at work in a Montessori school. $1.25 *net; by mail*, $1.35.

Henry Holt&Co., 34 W.33 St. New York

HOUGHTON MIFFLIN COMPANY'S NEW BOOKS OF IMPORTANCE

THE LATEST ESSAYS.

JOHN BURROUGHS' **Time and Change**

Among the subjects treated are "The Grand Canyon," "The Spell of the Yosemite," "The Phantoms Behind Us," "The Muse of Rock and Soil," "The Long Road," and "Through the Eyes of a Geologist." $1.10 *net. Postage, 10 cents.*

MEREDITH NICHOLSON'S **The Provincial American**

Wise, humorous, and eloquent papers by one of the most interesting and charming of contemporary American essayists. Among the topics discussed are: "A Hoosier Novelist," "Should Smith Go to Church," "The Spirit of Mischief," and "Confessions of a Best Seller." $1.25 *net. Postage extra.*

BLISS PERRY'S **The American Mind**

Studies of American traits as expressed in the books and the men, the ideas and the impulses, which are most genuinely characteristic of our people. $1.25 *net. Postage, 10 cents.*

AGNES REPPLIER'S **Americans and Others**

Miss Repplier, with her well-known originality and charm, in these papers touches on a variety of themes. Among the titles are: "The Condescension of Borrowers," "The Customary Correspondent," "The Mission of Humour," "The Grocer's Cat." $1.10 *net. Postage, 11 cents.*

JAMES G. MUMFORD'S **A Doctor's Table Talk**

In this delightful and instructive book one of the most distinguished living physicians writes with both wisdom and humor of some of the problems, responsibilities, and mitigations of his profession. $1.25 *net. Postage, 10 cents.*

CHARLES A. DINSMORE'S
The New Light on the Old Truth

Sensible and practical papers on "The Modern World and the Modern Man"; "The Bible"; "The Person of Christ"; "God and Salvation"; "Immortality"; "Improvement." The book is so pleasantly written that it should appeal to a large public. $1.25 *net. Postage, 10 cents.*

NEW FICTION.

Prudent Priscilla **By MARY C. E. WEMYSS**

This story of the adventures that befall a charming young woman because of her too ready sympathy with the misfortunes and entanglements of others, is the author's most delightful book. $1.25 *net. Postage, 11 cents.*

Linda **By MARGARET PRESCOTT MONTAGUE**

Linda is one of the most appealing feminine figures in the fiction of recent years. How she develops from an illiterate West Virginia mountain girl into a Boston young lady of charm makes a story the reader cannot put down. *With frontispiece in two colors.* $1.20 *net. Postage, 12 cents.*

The Children of Light **By FLORENCE CONVERSE**

A suggestive and inspiring story of the adventures and experiences that befell a group of interesting young people who undertook to solve in their various ways the great problem of social reform. $1.35 *net. Postage 12 cents.*

Gutter Babies **By DOROTHEA SLADE**

Even more than the late Myra Kelly does Miss Slade make the reader feel both the pathos and the humor of the lives of slum children, which she so vividly portrays. *Illustrated in tint by Dorothy Stanley.* $1.25 *net. Postage 12 cents.*

POETRY.

Romance, Vision and Satire **By JESSIE L. WESTON**

A spirited and faithful rendering of one of the most interesting groups of poems in English literature, some of which have never before been translated into modern *verse.* $1.25 *net. Postage 13 cents.*

A Dome of Many Coloured Glass **By AMY LOWELL**

This collection of unusual poems, many of which have appeared in the *Atlantic Monthly*, combines marked technical ability with a rare and individual poetical feeling. Miss Lowell is a sister of Percival Lowell and President A. Lawrence Lowell, of Harvard University. $1.50 *net. Postage 6 cents.*

Poems and Ballads **By HERMANN HAGEDORN**

Of the younger American poets few have made a deeper or wider impression on readers of contemporary verse than Mr. Hagedorn. His new collection shows a still wider range and a distinct advance in poetical achievement. $1.25 *net. Postage 6 cents.*

A UNIQUE TRAVEL-BOOK.

Around the Clock in Europe **By CHARLES F. HOWELL**

An original and cleverly planned book, made up of a series of impressionistic sketches of European capitals at the most characteristic times of day. *With 24 illustrations by Harold Kellogg, Boxed,* $3.00 *net. Postage 20 cents.*

VOLUMES OF AN ECONOMIC AND SOCIAL NATURE

The Family

By JAMES Q. DEALEY.

"It is a pithy, wise little volume, every sentence well pondered, and expressing ripe scholarship and sound judgment. It accords well with the preponderance of opinion among the great sociologists, and I hope it will have a wide reading."—E. A. Ross, Professor of Sociology in the University of Wisconsin and author of "Changing America." 75 *cents net. Postpaid.*

The Milk Question

By MILTON J. ROSENAU.

In this important book, Dr. Rosenau, who is perhaps the greatest living authority on the subject, has produced a complete and authoritative study of all the various aspects of the question of the quality and healthfulness of our milk. *Illustrated.* $2.00 *net. Postage extra.*

Citizens Made and Remade

By W. R. GEORGE and LYMAN BEECHER STOWE.

A succinct account of the origin and development of the George Junior Republic, and the problems and difficulties which it has met and surmounted. It will be welcomed by all workers for civic betterment *Illustrated.* $1.25 *net. Postage, 11 cents.*

The People's School

A STUDY IN VOCATIONAL TRAINING.

By RUTH MARY WEEKS.

A clear, compact, and interesting statement regarding the vocational training movement in this country and abroad. In the Riverside Educational Monographs. 60 *cents net. Postpaid.*

Capitalization

By WALTER H. LYON.

An exposition of the methods and underlying principles of Corporation Finance by one of the foremost authorities in this field. $2.00 *net. Postpaid.*

The Task of Social Hygiene

By HAVELOCK ELLIS.

Deals in a most instructive and authoritative fashion with some of the most pressing and momentous questions of the day. "A singularly powerful book, the whole argument deserves careful study. It will supply much food for thought."—*London Daily Graphic.* $2.50 *net. Postage, 15 cents.*

A Noteworthy Book

A Quarter Century of Public School Development

By WILLIAM H. MAXWELL, City Superintendent of Schools, New York City. With an Introduction by *Nicholas Murray Butler*.

$1.25

Articles and addresses, and selections from annual reports, collected by the Committee in charge of the celebration of Dr. Maxwell's twenty-fifth anniversary as Superintendent. Here in short compass are gathered the results of twenty-five years of experience in the administration of the greatest educational system in the world. The reader has unfolded before him the pages of progress in the accomplishment of ideals. He discovers how, step by step, all the elements of our educational system beyond the three R's have been fought for year by year and eventually adopted.

JUNG DEUTSCHLAND

By ANNA GRONOW

University Elementary School, The University of Chicago

90 cents

"Jung Deutschland" presents as much simple idiomatic reading and as much grammar as an average student can cover during one year in high school. It teaches the fundamental principles of German grammar in and through the language itself. In very simple German the pupil is introduced to his everyday surroundings and happenings. The subjects have been chosen with a view to strengthening vocabulary, and also on account of their adaptability to teaching grammar. Oral work is considered the most important feature of the first year's course, in its attempt to inspire the pupil with confidence and with ease of expression through the German.

UNSEEN EMPIRE

By DAVID STARR JORDAN

Dr. Jordan here shows that civilized nations are all in their degree under the domination of a power stronger than kings or parliaments, more lasting than armies or navies, the unseen Empire of Finance. He further shows that this mastery is not now in the hands of individual men, however powerful, but that it has passed over into an impersonal Empire of Debt. Many of the essential statements which Dr. Jordan makes have been verified by leading bankers both in this country and abroad. There is an "unseen empire" that can to a certain, and perhaps to a large, degree sway the destinies of nations, and the method, if not the exact extent of it, is told in this highly informing and suggestive volume.

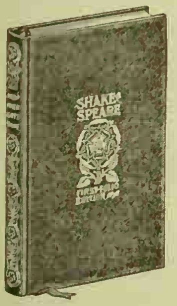
Completion of a Great Work

FIRST FOLIO SHAKESPEARE

Forty volumes. Edited, with Notes, Introductions, Lists of Variorum Readings, and Selected Criticisms, by Charlotte Porter and Helen A. Clarke. Photogravure frontispieces and rubricated title-pages. Cloth, gilt top, per set $30.00. Limp leather, per set, $40.00. Volumes sold separately, in cloth at 75 cents and in leather at $1.00 per volume.



Size 4¼x6¼

¶ The publication this year of seven new volumes in the famous "First Folio" Edition of Shakespeare's Works brings to a completion this monumental undertaking. The works just published are the three parts of "Henry VI.," "Henry VIII.," "Venus and Adonis," "Lucrece," and "Sonnets and Minor Poems." ¶ Shakespeare students and readers who have been buying the books as they came out from year to year will now be able to complete their sets. Those who have put off buying until all the plays appeared are advised that the time has arrived for them to secure this great work in its entirety. ¶ The publishers have been gratified at receiving numerous letters of commendation concerning the edition, the general tone of which can be seen from the few which follow:

"Delightful, thoroughly useful, and really instructive. I know of no edition that I would rather put into the hands of a young student or hold in my own."—HENRY VAN DYKE.

"The best books yet published for the study in college of separate plays."—Prof. H. N. MACCRACKEN, Yale University.

"I congratulate you on the form of your issue of the First Folio, and on having taken for it the best text of Shakespeare. The Notes and Literary Illustrations, etc., are admirable. Of the many editions I have, and have seen, yours will certainly come in the first rank."—J. FORBES-ROBERTSON.

"I find this series beyond question the best for the purpose of my classes."—GEORGE B. CHURCHILL, Amherst College.

"Had there been such an edition thirty-five years, ago, I should never have undertaken a new variorum."—HORACE HOWARD FURNESS.

"I never fail to find the volumes of this delightful edition illuminating and instructive."—EDWARD DOWDEN.

"It will prove, I am sure, the most desirable edition of the Plays which has yet been published. A reprint of the First Folio has never been within reach of the general reading public. You will do more for Shakespeare by this edition than has been done by any previous one."—HIRAM CORSON, Cornell University.

"Done with unusual intelligence. A great gain for Shakespearean students."—HAMILTON W. MABIE.

"The most useful edition now available for students." —BRANDER MATTHEWS.

The Nation

NEW YORK, THURSDAY, OCTOBER 31, 1912.

The Week

There were thousands of people who felt themselves roused to indignant sympathy with Mr. Taft, at the time of Mr. Roosevelt's malicious attacks upon him in the primary campaign. Such people, even when they belonged to the Democratic party, drew considerable gratification from the reviving activity of Mr. Taft's campaign a month ago. They were willing to concede to him a certain share of the political advantage which accrues to an existing Administration from the return of prosperity to the country as a whole, and they accepted as part of the political game the President's public statements, asking voters whether they wanted to "change things" when their business affairs were moving so satisfactorily. Had Mr. Taft been content to rest on this general argument, he would have ended the campaign with dignity, even if it ended with his defeat for reëlection.

In 1908, Mr. Taft began his autumn swing round the circle with a defence of the judiciary's rightful powers in labor cases, and with an attack on the scheme of Government ownership of railways, which brought him the applause and respect of conservative men, even among his political opponents. When, however, he reached the old Protectionist battleground of Indiana, he began to tell his audiences how the Wilson tariff bill of 1894 brought on the country "the worst financial disaster it has ever seen"; and having thus pointed out the antecedent causes of the panic of 1893, he asked his South Dakota audiences to recall "that great tariff measure," "under the influence of which wheat went down below 50 cents." The feeling which those absurdities created in the minds of thinking men was expressed by a well-known lawyer, who declared, in a letter at the time, that the public man who resorted to such arguments either believed them, in which case he was too foolish to be a fit President of the United States, or else did not believe them, in which case he was intellectually too dishonest for that office. The criticism was severe, and we imagine that Mr. Taft himself felt its force. But here, at the similar period in his campaign of 1912, comes Mr. Taft again with this jewel of economic reasoning, in his written appeal to the farmers of Minnesota:

> It is not necessary to jog the memory of the older farmers of your State as to what happened when the Democratic party passed the Wilson tariff bill. Wheat went down to 40 cents a bushel, corn to 21 cents, oats to 18 cents, potatoes to 27 cents.

We do not know that any formal argument against the high protective tariff school could be more convincing than this illustration of the condition to which its doctrines bring a mind that has shown itself capable of grappling courageously and honestly with other problems of the day.

Gov. Wilson's words concerning the importance that would attach, in the event of his election, to Democratic control of the Senate are none too strong. With undisputed power to legislate, both the party and the new President would be placed in a position in which they would have a full opportunity to show what they can do for the country. Large promises have been made, of which no one can demand the immediate fulfilment, for tasks of the kind in contemplation take time; but on the other hand the country has a right to hope for some clear results actually achieved, and some significant beginnings of results to be accomplished later on. Against any accusation of failure in these regards, a divided Congress might serve as a convenient answer; but with both Houses Democratic, Mr. Wilson would find the field really open for carrying out the great policies of improvement that he has outlined. That opportunity he would eagerly welcome, tremendous as is the responsibility which it would place upon him. And it looks as if it were by no means improbable that he will get it.

For some years Chicago has been endeavoring to decide whether it wanted voting machines or not. A few months ago it purchased a number, which were used in a city election with varying success. Now an effort is made to prevent their employment in this election. The object of attack is the legal limitation upon the voter of one minute in which to cast his ballot, it being contended that this time is insufficient for arranging a "split" ticket. This contention is apparently borne out by the results of a test at Springfield. Experts succeeded in splitting tickets in forty seconds, but others fell far behind that record. The president of the Citizens' Association of Chicago, who has been a prominent figure in reform politics for many years, required above two minutes to vote, making several mistakes in the process. A street-car conductor was a little longer, and a reporter, strangely enough, was the longest of the three. Those who are opposing the machines for the approaching election assert that 30,000 voters will be disfranchised if they are used. Part of this result will be due to the one-minute limitation, and part to mistakes which will invalidate the machine-cast ballots; while, judging by experience, many voters, owing to their unfamiliarity with this method of voting, will stay away from the polls altogether.

A taxation reform of unusual interest and importance is involved in one of the Constitutional amendments—Amendment No. 3—to be submitted to the people of New Hampshire for ratification at the coming election. It is urged upon the voters in a simple but convincing statement issued by the Society for Protection of New Hampshire Forests, which sets forth both the glaring inequalities of the actual method of taxing forest property, and its inevitable effect in promoting the lamentable destruction of the trees. Under the existing Constitutional requirement that all property be taxed equally and proportionally every year, the growing crop of timber—if the requirement is obeyed—must be "taxed at its full value over and over again"; and the practical consequence is a twofold evil. On the one hand, the law is not fulfilled and its mitigation results in all sorts of inequities and abuses; and on the other hand, even this mitigated enforcement of the law is sufficient to compel forest owners to cut down forests so as to avoid further taxation, long before they otherwise would do so. The proposed amendment will permit the Legislature to provide a special system of tax assessment for forest property; the intention being that an annual tax shall be levied on the land value as such, irrespective of the growing crop of timber, and that the timber itself be taxed only at the time of felling, and then at a proper and adequate rate. It is to be hoped that this salutary reform will be adopted. The preservation of the New Hampshire forests is a matter of acute interest far beyond the confines of that State.

There are some supporters of the "Oregon system" who declare that a trap has been set for it this year by the Legislature. The citizens of that State are to vote on thirty-eight different laws and amendments. The proposal which the friends of direct legislation regard as dangerous is in the form of an amendment to the Constitution calling for a majority of the votes cast "at the election," instead of the majority of the votes cast "thereon," to carry any future amendment. In this the radicals see their pet scheme used against itself. They are opposing its passage tooth and nail, as also the passage of a proposal of similar tenor in regard to "initiative" measures. Other important provisions among the thirty-eight proposals, such as those for equal suffrage, for inheritance and income taxes, to provide a "blue sky" law and to abolish contract prison labor, make it plain that, for the student of government, Oregon's action at the polls will be well worth watching.

The establishment, through the gift of Mr. James B. Brady, of a Urological Institute in connection with the Johns Hopkins Hospital, is the third of a series of foundations made in recent years by special endowment at that great institution. The other two are the Henry Phipps Psychiatric Clinic and the Harriet Lane Home for Invalid Children. All of these special establishments serve the double purpose of hospital and research institute, and, working in conjunction with the admirable staff of the Johns Hopkins Medical School, form an important addition to the country's resources for the advancement of medical knowledge. It is notable that, in these and other ways, the medical side of the activities initiated at Baltimore a generation ago through the far-sighted munificence of Johns Hopkins has been liberally promoted by men of wealth from a distance; but the general work of Johns Hopkins University, while it has received generous support from Baltimoreans, has had very little pecuniary aid from the country at large. The difference is doubtless largely due to the personal experience through which donors have become acquainted with the merits of the medical activities.

The busy news collectors in Mexico who began announcing the imminent fall of President Madero even before his election, have laid stress on two fatal circumstances. In the first place, Madero was a dreamer and theorist who was unequal to the practical exigencies of his position. In the second place, a national spirit was totally lacking in Mexico. The actual course of events has shown that in Madero the Mexican people has found a leader of extraordinary resourcefulness, of courage, and of tenacity. When Orozco's army was carrying everything before it in Chihuahua and the anti-Maderist press was announcing that at Torreón the fall of the Government would be signalized, Madero refused to give way to panic and bided his time until his forces were in a position to strike a decisive blow. The dramatic collapse of Orozco's revolution is a matter of recent history. The situation was a trying one. Besides Orozco, there were the Zapatist forces in the vicinity of the capital to be reckoned with, and in Mexico City there was discontent and disloyalty. Porfirio Diaz himself could not have dealt with the situation more effectively.

Then came the fiasco of Diaz at Vera Cruz, and it was demonstrated that Madero did have behind him the good will of the bulk of the nation. The walls of Mexico City did not tumble down at the magic sound of the name Diaz. The confidently predicted defection of Federal generals and troops did not take place. The expected upheaval of the entire countryside at the signal from Vera Cruz did not come off. It has been shown pretty conclusively that the Mexican people is not tired of Madero and that it is by no means convinced that he has badly failed in his work. The man who can hold his own against the powerful influences brought into the field by the supporters of Porfirio Diaz, who can command the obedience of his troops and the loyalty of their officers, who can keep order in the capital and deal pretty effectively with the marauding bands of so-called revolutionists in the provinces, seems to be quite the right man for his place. Madero's prestige to-day is higher than at any moment since he took office.

The break in the Borden Cabinet, made by the resignation of F. D. Monk, has been expected. The retiring Minister feels that, as his colleagues do not intend to submit the proposed new naval policy to the people, he will be put in the position of violating his preëlection pledge in the matter. Now, it may be perfectly proper for this particular official, under these particular circumstances, to give up his seat at the council table, but he cannot be blind to the gravity of the precedent he is setting. What would happen if officials in general were to act upon it, and resign rather than share the responsibility for the violation of preëlection pledges? Mr. Monk's act, we suppose, is dictated by the new spirit that has come over politics in recent years. Certainly, the time-honored course for him to have followed was to explain to his constituents that the preëlection pledge was, in fact, and despite appearances, being fulfilled to the letter. If this was absolutely impossible to "carry off," then he should have resorted to the *ultima ratio* of the politician. Ex-Representative "Jim" Watson of Indiana could have coached him. Facing a convention in his district during the McKinley Administration, shortly after he had voted upon a measure contrary to the expectations of his supporters, the sagacious Congressman struck an attitude, and declaimed in words like these: "But when I saw ranged on one side all those grand leaders of the grand old Republican party, William McKinley——" Here the cheering told him that the argument had gone home.

At a convocation held for the purpose of renominating Dr. Charles B. Heberden, principal of Brasenose College, Oxford, to be Vice-Chancellor for a third year of office, we read that the Vice-Chancellor "delivered the customary speech (for the first time in English), saying that when he addressed them last year he raised the question of abandoning the time-honored custom of employing Latin for this speech, and on the whole he considered that the use of English was better." Many will feel a pang of regret on reading this announcement. The change is not of vital importance, and a few severely practical reasons can be advanced which seem to make it desirable. Yet the abandonment of that "time-honored custom" signifies the breaking of another link in the chain which connects Oxford so intimately with the traditions and usages of the past. It may, of course, be pleaded that many of those who listen to the Vice-Chancellor are unable to follow him in Latin; but the quality of ambiguousness is by no means confined to speeches delivered in a dead language. Occasionally, too, there may be an element of the grotesque in the spectacle of a scientific or mathematical Vice-Chancellor wrestling with uncomprehended Ciceronian periods, and stumbling deplorably over his Latin quantities; certainly, after the event, there is scholarly, if unhallowed, joy in many common-rooms over the Vice-Chancellor's discomfiture. But these are small incidents, and if we began to eliminate from Oxford all the forms and ceremonies that contain for modern eyes something of the grotesque, it would be difficult to know where to stop.

The chief argument in favor of the "time-honored custom" prescribing that the Vice-Chancellor shall address Convocation in Latin is that it emphasizes the continuity not only of Oxford's history, but of the history of learning. When the Vice-Chancellor delivers his Latin oration he is using the medium of speech that made learning possible in the early stages of our present civilization, the *lingua franca* of scholars throughout the world, by means of which the thoughts and researches of the wisest of Europe were made the common property of all. In an age when books were rare and hard to come by, it was no small thing that the scholars of every nationality were able to write and to converse in a common tongue; when travelling in a foreign land was a difficult and hazardous adventure, it was of great solace to the cultured pilgrim that throughout Europe there was a chain of houses in which he could enjoy both hospitality and conversation.

> BERLIN, October 25.—The growth of cities at the expense of the country is responsible for the German meat famine, Chancellor Bethmann-Hollweg told the Diet to-day. Tariffs and taxes have nothing to do with it, he asserted. He suggested the draining and colonizing of the moorlands with the Government's financial aid as a palliative, but declared that the only sure remedy is an increase in the number of farmers.

The cable may not have done full justice to Herr von Bethmann-Hollweg, but we very much fear that it has reported him pretty accurately. Yet in any other domain than politics or economics, such nonsense could not go down for a moment. You keep foreign meats out for no other purpose under the sun than to enable home producers to get good prices for meat, and then you turn round and say that the price would be just the same if you had done nothing of the kind. As for an "increase in the number of farmers," Germany could get a very big increase in twenty-four hours by simply letting the farmers of Argentina, and Australia, and any other country that desires to sell meat, come into the German market. And if the Chancellor disdains such simple and "doctrinaire" considerations, the favorite "historical" method of German thinkers might come to his aid. Does he think that the cry for cheaper food, three-quarters of a century ago, in another country which was rapidly developing its manufactures, should have been silenced by the assertion that tariffs made no difference? Does he think England was acting under a sheer delusion when she abolished the corn laws?

To take one possible explanation of the unbroken series of Turkish defeats, is it probable, as some correspondents are now asserting, that the Turkish soldier has lost his fine qualities of the past? Instead of the splendid fighting animal, whom religious fanaticism made indifferent to death, and who won victories in rags and on an empty stomach, we are now asked to regard the Turkish soldier as indifferent, ill-disciplined, and prone to give way without a contest. The change is too startling to be credible. It is belied by the showing made in the Greek war of 1897, and only the other day against the Italians in Tripoli. Nor is it reasonable to suppose that the long years of training under capable German officers have gone to waste. We must adopt the more plausible explanation that the Turks have so far been numerically weaker in the field than their opponents, and decidedly inferior in equipment. When Turkey's standing army was balanced against the armed forces of the allies, the important factor of mobilization was not sufficiently taken into account. Constantinople has to draw its reserves from Asia Minor, Armenia, and Arabia, whereas the allies are virtually fighting in front of their own doorsteps.

When we speak of the rapidity of the Balkan armies' advance, we must bear in mind also that distances are small in the present field of hostilities. Adrianople is less than twenty-five miles from the Bulgarian frontier; Scutari is about the same distance from Podgoritza, where the Montenegrin advance began; the Servians have had to move forward from ten to thirty miles to occupy the towns of Novibazar, Prishtina, and Kumanovo; the Greeks have moved forward about thirty miles to reach Serfidze. Over such short distances the first impulse of an offensive attack is enough to carry an invading army.

All doubt about what happened to the Czarevitch, and how he is getting on, has been dispelled by the following statement made by the Marshal of the Court of Russia:

> An accidental fall suffered by the Hereditary Grand Duke will keep his Imperial Highness in bed for some time still. You can place entire confidence in the statements of the official bulletins.

Even in countries whose governmental arrangements are less perfect than those of Russia, it is well known that official statements are always absolutely truthful—though some have suspected that the author of Pinafore intended a little mischief when he made Sir Joseph Porter, K.C.B., say that in his happy country "official communications are invariably regarded as unanswerable." But whatever may be true of less favored lands, no assertion made under governmental sanction in Russia has ever been known to be other than strictly accurate. We only wonder that the Marshal of the Court should have gone so far as to recognize that there may exist persons so depraved as to require his assurance that the official bulletins are worthy of entire confidence.

PROPHETS TO THE FORE.

These are Presidential prediction days, and they are giving us a flood of forecasts that would be perfectly conclusive if they did not destroy one another. Each campaign manager sees rosy. He confesses, if you press him, that six weeks ago the prospect was troubled, but now every cloud has been swept from the horizon, and "unless all signs fail," a sweeping and glorious victory is to perch upon his banner. But so it is on all other banners. Dixon and Perkins are not carrying New York for Roosevelt any more positively and solemnly than Barnes and Koenig are for Taft. Senator Dixon is really splendid. He has the Roosevelt vote, both popular and in the Electoral College, figured out to a nicety, and has put out his statement without the flicker of an eyelid. Not less enthusiastic is Mr. Perkins, but he has not the full *aplomb* of Dixon. Stating that his confidential reports show that Roosevelt is going to carry several Southern States, he adds that he is "green" in politics, and that his correspondents "may be stuffing" him. This is a momentary weakness in Perkins. The true election prophet must not admit that by any possibility can he be mistaken. He should say with calm authority, as does a Roosevelt organ, that all "unbiassed polls" show the Colonel far in the lead. One such unbiassed poll was printed last week by a Roosevelt paper in New York, showing that the employees in a certain establishment in this city stood: Roosevelt, 29, Taft, 8, and Wilson 7. But the head of that firm has since written to the *Tribune* to say that he employs only eight men, two of whom are under age. Thus is doubt cast upon a sure word of prophecy.

One hears wonder expressed why campaign managers should think it necessary or desirable to don the prophet's robes which so ill become them. Do they expect people to believe that they know as much as they pretend to know? Are they not fully aware that their loud predictions are taken by everybody as merely so much shouting to keep the courage up? Well, all this is one of the pleasing little arts of their profession which they feel that they cannot afford to neglect. By stoutly claiming everything, they may get something. If not the whole silk gown, at least a sleeve of it. The fact that previous forecasts of theirs have turned out ludicrously astray, they do not permit to deter them. They feel a kind of fatality upon them. They alter Descartes's phrase, and say, "I predict, therefore I am." What are they there for except to make prophecies? Students of these matters have noted one invariable rule: the more hopeless the chances of any given party, the shriller become its advance cries of victory. In 1892 the Republican party met a smashing defeat, but Chairman Carter would hardly grant, before the election, a single State to Cleveland. As Republican prospects declined, Carter's claims rose. So it has been again and again; and Senator Dixon is but following venerable precedent in putting out his tremendous claims for the Progressives at a time when the general conviction has become established that their situation is desperate.

Along with these official auguries go a vast number of "straw votes." Of these we do not hold so low an opinion as Mr. Dooley. He assured Hennessy that nothing so strong as American politics could be taken through a straw. There are straw votes and straw votes; some of them obviously worthless, but some highly significant. If we could get enough of them, fairly typical of sentiment in various parts of the country, impartially taken and honestly reported, we should have a very trustworthy indication how the election would go. The trouble with most straw votes and "postal-card votes" is that we have no means of knowing how accurately they represent the real preferences of the section or class which they profess to canvass. They may, indeed, give us an inkling of what the decided and clamorous voters mean to do, but the uncommitted vote, the silent vote, may escape them altogether. And then there is the vital point of what we may call the changed vote. It is the shifting of party allegiance that is the crucial thing; and the ordinary straw vote tells us little or nothing about that. It is of no use to set forth polls showing that Roosevelt or Straus, as the case may be, is going to receive such and such numbers of votes, unless information is at the same time given how many of those votes are to come from Democrats.

Every man of sense knows that, unless there is a marked Democratic defection this year, the sharp division on the other side will make Wilson's triumph easy and certain. It needs no one risen from the dead to tell us this. Nor is any remarkable mathematical ability or skill in divining the future necessary. All that one has to do is to take a pencil and paper and sit down with the figures of previous elections. But no one has produced evidence that any large body of Democrats will cease voting for their party. Mr. Don M. Dickinson, of Michigan, is about the only Democrat of any prominence who has announced his intention of supporting Roosevelt; and the effusiveness with which the Colonel greeted him last Sunday implies that he has had few occasions of that kind to hold out his hand. Even if as many as 10 per cent. of the Democrats were to vote for Roosevelt—and there is no proof whatever that the number will be near that—the remainder would mean a comfortable plurality over any division of the Republican vote between Roosevelt and Taft that is at all conceivable. It is the hard-headed perception of this truth, we suppose, that holds the betting odds firmly at 4 to 1 on Wilson, despite the best that Dixon and Perkins can do.

We have no thought of taking a turn at prophecy ourselves. Don't, onless ye know. But we are confident that every man can be his own prophet as wisely as he can put faith in the vaticinations of Barnes or Perkins or McCombs. He can look about him. He can sound his friends and acquaintances. He can study the signs of the times as they are broadly revealed the country over. He can put aside his own hopes or fears as irrelevant, take the main facts of the party situation as they stand out clearly, and make as good a guess as the next man. When it is beyond question that some, at least, of our political forecasters are lying prophets, there is no reason for believing that any of them are divinely inspired.

THE BECKER VERDICT.

It is obvious that the verdict of the jury in the Becker case came as a surprise to most people. A disagreement was the common and confident prediction. This did not mean that Becker was not generally believed guilty. We suppose that the details of the murder of Rosenthal, as they were little by little made public, left no doubt at all in the minds of intelligent men that Becker had a direct connection with that crime which startled a city even as hardened to such things as New York. It was not his guilt, but the legal proof of it, that was called in question. The feeling was that the long and difficult trial, with the abhorrent character of so many of the witnesses, would result, at best, in a hung jury. Hence the general astonishment—which is also an unmistakable feeling of relief—at the verdict of murder in the first degree.

This must be regarded as a most tonic event. It shows, for one thing, that justice in New York need not always move on leaden feet. The bold assassination of Rosenthal was done on July 16. In less than three months Becker was brought to trial All the involved processes of first detecting his hidden responsibility for the crime, next of marshalling the evidence on which he was indicted, and then of getting his case before a jury with skill and force sufficient to cause his conviction, were got through successfully with great speed. The sword of the law was not allowed to rust in the scabbard. People had not forgotten what the crime was before judgment had been pronounced upon it. The net result cannot fail to restore confidence in our methods of criminal prosecution, not only in New York, but in all large cities.

Even more important is it to have the demonstration that the weapons of the law are sharp and strong enough to cut through the network of police collusion with crime. It has been the boast of the "system" that it could snap its fingers at the criminal code and defy prosecutors and the courts. Nothing would happen. Everything would soon blow over. Even if any man was caught, he would be got off. That was the burden of the talk, as sworn to, between Becker and his hired assassins. The confederation between the police and favored criminals was represented as too powerful, with too many ramifications, for the District Attorney to break into. But Mr. Whitman has knocked all that into a heap. He has shown that the resources of criminal investigation and the agencies of the law are adequate to cope with the vilest conspiracies and the most intricate crimes that the "system" can devise. The strong arm of the law has grappled with the strong-arm squad. We can easily imagine the shock given at midnight to all the corrupt and conniving members of the police force by the news that Becker had been found guilty. They must have looked at one another with startled eyes, as if asking, "Who next?" Viewed from any angle, the verdict of this jury is the most terrible blow that the wicked and flaunting alliance between the guardians of the law and the violators of it has ever received.

For achieving this, District Attorney Whitman deserves the thanks of New York city, and so do he and his assistant, Mr. Moss, for the very great labor of preparing the evidence against Becker and presenting it in such a way as to obtain a conviction. And we think that Mr. Whitman had the true instinct for the demands of the situation when he arraigned Becker first of all. The wretched tools who actually did the shooting of Rosenthal might well be passed over for the time, in order to bring their principal to the bar. It was necessary to strike high as well as hard; and from the effects of the blow which Mr. Whitman has dealt we can see how sagacious he was in choosing where first to aim it. Some other order of prosecution might have seemed logically better, or even more sure legally, but the moral impression caused by success in going straight at the most heinous offender, proves that no mistake was made by the District Attorney.

Becker's counsel will appeal. There will necessarily be a review of the trial by a higher court. The blackest criminal is entitled to all his legal rights, and Becker must have his. If able and conscientious judges hold that errors were committed in the course of the trial sufficient to vitiate the verdict of the jury, it will be their duty so to decide, and it will be the duty of the public to respect their decision. But it is much to be hoped that nothing of the kind will be necessary. The reviewing judges will doubtless be impressed, as everybody else must be, by the fact that a carefully chosen and exceptionally intelligent jury came so promptly to the conclusion that Becker was guilty. These jurymen not only heard all the evidence, but had the opportunity of studying all the witnesses face to face. They must naturally have had their suspicions of Rose and Webber and the other refugees of the darkness who had to be called upon to testify, if any evidence at all was to be had; yet they scrutinized these wretches as they told their story and observed them under cross-examination, and must have made up their minds that the testimony was credible. At least, it was not broken down at any vital point. It is this broad consideration of the findings of the jury which must weigh most with the public, and will doubtless have due weight with judges. As the matter stands, there has been a signal and heartening vindication of justice. All must hope that nothing in the future disposal of the case will lessen its deep impressiveness.

SUPERVISING MANKIND.

Dr. Lewellys Barker's letter on "Preventing Czolgoszes and Schranks," printed in the New York *Times*, will attract more than local attention on account of the professional eminence of its writer. All that part of it which relates to the care and treatment of the insane, and much of what is said in it about the feeble-minded and similar classes, is not only highly important but wholly unexceptionable. But in some of its aspects, the proposed "national campaign for mental hygiene" raises questions which cannot be properly approached without consideration of the most far-reaching consequences, questions which go to the very core of life.

"Provision must be made," we are told, "for the birth of children whose brains shall, so far as possible, be innately of good quality; this means the denial of the privilege of parenthood to those likely to transmit bad nervous systems to their offspring." It is quite possible that Dr. Barker does not fully mean what he here says, though no qualification of it appears in the context; but, however much allowance we may make for intended qualification, it is clear that the social policy he has in mind goes far beyond the mere segregation or sterilization of pronounced degenerates or imbeciles. And this is all the more certain for the reason that such a programme has already attained considerable currency. Moreover, it is an indispensable programme if we set forth to achieve the object of "preventing Czolgoszes and Schranks." We would by no means be understood to admit that it would be *sufficient* for the accomplishment of that object; but surely nothing *less* would suffice. The question, then, is, What does the execution of this eugenic programme involve? What forces would be brought into play by it? How would it affect not only the lives of those directly or indirectly concerned, but the very feelings and ideals of life, of all mankind?

By whatever instrumentalities it may be proposed to carry any such scheme into effect, one thing is essentially involved in it—the making of a vital distinction between individuals upon the basis of a scientific, or quasi-scientific, estimate of their physical endowments. How serious the danger of error in the diagnosis, how grave the possibilities of mischief due to malice or prejudice, how pervasive might be the dread or the blighting uncertainty which would oppress those whose peculiarities made them more or less suspect—into these things we do not intend to enter. For in this proposal to mark out as derelicts such men and women as fail to come up to a desired standard of fitness, there is something which cuts still deeper into the texture of life and society. The criminal, the insane, the imbecile, clearly marked out to be set apart from the mass of normal human beings, we habitually ignore in the daily course of life; this is hard, cruel perhaps, but it leaves all the rest of mankind on the solid ground of equality in the things that are vital—not only equality in rights, but equality in self-respect, in the fundamentals of human dignity. In the relation of parent and child, of brother and sister, of friend and friend, all men, rich and poor, strong and weak, gifted and dull, stand on an equal footing. Each feels that if he but acts well his part, lowly though it be, he has earned the right to self-respect, and to the unpatronizing and unforced regard of those with whom he has to do. He asks for no other man's certificate that he is himself a man; he walks erect among his fellows. He may be deficient in mental power; he may have a less perfect nervous system than is to be desired; but he neither abdicates the rights, nor asks to be absolved from the responsibility, which he understands to attach to all the children of men. Take away this feeling, and can you presume to measure the awful gap that will be left? Can you estimate the value, the potency, of the simple and unquestioned doctrine that a man's a man? It is the safeguard of human dignity, it strengthens the weak to bear themselves worthily, it incites the strong to feel true consideration for the weak, it runs through the whole warp and woof of the web of life. Before we disturb it, we had better be very sure that our little scheme for doing without it will more truly serve mankind.

There are other grave aspects of the "campaign for mental hygiene" on which it might be profitable to dwell. But it may be more to the purpose to make a remark that bears equally upon many other current proposals of radical innovation. The argument for these proposals almost always rests upon a postulate tacitly taken for granted by their advocates. This postulate is that, in the particular matter that interests them, perfection should be attempted at any cost; and when we say "attempted," we do not mean striven for as an ideal, or as an ultimate goal, but directly sought by whatever means may be at hand. None of us want Schranks or Czolgoszes; but before we determine to prevent their birth, or even to prevent their growing up without special supervision, we instinctively ask whether it is worth while to make that sacrifice of the general freedom, and simplicity, and unconsciousness of the daily lives of men which such prevention would necessitate. None of us likes to contemplate the hardships of the very poor; but before we condemn the existing structure of society to demolition in order to abolish poverty, we wish to have some assurance that the things that make for the building up of character, and for the zest of life in almost all classes, will not be sacrificed in the process. Human society is far from perfect. But such advance as we have made from conditions infinitely worse than those that now exist has been bound up with the growth of certain fundamental ideas and institutions; and to pursue perfection in one particular respect without regard to the injury that those ideas and institutions may suffer is to run the risk of burning down your house for the sake of smoking out the rats.

EFFICIENCY TESTS FOR CLERGYMEN.

As the modern efficiency expert pursues his devastating way, the troubled question is more and more frequently heard: "Who of us is safe?" The old immunity of the college professor is soon to vanish. He has been asked to punch a time-clock as he teaches, and to work out a daily sheet showing by curves and percentages whether he is or is not an unprofitable servant. And now it would appear that clergymen will have to submit to like tests. If we may judge by the address to the Presbyterian ministers by the Moderator of the General Assembly, the time is drawing near when efficiency machinery will be set up in every pulpit. As reported in the press, Dr. Matthews was especially severe upon the clergy for their shocking waste of time and energy. They seem to make as many unnecessary motions as the old-style bricklayer. The speaker was very emphatic in his warnings that all this must cease if the church is not to fall behind the times. The pastor must be a driving man of business. He must have full authority to appoint his church-officers, and to engage and dismiss his assistants. They must be ready, with him, to work sixteen hours a day year in and year out, and to be able to account for every moment of their time; if they didn't in Dr. Matthews's church, he said significantly, "they knew what to expect."

Without holding him literally to every word put in his mouth by the reporters, it seems pretty clear that he is a great believer in what is called "the institutional church," and would have all of its manifold activities managed in the spirit of the most scientific industry. There must be no dawdling. Nobody in the church must look for leisure to invite his soul. All must go at high tension. The Apostle's injunction about "redeeming the time" is to be taken in the severest terms of the current doctrine of efficiency. For example, an assistant pastor should be expected, at the end of a day's work in the parish, to submit a precise and detailed record of all that he had done or attempted. He should turn in a time-card, filled out something like this:

9:30 to 10:27, visited the widow and the fatherless in their affliction.

10:27 to 11:03, bound up three broken-hearted.

11:03 to 12:15, at the hospital. Spoke to ten patients. Repeated twelve verses from the Scriptures. Offered three prayers. Recited four hymns.

12:15 to 12:32, lunch.

12:32 to 3:10, made a round of the classes in sewing, cooking, athletics, and inspected two companies of boy scouts.

3:10 to 5:20, kept office hours, seeing five

> book-agents, three applicants for charity, two clerical impostors, a delegation from the Daughters of the Revolution, and six persons with suggestions about enriching the church services and improving the sermons.
>
> Summing up the whole day, I humbly reckon my efficiency percentage at 97.3.

We would not be thought to decry, least of all, to burlesque, the multifarious activities of a large church in a city. They are undoubtedly of great usefulness, and it is needful to conduct them in a business way. Whatever the impulse behind them, or their ultimate aim, the actual details have to be attended to by careful administrators. This is the reason why it is sometimes said that the pastor of a great institutional church must unite in himself the qualities of the head of a big factory, a tactful manager of all sorts and conditions of men, a skilled financier, a profound student, a good writer, and an acceptable speaker. The combination is, of course, impossible; and that is the explanation of the division of labor in so many large parishes of the present day. A man cannot spend six-sevenths of his time serving tables and then on Sunday be a flaming prophet of the soul.

Efficiency tests where they may rightly be applied, say we, but beware of attempting to measure the subtle things of personal and spiritual influence by reducing all to percentages. There is something here too deep for the mechanical probe to reach. The truly great teacher is not so known because somebody has timed his lectures, or applied the yardstick to him, but because the hearts of the young are stirred within them as they listen to him, and from him they get guiding motives for their whole lives. And still more absurd would it be to attempt to classify and rank pastors and preachers by efficiency tables. Who will be impudent enough to think to express in figures the spiritual value of the goodness and benignity which beam from a man who has been minister of one village church for thirty years, and whose face itself has become a benediction? What way is there of making an arithmetical estimate of the services of Father Damien, or of any clergyman who goes fearlessly where infection or plague is raging? Can any statistics express the worth of a truly prophetic message from the pulpit? As well imagine that the most moving passages in the Bible can be explained by showing that they are an artful arrangement of vowels and consonants. Great is efficiency, but there are some things off which it must keep its hands; and the spirit that bloweth where it listeth is one of them.

NEW REPUTATIONS FOR OLD.

When Hamlet asserted that there was ne'er a villain dwelling in all Denmark but he was an arrant knave, he reckoned without the alchemy of modern historical criticism. The problem today would be to find a villain in Denmark or anywhere else who, when you looked at him aright, was not seen to be in reality a much abused man. There is Aaron Burr, for example. How old-fashioned it seems now to talk as if the slayer of Hamilton had been aught but a model citizen and statesman! To go still further back, the time-honored notion of Cleon as a demagogue received a body-blow when some one suggested that the witnesses against him were prejudiced. Aristophanes owed him a grudge because Cleon had pointed out the unpatriotic character of one of his plays, a play, moreover, that had been witnessed by foreigners; and Thucydides thirsted for revenge for the exile into which Cleon had once thrown him. We have even heard of a teacher who aroused sympathy for Henry VIII by tender allusions to the series of domestic sorrows that befell him. Unfortunately for the rehabilitator of evil reputations, the supply of famous sinners is not unlimited, and, accordingly, the industry has apparently been threatened with extinction. In the very nick of time, however, a new field has been discovered in the rogues of fiction. Why should Nero be whitewashed, and no good word said for Lothario? Is not one as real to us as the other?

So it seems to Otis Skinner at least, who is just getting his breath after the exertion of lifting Shylock upon a pedestal. That this immortal figure has long been invested with a dignity and pathos that no one in Shakespeare's audiences would have granted him, is well enough as far as it goes, but it is still short of the truth. The long-concealed fact is that Shylock was the only gentleman in Venice. He merely "made an honest contract" with Antonio, who was a liar and a profligate, and then tried to prevent him "from crawling out of it." The stipulated pound of flesh was "a thing of no value to Shylock"—as, indeed, the only gentleman in Venice was the first to point out—whatever may have been its importance to Antonio. Shylock, in a word, was simply the original representative of "big business," and as such should receive a very different kind of fame from that which has clung to him. What if Tennyson did say, in an unguarded moment, something about one's being all fault who has no fault at all? He had not heard of the true Shylock, beside whom Cordelia and Desdemona appear frail specimens of humanity.

Thus the way is now open for a general revision of the reputations of literary personages. The Advocatus Diaboli is no longer to read his indictment unopposed. The virtues of the blackest are to be called upon to plead like angels, trumpet-tongued, against the deep damnation of their exclusion from the isles of the blessed. We would not anticipate the exact results of this refurbishing. Whether Iago will emerge wearing the white flower of a blameless life, or only as a nobler Horatio, it would be rash to predict. That Othello grievously, perhaps designedly, mistook him, we regard as already settled. Indeed, may there not be an unexplored and rich field for the distracted seeker of new literary worlds to exploit, in this matter of the prejudice of authors against the types of villain which they put into their pages? Can we accept Chaucer's account of the Pardoner at its face value, when we have no means of knowing what the Pardoner might have said against Chaucer? Dante's little way of consigning his personal enemies to a very real Perdition should put us upon our guard. It is not impossible that we shall sooner or later discover that there has never been such a thing as a villain at all.

From so dire a calamity we may well call upon all the saints to defend us. How many of the most interesting pages of history and fiction would be left, if all those that are besmirched with the doings of the world's rascals, from Paris and Xerxes down to Falstaff and Becky Sharp, were torn out? Here, as luck will have it, a law of nature comes to our aid. For every action, there is an equal and opposite reaction; not otherwise is the action possible. Mr. Skinner can elevate Shylock only as he depresses Antonio and Bassanio. We may have to give up our old villains, those to whom we are accustomed, but in return we are furnished with a new set. We are far from saying that there is no loss in the exchange. The rascals we get may be as fascinating as the rascals we lose, but this takes no account of sentimental values. It is asking a good deal of one to part with a scoundrel whom long association has endeared to him, and accept in his place a wretch whom a mere expert has decided to be the better scoundrel of the two. Suppose that one has taken a fancy to one of the Borgias. Does it not savor of cruelty to destroy one's faith in the malign possibilities of one's chosen villain, and is it not rather impertinent to bid one be content with, say, Jack Cade? It may yet become necessary to organize a society for the preservation of evil reputations.

THE LITERATURE OF THE TURCO-ITALIAN WAR.

Rome, October 15.

The campaign in Tripoli, which has stirred Italian public opinion more than any other event since the wars of independence, has resulted in a continuous output of books dealing with the subject from every point of view. The books are not all of equal value, and many are only of slight and ephemeral interest. But they all bear witness to the birth of the new spirit of Italy, the new attitude of the Italian public towards questions of international politics, military affairs, and Socialism. Some of these volumes are merely the republished letters to various Italian newspapers of their respective war correspondents; others are studies on the economic, geographical, climatic, and agricultural conditions of Tripolitania and Cyrenaica, while others again are literary essays on the war and its various aspects, human and moral.

The most remarkable piece of literature inspired by the campaign is undoubtedly Gabriele D'Annunzio's volume, "Le Canzoni delle gesta d'oltremare" (Milan: Treves), consisting of ten poems originally published in a daily paper. I use the word "inspired" advisedly, for these verses are full of genuine poetical inspiration and bring out the author's best gifts—his vigorous word-painting, his extraordinary mastery of the Italian language, his brilliant coloring. They also reveal in him another quality in a very high degree—that of virulent and scathing invective, which led in fact to the confiscation of the first edition of the volume on account of the diatribe, in "La canzone dei Dardanelli," against the Emperor Francis Joseph. D'Annunzio's faults, however, are not absent, and one cannot but regret his somewhat involved style and occasionally his too great fondness for allusions to obscure or little-known episodes. Realizing these difficulties for the ordinary reader, the author has provided copious notes of explanation. In some ways these poems rank with D'Annunzio's finest work, because of their deep sincerity. In the "Canzone dei Dardanelli" he attacks the foreign Powers for their interested hostility to Italy and their protection of Turkey with an almost Dantesque virulence.

Of the writers on the military operations and the political aspects of the Tripolitan campaign, Enrico Corradini, the novelist and apostle of the new Italian Nationalist movement, easily takes the first place. Although he went to the front as the special correspondent of the *Illustrazione italiana*, he is far more than a mere chronicler of events. His object is to describe the moral values of the African enterprise, the bravery, sobriety, staying power, and kindness of the Italian soldiers, and the effects of the war on the Italian character. To him the war was the great school of the nation, the temper in which the national spirit was steeled for its high future destinies, the fire wherein Italy's political life, so long dominated and oppressed by anti-national, anti-patriotic, self-seeking demagogues, was purified. In "La Conquista di Tripoli" (Treves) he sets forth the chief episodes of the war from the landing at Tripoli to the capture of Ain Zara, with picturesque vigor and accuracy. His accounts of Shara Shat, of Sidi Mesri, of Ain Zara are brilliant pieces of writing, and his volume also contains many vivid scenes of camp life, episodes of individual bravery, descriptions of scenery, and of the unearthed relics of ancient Rome which so impressed even the untutored common soldiers.

Another book by the same author, "Sopra le vie del nuovo impero" (Treves), deals more with the political side of the enterprise. It begins with a vivid description of the scene in the Italian Chamber when the decree extending Italian sovereignty over Libya was voted by an overwhelming and enthusiastic majority, and of the miserable collapse of Signor Turati, the Socialist leader, who, after posing so long as the master of the Italian proletariat, suddenly found himself isolated. An account of the situation in Tunisia follows, of the work of Italian emigrants and their relations with the French and with the Arabs, and finally we have a series of effective pictures of the various Ægean islands occupied by Italy, including an admirable account of Gen. Ameglio's brilliant operations in Rhodes. By *vie dell' Impero*, Sig. Corradini means lines of thought and ideal tendencies, rather than material and actual conquests. He regards emigration as the beginning of Imperialism, and is convinced that Italian Imperialism, based on the expansion of the Italian race and Italian culture protected by Italian arms, is superior to that of France, which is a purely capitalist movement, unaccompanied by French emigrants. Italian emigration, he believes, prepared the way, both spiritually and materially, for the occupation of Libya; and the occupation of the Ægean islands, which he is convinced ought to be retained in some form or other, should lead to Italian expansion and influence, both political and commercial, in Asia.

Giuseppe Bevione, correspondent of the Turin *Stampa*, is a more detailed historian than Sig. Corradini, and in his "Come siamo andati a Tripoli" (Turin: Bocca) gives a clear, vivid, and accurate account of the first phase of the campaign. His style is less picturesque, but he writes easily and agreeably and will always be read with interest. Sig. Bevione, like so many of the ablest and sincerest men in Italy to-day, is an ardent Nationalist. Paolo Giordani's "Sui campi d'Africa a Tripoli e a Bengazi" (Rome: Tipografia editrice nazionale) is the record of another journalist, and consists of letters published in the Rome *Tribuna*. The most interesting, when they first appeared, were those dealing with the operations in Cyrenaica, where correspondents were not allowed to land during the early months of the campaign, but now, of course, they have lost the charm of novelty. The same criticism applies to several other volumes of republished contributions to newspapers, such as Giuseppe Piazza's "Come conquistammo Tripoli" (Rome: Lux), and Pietro Pasetti's "Note ed episodi della guerra in Tripolitania" (Rome: Tipografia editrice della Sapienza).

In addition to the journalists, numbers of Deputies have flocked to Tripoli during the last twelve months, and it is even said that their presence constituted one of the chief difficulties of the Italian commanders. Some one remarked that the officious interference of men like Sig. De Felice, the member for Catania, and correspondent of a Roman paper, made one realize the calamity of war! Several of these itinerant statesmen have also recorded their impressions and experiences. Thus Sig. Vittorio Cottafavi has published "Nella Libia italiana" (Bologna: Beltrami), a volume of somewhat feeble sketches strung together without any particular sequence or literary merit. While the author does not add much to our knowledge, he, too, like all other writers on the expedition, bears witness to the admirable spirit of the troops and their cheerfulness and good humor under trying circumstances and in the face of a treacherous foe. Another Deputy who went to Tripoli and wrote about it is Guido Podrecca, the author of "Libia, impressioni e polemiche" (Rome: Podrecca e Galantara). The chief interest of this book lies in the fact that, although the author is a Socialist of advanced and violent views and a rabid anti-Clerical, he entirely approved the policy of the Italian Government. His example and that of several other prominent Socialists, has been followed by a large section of the party, including many of the leaders and most of the workingmen. In the preface he replies with vigor to his opponents within his own party. Emilio Pinchia, on the other hand, although not a Socialist (he and Don Leone Caetani were the only Constitutionalist Deputies who voted against the Government on the sovereignty bill), is one of the few men who have written against the expedition. In "L'impresa di Tripoli, il primo periodo, diario politico Settembre 1911—Marzo 1912" (Milan: Società anonima editrice Avanti) he has put together a number of letters, speeches, articles, impressions, and comments of his own. Sig. Pinchia discounts the value of Tripoli as a field for Italian enterprise, and repeats the old and now exploded theory that the campaign was undertaken for the sake of the Banco di Roma, which had developed important commercial interests in the African vilayet. According to him the only bright spots in the whole situation are the gallantry of the Italian soldiers and the spirit of self-sacrifice of the people, "which pursues its noble ideals, now as always, in the generous vision of the fatherland."

Two volumes on the natural conditions and agricultural possibilities of Libya have been published by Profs. Arcangelo Ghislieri and P. Vinassa de Regny, respectively. The former, "Tripolitania e Cirenaica dal Mediterraneo al Sahara" (Milan-Bergamo: Instituto italiano d'arti grafiche), is made up mostly of extracts from the works of other writers, explorers, and scientists. The author, who is a member of the Republican party and a pacifist, cannot wholly divest himself of his political ideas, and tends to present only the evidence unfavorable to the possibilities of future development of the new colony. The work is, moreover, somewhat sketchy and ill-digested. Professor Vinassa's book, "Libya italica, Terreni ed acque, vita e colture della nuova colonia" (Milan: Hoepli), is a more serious and careful essay on the same subject, based on personal experience as well as on trustworthy information from other sources. The author is sanguine as to the prospects of Italian colonization both in Tripolitania and in Cyrenaica, and proves by abundant evidence that the soil is fertile and suited to a variety of crops, and that if there is but little running water there is an ample and easily available supply of water under the earth. The first colonists, however, should in his opinion be men who have a little capital, or to whom the Government could safely lend money on easy terms. Such settlements should have a military character, and Professor Vinassa suggests that the time-expired soldiers who have served in the campaign should have the preference in the matter of land concessions.

Perhaps the most remarkable piece of prose on the war is the speech delivered by the late Giovanni Pascoli at Barga and afterwards published in pamphlet form under the title of "La grande proletaria si è mossa" (Bologna: Zanichelli). The Romagnol poet had been a strong opponent of Crispi's Abyssinian policy of 1895-96, and had written against it, but, like so many other Italians, he became converted to the necessity of his country's colonial expansion and was a firm advocate of the Tripolitan expedition. In this speech he describes in impassioned words how Italy, from a nation of laborers and emigrants working for foreign taskmasters, hewers of wood and drawers of water for alien capitalists, had become a nation in arms, an army in being, and was giving the world a great example of organized military power and of bravery in the field. The charges against the Italian soldiers spread abroad by the foreign press he attributes to the jealousy and astonishment which other nations felt when they saw the Italians, whom they believed capable of wielding only the pick and shovel and the "stiletto," well able to use the rifle and the bayonet. The oration ends with a fine invocation to the dead soldiers, who, having fallen at the moment of victory, will go to cheer the spirits of those other dead Italians who were struck down on the fatal days of Lissa, Custoza, and Adna.

The expedition to Tripoli has produced a profound change in the spirit and temper of the Italian people. There is a decline in literature of the morbid, sentimental, neurasthenic kind, which had been so abundantly exploited in the last two or three decades, and even writers who originally made their name in that field are tending to follow a more manly and robust vein. The war poems of D'Annunzio mentioned above are a striking instance of this. Books of travel and adventure, essays on the political and economic conditions of foreign countries, on colonialism, expansion, and military matters are now read with an eagerness hitherto unknown. A remark which one frequently hears is that "the war has changed us all and has changed all in us." It marks the birth of a new Italian national feeling, the real unification of the Italian people.

L. V.

NEWS FOR BIBLIOPHILES.

The library formed by Mr. Beverly Chew, which has recently been purchased by Mr. Henry E. Huntington, is worthy of more than the passing notice which it has received in the news columns of the daily papers. Mr. Chew, who is vice-president of the Metropolitan Trust Company, is one of the best known of American book-collectors for more than one reason. Not only has he been collecting books much longer than most of the others (Sewall, Foote, Bierstadt, Adee, Cole, and Hoe, once his associates, are gone and their libraries have been dispersed at auction), but he was endowed by nature with a marvellous memory for details, at least about books, and the minutest particulars about editions, issues, states, and variations, locations of other copies. sales at auction, and prices of books and prints in the classes which interested him, are filed away in his well-ordered brain and always at command. Moreover, this information is always at the service of other book-collectors, and, what is not always so in similar cases, at the service of the booksellers. He has not written much upon bibliographical subjects, but his contributions to the short-lived *Bibliographer* upon the editions of Butler's "Hudibras" and upon Waller's "Poems" were models for others to follow, and, needless to say, they are the final word upon those subjects. He has never been abroad, but English book-collectors and librarians appeal to him as the final authority on many bibliographical subjects, and there is one English collector of engraved portraits of Milton who is eagerly and expectantly waiting for Mr. Chew to walk in upon him in his pleasant old house in Well Walk, Hampstead, that he may compare "states" of their prints and swap (though the English collector would never use this word) anecdotes about what bargains they used to get before their respective Milton portrait catalogues were circulated.

Mr. Chew has been a most faithful friend to the Grolier Club, and books and prints from his collection have been shown at many of the Club's exhibitions. The Club's display of Milton portraits (mainly Mr. Chew's) was the finest ever got together anywhere.

Mr. Chew, before his graduation from college, now forty years ago, was collecting books. Then he aspired to own nicely printed reading editions of the older English poets, especially those issued by William Pickering. Before Leon, who had a shop under the Fifth Avenue Hotel, began booming first editions of American authors, Mr. Chew and Mr. Foote (a well-remembered book-collector and one of the kindest-hearted of men) used to buy the choicest and rarest first editions of Longfellow, Lowell, and Whittier at fifty cents and a dollar a volume. Mr. Chew sold his collection of American first editions in 1900, and it went, *en bloc*, into the J. C. Chamberlain collection. Indeed, some of Mr. Chamberlain's choicest volumes were formerly Mr. Chew's; most notable, perhaps, the copy of Lowell's first volume of verse, "A Year's Life," which Lowell presented to Tennyson and which Tennyson discarded. Mr. Chew bought it for a few shillings from an English second-hand bookseller's catalogue.

But the collecting of the works of the English poets, a love for which was probably inspired in him by some unremembered college professor of long ago, has been Mr. Chew's avocation for many years, and it is the collection of these books which Mr. Huntington has just purchased at a great price.

Oliver Wendell Holmes said that a library should be complete upon some one subject, even if no more than upon the history of pin-heads, and, if Mr. Chew has not been able to gather together the greatest collection of Shakespeare in the world, he has given his library the leading place for its collections of the first and later editions of the writings of such men as George Wither, John Donne, John Cleveland, Francis Quarles, Edmund Waller, and other writers of their period, who, as is shown by the number of editions, authorized or spurious, which have come down to us, were once the favorites of English readers. Nor are the monuments of English literature entirely absent from the collection. There is a set of the four folios of Shakespeare, the possession of which makes any library notable, though unfortunately the First Folio (1623) is not perfect, as has been stated in the press. The leaf containing Ben Jonson's verses and the title-page are in facsimile, but the volume is one of the largest, cleanest, and soundest copies known. It formerly belonged to the late John Boyd Thacher of Albany, and was one of the few books which he sold shortly before his death. Mr. Thacher's great collection of incunabula is now on loan at the Library of Congress and will, it is to be hoped, find a final resting place there. The Second Folio has the rare Smethwick imprint, and the Third is a fine copy of the 1664 issue from Frederick Perkins's library, with his arms. There is also a fine copy of Shakespeare's "Poems" (1640), bought, no doubt, largely on account of the frontispiece portrait engraved by William Marshall. Marshall's portraits and engraved titles have long been objects of Mr. Chew's love, and few have escaped him. The Miltons include the first "Poems" (1645), another book with a Marshall portrait, which is chiefly remarkable for the trick which Milton played upon the engraver. Below the portrait are four lines in Greek written by Milton and engraved by Marshall who, unfortunately, was not a Greek scholar. These lines have been translated:

> That this likeness has been drawn by an unskilful hand, you would say at once, if you could see the original, but, my friends, as you cannot recognize the portrait, laugh at the misrepresentation of this botching artist.

There is a first edition of "Paradise Lost," with the first title-page and with seven lines believed to be in the autograph of John Dryden, also a long series of later editions, including the very rare first American edition, with the portrait by Norman.

The unique character of the collection, however, lies in the unequalled series of the books of certain minor seventeenth-century authors: Brathwaite, Cleveland, Donne, Quarles, Vaughan, Waller, and Wither, and books by other such little-read authors as Crashaw, Denham, Flatman, Flecknoe, Sandys, Urquhardt, Southwell, and many others, books which are, many of them, actually as rare as Shakespeare quartos. The list of books by Richard Brathwaite comprises twenty-nine titles, that by John Cleveland thirty-five titles; that by Francis Quarles thirty titles, and that by Wither fifty-four titles, each being, probably, the most extensive series ever brought together.

Mr. Chew has also collected the books of nineteenth-century English poets: Tennyson, Swinburne, Morris, Rossetti, and others, and especially those minor writers, such as Locker, Bridges, Blunt, O'Shaugnessy, and the writings in verse or prose of Andrew Lang, Austin Dobson, and Edmund Gosse. But these collections he has not sold.

It is to be hoped that some way may be arranged by which the Chew collection will retain its individuality as a part of the larger library which Mr. Huntington is bringing together so magnificently.

It must be either twenty-seven or twenty-eight years ago that the writer of this, then employed in a book shop in a minor Western city, read in his *Critic* (the good old weekly *Critic!*) Mr. Chew's verses, "Old Books Are Best." He had never seen a really "old" book then, but the spark was there. Since then many of the world's rarest books have passed through his hands. Fortune has not permitted him to become a book-collector, only a bibliographer and a bookseller, but still he says, as Mr. Chew then wrote and still believes, "Old books are best." L. S. L.

Correspondence

DISCRIMINATORY TOLLS.

TO THE EDITOR OF THE NATION:

SIR: The suggestion has been made that the United States Government could satisfy the stipulations of the Hay-Pauncefote treaty in regard to equality of treatment "of the vessels of all nations" by the simple device of imposing a uniform charge upon all ships passing through the Panama Canal, and then granting a special rebate to American vessels. The uniform charge, it is contended, would fulfil the treaty condition of "entire equality" to the very letter: the subsequent rebate to American ships would be a mere matter of domestic economy with which other nations would have no concern. Should other nations find themselves injuriously affected by the special favor shown to American ships, they ought not to feel aggrieved, since there was nothing to prevent them from adopting a like liberal policy towards their own shipping. The United States would certainly not object to the Governments of other countries paying a part or the whole of the canal charges on their shipping by way of bonus.

But the advocates of this preferential policy have overlooked an important historical precedent in which a similar principle was involved. Under the terms of the Treaty of Washington, 1871, "the use of the Welland, St. Lawrence, and other canals in the Dominion on terms of equality with the inhabitants of the Dominion" was granted to the citizens of the United States in return for certain concessions. The Canadian Government proceeded to spend large sums of money in improving the canal system on the Great Lakes and the St. Lawrence. But the results, from a national standpoint, were very disappointing to the Canadians. The great bulk of the traffic continued to be carried in American bottoms and to pass through American ports. The Government at Ottawa, accordingly, resolved upon a policy of affording direct encouragement to Canadian shipping, and to the import and export trade of the lower St. Lawrence. To this end a series of orders in Council were issued under the terms of which a rebate of 18 cents a ton was granted on grain and other products carried through the Welland Canal to Montreal, or any port east thereof, in case of exportation; the transshipment of cargo in Canadian ports was permitted without loss of the rebate, but otherwise, if made in the United States, and the toll on cargoes eastward was reduced to one-half the amount charged on cargoes westward-bound. The purpose and effect of these measures was to favor the Montreal route and Canadian transshipment at the expense of American vessels and trade routes.

The United States Government protested strongly against this discrimination as a violation of the terms of the treaty. As the Canadian Executive failed to heed these representations, the President submitted the matter to Congress, which promptly passed an act requiring the President to suspend by proclamation the free passage of Canadian vessels through the St. Mary's Falls Canal, and to impose retaliatory tolls upon the same whenever he should be satisfied that the passage through Canadian canals of American vessels, cargoes, or passengers, bound to an American port, was prohibited, made difficult, or burdened with tolls which he should deem unjust or unreasonable. A proclamation was accordingly issued by the President, August 18, 1892, imposing a toll of 20 cents a ton "on all freight passing through St. Mary's Falls Canal in transit to any port of the Dominion of Canada."

The decisive action of the President had the desired effect. The following February the Canadian Government issued a new order in Council, imposing uniform dues on all vessels using the Welland and St. Lawrence, irrespective of their nationality and destination. Upon receiving assurances from the Canadian Executive that the new regulations involved the abandonment of all provisions in any way discriminating against the United States, the President issued a proclamation suspending the collection of tolls on the St. Mary's Canal.

In view of the resolute attitude of President Cleveland on this occasion, it is difficult to see how either Congress or the President can consistently support a somewhat similar preferential policy in respect to tolls on the Panama Canal. The guarantee of equality of treatment is even stronger in the Hay-Pauncefote treaty than in the treaty of Washington, inasmuch as it is expressly provided in the former that "there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise," and by way of additional security there is added "such conditions and charges shall be just and equitable."

The United States cannot afford thus to play fast and loose with her international obligations. To adopt such a policy would not only lower the honor and prestige of the Government among nations, but would justly expose American commerce on the Great Lakes to the danger of retaliation on the part of the Canadian Government. That this danger is by no means inconsiderable, is manifest from the fact that the tonnage of American vessels passing through Canadian canals on the inland lakes and rivers is much greater than the tonnage of Canadian vessels using the same, and is rapidly increasing with the development of Western trade. The dependence of American shipping on the Canadian canal system will be still further emphasized by the deepening of the Welland and St. Lawrence Canals, so as to afford unobstructed passage for seagoing ships from the shores of Lake Superior to the ports of Europe.

C. D. ALLIN.

Minneapolis, October 22.

ARMAGEDDON AT ATHENS.

TO THE EDITOR OF THE NATION:

SIR: In the fifth chapter of J. B. Bury's "History of Greece" occurs the following passage relating to the skilful politician who overthrew the Athenian democracy and became absolute ruler:

> By professing democratic doctrines, and practicing popular arts, he ingratiated himself with those extreme democrats who, being bitterly opposed to the nobles and not satisfied with the Solonian compromise, were outside both the Plain and the Coast [the two old parties]. Pisistratus thus organized a new party. . . . It included . . . many discontented men. . . . With this party at his back, Pisistratus aimed at no less a thing than grasping the supreme power for himself. One day he appeared in the agora, wounded, he said, by a foul attack of his political foes—his foes because he was a friend of the people; and he showed wounds which he bore.

The Muse of History seems to be rather an uninventive authoress; unlike Shakespeare, she is given to repeating herself. We are not told exactly what Pisistratus said on the memorable occasion of his showing his wounds to the people; but would it not be safe to conjecture that he said something like this?—

> I am not thinking of my own success. I am not thinking of my own life or of anything connected with me personally—I am not speaking of myself at all. I give you my word, I do not care a rap about being stabbed, not a rap. What I do care for is my country.

If the great Athenian expressed himself thus, no doubt he spoke sincerely. Who will venture to accuse the wolf of hypocrisy, when he protests that he cares for the sheep? POLITES.

Denver, Col., October 19.

THE INTERPRETATION OF LIFE.

TO THE EDITOR OF THE NATION:

SIR: The letter of Mr. Harold G. Merriam on "The Semester Course and Cultural Studies" (*Nation*, October 10) leads me to send you the following suggestion. What our colleges seem to need most of all is a broad study of the interpretation of life.

At the risk of seeming visionary, and with a fair appreciation of the difficulties involved in the scheme, I would propose the following course, to extend through the four years of college work. The first year should give a discussion of literature and art as attempts to interpret life. Abundant reading should be required, and the course should be prescribed for all students. The second year should be given to a discussion of the purpose, methods, and limitations of science as an attempt to study and interpret life. The third year should be similarly devoted to a study of the great philosophies, not as systems of speculation, but as studies in the interpretation of life. The fourth year should be occupied with the still more intimate interpretation of life to be found in religion, which at present has virtually no place in college work, but is left to the free associations and Bible classes among students, without a special teacher.

Whatever the difficulties such a course might present, they would be amply paid for by the real, broad culture it would give to all students. The student would gain not only culture, but even more the ability to appreciate culture, which is in itself a high form of education. Another great benefit to be derived from such a course would be the destruction of the proverbial senior's or graduate's omniscience. If the student has never been directed to the deeper problems of life, but gets only a fragmentary solution of a fragmentary problem here and there, he may naturally imagine that he has solved all questions and acquired all knowledge in his four years of college life. A true cultural course would be the most effective cure for such a tendency, and this would in itself be a valuable preparation for life. W. A. LAMBERT.

South Bethlehem, Pa., October 24.

Literature

JOSEPH WHEELER.

General Joseph Wheeler, and the Army of the Tennessee. By John Witherspoon Du Bose. New York: The Neale Publishing Co. $3 net.

Mr. Du Bose, one of five soldier brothers, of whom three laid down their lives for the cause of the South, is well known as an author and journalist. Of Huguenot ancestry crossed with Scotch, as we infer from the record, he was nurtured in a South Carolina environment, and has the character and ideas to be expected from such antecedents and surroundings. His portrait of his hero is glowing but not extravagant.

Wheeler, a brilliant champion of the "Lost Cause," was oddly enough of old Massachusetts stock, a near kinsman of the Rev. James Freeman Clarke, both being grandsons of the unfortunate Gen. Hull, of the War of 1812. His parents went to Georgia, where Joseph was born, but he was educated in New England until he went at last to West Point. His Puritan heredity and training did not quench his Southern ardor, and when scarcely out of boyhood he was armed and in the saddle. His promise for achievement was small. His stature was only five feet two, he weighed less than a hundred pounds, his voice was gentle, his manner unaggressive. But the stuff for the best soldiership was in him. It would be worth while for some one to show to how large an extent the great soldiers of history have been in physique small, compact, unimpressive men. Wheeler's frame was alive in every fibre, answering to the call of an iron will and a quick and well-balanced mind. He seems to have been never ill, went unwearied through a hundred combats, and though always in the front, escaped wounds. His puny figure seemed almost to elude marksmanship. It is to the credit of Bragg that he recognized early the quality of the almost child-like champion. He showed capacity at once, and at Shiloh commanded a regiment.

His rise was rapid. Before a year had passed he was a major-general, winning great distinction especially in covering the Confederate retreat from Kentucky in 1862. His rival as he rose was no other than Forrest, fifteen years his senior, who no doubt surpassed him in military genius, a fact which Wheeler seems to have modestly recognized. He was set above Forrest, but it was in spite of Wheeler's wish. Though mutually respectful, the two cavaliers never worked well together, and in a vivid picture, one of many in which his book abounds, Mr. Du Bose describes their final disagreement. Wheeler, with Forrest under him coöperating not cordially, had suffered a repulse, which led to a retreat through rain, darkness, and cold. Catching a brief rest in a miserable shanty,

> The generals gathered about a wide hearth where blazed a log fire. Wheeler sat on one side, Wharton on the other, while Forrest lay flat on his back, a turned-down stick-chair supporting his head, and the heavy boots enclosing his feet, wet, rested on the hearth. Wheeler dictated to his adjutant his report of the day to Gen. Bragg. Forrest sharply called out that his men "should receive justice." "I will give your men justice, General," was the low-spoken but firm answer. A scene followed. Forrest raved. He exclaimed: "General Wheeler, I am your friend. You know I respect you. You may take my sword from me, but I never will go into battle again under you!" "I do not want your sword, General Forrest," replied Wheeler, imperturbable. Wheeler once, at a later time of great peril to the army, offered to serve under Forrest for a given purpose, but Forrest never again served under Wheeler.

In the great campaigns of which the central events are the battles of Murfreesboro, Chickamauga, and the fall of Atlanta, the reputation of the young general, only twenty-five, constantly grew. The inferiority of the Federal cavalry was at this time apparent, to none more plainly than to Grant, Sherman, and Rosecrans. It may be said, probably, that the Federal cavalry never became properly effective in the West until the coming, at the very end, of

James H. Wilson. Wheeler's task during the "March to the Sea" and through the Carolinas was indeed a forlorn one, but he maintained his prestige. When, in 1865, the Richmond Government conferred the rank of lieutenant-general upon a cavalry officer, it was a question whether Gen. Wheeler or Wade Hampton was the better entitled to the honor: it fell to Hampton perhaps unfairly. Wheeler's service, unbroken through the four years, was fearless, and in every way efficient. It is a disappointment that Mr. Du Bose's account of Wheeler ends abruptly with 1865. He lived forty years longer, a modest and loyal citizen of the Union he had sought to overthrow, becoming at last a conspicuous figure in still another war. But of all this he takes no notice.

The author, in this crowded book, is no more interested to describe Gen. Wheeler than to tell the story of the Army of the Tennessee, and both these topics seem incidental to a larger purpose, to narrate summarily the tale of the whole Civil War, in fact still more the relations of North and South from the foundation of the Government. A zealous disciple of Calhoun, and an experienced writer moreover, he presents with unusual force the Southern view. On many points, of course, his conclusions will be questioned, but they are not negligible. Candid historians must weigh them with care. As to South Carolina nullification in Jackson's day, he contends that it was a protest rather than a rejection, directed not against any constitutional provision, but against a Federal enactment believed to be unconstitutional, the "tariff of abominations," namely, quite certain to be set aside by the Supreme Court when opportunity offered. As to slavery, taking the thing in the large, Mr. Du Bose thinks it was beneficent. Several millions of a backward race were undergoing therein a schooling for a status higher than barbarism. The slaves were emerging into serfs, and in a generation or two were quite certain to become wage-earners. The extinction of slavery was certain, for economic reasons. A slave at his best in 1850 was worth $1,500, his yearly earning capacity but $200. It required long nurture to bring him to efficiency, and he rapidly deteriorated as he advanced in years. For long periods the slave's earning capacity was small; in childhood and old age he was only a charge. Economically, slavery was too burdensome, and was on the point of sinking out of sight, through its own weight, when the demand from outside for precipitate abolition aroused passion, and an angry people rallied to defend a moribund incumbrance. In Mr. Du Bose's sociology slavery, in spite of incidental inhumanities, was serving well the good purpose it has often served in human history, training for a higher status a race that has lagged behind. In substance, many good things which we are striving hard to gain in the industrial stage, old-age pensions, employers' liability in case of accident, insurance against illness and disability—these were all obtained. But it cost too much; it was surely doomed, and about to pass away as a thing outgrown.

In respect to the causes of the Civil War, Mr. Du Bose argues that the North, and not the South, was the Constitution-breaker. Massachusetts, in 1840, made it felony to return a fugitive slave, a direct infringement of the Constitution. The doctrine of the "Higher Law" was announced and widely accepted. The "Underground Railroad" was a fact East and West, and the party which prevailed in 1860 sanctioned or connived at the most extreme acts and utterances. His name for the war-party of the North is "The Nullifiers," and he contends that it is much more truly descriptive than when applied to South Carolina. The compact was broken, and the aggrieved States exercised their right, never yielded, to withdraw. We have no space or desire here to wrestle with the contentions of Mr. Du Bose. It would be indeed a threshing of old straw. It may be asserted that his arguments have been often and long ago refuted. But they will not down. Here they are presented with thorough sincerity and unusual ability.

As regards the conduct of the war, while Southern soldiership is held at the highest, the author does not minimize the great difficulties of the Northern armies, is fairly appreciative of their bravery, and cognizant of the skill of their greater leaders. His admiration of the force and tact of Lincoln is quite unbounded. He exalts his character, and holds that a great calamity befell the South in his assassination. Among the Confederate generals he admires especially Joseph Johnston, and holds that but for his displacement by Hood before Atlanta, in 1864, the Washington Government would have been overthrown and the cause won. This contention of Mr. Du Bose is easier to admit than many others. Had Sherman failed before Atlanta, the autumn election must have been lost to the upholders of the Union. Johnston's masterly defence had that end in view, and there is small reason to think he would have failed. For this disaster to the South, and the ill success in general, Mr. Du Bose bitterly arraigns the Richmond Government, and particularly Jefferson Davis. Conceding to him accomplishments, courage, sincerity, and force of character, he holds his leadership to have been fatally defective. He judged men poorly, blundered as to expedients, was impervious to advice, and obstinately self-willed. His diplomacy was utterly abortive. In finance he wretchedly failed. In its cotton the South possessed a source of vast wealth, which with proper management could have been continuously produced and marketed. The fatuity of Davis culminated in his conduct of the war. No skill or valor could avail to counteract the influence of his paralyzing hand. He sustains this charge by instances from the entire field of strife, but especially from the melancholy story of the Confederate Army of the Tennessee. Northern readers of this book will find many things to question, and at the South it must meet with much disapproval; but it is worth taking into account.

CURRENT FICTION.

[LEONARD MERRICK.]

Cynthia: A Daughter of the Philistines. By Leonard Merrick. New York: Desmond FitzGerald.

The Man Who Was Good. The same.

Mr. Merrick belongs to that brilliant, versatile, and industrious order of literary workmen which has done so much during the past two decades to console England for her lack of the higher imaginative product. It is long waiting for the curtain to rise again, but we are not permitted to be dull during the entr'acte. With a Shaw, a Wells, a Chesterton, or a Bennett always ready to do a turn in front, much may be forgiven the management for its slowness behind scene.

These are not young men. Each of them has qualified himself by a hard apprenticeship for the trade of literary entertainer. Each of them has learned the stops of various quills, and is a master of the quick change. Each of them at his best is something better than an entertainer, but entertainment is the business of their lives. The fact that they are so much cleverer at it than we Americans, who used to pride ourselves on being a nation of show-people, is disconcerting, but not hard to explain. The truth is, we have no such school of discipline as London provides her writing men withal. Flowery beds of ease are not the invariable portion of the American who writes for a living. The game is hard enough, whatever the local rules. But with us the worker of more than ordinary ability has a fair show. There are so many means of publication, so many audiences to appeal to; wages are at least above the starvation scale; at worst he can hardly be exposed to the grilling, killing struggle which an English writer has to survive in order to win a competence. Kill or cure—there is no reason why a man with vitality enough to pull through at all should not have strength left to be gay. Death must have lost its terrors for him; and if he had not been capable of taking life as a jest, he must have given it up long ago.

The late George Gissing set forth the details of that grim struggle—his gayety had not been proof against it, and he went through life a haunted man. Mr. Merrick no doubt had more to begin with, and it has survived, to the undoubted increase of his audience. But in one of his best novels—perhaps the best of them—he has given his own record of the experiences of a young writer in London. "Cynthia" and another of the early stories have just been reissued by an American publisher. This would seem to indicate that their author is gaining ground in this country rather than losing it. The fact that these new issues are not by the same publisher who only the other day inintroduced these novels and most of Mr. Merrick's other stories to the American public, is puzzling to the lay mind.

Mr. Merrick, we have said, belongs to the versatile school of current British authorship. It is not a versatility of the older type—like that of the late Andrew Lang, for example. Scholarship is not among its assets. But as entertainment its range is considerable. It passes with ease from grave to gay, from lively to severe, and employs the tools of realism or romanticism as the mood of moment, or the character of the chosen audience, may determine. Mr. Merrick has written some fifteen novels and a liberal handful of plays, all entertaining in one way or another. He began to write in the day when realism was an acknowledged war-cry, but the romantic vein was strong in him even then, and since has often had its way frankly. To compare "The Man Who Was Good," "Cynthia," and, say, "Conrad in Quest of His Youth," is to compare different dishes by the same chef.

The helplessness of love, its persistence in the face of reason, is the theme of "The Man Who Was Good." The intention of the treatment is to record fact. The opening scene, a dressing-room in a provincial theatre, is presented without glamour, and the three persons therein, two actresses and an actor's wife, speak the tongue of real life. But almost at once the serpent of romance is seen to rear its head. The wife is not a wife: the actor is a villain, who virtually turns her out upon the street. She makes her way to London, and the tale of her vain efforts to find work is told with Gissing-like detail. From actual starvation she is rescued by "the man who was good." Coming to the knowledge of her story, he still wishes to marry her, but she cannot reward him with love. The situation is real, but the solution of it is on the plane of melodrama. That such a woman might still love the wretch who had betrayed and forsaken her, and might choose to give her life for the life of his child, is true; but the manner of her sacrifice has the damning novelty of a trivial invention. The whole affair has somewhat the effect of one of those moving-picture "shows" in which the photographic reproduction of real people in action is reinforced by dormant colored monsters of the popular fancy as crude and unreal as the chromos of a by-gone day.

In some of his later novels, we have suggested, Mr. Merrick has frankly thrown off the bondage of truth-to-facts. "Conrad in Search of His Youth," as a diversion of whimsical humor, has a sincerity of its own. But this writer is not most successful as a humorist. In such a story as "Cynthia," with its fidelity to fact and to that larger truth for which, after all, we have found no better word than romance, he is at his best. It records the hard facts of the literary trade in London, but it also tells a delightful story. On the basis of a first success with a novel which has had excellent reviews and a small sale, young Kent marries the beautiful daughter of a family of middle-class Philistines. His art is precious to him, and his discovery that it means nothing to his wife saps his feeling for her almost at the outset. The refusal of his second novel by publisher after publisher, and his unwillingness to make copy, earn him the scorn of the Philistine family, and might have been expected to alienate the stupid young wife. But she loves him, and love makes all things possible for her. His poverty, their actual want, brings her closer to him. Her heart awakes her mind, and she begins to understand his work. He begins to see the stuff she is made of, but is destined to pass through the halls of Circe before their union is finally made perfect. The change in each of them is shown not as a conversion by force of the author's elbow, but that gradual and natural development of kindred tastes and feelings which is so often the seal of an unpromising marriage.

Mr. Merrick is barely past middle age, just arriving, it should seem, at the fit age for quiet and sound interpretations of this sort. Why should not such a writer confine himself to his Cynthias—why should not Mr. Bennett be content with his Clayhangers—and leave the business of being merely amusing and clever to those who can be nothing better?

Marcus Holbeach's Daughter. By Alice Jones. New York: D. Appleton & Co.

The sins of the fathers and the love affairs of the children make dull reading in these pages. One ends with the impression that in Lanse Louise, on the New Brunswick coast, the past generation of fathers must have been a uniformly bad lot. There was, or rather had been (since he is made known to us only as a bitter memory), the bibulous and improvident father of Jack Le Roy, whose widow must needs support herself by the sale of home-brewed remedies and home-made preserves, while Jack seeks his fortune among the hazards of Arctic exploration and mine prospecting. There was also the limp invalid hotelkeeper who collected geological specimens and absorbed his daughter's sympathy, while his wife conducted the business and saved to pay back his creditors in the States. That his innocence is eventually established is entirely due to the happy chance that brings the son of his fraudulent former partner to fall in love with his daughter. And, chiefly, there was Marcus Holbeach, amiable, personable, wealthy, who had had his illegitimate daughter brought up in the idyllic seclusion of this Canadian village, and who yearly, after the Cannes season and the Paris season and the London season were all quite over, seized the opportunity to escape from the society of a notorious, beautiful, and often burdensome Lady Violet, and repaired to this colonial retreat to play the fond English parent for a few weeks and go a-fishing. Him likewise the author has seen fit to remove finally from the scene of human affairs, after he has made a vain effort to marry his daughter to his nephew and heir-at-law, repelled Lady Violet's invasion of his domestic fastness, and indulgently provided for the future of his Virginia and her stoutly preferred Jack. The author displays far more interest in these dark pasts than in the peculiar quality of present-day life in the region described. The reader could wish that it had been the other way round.

THE OFFICE OF THE JUDICIARY.

Majority Rule and the Judiciary. By W. L. Ransom. New York: Charles Scribner's Sons. 60 cents net.

Mr. Ransom writes in his preface, "Ambition is a strong stimulus to superlatives." These words correctly describe the tone of the introduction which Col. Roosevelt has written to this book. It is full of the usual denunciations of all who differ with him. The opposition of "ordinary men" is explained by the fact that they have access only to channels which are wilfully poisoned, but lawyers, and especially corporation lawyers, who disagree with him, do so because "they are generally unable to understand justice and are generally unable to think of the judge except as an instrument devised to protect privilege against the right of the people by invoking the technicalities of the law for the purpose of preventing the obtaining of justice under the law." The opinions of the New York Court of Appeals, which is held to be the chief obstacle to the realization of the ideas of social justice entertained by Mr. Roosevelt, are contemptuously referred to as not merely iniquitous, but stupid. It may be noted in passing that in at least three out of the four cases quoted Mr. Roosevelt has, as was demonstrated by Mr. Guthrie in his article in the *North American Review* for August, completely misrepresented the meaning and scope of the decisions as well as the facts on which they were based.

The tone of the book itself is entirely different. The opinions of the Court of Appeals are described as able and thorough; the author is aware of the facts, which have evidently escaped Mr. Roosevelt, that the political philosophy of the time when the "due process" clause was adopted recognized the existence of rights in the individual, independent of and superior to the State; that the domain of the State was limited to well-defined functions, not as a matter of expediency, but as a matter of law and right, and, as a consequence, that as long as these provisions guaranteeing such rights remain unchanged as part of the Constitution, the scope of the police power, so far as the courts are concerned, is a mere question of law to be determined by legal precedents. While the author states this point clearly in one part of his book, he elsewhere attempts to justify the proposed appeal to the people in the tendency of a few men to obstruct the will and needs of the many by matters which present "only divergences of views as to what is expedient and proper so far as society as a whole is concerned"; and again he quotes with approval the opinion of Judge Gaynor, that the courts have set themselves "against the manifest and enlightened will of the community in matters of commercial, economic, or social progress."

Such statements completely misrepresent the position of New York courts. In its opinion in the Workman's Compensation Act, which is the chief subject of attack, it expressly recognizes the strength of an appeal "to a recognized and prevalent sentiment," but bases its decision on the fact that such appeal must be addressed to the people and not to the court. Clearly, if such sentiment is in favor of substituting for the doctrine of reserved and superior personal rights the doctrine that "the State can do what it ought to do," regardless of the effect of such action on private rights, it is for the people to change the Constitution, not for the courts to interpret the existing provisions in a manner contrary to their meaning as seen by the light of history. The author tries at great length to demonstrate that the right so to change the Constitution actually exists. No one seriously contests the existence of that legal right. What is contested is the moral right of the majority to impose their ideas of justice and expediency on an unwilling minority; to substitute paternalism for individual action and decision, even where the individual is entirely capable of judging for himself what his best interests require; to compel, for instance, as the author advocates, the workingman to waive his right to be adequately compensated for injuries suffered without his fault, under properly drawn Employers' Liability and Labor Acts, and to force him to accept the utterly inadequate compensation which the Workman's Compensation Act extends to the careful and negligent alike.

This tyranny by the majority is treated lightly by the author, and still more lightly by Mr. Roosevelt. He quotes Mr. Bryce in support of the belief that no such tyranny exists in America. He forgets to quote the words which immediately follow; namely, that this is so because of "the host of constitutional limitations which a tyrannical majority would need some skill to evade," and because, thanks to such a guarantee, "they cannot encroach on the personal liberty of the citizen, nor *on the full enjoyment of private property*." The very safeguards it is now intended to remove.

But assume that the change is made, would the results desired by Mr. Roosevelt and the author be the logical consequence? It is proposed to submit to the people the question whether a law which has been declared unconstitutional by the court shall stand notwithstanding. The proposition is described as being only "an effort and means to bring laggard State courts of ultimate appeal up to the progressive standard set by the nation's great court." The reform is not advocated for that court because it has adopted such progressive standard. It follows logically from this that it never would have been proposed and would be unnecessary if all State courts had adopted such standard and had subscribed to the doctrine of Judge Holmes, as quoted by the author and Col. Roosevelt, that "the police power may be put forth in aid of everything that is held by the prevailing morality or the strong and preponderant opinion to be greatly and immediately necessary to the public welfare."

Yet even under the new system it could not be held that, when the constitutionality of the law is challenged before a court, the mere fact that it has been passed by the Legislature is conclusive evidence that it comes up to the test. If this were so, it would be a mere play of words to say that the question is submitted to the court at all. The court would have to determine for itself whether, in its judgment, the law was backed up by a "preponderant opinion" that it was "immediately necessary to the public welfare." If the court should come to the conclusion that such prerequisite did not exist, it would have to declare the law unconstitutional. But if it did so, would not such a decision present the very case which it was intended to obviate? Would it not call for an "expression of the social opinion which is entitled to correct and overcome the court's original view as to what that opinion was"? Yet, according to the plan proposed, there would be no appeal to the people and the decision of the court would be final. We find no explanation in the book of this vital and fundamental inconsistency.

If the question as to the validity of laws intending to further social justice is no longer a legal one, what is the reason that the courts should be called upon to pass on it? If the question is one of mere expediency, we agree with the author "that it is all wrong to require or permit our judges to pass upon such matters." The New York Court of Appeals has always recognized this fact, and the books are full of decisions stating that where a measure is within the domain of State action, the question of its expediency and wisdom is not for the court.

If the change in our Constitution which is advocated is to be made, it should be left solely to the people to decide by referendum or other method what law passed by the Legislature accords with the prevailing ideas of morality or justice.

Post Liminium: Essays and Critical Papers. By Lionel Johnson. Edited by Thomas Whittemore. New York: Mitchell Kennerley. $2 net.

Of all the disciples of Walter Pater the most loyal and most promising was Lionel Johnson, who died by a pitiful accident in 1902, at the age of thirty-five. Promising, we call him, although he had already accomplished some of the finest writing of his generation. He himself, we suppose, would have regarded his poetical work as more important than his prose, and in a way it is certainly his more finished product. But we may question whether, in the end, he might not have made the higher mark as critic. For one thing, notwithstanding the fact that his most imposing ode is called by the name of the land whose cause he championed and whose religion he adopted, his affiliation with the Irish movement probably diverted him in his verse from his true field, whereas this influence is scarcely felt in his prose. He was, in fact, but loosely connected with Ireland by blood, and by education at Winchester and Oxford he was wholly English. In execution his verse is solid, even magnificent, one of the precious things of the century altogether too little known, and in the estimation of many quite above the range of W. B. Yeats and his Dublin band. But in substance, as dealing with his personal emotions, it has at times a morbid strain, due, no doubt, to the terrible affliction—the angel of the darker drink—under which he lived.

One book of Johnson's prose we already had—a profound, but somewhat labored and immature, study of "The Art of Thomas Hardy." Now, the editor of the present volume, by access to the file of Johnson's published papers kept by his sister, Miss Isabella Johnson, has brought together a collection of reviews and other articles which we accept gratefully as one of the most valuable publications of the year in the realm of pure literature. Most of the papers are brief, and we rather think the editor has made a mistake in attempting in some cases to give them a larger look by welding together two or three articles on kindred topics; but they are never hurried and they almost invariably show the fruit of a fine and deliberate scholarship. The personal morbidness that breaks through some of his poems does not here appear; he stands for the large and wholesome things of literature—barring possibly his extreme devotion to Pater and his misunderstanding of Byron—with his face against the tide, a master of the great tradition. If this is journalism, what might he not have accomplished if health and the fateful shears had permitted him in his maturity to plan a book!

The subjects of the volume are various—"Walter Pater," "Savonarola," "Lucretius and Omar," "The Fools of Shakespeare," "William Blake," "Saint Francis," "Leonardo da Vinci," "R. L. Stevenson," "Renan Truly Shewn," "Thoughts on Bacon," "Charles Stewart Parnell," "Erasmus, My Darling," "Poetry and Patriotism in Ireland," "O, Rare George Borrow!" "Santo Virgilio, "Cant," "Burke," "The Age of Dryden," etc., etc., Manifestly, it is not possible to characterize in detail so many and so diverse studies. A quotation may give some indication of the way in which a theme, in the atmosphere of his wide knowledge, grows large and significant. He is passing from a consideration of "The Fools in Shakespeare" to the madnesses of history:

> It is the age of Hobbes and Herbert, Donne and Crashaw, Norris, Ferrar, and More; of men whose names and dates may fearlessly be mingled, on the strength of their common bond. That bond is an extravagance of mental habit: a wandering, whether to Christian Talmudism, Catholic Quietism, Anglican Platonism, or Erastian expedience, outside and beyond the strict limits of what is generally wholesome. An atmosphere is about in which the fool hides his cap and bells, and lurks in the folds of a Geneva gown, or lies ensconced in the lawns of Oxford, amid doctors and mitred men. Exclusive gibing is at an end, for folk are grown at once too wise and too foolish, too anxious and too trivial, to enjoy one hearty intellectual laugh at the world. Even Izaak Walton, peacefully angling among the water-meads of Itchen, his mind running on Marlowe's lyric, and no less on the bombast of Du Bartas; full of love for the venerable and courteous Provost of Eton, and no less for his "dear son" and unworthy son, Cotton—even Walton has not escaped scot-free from the infection of oddity. Despite the charm and beauty abundant, the age, as a whole, is warped from the Elizabethan vigor. And Sir Topas, continuing his research into continuity, would skip with a Benedicite over the strange years in which the strained brains of England gave way to madness, and such grim jesting sprang up as might be among the warring chivalries of Loyalist and Puritan; when there sat at last upon the throne, Dictator in all but name, a "gloomy brewer," who played monkey-tricks at Whitehall banquets, and made England honored through Christendom. Clearly, the professional jester was not wanted.

The Guardians of the Columbia. By John H. Williams. Tacoma: J. H. Williams, $1.50.

The Mountain that Was God. By John H. Williams. New York: G. P. Putnam's Sons. $1.50.

By issuing these two handsomely illustrated volumes on the mountains and forests of our Northwest, Mr. Williams has rendered a service of great value to the States of Washington and Oregon, and to all nature-loving Americans. It is possible, as the writer of this review can attest, to be fresh from a fortnight's sojourn at the Riffelalp, above Zermatt, in face of the Matterhorn and the glacial wonders of the Gorner Grat, acknowledged the climax of scenic Switzerland, and still be awed and thrilled at the mere sight of the pictures of Mt. Tacoma (Rainier) and the three guardians of the Columbia River—Mts. Hood, Adams, and St. Helens—included in these books. To enjoy the "Playground of Europe," Americans are helping the Europeans to spend $150,000,000 a year. It is safe to predict that some day Oregon and Washington will harvest as many millions from the visitors to their mountain and forest playground as they now do from their bountiful fruit crops; and Mr. Williams's pictures and descriptions will greatly accelerate the advent of that date. His books are perhaps the strongest argument ever brought forward in favor of the exhortation, "See America Too." More than fifty photographers, professional and amateur, contributed their best to make "The Guardians of the Columbia" a pictorial monument to the Pacific Coast; and so well are their contributions reproduced that one needs a reading glass to get all their impressive details. The number of these illustrations exceeds two hundred. Many are full-page, some in colors. A glance at them will convince any Alpinist that we have picturesque peaks, snowfields, glaciers, and rugged ice formations unsurpassed anywhere; and so vast are the four mountains named that not only do they dwarf the Cascade Range near by, but all along the Oregon and Washington coasts, at a distance of fifty miles and more, one may say of them in astonishment, "Thou art so far and yet so near."

No one, surely, can look at the picture of Portland on page 61, with Mt. Hood towering in the background, without confessing that Oregon's metropolis is one of the most superbly placed cities in the world. The impression is strengthened by another telephotographic view, on page 113, of the city, with another stupendous snow peak, St. Helens, as the background. From the heights, in the residential district, four more snow mountains are visible. Mr. Williams's text is devoted chiefly to Hood, St. Helens, and Adams. He tells the story of their career as volcanoes so far as geologists have laid it bare; he relates the legends the Indians invented about them; gives accounts of first ascents; of present facilities for reaching and climbing them; of automobile roads and mountain clubs and hotels, and so on; while Harold Douglass Langville contributes a chapter on the vast forests which hold about one-third of the timber in our country.

Of "The Mountain that Was God" a second edition has appeared, with much new matter of value to tourists, and 190 illustrations of Mt. Tacoma and its surroundings. It may be worth while to call the attention of the Board of Geographic Names in Washington to the fact that nearly all the newspapers that reviewed this book were in favor of the old Indian name for our grandest mountain in place of the name given to it by Vancouver in honor of his friend, Admiral Rainier, whose only claim to such a distinction is that he fought hard to make our Fourth of July impossible.

The Age of Alfred. By F. J. Snell. [Handbooks of English Literature.] New York: The Macmillan Co. $1 net.

This latest volume in the well-known series edited by Professor Hales is not always, as our German friends say, *auf der Höhe der Wissenschaft*, but, on the whole, it is an adequate and well-designed work of popularization. It is written with sympathy and good critical judgment and the liberal use of synopses and translations enables the reader to gain a pretty comprehensive idea of Anglo-Saxon literature.

The adequacy of the chapters differs considerably according to the literature of the several subjects of which the author has made use. Thus for the "Beowulf" he has had the advantage of Professor Sedgefield's recent edition, which gives a sufficient summary of critical discussion concerning the origin and composition of that poem; but in the case of poems, the standard editions of which have appeared outside of England, his information is less satisfactory. There is no sign, for instance, of his being familiar with the excellent editions of some of the principal monuments of Anglo-Saxon poetry which have been published on this side of the ocean—particularly in the Albion series.

The most curious error in the book is the assumption (p. 139) that Cynewulf is the author of the whole Exeter Book. Nor, it may be added, was there any need of quoting the late Professor Earle's wild opinion that Cynewulf flourished in the eleventh century. Mr. Snell is too fond of citing the authority of this scholar, whose work has never carried the weight outside of his native country that it seems still to carry there. As a matter of fact, whether rightly or wrongly, since Sievers's discussion of the subject, Cynewulf's *floruit* has been generally placed in the second half of the eighth century, not in the first half, as our author states. The legend of the poet's having been a professional *scop* in his youth has been so thoroughly exploded by C. F. Brown and others that it no longer deserves countenance. It is singular that Mr. Snell should make no allusion to the divisions in the "Christ," which are universally recognized, or to the sources of this poem—the Greater Antiphons of Advent, the hymn, "Apparebit repentina dies," etc., which are so significant for the methods of composition of the Anglo-Saxon Christian poets. The assumption that both parts of the "Guthlac" are by the same author, too, is against all probability. Still further, Mr. Snell's statement that the prose portion of the Anglo-Saxon version of the Psalms (Paris Psalter) is later than the metrical portion just reverses the judgment of the scholars who speak with most authority on the subject. The ascription of either division to Aldhelm, moreover, is out of the question. In connection with the Paris Psalter, it would have been well if Mr. Snell had mentioned what is really interesting about this book—namely, that in the *argumenta* of the prose-psalms it preserves the heretical interpretations of the psalms ultimately due to the great Greek theologian, Theodore of Mopsuestia—interpretations which in a somewhat distorted form anticipate so strikingly modern higher criticism of the Psalms. Besides, quite recently (in the current issue of the *Zeitschrift für Celtische Philologie*) Prof. R. L. Ramsay has shown conclusively that the above-mentioned *argumenta* betray the influence of Irish psalm-interpretation, so that they constitute one of the most interesting pieces of evidence in regard to the intellectual intercourse between England and Ireland in this early time.

Space fails us to comment on all the points in which Mr. Snell's book requires correction or additions. It is characteristic of his weaker side, however, that he should cite the antiquated edition (1834) of the Anglo-Saxon "Apollonius of Tyre" by his own countryman, Thorpe, instead of the much better one by Zupitza in Herrig's *Archiv* (1896). Furthermore, if "Beowulf" is by a single author, as Mr. Snell believes, and as is most probable, the conjectured influence of the "Æneid" on his work assumed by Brandl and Klaeber, is at least worth mentioning—for a Northumbrian poet writing about the year 700 a poem of this extent would be almost certain to know the "Æneid." Whether he was seriously influenced by it or not is, of course, another matter. Finally, it should be noted that it was Zangemeister, not Sievers, who discovered the fragment of the Old Saxon "Genesis" in the Vatican MS. which confirmed the latter's theory that the Anglo-Saxon "Genesis" in its narrative of the Fall of Lucifer and Temptation of Man was really derived from an Old Saxon original.

Notes

Houghton Mifflin Co. promises for next week: "The Autobiography of an Individualist," by James O. Fagan; "The Japanese Twins," by Lucy Fitch Perkins; "Intimations of Immortality in the Sonnets of Shakespeare," by George H. Palmer; "Uriel and Other Poems," by Percy Mackaye; "The Unconquered Air and Other Poems," by Florence Earle Coates, and Emerson's "Success" in the Riverside Press edition.

For a later date the same house announces volumes in the Riverside Literature series containing "Ralph Roister Doister" and "Gorboduc," both edited by Prof. Clarence Griffin Child.

Among Little, Brown's November announcements are the following: "Penal Philosophy," by Gabriel Tarde, in the Modern Criminal Science series; "The Sea Trader: His Friends and His Enemies," by David Hannay, and "The Fir-Tree Fairy Book," by Clifton Johnson.

Desmond FitzGerald has in press: "When Dreams Come True," a novel by Ritter Brown; "The Heart of an Orphan," by Amanda Mathews; "Seeing Europe on Sixty Dollars," by Wilbur Finley Fauley, and "My Friends at Brook Farm," by John Van Der Zee Sears, the last survivor of that little colony.

Dr. Charles Frederick Holder, of Pasadena, Cal., has in press an illustrated history of Quakers in England and America, which begins with the time of Fox and continues the story down to the present year.

John Stuart Thomson has almost completed his new book, "Revolutionized China," which will be issued in this country by Bobbs-Merrill, with many handsome illustrations.

Putnams have the following list of miscellaneous publications announced for this season: "Bubbles of the Foam," the story of an Oriental despot, by F. W. Bain; "Symbol and Satire in the French Revolution," by Ernest F. Henderson; "A Prisoner of War in Virginia, 1864-5," by George Haven Putnam, revised and enlarged; "Little Cities of Italy," Vol. II, by André Maurel, translated by Mrs. Helen Gerard; "The Effects of the New Count on Auction Bridge," by Florence Irwin; "Recollections of the Civil War," by Mason Whiting Tyler; "Immigration and Labor," by Isaac A. Hourwich; "The Elmira Prison Camp," by Clay W. Holmes; "The Last Leaf," a gossipy chronicle of the last three-quarters of a century of world history by James Kendall Hosmer; "The Development of Religion in China," by J. J. M. De Groot, and "Problems of the Sexes," by Jean Finot of the French Academy, translated by Mary J. Safford.

Prof. Hermann Gollancz is bringing out through Henry Frowde, "The Book of Protection," being a collection of Syriac charms and incantations in the original, with translation, introduction, and notes.

Other books announced by Frowde include: "Donne's Poetical Works," edited by H. J. C. Grierson, 2 vols.; "Four Stages of Greek Religion," by Gilbert Murray; "English Literature and the Classics," by Gilbert Murray, J. A. Stewart, G. S. Gordon, J. S. Phillimore, A. C. Clarke, H. W. Garrod, S. T. Owen, R. J. E. Tiddy, and A. D. Godley, collected by G. S. Gordon; "An Introduction to Greek and Latin Palæography," by Sir E. Maunde Thompson, and "The People of God: An Inquiry into Christian Origins," by H. F. Hamilton.

In "Scenes and Memories," which Smith & Elder are bringing out this week, Lady Paget tells of her social life as the wife of the British representative at Berlin and Copenhagen, at Madrid and Florence, in the sixties.

From the same firm we may soon expect George Mallory's "Boswell the Biographer."

Miss Elizabeth Grierson, author of the forthcoming book, "What the Other Children Do" (A. & C. Black), sets forth her experiences as a worker in the slums of large cities.

Autumn publications of John W. Luce & Company include the following titles: "The Sunset of the Confederacy," by Gen. Morris Schaff; "The Introduction to a New Philosophy" ("Introduction à la Métaphysique"), by Henri Bergson; Remy de Gourmont's "A Night in the Luxembourg," translated by Arthur Ransome; "Indian Fairy Tales," by Lewis Allen, and "Aspects of the Irish Question," by Sidney Brooks.

Two anthologies, one called "The Charm of London," the other called "The Charm of Venice," have been compiled by Alfred Hyatt and published by George W. Jacobs & Co. For the London, Yoshio Markino has provided twelve illustrations in color, which certainly do not miss whatever romance the atmosphere of the city affords. The illustrations of the other volume are by Harald Sund, also in color. The text of both books draws a deep net through prose and verse, and offers many extracts which will be pleasantly new to most readers.

The H. W. Wilson Co., of Minneapolis and New York, have issued what is called a third edition of "The United States Catalog," which lists (under author, subject, and title, in one alphabet) all American books in print January 1, 1912. It is really a newly made work. Besides noting all books of whatever date now in print, it includes also the titles (marked "o. p.") of all books listed in the annual "Cumulative Book Indexes" since 1906. For titles of books in print before 1906, but now out of print, the searcher will turn to the "United States Catalog" of 1902, or the "Supplement" of 1905. The present edition, a huge volume, gives all the publications of more than three thousand publishers listed in the back of the "Catalog," besides regular English importations and Canadian books. The information given includes the publisher, price, date of publication, and the Library of Congress card number. The laborious task of editing has been carried through by Marion E. Potter and a staff of assistants. We need scarcely observe that the "Catalog" is indispensable for all booksellers and buyers. So far as our examination of the pages can speak, the work has been thoroughly carried out. We only regret that the publishers lend their authority to the freakishness of the spelling reformers.

Three thousand seven hundred and forty-two pages are bound beween the covers of a single volume, "The Home Book of Verse," which Burton Egbert Stevenson has compiled for Henry Holt & Co. The use of thin paper has made this practicable. The book is bulky, but not unwieldy, and the type is comfortable to the eyes. Mr. Stevenson has attempted to collect "the best short poems in the English language from the time of Spenser to the present day, together with a body of verse which, if not great poetry, has at least the distinction of wide popularity." The latter division we take to mean limericks, nonsense verse, and *vers de société,* of which the volume contains most of the old stand-bys. Living writers, even of the younger generation, will be pleased and often surprised to find how much of their work has been chosen. They will be gratified, too, by the arrangement according to themes, by means of which they may see themselves grouped in small divisions with Shakespeare, Milton, and somewhat lesser men. This feature, however, is one which will strongly appeal to serious students of poetry, for the work has apparently been done with great care and the categories are sufficiently precise to make comparison profitable. Placed together are poems of the sea, poems of places, those on friendship and brotherhood, etc. The confusion which might result from such a classification is avoided by three indexes, one of authors, one of first lines, and one of titles. Altogether, the apparatus shows unusual consideration for the reader's convenience.

Through Napoleonic documents there has flitted an elusive figure under some thirty variant appellations ranging from Biantowski to Piontikaioski. Until very recently no historian except M. Masson had been able to find as much as a page to say about this Polish officer. In "A Polish Exile with Napoleon" (Little, Brown), G. L. de St. M. Watson makes a real contribution in giving us the solid facts about him in a cleverly phrased biographical sketch. These facts may be very briefly stated. Charles Frédéric Jules Piontkowski, born near Warsaw in 1786, came under the spell of Napoleon's charm about the time of the Russian campaign. He fought for him until the first abdication, and then followed him devotedly to Elba. In March, 1815, he embarked from Elba with the great adventurer and played a part in the Hundred Days. After Waterloo he accompanied his fallen leader to Rochefort and England, and finally obtained the permission of the English Government to follow him to St. Helena. Four days after his marriage he set sail alone from England, and joined Napoleon in the last days of December, 1815. At St. Helena he aroused some jealousy and friction among the other voluntary exiles, wrote impudently to the English Government, was threatened with a horsewhipping by an English officer, and was ordered to leave the island when he had been there less than a twelvemonth. He returned to England, to his wife, and to the sympathetic ear of Sir Robert T. Wilson. To this English sympathizer of Napoleon he wrote, in 1817, a series of letters describing Napoleon's flight from France and his miserable, persecuted existence at St. Helena.

Piontkowski's letters, which are translated from the French by Mr. Watson, give some interesting details here and there about Napoleon, but they extend to only thirty or forty pages, and are not the most valuable part of this volume. They are merely the text to which Mr. Watson appends many incisive comments, and to which he prefixes a biographical sketch of his Polish exile and an arraignment of Forsyth and Masson. By going over the ninety volumes of Lowe Manuscripts in the British Museum, which is the material upon which Forsyth based his ponderous history of Napoleon's exile, he finds that Forsyth suppresses some of the secret dispatches, which, of course, are usually more important than the ordinary ones. He finds also that Forsyth makes some evident mistakes in deciphering the manuscripts, and that at every point where possible he is favorable to Lowe and unfavorable to Napoleon. Similarly, he discovers that Masson's sketch of Piontkowski is full of mistakes due to the learned Frenchman's ignoring English material and to his drawing too freely, apparently, upon his own imagination.

"Egyptian Days" (Houghton Mifflin) is the most readable and satisfactory of amateur accounts of a trip up the Nile which it has been our good fortune to see. It is sketchy and bright, full of fun and appreciation, and it gives a life-like picture of what one actually sees and hears. In fact it is all too brief. One of the chief merits of the book is that it does not attempt to rival Baedeker in details; it has no dismal array of quoted or borrowed erudition, and no masses of undigested misinformation taken in unacknowledged chunks from the guide-books. The least satisfactory chapter is that on the religious beliefs, but even here the faults are venial. The author, Philip Sanford Marden, editor of a Lowell, Mass., newspaper, took the usual tourist route by steamer, and with quick eye and ready pen has noted the events and incidents of the trip in natural and breezy style, so that his book may well serve a double purpose. It will serve to recall one's own experiences when the trip is over, and it may be used as a guide by one who has the pleasure still in expectation. The chief criticism falls at this point, for the publisher has used paper which, on account of its weight, renders the volume difficult as a traveller's companion. Publication occurred too soon after the advent of Lord Kitchener as the British representative in Egypt to enable the author to record the success of his administration, due to the fact that he knows the fellahin personally, and as a class, and is able to sympathize with their point of view.

A more fitting title to Thomas A. Joyce's "South American Archæology: An Introduction to the Archæology of the South American Continent, with Special Reference to the Early History of Peru" (Putnam) would be "Peruvian Archæology and Ethnology, with Slight Reference to Other Parts of South America." Considerably more than half the book deals with the ancient Peruvians and their influence on the surrounding areas. The author is truthful when he states in his preface that he has "ventured to *compile* the following chapters on the archæology of South America." As a compilation principally from Markham (reviewed in the *Nation* of March 21, this year), Prescott, Squier, Bandelier, and Uhle, the work is well done. The author follows Markham in what Bandelier has called "the Romantic School of American Archæology." He takes the early Spanish accounts as his gospel, and finds his inspiration from these highly colored descriptions made known to the English-speaking world by Prescott. Archæological research has not served to verify these accounts in all respects. The time has not arrived for a satisfactory book on South American archæology. Apart from the western and northwestern coast of the continent, very little is known. The author, unfortunately, has not had the benefit of Hrdlička's "Early Man in South America" (Bulletin 52, Bureau of Ethnology), which has lately appeared. Moreover, he does not seem to have availed himself of several sources on Peru, such as the articles in the *Revista Historica,* of Lima, Jiménez de la Espada's "Una Antigualla Peruana," and "Tres Relaciones de Antigüedades Peruanas," Fernando de Santillan's "Relacion," Martin de Morua's "Historia," and several others. There is a short bibliography, which does not pretend to be complete, and a workable index. The book contains a number of excellent plates, most of which, however, have been published before. Mr. Joyce persists in giving Bandelier the initials R. E., rather than A. F.

A single characteristic entitles Dr. C. L. G. Anderson's narrative history of "Old Panama and Castilla del Oro" (Washington: The Author) to a grateful welcome: it contains only the most incidental references to the Canal, and the author, despite his services as an army surgeon and as physician to the Canal Commission, ventures the suggestion that what God joined together, man might well hesitate to separate. Unlike most of the recent publications on the subject, this is actually what it claims to be, a book about the discovery and early history of the Isthmus prior to the year 1700. It is just the sort of book that nearly every one who goes to Panama asks for; an interesting narrative of the earlier Spanish epoch, giving with considerable fullness the stories of Columbus, Balboa, Pizarro, Henry Morgan and the Buccaneers, and the Scotch Darien Company. Dr. Anderson undertook a much-desired task. He has evidently labored earnestly and at length to accomplish his results. He has produced and published at his own expense a volume of 575 pages with forty illustrations, many of which are facsimiles of old engravings. It is largely made up of documentary material, usually in free English translations, presented in readable form. Unfortunately, Dr. Anderson does not distinguish for the reader between the statements made by Oviedo, the most trustworthy, and those of Gomara, the least credible, of the Spanish chroniclers. His footnotes give the impression, which is really quite unfair to the text, that he has merely trodden in the footsteps of John Fiske and Hubert Howe Bancroft, with occasional digressions in the company of Sir Arthur Helps and Washington Irving. He quotes extensively, but only when he happens to remember does he label his source. He tells of the deeds of Vasco Nuñez, giving him his proper name, but seemingly without understanding why this is more correct than the commoner "Balboa." Yet the book is not likely to mislead seriously those who take it for shipboard perusal. Like the historical writings of the late Dr. Elliott Coues, of which this volume is curiously reminiscent, it carries a dim but refreshing flavor of personality, a suggestion of individual prejudice and inborn convictions which crop up in the most unexpected places.

In the second volume of their edition of Lescarbot's "History of New France" (Toronto: Champlain Society), Prof. W. L. Grant and H. P. Biggar furnish the text and an admirable translation of Books III and IV of the originial. More precisely, the editorial work in this volume is entirely due to Professor Grant, while Mr. Biggar's contribution is confined to the introduction in Vol. I. In his third book, Lescarbot describes the voyages of Jacques Cartier, using for the first voyage the French translation of Ramusio, published at Rouen in 1598, and for the second voyage the original manuscript, presented by Cartier to King Francis I, and "bound in blue satin." This is now MS. No. 5589 at the Bibliothèque Nationale. The fourth book comprises the voyages of De Monts and Poutrincourt to the Bay of Fundy, the founding of Port Royal, relations with the Indians, etc. Professor Grant's notes leave little to be desired. They throw light where light is needed, without cumbering the text with unnecessary information; and they go a long way towards making this the standard edition of Lescarbot. In type, paper, reproduction of maps, and general appearance, the Champlain Society is to be congratulated upon the character of its publications. The third and final volume of Lescarbot is expected before the end of the present year.

Brig.-Gen. Henry Beebe Carrington, U. S. A., retired, who distinguished himself in the Civil War and later in his dealings with the Indians, died at his home in Boston, on Saturday. He was born in Wallingford, Conn., in 1824, and was graduated from Yale in 1845. He was author of several books, among them: "Crisis Thoughts," "The Six Nations," "Beacon Lights of Patriotism," "Washington, the Soldier," and "Lafayette and American Independence."

The report comes to us of the death, in his eighty-fifth year, of Dr. George W. Kitchin, dean of Winchester and later of Durham. He wrote "The Seven Sages of Durham," "Winchester" in the Historic Towns series, and a "History of France," besides several other less important works.

Dr. Eugene Oswald, whose death is reported at the age of eighty-six, was born and educated at Heidelberg, but is remembered mainly for activity in England, where he lived for many years. He was the author of "Early German Courtesy Books," "Thomas Carlyle, ein Lebensbild," "Goethe in England and America," "Land und Leute in England," "Memoirs," etc.

Capt. Frank Brinkley, for many years Japanese correspondent of the London *Times*, died on Monday, aged seventy-one. Capt. Brinkley was an authority on Japan and the Far East. He was attached to the British Legation Guards at Tokio, in 1867; was principal instructor at the Marine Artillery College. Tokio, in 1871, and later professor of mathematics at the Japanese Engineering College. For his services to Japan he was decorated with the third-class Order of Sacred Treasure. He was the author of "Japan" (1901), and "Japan and China" (1903).

Science

"The Chafing-Dish and the Preparation of Sandwiches," by Mrs. Alice James, is announced by Putnams.

Nowadays when we find upon the campus of a conservative university in the East lofty buildings dedicated to home economics, and see trains travelling through the Western States to demonstrate the science of the art of housekeeping, it is well to remember how much the movement owes to the initiative of one woman, Mrs. Ellen H. Richards, of the Massachusetts Institute of Technology. Her life as told by Caroline L. Hunt (Boston: Whitcomb & Barrows) presents a complete picture of her personality as seen by her friends, who have contributed their reminiscences, and as revealed by herself in her diary and letters. When she entered Vassar College in 1868, it was regarded as doubtful whether girls could be educated, and as quite improper for them to speak in public even in college chapel. When her mother objected to her study of surveying as unladylike, she wrote:

> And as for surveying, it is light work compared with washing. The chain is light and clean, and the pins also. The instrument for taking observations can be easily carried, and it is very fine work to take bearings. We cross brooks and woodland for pleasure, and pray why not for business? It requires a good deal of skill to go over a fence or a wall built of such small shaly stones as the walls here, but it can be done, and it is an accomplishment. I do not mean to do it with long dresses and hoop skirts, of course not. I find nothing in it not consistent with grace or virtue. I prefer surveying for a week to spending a week in fashionable society even of the best class, and there would be far less danger. Anything that will take the American woman out of doors will be a blessing to her.

This spirit, unfeminine and revolutionary as it then appeared, brought about a new form of training truly feminine, that is, higher education in what is by radical and conservative alike regarded as woman's special sphere, the home. It was Mrs. Richards's great achievement to bring kitchen and laboratory together, to show that cooking and cleaning are chemical processes; certainly a woman's work this, although it involved an invasion into masculine preserves at more than one point. When she left her laboratory for the last time, only a few days before her death, she was sixty-eight years old, and she had acquired a unique national reputation; she was recognized by the women as a good cook and by the men as a good chemist.

Bruno H. Bürgel, author of "Astronomy for All," which has now been translated from the German by Stella Bloch, is evidently a man of much experience in popular writing. He has made good choice from material ranging from the latest researches to remote and quaint historical works. The very copious illustrations are in the main well selected, and, with a few exceptions, are satisfactorily reproduced. Unstinted praise cannot be given to the text, for statements of facts and mere speculation are sometimes placed side by side without distinction. While reputable astronomers pretty generally refuse to accept Lowell's theories of Mars, we find them exploited here as if they were established fact. It is interesting to see the far-reaching speculations of Arrhenius set forth intelligibly, even if briefly, in sharp contrast to the views of Clausius, who was cock-sure of an ultimate end of things cosmic. Arrhenius, on the other hand, strongly contends for "an eternal, never-ceasing, circulatory motion of the universe, which turns nebulosities into suns, and suns again into nebulosities," a fascinating view, amplified in his recent brochure on "The Fate of the Planets." Moulton's cosmic hypothesis, too, is not neglected, whereby an explanation is sought of the thousands of spiral nebulæ discovered by Keeler. The translation from the German would be pathetic if it were not so ludicrous. We read of "years of light," "sheeted iron," of discoveries being "newsed," of a spectrum "throwing up" its lines, of the Yerkes telescope as a "twenty-five-yard refractor," of Phobos and Deimos being "undetected if Mrs. Hall had not egged on her husband," and of a great telescope as a "large glass eye," etc. The work deserves thorough revision by one whose English has not come to him second hand. (Published by Cassell.)

"The Healthy Baby" (Macmillan Co.), by Dr. Roger H. Dennett, is a useful book of small size, well suited to help inexperienced mothers in caring for their infants, with some advice pertinent to a later period. The instructions are simple and definite. The book differs happily from many books of its class in the absence of complicated tables of milk mixtures which have terrified many a mother to whom the artificial feeding of her baby has become a very practical problem. Dennett believes that complex formulas recently so popular are superfluous in the management of healthy children, and that their food may be prepared in much simpler ways.

Dr. Paul Segond, a noted surgeon, died in Paris on Sunday, in his sixty-second year. He was professor in the surgical clinic of the Faculty of Medicine of the University of Paris, and surgeon in chief of the

Salpêtrière. Several scientific works bear his name.

Drama

Letters of Bulwer Lytton to Macready. Privately Printed. Newark, N. J.: The Carteret Book Club.

Of the one hundred and five letters constituting this volume, scarcely half a dozen are of any real literary importance. Most of them are hurriedly written notes of a trivial nature, and often very carelessly expressed. But for the celebrity of their author they would never have attained the dignity of type. Others have a definite value, because they exhibit Lytton in a somewhat unfamiliar aspect and cast a new light upon his methods and capacity as a dramatic author. In them he confesses very frankly, over and over again, his inability to put a story into effective theatrical shape, and concedes to Macready the main credit for the dramatic efficiency of his most famous and successful plays, "The Lady of Lyons," "Richelieu," and "Money." It is perfectly plain, from his allusions to the radical changes made, at the suggestion of the actor, not only in the arrangement of the action, but in the general outlines of the plots—and the gratitude which he expresses for them—that in all these pieces and some others less well known, such as "The Sea Captain" and "The Duchess de la Vallière," Macready was an active collaborator. But in every case it was Lytton who suggested the theme, elaborated the characters, and furnished the literary decoration. Unfortunately, the letters of Macready to Lytton, explaining his suggested changes and the reasons for them, which would have made this correspondence complete and coherent, have not been preserved, or, at any rate, not found.

It is somewhat surprising, at first sight, to find an author so confident in his own powers, as Lytton has generally been represented to be, treating Macready with so much deference, but it must be remembered that the famous actor was an autocrat in his own domain, was intensely irritable and sensitive to opposition, and was far the older man. Moreover, there can be no doubt of the mutual affection and esteem existing between the two, or of the sincerity of Lytton's faith in Macready as the one mainstay of the imaginative stage and his eagerness to be associated with him in his honorable ambition, without regard to his own financial profit. These letters show that he more than once refused to accept money legally due him, for productions which had proved less profitable than expected, and that he was always ready to attribute such disappointments to the inherent weaknesses of his own work, rather than to any fault in the acting or management. That he was essentially a story-teller and not a dramatist—a fact long ago recognized—is plainly shown by his dependence upon Macready's ideas when trying to get "Richelieu" into presentable form, and his complete failure to perceive that the Cardinal must be the central figure until the actor pointed out the fact. He intended Macready to play De Mauprat, a part for which he was unfitted by nature. Evidently Lytton had no clear notion of the value of a dramatic situation until he had experimented with it upon the stage. His lack of theatrical invention is indicated also by his industrious search for plots among writers of all times and nationalities, from Aristophanes and Terence downwards.

A letter that has a particular interest for Americans was written in 1844 in reply to some unknown comments by Macready on this country. He thinks that this "young Titan of a Republic" may justly complain "that almost every tourist has spoken of it in the mincing criticism with which a dancing master might favor the Farnese Hercules." On the subject of the alleged vulgarity of American manners he says that "the wonder rather is that in a People without a Court, without an idle aristocracy, . . . that so much civility to strangers, so much courtesy to women, so forbearing an usage of legal equality, are the characteristics of the population." It is a pity that Macready's letter, to which this is a rejoinder, has not been preserved to accompany it. The literary, historical, or biographical interest in the bulk of the correspondence is small.

John W. Luce & Co. will shortly add to their edition of August Strindberg a second volume, containing "Comrades," "Easter," "Paria," and "Facing Death."

"The Blindness of Virtue," by Cosmo Hamilton, just produced in the Thirty-ninth Street Theatre here, will attract attention, doubtless, as it did in London, because of its subject, but would be much more effective if it were less disputatious and more convincing dramatically. Written in support of the thesis that many innocent girls are ruined for lack of proper instruction in the mysteries of sex, it actually, and apparently unintentionally, furnishes an instance where the girl's almost incredible ignorance, while it betrayed her into the most compromising situation, yet proved to be her sufficient safeguard. Mr. Hamilton has imagined a country clergyman's daughter, who, up to her seventeenth birthday, had virtually known nobody but her father and mother. A young man, who then comes to the house, seems to her a miracle of perfection, and she does not hesitate to tell him of her love. When he goes to London for a day, she goes to his bedroom, in her dressing gown, at 4 A. M. to welcome him on his return. He is abashed and overpowered by her innocence, and has not tried to take any advantage of it, when surprised by her father. Then, of course, follow passionate scenes, explanations, and a happy ending. Thus the piece, which is not without cleverness, or an assumption of serious purpose, discredits the validity of its own message. The truth is that problems of this kind, which have been debated for ages, and provoke endless differences of opinion, and whose solution must depend upon particular circumstances, are not profitable subjects for theatrical discussion. This play by Mr. Hamilton is particularly futile because he has not known how—or dared—to illustrate his own view.

The London Play Actors' Society will start its eighth season with a representation of Ibsen's dramatic poem, "Brand," to be played then for the first time in England in its entirety. A prose translation has been made by William Wilson. W. S. Fay, of the Irish National Theatre, will superintend the production.

The new Shakespeare memorial in Southwark Cathedral, London, will be unveiled by Sir Sidney Lee on November 4. The memorial, which is the work of Henry McCarthy, a well-known ecclesiastical sculptor, consists of a Gothic shrine, within which lies, in semi-recumbent attitude, a life-size alabaster figure of the poet. As first sketched in, the likeness was taken from the Chandos portrait, but so much doubt has recently been thrown upon the authenticity of this that the Droeshout portrait was finally followed, the fine impression in the Bodleian Museum serving as the model. Upon the Gothic base below the figure are carved five shields, that in the centre displaying the arms of Shakespeare, and the others those of Bishop Talbot; of Canon Thompson, the late rector; of Dr. Leftwich, the originator of the Shakespeare memorial and service; and of St. Saviour's, the poet's old parish church. The panel behind the figure shows old Southwark in relief, and includes the Globe Theatre and a portion of old London Bridge.

According to a London journal, Dr. Max Reinhardt is about to produce "The Playboy of the Western World" simultaneously in Berlin and Vienna.

Mme. Judith (Julie Bernat), the actress, died in Paris on Sunday at the age of eighty-five. She was, in her day, second only to Rachel, to whom she was related. Among her friends were George Sand, Victor Hugo, Alexandre Dumas the younger, Louis Napoleon, Théophile Gautier, and other eminent persons. She made her first stage appearance at the Paris Folies in 1842, was instantly successful, and, after a season or two at the Variétés, was a member of the Théâtre Français in 1846, becoming Sociétaire in 1852. Among her most famous parts were those of Rosina and the Marquise in Beaumarchais's Trilogy, Charlotte Corday, Pénélope in "Ulysses," and Alcmène in "Amphitryon." She was the original heroine of Hugo's "Marion Delorme," and so was a participator in the exciting demonstration which attended its first performance. She translated the "No Thoroughfare" of Dickens and Wilkie Collins, into French, and also published "Le Château du Tremble," under the name of Judith Bernard. She was in her prime a noble type of Jewish beauty. She was married to M. Bernard-Derosne, well known as a translator of English works into French.

Pierre-François-Samuel Berton, playwright, is dead in Paris. He was born in Paris in 1842. He came of a family of actors, his grandfather having been the famous Samson of the Comédie Française. His father, Francis Berton, was also a well-known actor. M. Berton made his début at the Gymnase in 1859, and passed successively to the Odéon, the Comédie Française, the Vaudeville, and the Porte St. Martin, as well as other less known theatres. As an actor, his chief successes, perhaps, were won in "L'Ami des Femmes," "Le Rendezvous," "Fédora," "Le Nabab," and "La Tosca." But he played with credit in a vast number of widely contrasted parts. He also shared in the authorship of several popular melodramas and farcical comedies.

Music

Boston Symphony Orchestra Programmes. With Historical and Descriptive Notes by Philip Hale. Boston: C. A. Ellis.

The bound volume containing the home programmes for 1911-1912 of the Boston Symphony Orchestra is a book of 1,594 pages. More than half of these pages are filled with advertisements. Now that this orchestra has become so popular and prosperous, it is to be hoped that these advertisements may soon be printed and paged separately from the reading matter, so that they need not be bound up with it. The programmes themselves thoroughly deserve being bound and preserved. They contain a good deal of valuable reading matter in addition to Mr. Hale's erudite yet entertaining and sane notes on the pieces played at the season's twenty-four concerts. Each of the programmes has a footnote imparting the information that there will be an intermission of ten minutes after the symphony. In order that the Boston music-lover's mind may not be arrested in its quest of culture even during that brief interval of time, Mr. Hale always provides a literary entr'acte, consisting either of an article on some general musical topic from his own workshop, or else, and more frequently, a paper reprinted from some English or American periodical. This Programme Book thus comes once a year as a life-preserver for a good deal that is valuable in contemporary journalistic literature.

Mr. Hale himself descants on Beethoven the Pianist, The Beginning of the Boston Symphony Orchestra, Bruckner, Color, Tonal and Colored Audition, Works of Liszt Played by the Boston Orchestra, Salome and Her Dance, The Triangle, Wagner's Account of Himself. Mr. Hale's predecessor, W. F. Apthorp, provides interesting reminiscences of earlier years of the Boston Orchestra. Barry writes about Liszt and the Symphonic Poem; Newman on Bantock, Wallace, and Elgar's Second Symphony; Runciman on England's Lack of Great Musicians and on Brünnhilde's Self-Immolation, on which subject Bernard Shaw is also quoted. Of special interest are the reprints from the London *Times* of papers on Cathedral Festivals, A Chopin Relic, Humor and Quotation, Mannerisms, Musical Patriotism, Post-Wagnerian Opera, Science and Singing. A good index makes it easy to find what one happens to be interested in, and this index also embraces those incidental references and footnotes which are a specialty of Mr. Hale's and many of which contain information hard to find elsewhere.

French music is a particular object of Mr. Hale's admiration; he keeps his eyes open for everything relating to it, and no one who gets this annual record is likely to miss anything of importance. While Saint-Saëns towers high above all French composers of the day, the most prominent of them, and the most widely discussed, is Debussy. Under the head of "Cor and Debussy" Mr. Hale gives a bird's-eye view of contemporary French and German opinion on this exotic composer. An article from the pen of Raphael Cor entitled "M. Claude Debussy et le Snobisme Contemporain" aroused a good deal of discussion. The *Revue du Temps Présent*, in which this article appeared, thereupon sent a circular to a number of prominent European musicians, asking them to answer certain questions relating to that composer. Thirty of the answers were printed in a small volume which M. Debussy must have read with mingled feelings of pride and indignation. What he read, among many other things, was that he is a musician without parallel; that he is original, but only negatively so: "take away from music rhythm, melody, and emotion, and you have defined Debussy's musical works." The monotony of his music "stupifies the hearer." It leads to reveries; it is a mosaic of chords; the passionate admiration of it is in Paris "a disease of the season, or a crisis." There are many vain imitations of it—childish apings. He was just the man to work in sympathy with Maeterlinck, the "Shakespeare for snobs." Among the thirty whose answers are printed in the volume referred to are Siegfried Wagner, who says regarding "Pelléas et Mélisande": "I heard only one act, and no one should judge after one act." Another composer, Reynaldo Hahn, wrote that, while he held Debussy in high honor, he was not a Debussyite, and regarded Debussyites as unfortunate persons. Paul Flat agreed with M. Cor that there is "an enormous part of snobbism and bluff" in the reputation of Debussy. The most amusing thing in the volume is a remark contributed by Romain Rolland, whose novel in nine volumes, "Jean Christophe," has found so many readers and admirers. In answer to the question whether Debussy is likely to found a school, he writes: "Every great artist has a school. Every school is injurious. Would it not, then, be better if there were no great artists?"

The Flonzaley Quartet will give its usual series of three New York concerts this season, in addition to a similar series in Brooklyn, Boston, and Chicago, and many individual appearances throughout the country. The New York concerts will be given in Æolian Hall on Monday evenings, December 9, February 3, and March 10. This season marks the Flonzaleys' seventh visit to America. When first brought together by Mr. E. J. de Coppet, the members of the Quartet made a mutual agreement neither to teach, play in orchestra, nor accept individual engagements. The members of the Quartet are: Adolfo Betti, first violin; Alfred Pochon, second violin; Ugo Ara, viola, and Iwan d'Archambeau, violoncello.

The season for the Symphony Society of New York will open with two concerts on the afternoons of Friday, November 8, and Sunday, November 10, on which occasions an orchestra will be heard in the new Æolian Hall for the first time. The programme, which is the same on both afternoons, will start with the "Leonore" Overture No. 3, and will also contain the Eighth Symphony of Beethoven. Maggie Teyte will be the soloist. The concerts will close with a novelty, a "Suite enfantine," by Maurice Ravel, entitled "Ma mère l'Oye" (Mother Goose), to be heard for the first time in America.

The first pair of concerts of the Boston Symphony Orchestra will be given in Carnegie Hall on Thursday evening, November 7, and Saturday afternoon, November 9. The programme for the first concert comprises the "Eroica" Symphony of Beethoven, the "Roman Carnival" Overture of Berlioz, the "Mazeppa" symphonic poem of Liszt, and the Prelude to "The Mastersingers of Nuremberg." The programme for Saturday afternoon includes Bischoff's symphony in E major, the "Siegfried Idyl" of Wagner, and the "Euryanthe" Overture of Weber.

Sir Charles Villiers Stanford has written a second concerto for piano. Robin H. Legge says that it was written for Moritz Rosenthal, who will probably play it in London next April or May. "I know," writes Mr. Legge, "that for some considerable time this distinguished pianist has been seeking a representative pianoforte work of British workmanship to add to his repertory in order to show his gratitude for many favors received from the public and from musicians here."

Herman Grau, manager for forty years of operatic productions, died in New York on Sunday. He was eighty-seven years old. Mr. Grau was born in Austria and came to this country fifty years ago to engage in the management of operatic productions with his brother, Jacob Grau. Later he took charge of the old Stadt Theatre in the Bowery. He produced grand opera at Terrace Garden, took charge of the Metropolitan Opera Company, and later founded the Grau Opera Company. Mr. Grau was an uncle of Maurice Grau, the operatic impresario.

Edgar Tinel, whose death at the age of fifty-eight is reported from Brussels, was director of the Royal Conservatory of Music of that city and a composer of international reputation. At the age of nine he won a scholarship in the Brussels Conservatory, and at twenty-three received the Prix de Rome for his orchestral work, "Klocke Roeland." Among his other works are: "Tableaux Symphoniques," "Mass of the Holy Virgin of Lourdes," and the oratorio "Franciscus," celebrating the life of St. Francis of Assisi, which was given last year at Carnegie Hall.

Art

SALON D'AUTOMNE.

Paris, October 12.

The scandal of the Autumn Salon makes a variegated impression on various people. There are painters who come to study abroad and get a starting glory from exhibiting at "the Paris Salon," without ever saying which Salon it was. And there are those who have a mild interest in art and say to themselves a salon is a salon, and that is the end of it. And others will always think that Art lively enough to make a scandal must be the coming thing, and so they go in for it. In reality, the Autumn Salon is too new and callow to have the prestige of the Spring Salons; and this year's very particular Autumn Salon is like the breakfast egg which the timid but scrupulously truthful curate accepted from his awe-inspiring bishop: "Is your egg good?"—"My lord, it is good in parts."

The scandal is among the French, not among foreigners. Monsieur Lampué, who is the oldest Municipal Councillor of Paris, led off. He has a tincture of paint in his composition; he studied at the Fine Arts School of Toulouse more than fifty years ago, and belongs even now to the Society of Independent Artists. He dipped his pen in his blackest ink and wrote straight to Government, that is, to the Under-Secretary of State for Fine Arts:

> Have you the right to lend a public monument to a band of malefactors who behave in the art world as apaches do in ordinary life?

In fact, the Autumn Salon is held, like the official Salons, in the Grand Palais, which is national property. The aged Municipal Councillor insisted that the young national Minister should go and have a look at it for himself:

> You will ask yourself if Nature and the human form have ever undergone such outrages. You will see with sadness that this Salon shows and accumulates the most trifling ugliness and vulgarity that can be imagined; and you will ask yourself again, Monsieur le Ministre, if this does not touch the dignity of the Government of which you are a part, since Government seems to take under its protection such a scandal by sheltering such horrors in a national monument. It seems to me that the Government of the Republic should have more care and more respect for the artistic dignity of France.

The chief protest is against the pictures of the "cubists," who try to make us see things as if they were composed of geometrical blocks; and against the "futurists" who would have us see things out of the four corners of our eyes all at once—quadruple strabismus instead of a straightforward outlook on the world.

The committee of the Autumn Salon has made a faint defence by a declaration of principle: "We admit all conscientious art efforts whatever they may be, no matter how personal or how foreign they may seem to the old-time formulas." One of the members of the committee turned the question: "The Autumn Salon is open to artists of every country. As is only fair, the jury comprises foreigners. Some come from England and some from Germany, and even from Russia—and that is why French taste is not always evident."

This gave the needed opportunity. Georges Lecomte, who has been president of all sorts of societies of artists and authors, had already resigned from the committee as a protest against the show they were making. He now came forward with an appeal "for French art—against all this defiance of common sense":

> For more than twenty years that I have been writing. I have defended with all faith and hope the art in which I believed modern sensibility was taking on a new form. I now retire from the Autumn Salon because I see that, through its weakness, the cause has been betrayed and compromised. By exhibiting with so much ostentation and in places of honor such shameless productions, the Autumn Salon casts on beautiful modern work the discredit which such ugliness is bound to provoke. You ask the crowd to make no difference between them. In its amusement and indignation, it too often risks confounding these illuminated eccentricities with the art of life and light and harmony and deep human emotion. When we think of all the trouble there has always been to bring the public to understand and admire, we suffer to think how this same public, thus bewildered, may go backward and take up again with dull and cold academic art. It is a reaction which has already begun and is growing strong.

We are here far away from the time of Zola's art hatreds. Impressionism is an outworn creed, and neo-Impressionism is dead. They have gone the way of symbolism and decadence in poetry. Naturalism, to which the aged romantic movement turned, survives but weakly before this classic revival. Philistine rebels no longer ask the newest painter to turn his picture upside down or sideways so that haply they may comprehend. These astonishing futurists play to the gallery of those who look on nature mostly when whirling by in their automobiles. And the cubists address themselves to a generation whose pastime has been the piecing out of puzzles. It is a slur on their predecessors to attribute to them the pained sincerity and fanaticism of early Impressionists.

All this barely leads us to the real question, which Georges Lecomte asks with a passion that can surprise only foreigners who do not take Frenchmen seriously: "Is it not our duty to think of the good name of French art? Among our supremacies, art is still intact. Can we allow foreigners to believe that our French art is made up of such horrors, that it goes staggering crazily along? And shall we allow its prestige to sink in ridicule?"

Even André Michel, the usually sober art critic who lectured lately in the United States, loses his placidity of temper and language:

> In this Autumn Salon, the snobbery of a few good souls has been pleased to group morose and maniac geometers with delirious dyers, crazily covering their defenceless canvases with color puddles and diagrams which you would say had been traced by some demented Bouvard and Pécuchet. One of the most unformed daubs of this Salon is dedicated: "To mariners, travellers, and mountebanks." Taking into account the foreigners, cranks, and humbugs who are the main originality of this Salon—in which "French" taste was to be renewed—we wonder the organizing committee did not choose this "symbolic and synthetic" picture for its poster.

Yet Professor Michel takes his samples of the offending painting and sculpture, not from these foreigners, but from "one of our Gascons." The picture is named Mountaineers Attacked by Bears, and is dated "Annecy, 1911—Paris, 1912":

> If I guess the rebus aright, then you must make out in the picture's tangle not only the episode of its title, but the route from Annecy to Paris, railway and bridges, telegraph wires and the compartment in which the painter sat during his journey, and the house in which he lives, as well as the mountain site where the wicked bears attacked the poor travellers—and the gun they used for their defence. Of bears and mountaineers, of road and landscape, only unformed morsels and scattered bits thrown and cut about at random remain, so that the mother bear herself would no more recognize her little ones than her victims.

As to Family Life carved in stone:

> It can only be compared to a pyramid of anatomic refuse which medical students occupied in dissecting monkeys have taken a morbid pleasure in putting together after radically and geometrically cutting and slashing each limb.

And all this "sorry show" of art comes from some one discovering that the "line" does not exist in nature, but only "planes," or, better still, "volumes." "The human form is of no importance—all is in the volume, monsieur!"

Because it concerns some of our young American artists in Paris, I must cite one more analysis of this new art craze that threatens to undo the Autumn Salon, which is really "good in parts." Thiébault-Sisson has for years taken a kindly interest in Art Independents, so that his language is all the more impressive:

> In the art city, the great part has hitherto been played by those who know. The revolutionary is the one who does not know, the man of instinct who believes his natural impulse is stronger than all rules, whose temperament expresses itself outside of all received habits, disorderly, rough, emphatic. This is the case of that colony of foreigners who, because they felt some disposition in themselves, thought they were immensely superior to their native surroundings, and came, possessed by their demon, to Paris to develop freely their instinct. In the heroic age of open exhibitions, we saw their fantastic compositions in which common sense, taste, shame, and the most elementary principles of drawing were equally offended, but with bursts of color sometimes strangely harmonious and attractive. These fits of insanity lasted not long. As they learned our language and came in contact with our art clans, these wild men were civilized and permeated little by little with a culture they had never dreamed of. It taught them the necessity of knowledge and the benefit of rule. They began studying with Henri Matisse and Guérin.

The cat is out of the bag. It has hitherto been dangerous to speak truth of Henri Matisse, whose talent nobody would deny. There is no revolution without leaders, says Dr. Gustave Le Bon. For Henri Matisse, with his eccentricities and improprieties, I will only refer, through fear of the Brahmins, to Matthew Arnold's explanation of Ruskin's indulging in wilfulness. In the idle companionship of a sea voyage, I once showed to a Scot who had made money in America the passage expressing the desire that the new part of Edinburgh should be destroyed and rebuilt, and New York be destroyed simply. His amazed comment was: "Why, the man must be a crank!" Abel Faivre has drawn one of his caricatures of the "bourgeois" for this year's Autumn Salon. The couple stand looking with astonishment at a picture, and the husband remarks: "Perhaps it is the Balkans!" S. D.

"Nietzsche and Art," by Anthony M. Ludovici, is in the press of John W. Luce & Company.

The *Bulletin* of the Worcester Art Museum, announces three interesting acquisitions. A Portrait of a Bergamesk Captain by Moroni seems from the reproduction to be of the first quality. The figure is shown from the thighs, and the pose is ingratiating, like that of the marvellous Tailor in the National Gallery. To Rocco Marconi, Director Gentner ascribes a very handsome Madonna and Child, highly Bellinesque, and evidently related to a Madonna ascribed to Giambellino, in the National Gallery. A minor, but charming, purchase is the bust of a youthful saint in glazed terra-cotta from the *atelier* of Andrea della Robbia. The Worcester Museum must be congratulated on such accessions, and its example may be recommended to other museums who practice too zealous and one-sided a patronage of contemporary art.

The death is reported from Paris of Frédéric-Charles-Victor de Vernon, one of the leading French engravers, at the age of fifty-four. M. Vernon devoted himself mainly to engraving medals, though his work in other branches of the art also was distinguished. He was a chevalier of the Legion of Honor, and in his student days won the Prix de Rome.

Finance

THE WAR, THE ELECTION, AND THE MARKETS.

Compared with the opening of October, just before Europe began to sell in quantity, declines in important stocks have run as far as 5 to 6 points each in Steel common, New York Central, and St. Paul, 8 in Northern Pacific, 9 in Amalgamated Copper and Union Pacific. Reading has fallen nearly 10 points from its high price of the end of summer. This is a heavy break, and it is paralleled in a long list of other stocks. It is a question now in point, exactly what sort of Stock Exchange situation and what sort of immediate financial outlook are left as a result of this movement.

That is a question on which light can best be thrown by inquiry into the influences which must hereafter prevail, in the way of higher or lower prices. Probably most people of the observant sort would say that one or all of four main influences will determine the immediate future of the market. These are the movement of home prosperity, the course of the money markets, the incidents of the Balkan war, and the Presidential election. It is not very often in the history of a financial market that so many influences, each with an immediate bearing on finance, and each containing possibilities of great dramatic interest, are to be seen at work simultaneously.

Of the American position and the American trade revival, it is possible to say that, up to the present date, the most daring predictions of the hopeful prophets have been realized. The record-breaking grain crops are no longer a matter of conjecture or uncertainty. The actual harvest has been followed, during these very weeks when Stock Exchange prices were collapsing, by news of the largest aggregate net railway earnings on record for the month; by the greatest demand on transportation facilities (shown in the freight-car shortage returns) since 1907; by the largest September grain exports since 1902, and the largest total September export trade on record; by the largest sum of orders on the books of the steel-making companies since 1907, and the largest monthly production of steel on record. Taken by themselves, these factors have a sufficiently obvious bearing on investment values. Whether and to what extent their influence can be offset by other considerations, is the next question.

The money market contains certain possibilities in that direction. Last week, the shipments of currency from New York to the harvest States reached an abnormally large figure, and this loss of reserve money by the banks occurs at a moment when the offset on which the market lately counted—large import of gold from Europe—has been blocked by Europe's own necessities. Abroad, nearly all the great state banks have advanced their discount rates, and it is easily conceivable that something like an actual "money squeeze" might be occasioned, not only there, but here.

This is a really perplexing problem. The most that can be said with confidence at the moment is that only two months remain in which money rates will be an essential influence, and that during this period the danger of really acute money stringency is at least allayed by the recent heavy stock market liquidation on all markets of the world, and by the fact that the Treasury still has a "working balance" of $87,000,000, a substantial part of which could be placed on special deposit with the banks in the case of genuine need.

Whether the Balkan War is itself to be a continuing offset to the influence of home prosperity, or whether its financial effects have been already discounted, is perhaps even more largely a matter of opinion. War is the greatest of all games of chance, in finance as in diplomacy. The unexpected initial successes of the Balkan armies, in their movement of last week on the Turkish positions, have already disconcerted the calculations of diplomacy. The story of 1899—when Europe's markets believed, for fully two months after the break which greeted the beginning of the Transvaal War, that they had seen the worst of its financial influence, only to be awakened with a cruel shock when three British armies in South Africa were defeated and a long contest was foreshadowed—was not the first nor the only instance of the kind. Yet it will not be forgotten that in all such cases—not excepting the Boer War itself—existence of genuine home prosperity in America proved in a reasonably short space of time to be in this country the preponderating influence.

When one begins to ask what influence the election of November 5 is to exert on the Stock Exchange situation, a question of the oddest character is stated. On the one hand, precedent of the four past Presidential elections—in other words, the precedent of sixteen years—should warrant expectation of an enthusiastic "boom" in prices, with the outside public buying, immediately after the result is known. On the face of things, such expectation should be reinforced by the well-known fact that financial prediction, as far back as last spring, foretold a rise on the Stock Exchange after the election, whichever candidate were to win.

Precedent counts for much; especially precedent established alike in good business years such as 1900 and in bad business years such as 1908. There are, on the other hand, two possible circumstances which, as matters now appear, might be taken as somewhat impairing the value of the precedent. If Gov. Wilson is elected, this will be the first occasion since 1896 when the party out of power has been voted in again; and even in 1896, the defeated party, although nominally the party of the Cleveland Administration, was really controlled by the Populist forces which had captured it; so that McKinley's election signified maintenance of the *status quo*.. That would be one departure from recent precedent. Another would be provided, so far as regards the period with which comparison is made, if the opposition party were to win next week so overwhelming a victory, throughout the United States, as to confuse even political calculations. As to this, we shall have to wait for the midnight bulletins of next Tuesday.

BOOKS OF THE WEEK.

Abbott, G. F. The Holy War in Tripoli. Longmans. $4.20 net.
Arabian Nights. Illustrated by René Bull. Dodd, Mead. $3.50 net.

MIRIAM LUCAS

By Canon Sheehan

Crown 8vo. $1.35 *net; by mail,* $1.50

The author of "The Queen's Fillet" and "My New Curate" deals in his new novel with some unusual features of Irish life in our own day, including the "Irish Curse." The scene of the story is laid partly in America.

Longmans, Green, & Co.

THE COURTS THE CONSTITUTION AND PARTIES

Studies in Constitutional History and Politics

By Andrew C. McLaughlin
Professor of History in the University of Chicago.

The work consists of five papers, the first of which discusses the power of a court to declare a law unconstitutional. It examines into the historical growth of the judicial power, and seeks, by reference to the writings of American statesmen of early days, to trace the idea of fundamental law.

Two of the papers deal with the growth and essential character of political parties, and are followed by one on the history of differing theories of the federal Union. The work fittingly concludes with a discussion of the written constitution in some of its historical aspects.

The work is a sane and illuminating contribution—of extreme value to lawyers and sociologists, but equally adapted in tone and scope to all who take an interest in the maintenance of a popular form of government.

The MAN WHO CAME BACK

By JOHN FLEMING WILSON

This is the story of the primrose paths trod by a reckless young prodigal, spoiled by great wealth and dissipation and cast off by his father, who "strikes bottom" in a Shanghai slum. It is the story, too, of how a wanton of the music halls recalls him to himself, and of how, thanks to her, he resolutely "came back."

12*mo. Illustrated by Bracker.* 75 *cents net.*

THE CAT

Being a collection of endearments and invectives lavished by many writers upon an animal much loved and much abhorred. Selected and arranged by **Agnes Repplier,** author of "The Fireside Sphinx," etc. Illustrated by **Elizabeth F. Bonsall.**

Prefixing her selections with an essay instinct with the charm of one of the most delightful of familiar essayists, Miss Repplier has here brought together the finest passages in literature devoted to the cat. 16*mo. Illustrated.* $1.00 *net; postpaid,* $1.08.

THE DRAMATIC METHOD OF TEACHING
By HARRIET FINLAY-JOHNSON
Edited for American Teachers by Ellen M. Cyr, Author of the "Cyr Readers."
Illustrated, $1.00

This book, the story of the author's experience as head mistress of the Sompting School, Sussex, England, is a revelation of the results which can be obtained along the line of dramatic methods in school work.

Under her guidance, lessons in history, literature, geography, and arithmetic became full of imagination and action. She succeeded in enlisting the interest of her classes in every branch of study, and this book reveals many secrets of her success in directing instead of suppressing the natural activities of childhood.

Whether or not dramatic methods are to be followed in detail, the unique story of Miss Finlay-Johnson's success makes entertaining and stimulating reading that cannot fail to interest every teacher.

A New Book by Dr. G. STANLEY HALL
D. APPLETON & COMPANY - NEW YORK

Letters and Memorials
OF
Wendell Phillips Garrison
Editor of THE NATION 1865—1906
In one volume, crown 8vo, 300 pages, with photogravure portrait

During the forty-one years in which he edited the *Nation,* with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait. It likewise preserves the notable letter of appreciation addressed to Mr. Garrison by more than two hundred contributors to the *Nation* on the completion of his fortieth year of service, and his acknowledgment thereof.

The Reconstruction
OF
Economic Theory
By SIMON N. PATTEN
Professor of Political Economy, University of Pennsylvania

Economics has passed through two epochs, that of 1776, to which Adam Smith has given a classical expression, and that of 1848, the results of which are found in the writings of Mill, Marx, Carlyle, and their contemporaries.

In 1912 American thought is entering an epoch of equal significance. A demand is thus created for a restatement of economics in harmony with the broader and more unifying tendencies now becoming visible. Dr. Patten discusses current problems in the light of theories in the making.

CONTENTS:
I. THE DEVELOPMENT OF AMERICAN THOUGHT.
II. THE PROBLEM.
III. THE ORIGIN OF SOCIALISM.
IV. THE ECONOMIC MARX.
V. TYPES OF AMERICAN SOCIALISM.
VI. AN INTERPRETATION OF JOHN STUART MILL.
VII. THE FAILURE OF THEORIES OF DISTRIBUTION.

The Nation

NEW YORK, THURSDAY, NOVEMBER 7, 1912.

The Week

Though Gov. Wilson's election to the Presidency was expected by all men able to view the political situation coolly, the extent of his victory impresses the imagination. Let no man say that his success was undeserved. He had a magnificent opportunity, but he seized it magnificently. Deliberately marking out the lines of his campaign, he clung to them tenaciously, and by the dignity and force of his speeches, the sagacity of his judgment, and the manliness of his bearing, held his party together in the face of a formidable raider, and won the support of thousands of Republicans and independents. This is a shining achievement. No sure good fortune made Woodrow Wilson appear taller from the shoulders upward than any other possible Democratic nominee this year. Over any other of the candidates at Baltimore, Roosevelt would have driven his chariot triumphantly. And first among the great gains of his victory, we put the destruction of the hideous superstition about the protective tariff, which was again dragged out the past month in the hope of deceiving, at the same time that it insulted, the intelligence of the American people.

But with the same vote by which Gov. Wilson's wonderful success has been attained, solemn warning has been given. It is not an hour for foolish elation. No man perceives this more clearly than Woodrow Wilson. His earliest words are all of deep responsibility, and of the sobering which such a victory as his carries with it. We may be sure that no eye is keener than his to read the signs in the political heavens. He sees the breaking up of the great deep in this election. Party allegiance was trampled upon. In the casting of ballots impatience visibly went with hope, imperious demands for the future alongside condign punishment for the past. The vast and fluctuating electorate stands ready to inflict its dire penalties upon Democratic failure. Gov. Wilson must be fully aware of all this. He must understand perfectly, for example, what courage and strength of will and calmness under obloquy he will need in order to prevent the party victory from being transmuted into a swinish rush for spoils. This would infallibly lead down a steep place into the sea.

This is no time to attempt to review Mr. Taft's Presidency. Every man knows in his heart, however, that it has not been that black betrayal and wretched failure which it has been painted. The country has many services to thank him for, as all will acknowledge when the rancorous animosities of the past few months have sunk to their proper level. But in the personal aspect of his humiliation, one fact will remain unchallenged. He brought his fate upon himself. When in 1908 he allowed Theodore Roosevelt to force him upon the Republican party and the country as President, he put his official life at the mercy of one man. Placed in the White House by grace of Theodore Roosevelt, he is now expelled from it by revenge of Theodore Roosevelt.

Besides winning the Presidency, the Democrats will have a tremendous majority in the House of Representatives, and, if present indications are borne out, also a safe margin in the Senate. With the exception of the first half of Cleveland's second Administration, this will be the first time since the outbreak of the Civil War that the Democratic party will have had control of the three branches of the Federal Government upon which devolves the power of legislation and administration. And in that exceptional two years following the election of 1892, the situation both of the party and of the country was so peculiar as to block disastrously the party's power to make a record of constructive work. The silver question was approaching its acutest stage, and upon this question the party was hopelessly divided within itself; the national finances were in a critical condition, and preparations had been made by the outgoing Administration for taking the extraordinary step of a bond issue in time of peace; a desolating panic prostrated business very soon after Mr. Cleveland's inauguration; and finally a little group of machine-made Senators, bitterly hostile to Cleveland, was in a position to paralyze the party in the upper branch of Congress. In every one of these respects, the situation to-day is in most gratifying contrast to that of 1892. The Democratic Congress will have the opportunity, and we believe will have the will, to coöperate effectively with the Democratic President in a great programme of national progress. That it may be guided by wise as well as patriotic leadership is to-day the hope and expectation of the country.

Among the influences which will bear on the political history of the coming Democratic Administration, there is one of high importance to which little consideration has as yet been given in the forecasts of people or politicians. It has been the peculiar lot of the Democratic party, in each of its Presidential victories for the sixty past years, to enter office at a time of business depression. When Mr. Cleveland was inaugurated for the second time, in March, 1893, the great financial panic of that year was already beginning. His first inauguration, in March of 1885, occurred when the country was still shaken by the after-effects of the panic of 1884. Mr. Buchanan took office only a month or two before the outbreak of the panic of 1857. All three of those financial crises were the outcome of causes world-wide in their scope and purely economic in their character; but the handicap imposed by them on a new Administration was inevitable. The Republican party, on the other hand, has been favored by exceptional good fortune in the character of the period when its Presidential candidates have replaced those of the opposition. When Mr. McKinley took office in 1897 and Mr. Harrison in 1889, the tide of prosperity was running strongly in the country's favor. Gov. Wilson's Administration will begin under just such auspices as theirs.

The late Vice-President of the United States, Mr. Sherman, had a genial and attractive personality that made him particularly popular in Congressional circles, and won him a large number of friends. Yet he represented a type of public man now rapidly disappearing from view. The progressive movement everywhere has made it clear that there is no longer place for men who but twenty-five years ago were looked up to as the mainstay of political parties—the men who went into politics because of business and believed that victories in politics were to be achieved primarily to make money for the victors and their friends. The whole teaching of Mr. Sherman's party was along that line; the rich manufacturer from whom one could fry fat and to whom one could grant tariff favors was the exemplar of successful American citizenship. For this kind of business politics the Republican party is now paying a terrible but a deserved penalty. Its leaders of the future cannot be men of Mr. Sherman's kind, even though they embody in their personality great charm and all the social virtues, and are skilled party leaders and able parliamentarians.

There must be some mistake about the announcement that the Supreme Court of the United States has devised rules for making the administration of justice in the Federal courts more speedy and less costly. The way in which this reform has been brought about naturally makes us very suspicious of it. Judges have been giving a great deal of patient labor to it. They have conferred with one another and with legal experts; have had a large mass of evidence before them, which they have painstakingly sifted, and have carefully studied the various proposals for improvement laid before them. They have taken their time about it, too, and have been cautious. But the country knows very well that judicial reform cannot be brought about in any such pussy-footed way. The thing to do, as we have been told over and over again, is to let loose a hurricane upon the courts, to get the crowd to teach the judges how to decide, and to make an end at once of the law's delays by taking a popular vote in every case which it is desired to hurry to a conclusion. With all these new principles firmly fixed in the citizen's mind, he will know what to think of the pretence that by study and patience and trained intelligence a reform in judicial procedure has been accomplished.

It is nearly a quarter of a century since James Bryce wrote:

> Under the system of Congressional finance here described, America wastes millions annually. But her wealth is so great, her revenue so elastic, that she is not sensible of the loss. She has the glorious privilege of youth, the privilege of committing errors without suffering from their consequences.

Any interference with this glorious privilege is still sacrilege in the eyes of Congressmen, and, accordingly, by means of the convenient device of a "rider," they provided during their last session that no annual budget should be prepared for the Government until they should so order. The immediate purpose of this action was to head off President Taft and his Commission on Economy and Efficiency, who were known to be contemplating so violent an invasion of our liberties. In support of the position assumed by Congress, grave Constitutional and practical arguments are advanced. These would be much more impressive if Congress itself had been exhibiting a disposition to systematize the methods of raising and spending the people's money. The advantages of a budget are not only in the direction of wiser financing; of equal value would it be to help both citizens and officials to get an intelligent grasp of this important branch of the Government's activities. What the country had a right to expect was coöperation between Congress and the President in the establishing of so desirable an improvement. The attempt to thwart Mr. Taft in this respect will only delay the triumph of a policy that all other nations have long followed.

The census bulletin on illiteracy makes a most satisfactory exhibit of progress. The percentage of illiterates in the entire population has, in a decade, been cut down from 10.7 to 7.7, and this percentage among children from ten to fourteen years of age has been reduced, in the same period, from 7.2 to 4.1. The latter showing is both the more striking and the more significant of the two; it means that in the rising generation there are but little more than half as many illiterates in every thousand persons as there were among the young people of like age ten years ago. A remarkable feature of the detailed showing is that the reduction of illiteracy has not only been common to all sections of the country, and strongly marked in every section, but that it has been proportionally as decided in those sections in which the amount of illiteracy was already very small as in those in which there was—and is—a great deal of room for improvement. Thus (for children 10-14 years of age) while the percentage in the South Atlantic, East South Central, and West South Central States fell from 17.8, 18.2, and 16.2, respectively, in 1900 to 10.0, 10.7, and 9.4 in 1910, the New England percentage was reduced from 1.2 to 0.4, the Middle Atlantic from 0.9 to 0.4, the East North Central from 0.7 to 0.3, the West North Central from 1.4 to 0.6. This record of advance seems fully to justify the assertion in the bulletin that the figures "show that illiteracy in the United States is being gradually eliminated."

But, while the *relative* figures of illiteracy, the comparisons between 1910 and 1900, are at all points in a high degree satisfactory, some of the *absolute* figures are very far from what they should be. Especially is this the case in regard to the negro population. Thus in the three above-named Southern divisions of the country, among the negro children from ten to fourteen years of age, the percentage of illiterates is still 18.9, 20.7, and 22.4, respectively; which, though it is a marked improvement on the 31.3, 33.1, and 32.7 of ten years ago, yet represents a vast body of neglected childhood. The significance, too, of such a mass of illiteracy is more than what appears from the figures; for where downright "illiteracy"—the inability to read and write—is so common, we may be sure that a large proportion of those above that line have the most meagre schooling. There is much uphill work still before the men and women who are striving to procure the benefits of elementary education for the negro population of the South. Our foreign-born children, on the other hand, and the native children of foreign parents, make a most excellent showing. Throughout the North, illiteracy among the native children of foreign parents amounts to only about one-fifth of one per cent.; and even among the foreign-born children (of the ages in question) it ranges only from 2.1 to 5.8 per cent. Nothing could give stronger evidence of the rapidity with which the American school system takes hold of the inflowing tide of humanity.

While the publication of the Loeb Library of Greek and Latin Classics has now long been a certainty, the actual appearance of the initial volumes of the series is an event that should not be passed by without a word of welcome. With the original text on one page and the best obtainable English translation facing it on the opposite page, and with the price placing the books within the reach of all lovers of ancient literature, the publication of this great collection brings reinforcement to the friends of "the humanities" at a time when it is sorely needed. But, while Mr. Loeb's well-chosen munificence is thus an encouragement to what is in many ways a waning cause, we believe that it indicates something more than the feeling of one man, or one small group of men, in regard to that cause. In this day of large-scale operation in all directions, the currents of life which are not predominant are apt to be ignored altogether; and every once in a while something occurs to reveal their existence in quite unsuspected strength. Such a revelation was made, in this very matter of the classical tradition, when the new movement at Amherst was launched, a year or two ago; and so, we are inclined to think, the Loeb Library will prove to be not only a cause, but also a sign, of a wider interest in the classics than is generally supposed to exist at present. In any case, it will be a fine achievement—a notable addition to the higher intellectual resources of the English-speaking peoples, and a credit to our own country.

That football makes tremendously for the development of character has long been recognized, but it has seldom if ever before furnished so striking a manifestation of its possibilities in this direction as it gave a day or two ago at Dartmouth. On the squad was a well-built youth from New Hampshire. He had been on the team for a year, but had not displayed the prowess that might naturally have been expected from his appearance. On this occasion he was put in at guard. As usual, he was playing only fair football when something happened that proved to be the turning-point in his career: he was accidentally kicked on the nose. From that moment, observers say, he was invincible. He played harder as the game progressed, and stopped every play that was directed at him. He now sits among the mighty at the training-table. The regrettable feature of this otherwise inspiring incident is that what could so easily have been brought about by design in the very beginning was left to the caprice of chance. A man who may now make the All-America eleven some day was permitted to find himself as best he could. Evidently, the coaching system was gravely at fault. We trust that no more Dartmouth youths will have to wait a whole year for a trifling but indispensable bit of experience that shall in a moment transform them from boys to men.

Cuba's Presidential election on Friday disappointed the prophets—especially the inspired prophets of American intervention—by being conducted in the most orderly manner. None of that rioting and bloodshed at the polls which were so solemnly predicted, and which were to be the signal for the sailing of our men-of-war for Havana, appeared anywhere; no disturbances being reported from any part of the island. This speaks well for the growing self-restraint of the Cubans, while it also shows that they understood the bearing of a peaceful election upon the whole question of their continuing independence. The success of Gen. Menocal was generally expected, and was plainly desired by the most stable and substantial elements of the population. He seems clearly to be the best man for the job, to use the consecrated American phrase, but it is truly a big job that confronts him. President Gomez leaves him the legacy of a discredited and well-nigh wrecked Government. The interval before Menocal is inaugurated will be a critical period, but if that is safely got through, and the new President takes office next spring with the best people in Cuba sustaining him, there is every reason to hope that the young republic will acquire new strength and respect.

Mr. Asquith made a telling point in one of his recent speeches when, leading up to a powerful statement of the case against the threatened Unionist policy as to Ulster, he reminded his hearers of two earnest warnings uttered by him in the past, and disregarded by the Tories with disastrous results. The first related to Mr. Chamberlain's fiscal campaign initiated in 1903—"a campaign in favor of a return to the old and discredited system of protection"; the second to the rejection of the budget of 1909 by the House of Lords. The Premier has no occasion to apologize for any assumption of prophetic gifts when he points to the fact that he repeatedly warned the Unionist leaders in 1903 and 1904 that they were "heading straight for the disaster into which they plunged in 1906," and that he likewise warned them in 1909 that rejection of the budget would bode calamity to the House of Lords. In both instances, he was resting not on any special insight peculiar to himself, but on the knowledge that political instincts and convictions which were deeply imbedded in the public mind of England could not be offended against with impunity. The "Tariff Reform" agitation has been a dismal failure; the rejection of the budget brought down on the House of Lords the penalty that level-headed men, friends and enemies alike, foresaw; and Mr. Asquith has no difficulty in making out a case against the Ulsterite irreconcilables quite as strong as that which held against the unfortunate positions assumed by the Unionist leaders upon the other two questions.

A step towards the union of cleanliness and godliness in India has been taken by the appointment of a commission to inquire into the sanitation of Hindu and Mohammedan centres of pilgrimage. For a series of years there have been outbreaks of epidemics at these points, and the departing devotees have carried away with them the germs of diseases which have later appeared hundreds of miles distant. It is also known that pilgrims carry contagion and infection to these centres, with serious results. Doubtless it is better to be dirty and holy than to have clean hands but an impure heart, and the Government will have to proceed tactfully in any strengthening of existing regulations. The part played in the Mutiny by the greasing of cartridges with the fat of certain animals must always haunt the officers entrusted with the task of "civilizing" India according to European standards and methods.

PROGRESS AND THE CONSTITUTION

The agitation of which Mr. Roosevelt has been the central figure, and which, though it has flamed out with a sudden intensity in the last few months, was distinctly under way during a large part of his second term as President, has all along had as one of its essential features an assault upon the potency of the written Constitution, the distinguishing feature of our historic polity. That assault has taken various forms. For a long time it consisted chiefly in the vehement assertion of an extreme doctrine of loose construction, a doctrine under which it became the duty of the judges to read into the Constitution—or out of it—anything which an assumed change in the ethical or economic demands of public sentiment might call for. A more advanced stage was reached in the proposal that judicial decisions on certain great questions of Constitutional interpretation should be subject to reversal by popular vote; a proposal from the working of which the Supreme Court of the United States was, in terms, excluded, but which obviously carried with it, as a logical and even an indispensable sequel, the application of a like process to the decisions of the nation's highest tribunal. And in his final brief appeal to the voters on the eve of election, Mr. Roosevelt made a reference to "worn-out governmental expedients" in which it requires no great exercise of insight to see a contemptuous allusion to the restrictions of a written Constitution.

Among the causes of the growth of this agitation—by no means the only cause, but unquestionably a very powerful one—has been the belief, entertained by many highly intelligent persons, though with very little reason, that the Constitution of the United States is virtually unamendable. We say "with very little reason," because, although no amendment has been made to the Constitution for a century, except for those brought about by the Civil War, it is equally true that no earnest, determined, and general movement in favor of any amendment has been made at any time during that period, until very recently. Within the last few years, two changes—the income-tax amendment, and that providing for direct election of Senators—have aroused serious interest throughout the country; and what is the result? It was announced from Washington three or four days ago that thirty-four out of the thirty-six States required have approved the income-tax amendment; and there is no doubt that within a few months it will be incorporated into the Constitution. The direct election of Senators is not so far advanced, but it has been adopted by House and Senate, and will in all probability have an easy course through the State Legislatures. Moreover, in both of these cases, the adoption of the amendment would have been much more prompt had it not been for obstacles not germane to their purpose. Gov. Hughes's objection to what he regarded as a dangerous, though unintended, consequence of certain words in the income-tax amendment unquestionably delayed its acceptance by at least a year; and in the matter of the direct election of Senators, the difficulty of reconciling Northern and Southern views as to a purely accidental bearing of the amendment on the conduct of elections caused the proposal to hang fire for a long time. As it is, the quiet progress of these two proposals completely disposes of the notion that the Constitution is incapable of amendment except by war or by a tremendous popular upheaval.

It was not in the specific schemes of economic or social change embodied in the Progressive party's platform that the essential point of departure of that party was to be found. Many of these projects not only have the hearty approval of all humane and open-minded men without distinction of party, but had been making rapid strides towards adoption before the Progressive party was heard of. Some are of a different nature, and involve decidedly contentious matter. But the great thing that underlay the whole, the thing conveyed in a thousand ways though not expressed in any platform plank or perhaps in any explicit utterance, relates not so much to objects as to methods. Impatience of any such restraints as are imposed by a written Constitution is of the very essence of the movement; and even this does not by any means measure the extent of its departure from the American tradition. What the new Constitution of Ohio has done for that State is but an advance specimen of what, by the very law of its being, this movement, if it should persist, is bound to seek to impose upon the nation. Amendment of the Constitution initiated by a trifling percentage of the voters, and completed by the assent of a majority of those voting upon it at a single election; statutes similarly enacted, without the interposition either of the Legislature or of the Executive: this is what the logic of the Progressive movement, and the emotional force behind it, alike prescribe as its inevitable goal.

And why not? "What great harm," it may be asked, "would there be in this direct power of the people to settle the questions of the people? Let them make mistakes; they will learn to correct them." This is a cheap and easy answer; and it seems to satisfy the youthful reformers of all ages with whom the country nowadays abounds. Bow how about mistakes that cannot be corrected? How about a plebiscite for free silver in the dark years following the panic of 1893? That would have been an absolutely irreversible judgment—the mischief would have lain in the change itself, and could never have been undone. How about a plebiscite on Union or Secession? Who knows what would have been the result of that? Was the Union to be staked on the result of a count of noses at any single time at which its opponents wished to put it to the touch? And who knows what fundamental questions—questions quite as fundamental as either of these—the future may bring forth? The defenders of the Constitution to-day, the defenders of representative government to-day, stand for the preservation of established institutions in the face of sudden attack. They stand for "governmental expedients" which make it impossible to sweep away fundamental features of our political or economic structure without giving them a fair chance to measure their strength against the wave of innovation. It is no iron-bound Constitution that they are pledged to defend; it is a Constitution subject to change, but subject to change only when the desire of the nation for that change has been proved to be steady and assured. And under that Constitution, with such modification as the firm judgment of the country may demand, the nation will respond to the requirements of progress without sacrificing its sobriety or endangering its stability.

METAPHYSICAL STANDARDS OF LIVING.

No discussion of social conditions among the workers of the nation to-day is complete if it does not lay a great deal of stress on the question of immigration, on the changes in the industrial world that have resulted therefrom, and specifically on the American standard of living. Especially in treating of the character of the "new" immigration from Southern and Eastern Europe during the last thirty-five years, a writer seldom fails to point out the menace to the American standard of living that arises when vast hordes of poverty-stricken Italians and Slavs are brought into competition with the native workingmen. The main features of such contrasts are familiar. We are directed to the tenement districts of New York city or Chicago, we are shown perhaps a dozen Polish or Slovak laborers herded together in two or three rooms under destructive physical and moral conditions, and we are asked to consider what, under such circumstance, is to be the future. Mary Field, in the last number of the *American Magazine*, has done this in a series of very vivid and generally truthful sketches of the way in which wage-earners live in Chicago. Much in the same spirit is W. Jett Lauck's article on "The Vanishing American Wage-Earner," in the last *Atlantic*.

And yet, in both these studies of the immigrant wage-earner, though they seem to deal with concrete figures and conditions, there is discernible a peculiar hesitancy in getting down to the essential fact. The writers reason *a priori*. They show us what the living conditions are among the immigrant population, they remind us of the American ideal and draw the conclusion explicitly or by inference that a degradation of American standards is inevitable. But evidently a much simpler and more scientific way of going at the problem would be to ask specifically whether, taking the ninety millions of people in the United States as a whole, life to-day is on a lower plane than it was thirty years ago or sixty years ago. Is the average wage lower, is the average amount of comfort smaller, is the average percentage of destitution and crime larger, is the average standard of popular education on the decline? To bring forward specific figures on such vast and complicated matters is out of the question in this place. But we doubt if even the most remorseless critic of industrial conditions in this country will, as a matter of general knowledge and conviction, defend the thesis that the economic position of the American wage-earner has been going down under the pressure of immigration. As for the broader ethical and spiritual effects of the foreign inrush, the social worker will be the last to deny that it is precisely during the last quarter of a century that this nation has experienced a spiritual awakening whose effects in politics, industry, and social relations we are now beginning to see in full force. Reasoning *a priori*, the student of immigration would have argued, twenty-five years ago, that the invasion of uneducated foreigners, with no tradition of liberty and self-government behind them, must inevitably work a deterioration in our politics. Yet it is to-day that we are in the full swing of a campaign for governmental reform.

When the critics of the "new" immigration speak of the American standard of living there seems to be vaguely present to their minds a picture of the America of seventy-five years ago, with its industries located in the small manufacturing towns, and its population of independent, native workingmen living in their own homes, and moving, out of shop hours, on a basis of democratic equality with their employers. With this they contrast the condition of what they describe as industrial serfdom under which the foreign mill-worker or miner lives to-day. But that obviously is a false contrast to make when one wishes to discuss the effects of the "new" immigration. The true contrast to be drawn is between the living standard of the "new" immigrants and that of the immigrants of three-quarters of a century ago, when the Irish began to enter the mills and factories, to be followed by other races, such as the French-Canadians. The workingman of native stock reaching back, let us say, a hundred years, was never a tenement dweller. The city tenement and the slum arose with the first waves of the older immigration. The proper question to ask, therefore, is whether tenement conditions to-day are worse than they were fifty years ago, whether congestion among the Italians and Slavs of New York city, taking them as a whole, is worse than it was among the Irish tenement dwellers in 1860. At bottom it is not a question whether the "American" standard of living has been declining, but whether the standard of living among tenement dwellers in America has been going down. And on that point the answer would surely be by no means as one-sided as our writers would imply.

An analogous want of really close analysis is apparent in what the *Atlantic* writer has to say concerning the "vanishing" of the American wage-earner. He shows that when the cotton mills were first started in New England, "the looms and spindles were tended by the sons and daughters of the farmers who lived in the surrounding country." As the industries expanded, skilled operatives came in from Great Britain. After 1850 the French-Canadians appeared. After 1890 began the Slavic and Latin invasion. To-day the number of native Americans in the New England mills is one-tenth of the total number of employees. In the woollen mills the proportion is one-seventh. In the silk mills the proportion is one-fifth. Apparently, the American workingman has been "vanishing" indeed. But our writer neglects to mention that between 1870 and 1910, the output of our silk mills increased sixteen-fold, our cotton output increased nearly four-fold, and our woollen output increased nearly to the same degree. Presumably there has been a corresponding increase in the number of wage-earners engaged in these industries. It makes a very considerable difference whether we say that the Portuguese or Italian mill-hand has forced the native workingman out of his job or whether the foreigner has simply taken the job that could not be filled by American labor.

The vanishing American workingman! The non-metaphysical mind insists on asking where has the American workingman vanished to? Evidently, he must have vanished either up or down. Our writers do not assert that he has gone down. The native stock has not swelled the ranks of pauperism and crime. Has he, then, risen, as a great many people believe, to the position of foreman and director of the new masses of foreign labor? The writer in the *American Magazine* seems inclined to think that he has; wherefore, evidently, his standard of living has not suffered from foreign competition. But a more satisfactory answer is supplied by Mr. Lauck in the *Atlantic*. Speaking of the old English, Irish, and Scotch immigrants, whom, by contrast with the newer immigrants, he treats as "Americans," he tells us that "not only has this class ceased entering the mills, but those already employed have sought work elsewhere." Working elsewhere; in other words, the vanishing American wage-earner is still a wage-earner somewhere; he has not vanished at all.

THE TURKISH DOWNFALL.

Acknowledgment of defeat comes from Constantinople in the form of an appeal by the Ottoman Government for the good offices of the Powers. The final outcome of an extraordinary campaign can hardly be affected by what the next few days may bring forth. It is simply a question whether the present conflict shall go down in history as a two weeks' war or a three weeks' war. It was only on October 19 that the Bulgarian offensive began, and it is the work of the Bulgarian armies that has decided the issue. Just what have been the factors that entered into the Bulgarian victories we are still left to conjecture. It is only with the news of the approaching end of the war that anything but the most meagre details has begun to reach us as to the nature of the fighting. On the Bulgarian side there has been just one newspaper correspondent at the front, and his reports have dealt more with results than with the actual nature of the contest. Until now we have had to be satisfied with general impressions. The Bulgarians have displayed extraordinary courage and dash. Their commanders have been resourceful. The Turks were beaten steadily backwards. But as to the number of forces engaged, their strength in the various arms of attack, and the losses on both sides, there is still the greatest uncertainty.

It may be in place here to attempt a brief review of the movements of the armies from the investment of Adrianople and Kirk-Kilisseh to the present moment. We must imagine a rough triangle some 140 miles tall, with its base running from Adrianople to Kirk-Kilisseh and its apex, pointing southeast, at Constantinople. At Adrianople the fighting began on October 20, and almost simultaneously at Kirk-Kilisseh. The first Turkish defeat came at the latter place, which was taken on October 24. The fighting line then shifts forty miles to the southeast, and by so much nearer to Constantinople. The base of the triangle, roughly parallel to the original base line, now extends from Baba Eski on the west, through Lule Burgas and Bunar Hissar to Visa. Along this line the decisive point was the capture of Lule Burgas by the Bulgarians on October 30. The Turks fell back, another section of the triangle had been cut off, and the base pushed back thirty miles nearer to Constantinople along the line between Chorlu, near the Sea of Marmora, and Sarai, near the Black Sea. There, for a while, the Turks made a stand, not with the hope of retrieving their fortunes, but for the purpose of enabling part of their forces to reach the Tchatalja line of fortifications forty miles to the southeast and within two days' march from Constantinople.

Of the spirit animating the Bulgarian forces enough has been said. What has been the conduct of the Turkish troops? Almost from the first there have been stories of panic and cowardice on their part. Regiments have been described as surrendering in a body, or fleeing to the rear and fighting for possession of the southbound trains. The retreat of the Turks after the battle of Lule Burgas is characterized as a rout in the London *Chronicle's* story from its correspondent with Nazim Pasha's army, the first piece of effective narrative the war has so far produced. Battalions, regiments, and companies are described as melting away into mobs of panic-stricken fugitives; and the *Chronicle's* story is echoed in other reports. But that the retreat from Lule Burgas, while precipitate, was not entirely a *sauve qui peut* appears from the fact that after being beaten on Wednesday at Lule Burgas, on Saturday, the day after the *Chronicle's* correspondent dates his dispatch, the Turks are fighting obstinately some thirty-five miles to the south along the line of Chorlu-Sarai. "Murderous" is the way one story characterizes Saturday's conflict, which showed a casualty list of twenty thousand. This story, it is true, comes from Constantinople, but it is amply confirmed by a dispatch of Sunday's date from Sofia, to the effect that the remnant of the Turkish army was making a stand along the line from Chorlu to Sarai.

It should seem to be clear, therefore, that it is not want of courage on the part of the Turks that has brought about their overthrow. The Bulgarians, of course, have been their match in that, and have had in addition the impetus that is always on the side of the attacking force, and, as time went on, the prestige of success. Much of the fighting has been of a ferocious character, hand to hand and dagger against club. But it now appears that preparedness and efficiency entered largely into the result. The *Chronicle's* representative speaks of the splendid effectiveness of the Bulgarian artillery, but it was an effectiveness made possible largely by the breakdown of the Turkish artillery, due to the failure of supplies. Turkish artillerymen are described as standing with folded arms at their guns, ammunition exhausted, and waiting for their fate. Ill-armed, ill-fed, ill-clad, the Ottoman soldier went out under a tremendous handicap. The outcome of the war is sure to bring a crisis in the affairs of the Young Turkish régime at Constantinople. The crisis will be all the more severe if it shall turn out that during the four years they have been in power they made no effort to prepare the army against the test which they must have foreseen was bound to come.

THE NATIONAL ARCHIVES AGAIN.

"The care which a nation devotes to the preservation of the monuments of its past may serve as a true measure of the degree of civilization to which it has attained." With this sentiment from a Russian Governmental source, Mr. Waldo G. Leland begins an authoritative article in the *American Historical Review* upon the condition of our national archives. He goes, however, beyond the usual complaint, not only in the fulness of his picture of their deplorable situation, but in his presentation of a programme for betterment. Certainly, there is very little of the civilized in our Government's present neglect of its archives, the value of which is obviously inestimable. It is not only that the records are scattered all over Washington in storehouses, disused theatres—the one in which Lincoln was shot has been used for some of the most precious papers of the War Department—but that wherever they are they usually suffer from such neglect as to insure often their rapid deterioration or make possible their theft or deliberate destruction as waste-paper. Where else than in Washington are abandoned car-barns deemed proper housing for records not only indispensable to the historian, but often vitally necessary to the proper conduct of official business?

Naturally, in such extraordinary hiding places the danger from fire is appalling. In the various departments priceless papers are kept on wooden shelves and in wooden cases. It is only by good luck that there has been no worse loss at Washington than that at Albany in the Capitol fire, over which every historian still mourns. Should some of these Washington records go it would entail an actual cash loss that would run into the millions—a cold business fact which alone ought to move Congress. The President's Efficiency Commission might also complain of the loss of time involved in getting at almost inaccessible records and in searching for others that have disappeared. Obstruction of business in this way costs a great deal of money. Not long ago, Mr. Leland reports, 760 file-boxes of the Indian Office archives were found in an attic of the Interior building, where they had probably lain since 1876. The archives prior to 1850 of the Chief of Engineers of the army will, it is hoped, be turned up in some similar place; but this is doubtful, for it is said that they were sent to the Capitol about 1850 and never returned. How unsafe this was appears from the old story that the open fire of the file clerk of the House of Representatives was kept going for a whole winter by the use of petitions and other documents which should have been most carefully preserved.

Mr. Leland's programme is, of course, premised upon the much-desired archives building. Without this a responsible administration or management is impossible—a fact long recognized by those who have fought for the building. Mr. Leland thinks the site originally selected is too far from the centre of things in Washington. Convenience and safety are the controlling requisites. As to its size, he estimates that 5,000,000 cubic feet of space are already in use for records in the District of Columbia, with an annual growth of 60,000 cubic feet. The bill now before the Senate calls for a building of 1,500,000 cubic feet. We fully agree with Mr. Leland that it would be a penny-wise-pound-foolish policy to start with one having less than double that amount. Warned, perhaps, by the architectural horrors of the Government Printing Office and the Pension Bureau, he modestly hopes for "something more than a storage warehouse." Indeed, there is no reason whatever why it should not be in keeping with the latest Washington buildings which have added so much to the city's beauty, and that it should be of the steel stack type, wholly fireproof, is also obvious.

Turning to the question of the control of the records, once they are housed, Mr. Leland emphatically urges that they should then come into the legal custody of the archivist. Any other course would, it seems to us, involve such a tangle as to be unthinkable. Yet there will probably be a determined effort to reserve to the various departments complete jurisdiction of their archives—a system which failed lamentably in England. Each department should, of course, have the right to designate the records to be deposited in the archives building; but central control of all the records would prove essential to efficiency and to the authentication of documents. As to the character of that control, Mr. Leland favors an Archive Commission, to be composed of a representative of each of the executive departments, with an archivist as the head of the actual work. Such an archivist would naturally keep in closest touch with the Library of Congress, which must remain the proper place for the preservation of private and historical manuscripts, and also with the proposed Commission on National Historical Publications to control the printing of such of the archives as warrant publication.

We have gone at length into these details because we feel that there is no subject connected with the machinery of our Government which demands a prompter attention at the hands of Congress. Every day that passes under present conditions means a loss of money, and of historical treasure that cannot be replaced. We are thinking not merely of the scholars and writers, who are deprived at present of access to the records, but of the wealth of unused educational matter of inestimable value to teachers and students of government, of politics, and of administrative law. More than that, a conflagration in certain places would cripple the workings of departments and bureaus and lay the Government open to being plundered for lack of the evidence with which to refute unjust claims. It took years to get the new Library of Congress; surely the time is at hand when this other need will be filled. Cabinet members have urged it for years, and so have committees of Congress. There can be no excuse for further delay.

CHAUCER IN MODERN PROSE.

Is the convenience of the modern reader too much consulted? It would be hard to mention any Continental masterpiece of which a fairly recent English translation does not exist. And having exhausted foreign works, the translators have turned to the monuments of old England. The stamp of approval was put on that movement by a great scholar when a few years ago Professor Gummere brought "Beowulf" within the reach of all. The venture was daring, but was pronounced highly successful. Now come Professor Tatlock and Mr. Percy MacKaye with a modern prose rendering of Chaucer, in a handsome volume, with choice colored plates (published by Macmillans). The question is whether this consideration for readers with extremely limited equipment will not in a very special sense make modern readers of us all. In the case of the Loeb Classical Library, the danger is partly forestalled by the inclusion of the original texts along with the translations. For obvious reasons, no such arrangement was thought necessary in the present book.

Chaucer in prose! The idea at one time would have seemed odd, even if the rendering were into another tongue. For Chaucer's rhythm, like the bells on his Monk's horses, which so clear and loud could "jingle in a whistling wind," has a way of getting into one's head. Just at first one is sure to feel resentment, upon turning to the Prologue to the Canterbury Tales, to read in the new version:

> When the sweet showers of April have pierced to the root the dryness of March, and bathed every vine in moisture whose quickening brings forth the flowers; when Zephyr, also with his sweet breath, has quickened the tender new shoots in holt and moor, and the young sun has run his half-course in the Ram, and little birds make melody and sleep all night with eyes open, so nature pricks them in their hearts; then folk long to go on pilgrimage to re-

nowned shrines in sundry distant lands, and palmers to seek strange shores. And especially from every shire's end in England they go their way to Canterbury, to seek the holy blessed martyr who helped them when they were sick.

Readers will be apt to turn back to some such couplet as the following and grieve over its scattered melody:

And smalë fowlës maken melodye,
That slepen al the night with open yo.

Pronounced with the vowel sounds of Chaucer's day, these lines have a music comparable to that of the best Italian verse.

Great loss there is bound to be, as the two editors readily admit. It is not their aim, they assert, to win away from Chaucer's own words any readers to whom his language presents no difficulties; but rather to attract to him those who otherwise would not tarry at all. How many there are in the latter class, time and the publisher's count may tell. Their number is probably great. For the obstacle of the language is real and has long been felt. Even so early as the age of Elizabeth, Spenser's enthusiasm for Chaucer was not general, and though Dryden later made certain adaptations, he seems not to have understood Chaucer's metre. More recently schools and colleges have taken him up, and at Harvard the tradition started by Professor Child has grown formidable. Yale, too, has her Lounsbury. But for every one getting such expert instruction there must be many whose lack of the Chaucerian *Sprachgefühl* makes them botch and bungle, and then give up their experiment with the language altogether. They are likely to be more easily discouraged than an Englishman, the possessor of a Kelmscott Chaucer, who, reading with total disregard of proper accents, remarked cheerfully, "You see, it runs along pretty well if you scan it right." Granting, then, the demand for a modern version, it is a pleasure to acknowledge that Messrs. Tatlock and MacKaye have done their work well. Both had special qualifications, which are manifested by their constant endeavor to safeguard the feeling of the original lines.

Certain portions of the poet naturally come off better than others. Without the gentle tap of the rhyme the Prioress loses much in piquancy. Only Chaucer himself will do:

At metë wel y-taught was she with-alle;
She leet no morsel from hir lippës falle,
Ne wette hir fingres in hir saucë depe.
Wel coude she carie a morsel, and wel kepe,
That no drope ne fille up-on hir brest.
In curteisye was set ful muche hir lest.

For the same reason there is less pathos in the tale of the good Custance; nor can Chauntecleer ever look quite himself minus his quibbling couplets. But there are several instances in Chaucer where such personal traits must yield to the normal demands of narrative; so, for example, "Troilus and Criseyde." Here the sacrifice of the verse is not so serious. There be even some who have said—but it is heresy—that Chaucer would have done better this once to adopt prose; that the exigencies of the intricate stanzaic form have led to prolixity. "And shortly for to seye," cries Chaucer to disarm you, but meanwhile is merely filling out a verse and scrambling for a rhyme. Such dissenters will be specially interested in this modern rendering. As told there in prose, the story is still a delight and is expressed in language which appears highly suitable.

Chaucer modernized will never supplant his real self in the minds of them who know him, any more than the cleverest equivalents of Horace's Latin can suffice. But to those for whom the book was planned it may be heartily commended. If haply it shall produce a more general acquaintance with Chaucer, we shall expect it also to free him from the smart judgment, often heard, that he appeals only because he is quaint and that his characters are too simple to touch our own more complicated age.

SCANDINAVIAN LITERATURE.

BERGEN, Norway, October 21.

One of the books which has attracted much attention in Denmark this season is Edmund Gosse's "Two visits to Denmark, 1872, 1874," translated into Danish by Valdemar Rordam, and published by Gyldendal. Gosse visited Denmark at a time when a new spirit was breaking forth, and, though a stranger, fully understood and described it. Of particular interest is the account of his acquaintance with Georg Brandes, who at the moment was probably the most hated man in the country, but who, as Gosse foresaw, was soon to be one of the leaders of Danish intellectual life.

The late King Frederick was especially interested in military affairs, being a general in the Danish army, and having fought in the Dano-German war of 1864. The most important events in his life were of a military character, and the timely little publication, by Axel Liljefalk, "Kong Fredrik den ottende, et bidrag til hans livs historie" ("King Frederick the Eighth, a Contribution to the History of his Life"), traces his career from his first service as a sub-lieutenant in the army till he led the big manœuvres a few years ago as a general and commander-in-chief. The book does not number much more than fifty pages, but gives the chief facts of the King's life, without trying to portray the development of the country during his reign.

A novel of some vigor is Harry Søiberg's "Af nyskovens saga" ("Of the New-Forest Saga"). The author belongs to the most promising of the younger generation in Denmark; by a former publication, "Af jordens slægt" ("Of the Earth's Race"), he obtained a name in Danish literature and a large circle of readers. His descriptions of nature, and the life in the forests and on the mountain slopes, are drawn with an intensity and force which remind one at once of Kipling, and, in Northern literature, of Johannes V. Jensen and Hamsun. The conflict in this latest novel is rather simple and lacking in originality; its interest is due to its poetical and psychological intensity, to the extraordinary fresh and direct charm by which the landscape is framed round a rough and primitive life. Among other Danish books must be noted a new (the fourth) collection of "Myths" ("Myter"), by Johannes V. Jensen, and a collected edition of Jeppe Aakjær's works, the joyful and sympathetic singer of Jutland. A book which is advertised as forthcoming is by Jacob A. Riis. "Hvorledes jeg blev amerikaner" ("How I Became an American"), most probably a translation of the author's well-known work, "The Making of an American."

Few organizations have played a more important part in Norwegian political and cultural life than the Norwegian Students' Society ("Det norske studentersamfund"), which was founded in 1813. In the Students' Society the leaders of the great cultural parties, Wergeland and Welhaven, led their bitter controversies, here Björnson orated to the lasting benefit of freedom and liberalism, and here were fought epoch-making battles for new thought and ideas. No wonder that the students, old or young, are proud and fond of their society, and no wonder that an account of the history of the society during the hundred years of its existence is met with interest and expectation. Dr. Fredrik B. Wallem's "Det norske studentersamfund gjennem 100 aar" ("The Norwegian Students' Society During 100 Years") will be complete in fifteen parts. The first of these, which has just appeared, traces the history of the organization through the early difficult years, and is written with accuracy and restraint. The work will be provided with a great mass of pictures of prominent members and with other illustrations, and will no doubt prove an appropriate contribution to the celebration of the centennial anniversary of the society on the 2d of October, 1913.

The only son of Henrik Ibsen, Dr. Sigurd Ibsen, is a very industrious scholar. The philosophical work which he published last Christmas, "Human Quintessence," met with great approval in many countries, and his new book, "Udsyn og indblik" ("Views and Opinions") is likely to win equal success. Dr. Ibsen deals with political, social, and philosophical problems, and writes with the same vast knowledge, clear logic, and literary poise which marked the earlier production.

A book which will create a sensation in all the Scandinavian countries is the Norwegian professor, Yngvar Nielsen's substantial memoir, "Under Oscar 2s regjering" ("During Oscar the Second's Reign"), being notes and experiences from 1872 till 1884. The period which is here treated belongs to the stormiest in the history of the two formerly united countries, and the author, who was an active figure in the events of that day, contributes much that is new to an estimate of the leading persons in both lands. Through the whole work runs a warm and sincere sympathy and affection for the gifted King, who had the hopeless task of reconciling views and opinions which were diametrically opposed. And herein consists the main value of the work, that it throws new light on King Oscar's position in the controversy. The book should be read by all who are interested in the history and political development of the Scandinavian countries.

A bulky contribution to Dano-Norwegian literary history is Viljam Olsvig's "Ludvig Holbergs unge dage" ("Ludvig Holberg's Young Days"). Holberg was twenty years old when he left his native town, Bergen, Norway, but already had a marked personality, a solid character, and a mature intelligence. It is a curious fact, however, that no writer had heretofore told the story of Holberg's youth in Norway or had summarized the Norwegian prejudices with which he went out into the world. The work shows remarkable industry, a wealth of material having been gathered together, and will always stand as one of the chief sources for students of Holberg's early life.

Of the Swedish books of the season must be mentioned Prof. Harald Hjärne's monograph on Napoleon, which is a very able examination of the circumstances that led up to the defeat of "the great little man." A biography of Strindberg, by Gustav Uddgren, furnishes much of interest, although it is a rather fragmentary investigation of the poet's works. The second part of Fritz von Dardel's "Minnen" ("Recollections"), which covers the period 1863 to 1865, illuminates Swedish political and court life during that time. An interesting discussion of American questions is given in the recent book by E. H. Thörnberg, "Amerikanska samhällsproblem ("American Society Problems"). The author gives an account of the Swedish immigration to America, and deals with such other problems in the United States as those of the Trusts, the labor movement, and political corruption. The discussions appear to be well considered.

ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

So much has been written about Dr. Johnson that it might be thought the subject was exhausted. But notwithstanding the many things, fine and foolish, that are on record, the interest in the man is perennial, and welcome sidelights may still be found by the true Johnsonians, sidelights not to be obtained from the annotations of Croker, Napier, Hill, or even of Fitzgerald. Bearing this in mind, let the bibliophile who has the chance procure a copy of the eight-page pamphlet whose title-page is here transcribed:

DIALOGUE
BETWEEN
DR. JOHNSON AND MRS. KNOWLES.
LONDON:
Printed for J. and A. ARCH, Gracechurch Street.
MDCCCXCIX.
Price Sixpence.

About the incident to which the pamphlet refers, Boswell has much to say, and to his not altogether candid narrative Croker has added a not too candid note.

Miss Jenny Harry was the daughter of Thomas Hibbert, a West Indian planter, who was born in Manchester and went to Jamaica in 1734, where he died in 1780. Her mother is said by Croker to have been a mulatto, and Jenny's birth illegitimate. She was sent to England to be educated, and the house of her guardian, Nathaniel Sprigg, of Barnes, was frequently visited by a clever Quaker lady, Mary Knowles, the wife of a wealthy physician, and herself distinguished for artistic and literary talent. Mr. Sprigg did not think it inconsistent with good manners to poke fun at the doctrines and practices of the Society of Friends, and these were defended with spirit and ability by Mrs. Knowles. Jenny Harry, a lively, sensitive girl of eighteen, was a witness of these encounters, and by the time she was twenty had become a convert to Quakerism. But, in a written statement of her reasons for the renunciation of Anglicanism, which shows much talent, she lays no stress upon Mrs. Knowles's influence, and, indeed, seems to have been either naturally or by reading and reflection the type of character to whom the doctrines of the Friends would appeal. She may be styled a "born Quaker." Miss Seward says that her father was so annoyed that he reduced her fortune from £100,000 to £1,000. Croker says that this was not the case; that her fortune was £1,000, and that her father was not angry, but gave her another £1,000. Such are the puzzles of history! The truth seems to be that as the only surviving child of a rich man, she might reasonably have expected a large share of his fortune, but the bulk of it was left to his nephews, and apparently the legacy was increased to £2,000 at their suggestion.

Up to her adoption of Quakerism Jenny had been in favor with Dr. Johnson, who, as all the world knows, was very fond of the company of women, especially if they were clever or pretty, or both. But after she became a Quaker he discarded her, and rudely passed her in the street without a reply to her friendly greeting. Her change of religion had offended her father. Dr. Johnson's unkindness had added to her grief. She asked Mrs. Knowles to intercede for her. On April 15, 1778, Johnson was at the bookseller Dilly's, along with the faithful Boswell, Miss Anna Seward, Mrs. Knowles, a couple of clergymen, and others. The conversation ranged from Mrs. Glasse's cookery to the relative amount of liberty allowed to men and women. Friendship and universal benevolence were also considered. "I am willing to love all mankind, *except an American,*" roared Johnson, to which Miss Seward replied, "Sir, this is an instance that we are always most violent against those whom we have injured." Then they discussed Jonathan Edwards's tremendous doctrine of the will, and many other subjects. But when Mrs. Knowles introduced the name of Jenny Harry and solicited "kind indulgence for what was sincerely a matter of conscience," Dr. Johnson brutally replied, "Madam, she is an odious wench."

So far there is substantial agreement between the three who have chronicled the conversation which ensued, and it cannot be said that in any one of them Johnson shines to advantage, either as to manners or reasoning. Boswell, in a note, declares that he made a memorandum of the dialogue at the time, but he omits to state that he asked Miss Seward for her notes, and that he asked Mrs. Knowles for hers. He garbled Miss Seward's, and he suppressed Mrs. Knowles's statement of a matter in which she was so much concerned. While Boswell's own account reappears, of course, in every edition of his immortal work, none of his editors have thought fit to print in an appendix the accounts given by the two ladies. Miss Seward's letter to Boswell sending the "minutes" he had asked for is printed in the first volume of the *Friend,* printed at Philadelphia in 1828, and also, among other places, in the "Life of Edward Pease," by Sir Alfred Pease (1907). The same account, with verbal variations, appears in a communication to Mrs. Mompesson, December 31, 1785, which is printed in Anna Seward's "Letters." The three reporters were each dissatisfied. Boswell possibly toned down his account that he might not emphasize the Doctor's defeat. Miss Seward protested that he had garbled her statement. Mrs. Knowles was not content, because of what Miss Seward had omitted, as well as of what Boswell had suppressed and asserted. Miss Seward, writing to Helen Williams on October 19, 1788, mentions that "Mrs. K. is curiously dissatisfied with that tract, because it does not record a long, theologic dispute, which succeeded to what I *did* put down, and in which she ably defended her Quaker principles from the charge of Deism and absurdity which the Doctor brought against them. She fancies that she appears in a poor eclipsed light on the same manuscript, because she there opposes only strong, calm, and general reasoning to the wit of her antagonist." The result was that Mrs. Knowles's version was communicated to the *Gentleman's Magazine* in June, 1791, and appeared also in the form of a pamphlet, several times reprinted, which I am now advising Johnsonians to obtain—if they can.

The "Dialogue" is lively reading. "Not I, indeed," the doctor exclaims, "I have not read your Barclay's 'Apology'; and for this plain reason—I never thought it worth my while. You are upstart sectaries, perhaps the best subdued by a silent contempt." The lady rejoined:

> This reminds me of the language of the Rabbies of old, when their Hierarchy was alarmed by the increasing influence, force, and simplicity of dawning Truth, in their high day of worldly dominion. We meekly trust, our principles stand on the same solid foundations of simple truth; and we invite the acutest investigation. The reason thou givest for not having read Barclay's "Apology" is surely a very improper one for a man whom the world looks up to as a Moral Philosopher of the first rank; a Teacher, from whom they think they have a right to expect much information. To this expecting, enquiring world, how can Dr. Johnson acquit himself for remaining unacquainted with a book translated into five or six different languages, and which has been admitted into the libraries of almost every Court and University in Christendom!

Then, we are told, the doctor grew very angry, and became still more so "at the space of time the gentlemen allowed his antagonist wherein to make her defence," and his impatience excited Mr. Boswell himself, in a whisper, to say, "I never saw this mighty Lion so chafed before!"

After more discourse, the doctor said: "Well!—I must own I did not at all suppose you had so much to say for yourselves. However, I cannot forgive that little slut for presuming to take upon herself as she has done." "I hope, Doctor"—this was Mrs. Knowles's final appeal—"thou wilt not remain unforgiving; and that you will renew your friendship, and joyfully meet at last in those bright regions where Pride and Prejudice can never enter!" But he was obdurate. "Meet her! I never desire to meet fools anywhere." Mrs. Knowles adds: "This sarcastic turn of wit was so pleasantly received, that the Doctor joined in the laugh; his spleen was dissipated, he took his coffee, and became for the rest of the evening very cheerful and entertaining."

Jenny Harry, who was the cause of this conversation in what Boswell called "that tremendous evening at Dilly's," died in 1784. This was less than a year after her marriage to an Anglican, according to the Johnsonian annotators. This, if true, would show that the smiles of Dan Cupid were more powerful than the thunders of Dr. Johnson. But it was not so. Joseph Joshua Green, of Goodwyn Lodge, Hastings, has communicated to me his MS. monograph on Jenny Harry and Mary Knowles. The marriage of Jenny Harry and Joseph Thresher, jr., a young Quaker surgeon, took place at Devonshire House, London, November 26, 1782. But her married life was brief. She died August 17, 1784, leaving a baby son, who died in the following December. And Joseph Thresher, her husband, died June 30, 1786. The long letter—long enough almost to make a pamphlet—which Jenny Harry addressed to her father in explanation of her passage from Anglicanism to Quakerism, is remarkable for its pathetic sincerity, and for the clearness and cogency with which she states her case. It is surely a matter of regret that, so far as I am aware, it has never been printed. I owe to the kindness of J. J. Green the opportunity of reading this interesting human document.

UNIVERSITY FELLOWSHIPS.

TO THE EDITOR OF THE NATION:

SIR: Under present conditions universities are competing with each other in the prices bid for graduate students, and students write to a professor or to the dean of a graduate school and say: "I am a graduate student, and have had such a course; such a university will pay me so much to study there, another will pay so much; how much will you pay me?" If these fellowships were only to enable a poor man of exceptional abilities to study, there would be more reason for them. But it will always be possible to find means to enable an exceptional man, who would be wasted in another profession, to become a university professor. We all know that in practice many of these fellowships are merely subsidies to induce students to study in a particular university, rather than in some other. Thus, if there were only fellowships enough, a university with a weak faculty would seem to be as well off as one with a strong faculty, and a professor who knows little more than he learned from his own teachers would seem as useful as one who works twelve months in the year, who keeps up with the progress of his subject, and is acquiring a reputation here and abroad; students would be hired for both alike. Fellowships for graduate students take away from universities and from the professors individually a very healthful rivalry and a proper incentive to greater energy and efficiency.

But how are the students themselves affected? Is it a good thing for them to pay them for what they receive? Does it not turn the world for them upside down? These fellowships set for students a bad standard from the beginning, even if the teachers are equally good. Should young men be tempted in this way to enter an academic life, when they would be more happy and perhaps as useful on the farm or in some other business? And are we blind to the effect which this sort of subsidization is having upon the Ministry?

American universities are suffering most of all from this, that men of talent and force of character are seldom willing to enter an academic life. Able men, when they graduate from college, look beyond the few years of professional training to the profession which lies ahead. If they are strong men they are not willing to enter a profession in which it is impossible for one to live decently and to support a family, without independent means. The reason why university salaries are not larger is quite obvious, and is often stated frankly; salaries will not be increased materially as long as it is possible to fill positions at the present rates. Fellowships which are subsidies to graduate students, increase artificially the supply of teachers at the present salaries, and each one hinders by just so much a change to a better state of things. If universities provided reasonable salaries for the members of their faculties, there would be no need of fellowships to induce young men of real ability to enter this profession.

It is obvious what answer will be made to all this. It will be said that there is no hope at present for any considerable change in salaries, and that, while this is so, if fellows are not paid there will be no students in the graduate schools. If, however, university professors are really adding to the knowledge and civilization of the world, this country will need them and demand them, and the demand will create a supply.

It will also be said that this argument opposes the trend of the times. Certainly many universities are hastening to increase their fellowships in number and amount in this humiliating kind of competition. But it is also true that a protest is being raised all over the country against this thing, and within the last few months the president of one of the four greatest universities in this country boasted that his institution, at least, had few fellowships.

Universities may need fellowships, many and large, for men who are no longer students, but are productive scholars, engaged in independent research. They may need fellowships as prizes for their own undergraduates, or for some other reason. But to hire students to attend their graduate courses, not one cent.

WILLIAM K. PRENTICE.

Princeton University, October 31.

THE READING LIBRARIAN.

TO THE EDITOR OF THE NATION:

SIR: In a volume published last year, entitled "Facts for Freshmen Concerning the University of Illinois," there occurs, in the chapter on Library Science, the following sentence: "There is a saying that 'the librarian who reads is dead,' which means that the up-to-date librarian is too busy to find time to read books; he must know what is in them without reading them." Aside from the fact that the saying is wrongly quoted and wrongly applied, whoever penned the above sentence is preaching a false philosophy.

There is a tendency, I know, among librarians who regard themselves as "up to date" to deprecate, consciously or not, the fundamentals of librarianship, and to suppose that a librarian must be an administrator and *nothing else*. Let it be said once for all that no one is a true librarian who is not a lover and student of books. That he must be an administrator besides is another matter—he must be both. If he is *not* a student and lover of books he will never be able to find out "what is in books without reading them."

There is a legend about Justin Winsor that he could get the meat out of a book merely by glancing at the title page, preface, and index, and dipping into the text here and there. Therefore, so runs the popular application, this trick is the first that the tyro should learn. When, however, Justin Winsor learned the trick, he had behind him a lifetime as a student of books.

"The librarian who reads is *lost,*" wrote Mark Pattison in his life of Isaac Casaubon; that is: the librarian who reads, and reads, and does *nothing more,* is lost as far as a real understanding of his function goes. The saying has been repeated again and again since that day, in decrying the old-fashioned librarian, who regards himself as a watchdog of the books in his charge. The saying speaks the truth—as far as it goes. But when it is used for the purpose of demonstrating that librarians do not need to know anything but methods and technique, then it is made to preach a false philosophy.

Chicago, October 28.

THE COAST OF BOHEMIA.

TO THE EDITOR OF THE NATION:

SIR: It is a pity that you should have gone on all these years hoping for a geologist to explain how Bohemia once had a seacoast (see "The Alienist and Literature," *Nation*, October 17). It would have been so easy to ask some historian.

The possessions of the King of Bohemia once extended to the Adriatic, and took in some parts of northern Italy. Such conditions did not last long, but the story of "A Winter's Tale" might be supposed to occur at that time, even though the years passing in the play would have stretched historical accuracy a little. Shakespeare apparently was not advised of the changes of boundary, which seem to have been rapid in Bohemia about 1270 A. D., but he was not wrong about that seacoast.

MR. BRYCE ON SOUTH AMERICA.

South America: Observations and Impressions. By James Bryce. New York: The Macmillan Co. $2.50 net.

The keynote of Mr. Bryce's attitude towards travel in general and towards South America in particular is given in his introduction (p. xxii):

> The duty of a traveller, or a historian, or a philosopher, is, of course, to reach and convey the exact truth, and any tendency either to lighten or to darken the picture is equally to be condemned. But where there is room for doubt, and wherever that which may be called the "temperamental equation" of the observer comes in, an optimistic attitude would seem to be the safer, that is to say, likely to be nearer the truth. We are all prone to see faults rather than merits. . . . If this maxim holds true, it is especially needed when a traveller is judging a foreign country, for the bias always present in us which favors our national ways and traits, makes us judge the faults of other nations more severely than we do those with which we are familiar. As this unconscious factor present in our minds darkens the picture that a traveller draws, it is safer for him, if in doubt, to throw a little light so as to secure a just result.

Fairness and common-sense are essential in a book of travel, and these qualities are present in almost every page of this book, but there is a decided tendency, as shown by the quotation given, to over-emphasize the good points and pass over lightly the weak points of South American life.

Mr. Bryce's journey to South America was along the "beaten path" of railways and steamship lines, but he managed to see and learn more of the country and its people and to look deeper into their past, their present, and their future, than many who have written books on South America after years of residence within the country.

The most important chapters and those to which the reader will naturally turn first are those at the end of the book. In the Rise of New Nations (chapter xli.) the author discusses the influences which have served to divide the South American continent into distinct nations. He finds that Chili (the country which seems to have pleased him the most), Argentina, Peru, Uruguay, and Brazil may be regarded as nations in the European sense of the word, having distinctive traits of character and a strong national self-consciousness. Although, as he says, a Costa Rican and an Argentine differ less than a Texan and a Vermonter, the feeling of a common Hispano-American brotherhood is weak. The memories of the former greatness of Spain, a common aversion to the Spanish yoke before the War of Independence, and even the Roman Catholic faith do not serve to bring about a feeling of unity. "The only thing that to-day would draw the republics into line and knit them together would be any threat of aggression from outside. They have long ceased to fear invasion, still less subjugation, by any European Power. But the enormous strength of the United States and recollections both of the war she waged against Mexico in 1846 and of some more recent events make them watch the actions of that country with a sensitive suspicion which even the correctness of her conduct in twice evacuating Cuba has not entirely dispelled."

This is the place where we should have welcomed a discussion of the political aspects of the Monroe Doctrine. In a later chapter (p. 509) he writes, from the point of view of the South American: "Since there are no longer rain-clouds coming up from the east, why should a friend, however well-intentioned, insist on holding an umbrella over us? We are quite able to do that for ourselves if necessary." The discussion of political questions is avoided, as is shown by the following: "With politics I have in this chapter, and indeed in this book, nothing whatever to do." Mr. Bryce's delicacy in this matter, although regrettable, is capable of explanation.

In discussing the relation of North and South America Mr. Bryce asks whether the term "Pan-Americanism" describes a fact or merely conveys an interesting aspiration. He finds that "Teutonic America" and Spanish America have nothing in common but two names, the name America and the name Republican. The fact is lamented that the same name was given to North and South America in the first place: "How much trouble would have been saved and how many mistakes avoided!"

There is a masterly discussion of the meaning of the word Republic. Attention is called to the distinction between the mere name and that which is behind the name. It is not enough to call nations republican and thus place them all in a single category. The word as used in South America may or may not cover a multitude of sins. Serious impediments are present in some of the countries at least to retard the realization of the hope for true republicanism. Physical conditions prevent in many places inter-communication between different parts of the same country and delay the building up of a national feeling. Racial conditions, together with economic and social conditions, hinder the establishment of a sufficient number of citizens in the true sense of the word. Historical conditions are all against the republican point of view. Excluding Chili and Argentina, Mr. Bryce is brought to the conclusion that the countries of South America have never been democracies in any real sense of the word. He adds that injustice is done to South America by censures and criticism which ignore these fundamental facts. "The Constitutions did not suit the facts and the facts had to prevail against the Constitutions, sometimes against their letter, usually against their spirit."

Three classes of states are distinguished: the first in which representative institutions are present in name only, whereas a military despotism is the real condition of affairs. Hayti is cited as the worst example. Mr. Bryce's evident dislike of giving offence keeps him from mentioning the names of others. The second class is that which has a Legislature imposing some restraint upon the Executive, as Mexico under Diaz. True republics form the third class. Chili and, to a less extent, Argentina are good examples of a free constitutional commonwealth. It is to be regretted that Mr. Bryce, who so frequently mentions Central America in his book, has refrained from discussing the results of British rule under a governor appointed by the King as seen in the Crown Colony of British Honduras.

With the author's usual optimism, the future for South America is held to be by no means as dark as some others have painted it. "Taking the eleven South American states as a whole, their condition is better than it was sixty years ago." Hopes are held out that this continent may finally catch up with the rest of the world, and will regain the two centuries it lost while under the rule of the Spanish crown.

Chapter xiii is an admirable discussion of the relation of races. A marked contrast is shown between North America and its problems dealing with the Indian and negro populations and South America and its inferior peoples. There is no "color question" in South America. Every one is classed as white who is not wholly of Indian blood, and the mixed population is thus added to the white. The subject of miscegenation is taken up briefly. The purity of the white race is not thought essential to the future upbuilding of the country. It is believed that a fusion of the races now inhabiting South America—aborigines, European, and African—will ultimately come about.

Prescott's "Conquest of Mexico" is named in the first sentence of the introduction as one of the reasons for the desire of the author to visit South America. One is therefore a little disappointed to find that the ancient civilizations are not treated more fully and in more detail. No doubt the short time spent in the country and the nature of the journey did not permit a more exhaustive examination of the ruins of the western coast. The usual pitfalls of exaggeration and Asiatic influence to account for the Central and South American cultures are avoided. The violent methods of the early Spanish explorers and the injury done the Incas are rightfully lamented. The Conquerors "destroyed, in the thoughtless insolence of force and greed, the whole system of society and government. . . . Wretchedness had replaced prosperity; such virtues as the people had possessed were disappearing, their spirit was irretrievably broken. The serfdom to which the peasantry were by the Conquest subjected was not paternal, as that of the Incas had been, and was harsher, because the new master was a stranger without sympathy or compassion."

Mr. Bryce's necessary avoidance of discussion of any topic likely to be embarrassing to this country is seen especially in his reference to Panama. Our Government had tried to obtain a grant from the republic of Colombia. No reasonable terms could be arranged. A revolt took place, and the new republic of Panama resulted and gave to the United States a perpetual lease of a strip of land ten miles in width. Nothing more! Another opportunity for just criticism is passed over in the discussion of the fortifications of the Canal, which the author describes as the "greatest liberty man has ever taken with Nature." An implied doubt as to the wisdom of fortification is shown in the sentence, "The visitor who sees the slopes where these forts and batteries are to be placed asks who are the enemies whom it is desired to repel?"

There are throughout the book many paragraphs of common-sense advice, in addition to the one already quoted from the introduction, which might well be taken to heart by travellers of all classes. Only one of these can be given: "It is a sound maxim never to lay weight upon uncertain causes when certain causes are available as explanations."

A few minor errors may be pointed out. Palenque is not in Yucatan. "Chullpa" (p. 133) and "chulpa" (p. 137) are probably the same word, and the use of the second with its definition is the proper one.

Every reader will thank Mr. Bryce for writing a book of travel so entertaining and so instructive that the lack of illustrations is not felt. Like the over-done illustrated lecture consisting of lantern slides, and now, of moving pictures, with a running commentary, far too many books of travel depend upon their pictures to carry the narrative. It is certainly to be hoped that Mr. Bryce may give us an equally good account of his recent trip to Australia and New Zealand.

CURRENT FICTION.

At the Sign of the Reine Pédauque. By Anatole France. A translation by Mrs. Wilfrid Jackson, with an introduction by William J. Locke. New York: John Lane Co. $1.75 net.

There are some books of Anatole France's that will last as long as men continue to read Lucian, Boccaccio, Rabelais, Gil Blas. "At the Sign of the Reine Pédauque" is one of them. When you have turned the last page, you will recognize that the work belongs on the Index, you may think that it should be supplied with an appendix like Don Juan's classics, you may pitch it into the fire, chuckling like the delighted monastic censors in the painting. But you know very well that you cannot put an end to the abounding life that is in Monsieur l'Abbé Jérôme Coignard and his reverent pupil Tournebroche. With all their gross imperfections on their heads they are marked, like Tom Jones and Falstaff, for immortality. The English parallels are very inadequate. Tom Jones is only a spirited young animal. Falstaff resembles the abbé in being big-bodied, genial, a drunkard, a thief, a carnal sinner, and a sentimentalist; and yet, after all, he is but a lovable, brutal Englishman without culture or philosophy. Jérôme Coignard partakes heartily of the common sinful humanity of Sir John, but he includes, besides, within his ample sphere, nearly everything that his creator finds to love, pity, and deride in the civilization of the ancients, the Latin Christianity filtered through the Middle Ages, and the rationalism of the early eighteenth century.

Ex-priest, ex-professor of eloquence in the college of Beauvais, ex-librarian to the bishop of Séez, author of a translation of Zozimus the Panipolitan, this wine-drinking, wenching, mellow-hearted debauchee is, like M. France himself, a follower at the same time of Epicurus and Saint Francis of Assisi. A child of the "enlightenment" before the Encyclopædists and a disciple of Descartes, he keeps his religion and his philosophy in water-tight compartments: "Jacques Tournebroche, my son, be mindful never to put faith in absurdities, but to bring everything to the test of reason save in the matter of our holy religion." A student of theology, he is deeply read in the Fathers, and when he is in the vein, can be unctuous, devout, and seriously concerned for the salvation of his soul. He is also a classical scholar versed in the most recondite Grecian and Roman authors, and his rich table-talk is redolent of a charming erudition; but, when he is buried in a library and weary of labor and devotion, he does not hesitate to indulge his powerful sensuality in fare fitter for Trimalchio's feast than for the provender of a man of God. Escaping with some stolen false diamonds and some bottles of white wine from a drunken brawl in which he has stabbed a man, the good abbé is delayed on the Lyons road by the wrecking of his coach, overtaken by his pursuers at nightfall, and mortally wounded. Yet he lives long enough to make a beautiful repentance, obtaining salvation in the moment of death, and he expires in a pleasant odor of sanctity, not a little consoled by the fact that, as he had been struck down by a Jew, he "perished a victim to a descendant of the executioners of Christ."

M. France has given us his personal commentary on the abbé in a charming study of thirty-five pages prefixed to the companion volume, "Les Opinions de M. Jérôme Coignard," published in the same year, 1893, with the "Reine Pédauque." In 1909 he returned to the theme with "Les Contes de Jacques Tournebroche." We mention these facts because, in the two or three pages of general appreciation with which Mr. Locke introduces the work before us, he does not mention them. After due reflection we cannot guess why Mr. Locke was asked to write this preface, unless it was because he is the author of a popular book called "The Beloved Vagabond." If our conjecture is correct, he has neglected a very pretty opportunity to acknowledge a debt and to discourse on the differences between the spirit of English and of French fiction. The relation between "At the Sign of the Reine Pédauque" and "The Beloved Vagabond" is interesting. That Mr. Locke has borrowed in some fashion the happy invention of Coignard and Tournebroche—*cela saute aux yeux*. He sets out, just as M. France does, with the adoption of a clever boy engaged in a menial occupation by a very learned, very dirty, very benevolent vagabond of philosophical habit; and the boy in each case writes the memoirs of the alliance. But the two authors walk only a short way together. Mr. Locke's tale is conceived in English sentiment; his philosopher conceals beneath his soiled shirt a deathless romantic passion. M. France's tale is conceived in philosophical irony and Gallic cynicism; beneath all his classical and Christian culture, M. Jérôme Coignard is a sensualist, pure and simple. The one would persuade us that man is a flower that smells sweet and blossoms in the dust; the other presents man as an "obscene and evil fly" remarkably imprisoned in amber. If Mr. Locke could have overcome his diffidence, how gracefully he might have embroidered on his theme!

The Woman of It. By Mark Luther. New York: Harper & Bros.

The situation upon which this story is founded is a familiar one, but still worth interpreting. Stephen Braisted is a kinsman of Silas Lapham. He has reached middle age as clerk in a store at Tuscarora Falls, New York. By accident his wife hits upon a "relish" which he succeeds in getting upon the market. It becomes popular, even famous. Wealth pours in, and in due time Braisted goes to Washington as a member of the House. The son of the family is at Yale, and the daughter is placed in a fashionable and exclusive school in Washington. Braisted becomes immersed in politics of the practical sort, and his social ambition is roused. It all goes to his head. Meanwhile the wife, stout, old-fashioned, not even grammatical, is unable to follow him in his new course. She makes pathetic attempts—consults a beauty specialist, buys expensive clothes, and so on; but her Stephen still drifts away from her.

All this is genuine and moving, as a situation, and for twenty out of his twenty-odd chapters Mr. Luther makes a sincere attempt to interpret it with simplicity and dignity, and succeeds so far as Mrs. Braisted herself is concerned. And then suddenly and almost without warning the whole thing cheapens and flattens out. Mrs. Braisted undergoes a violent conversion from the mild, sweet-hearted rural wife and mother we have known to an alert, masterful woman of the world. Her rustic speech and manner go by the board. She, in fact, ceases to be, and another person takes her name and pushes the story, by way of a bit of melodrama, to a "snappy" conclusion. It is a pity.

The Inheritance. By Josephine Daskam Bacon. New York: D. Appleton & Co.

If it were not for its fantastic plot, this would be a really comfortable story in which a household of young people grow up together quite as they used to do in the pleasant pages of Miss Alcott. But the plot contains many more astonishing things than could conceivably pertain to the normal course of young life in South Warwick, Connecticut, from the bread-and-milk to the marrying stage. This groundwork of likelihood is shot through with lurid gleams—recollections, revelations, adventure abroad, strange psychical mishaps. Most of the extraordinary features of the tale have to do with the parentage of the boy and the girl whom hospitable Dr. Caldwell adopts into his family and who grow up among his own sons to be the two pillars of his home, the one the doctor's professional successor, the other the ruling spirit of the house. The trouble is that these two very natural and agreeable young persons appear so thoroughly at home in their Connecticut environment that the reader finds it hard to take a proper interest in Hugh's claim to a title and estate in England; or in the brilliant position which Chrissy's mother held in Bermuda society before she married a savant in the last stages of Egyptology and came to vegetate in South Warwick.

As to how the good doctor sustained the loss of his personality by hitting heads with a tramp in a thunderstorm, that would make a good story by itself—which is to say that the pseudo-scientific does not, any more than the romantic, properly come inside the covers of this book.

LAMB'S FRIEND THE CENSUS TAKER.

Life and Letters of John Rickman. By Orlo Williams. Boston: Houghton Mifflin Co. $3.50 net.

The subject of this memoir was not a brilliant letter-writer, and his character in general had more of the solid qualities than the entertaining, yet he is one of the men of his age with whom we are most pleased to become acquainted and whose biography we welcome accordingly. This is partly for the contingent reason that he belonged to Lamb's intimate circle of whist-players and furnished that maker of reputations with the theme for one of his most delightful letters. But that is by no means the sole reason. Rickman was a type, a very interesting type, and stands out with peculiar clearness by contrast with his associates. In an age of strong democratic drift, he was a triple-dyed and unrelenting Tory; in a circle of careless Bohemians, he was practical and prudent almost to harshness; among poets and philosophers who were introducing the new romantic movement, he was, not properly classical, but anti-romantic to the point of artistic obtuseness. Withal, if not precisely a lovable figure, he is thoroughly admirable, and beneath his somewhat forbidding exterior had qualities of honor and generosity, together with the rare gift of friendship, which draw us to him almost despite ourselves. Lamb wrote of him: "His memory will be to me as the brazen serpent to the Israelites,—I shall look up to it, to keep me straight and honest." Coleridge thought him a "sterling man," and Talfourd called him "the sturdiest of jovial companions." The present biographer, whose work we may say at once has been excellently carried out, thus sums him up:

> Rickman's friendships with these men and others—Poole, Telford, the engineer, and the Burneys—were characterized by a certain external formality which strikes rather chill upon the modern reader, who must remember, however, that society a hundred years ago was more patriarchal and punctilious than it is to-day. Yet rigidity was natural to the man. His family motto was "Fortitude in Adversity," and perhaps a puritanical fortitude in everything would best sum up his character. He was sturdily unromantic. He could write to Southey that he had "lately imported a wife," and remonstrate with Poole for supposing that he married for love. In his family his word was law, and even to his children his letters were rather portentously solemn. The grave homily administered to his daughter Ann on the occasion of her having confessed her inability to play quadrille music at a children's party might have come out of a Jane Austen novel. His taste for pleasure was not very highly developed. When the Lambs took him to Sadler Wells he slept, and his only recreation consisted in long driving tours in the yellow gig which Mrs. Lefroy describes, and these tours were planned on distinctly "improving" lines. He had a hatred of show and affectation, which led him to avoid "dinner-party intercourse," and deliberately banish the terms "drawing-room" and "dining-room" from his own house. A little litany which comes at the end of a letter to Southey gives a clue to some of his dislikes: "From all novelists, tourists, anecdotists, beauty-mongers, selectors, abbreviators, *et id genus omne*, good Lord deliver us! And also from overgrown theatres, which insure bad plays and bad acting." The beauties of Nature, he thought, were morbidly insisted on by the Lake poets; in his view they should be "as play hours." But Rickman was not in the least crabbed. "You know," he said. "I am in the habit of looking on the white side of futurity"; and again: "The wiser economy of life is to like as much as possible and to dislike as little as possible." Neither was he a domestic tyrant, and his excellent letters on Bertha Southey are proof that

he had a fatherly soul. His home life, indeed, was undisturbedly happy.

John Rickman, the son of a sturdy vicar of Newburn in Northumberland, was born in 1771. He was educated at Guildford Grammar School and at Magdalen Hall and Lincoln College, Oxford. In 1797 he met Southey, then residing with his wife at Burton, near Christchurch, and a friendship was formed which lasted untroubled through life. Most of the letters in the present volume are from the voluminous correspondence which passed between the two. He was at first, like Southey, a radical, but, like Southey again, turned soon to conservatism and became more and more of a Tory with years. The chief event of his life was his appointment in 1802 to the position of Secretary to the Speaker of the House of Commons. This place he held for twelve years, exchanging it for that of Clerk of the Table, which he held for twenty-six years—until his death in 1840. Though violently opposed to the Reform movement, he performed his duties to the Reform Parliament with exemplary faithfulness. His diligence in preparing information for various bills and in indexing the Journals was enormous. And to these duties he added various exacting outside tasks, chief of which was his development of the national census. There were few men in England more systematically busy.

It would be interesting to gather excerpts from his letters to show the man in his many relations and activities, but we can only indicate a work which has, indeed, already been well done by Mr. Williams in his admirable Introduction. In politics Rickman was, as we have said, a stanch, some would say an outrageous, Tory. To him the men at the head of the Reform movement, whom he served decorously as Clerk, were a set of reckless incendiaries, whose guilt was only equalled by the feebleness and cowardice of their opposers. Nor was Rickman without a philosophy of his own in his reactionary zeal. His hatred of the enlarged enfranchisement and of the transfer of power from those who have to those who have not, was only a single phase of his opposition to the whole humanitarian movement of the day. Though a man of great private liberality, he stood unflinchingly for what he regarded as "justice" against what he held to be "sentimentalism." "Pray, avoid superfluous liberality," he writes to Southey, "the growing vice of the age; and much connected (as I suppose I could prove) with the mock humanity of the day—the most powerful tool at present of the anarchs. Justice as a general rule, liberality as a *rare* exception, for if not *rare* it supersedes the rule, so that the good are not protected, and the bad not restrained. Be sure that a great deal more selfishness than either you or I have, is but justice."

This dislike of sentimentality is really the keynote of Rickman's character. Something of this was seen in the extract quoted above from Mr. Williams's Introduction. A lover of beauty may protest when this trait leads a man into indifference, if not to actual distaste, for poetry and the arts in general. Yet there are compensations. If nothing more, there is at least something almost funny in Rickman's rigid attempt to criticise his friend Southey's epics while admitting virtually that all epics, not Southey's only, are a nuisance. And in contrast with the Dyers and Burnetts and other intellectual tatterdemalions whom Lamb gathered about him and forced on his honest friends, there is a fine refreshment in Rickman's magnificent philistinism. One confesses sadly that the beggarly ways of Coleridge as hinted at in these pages makes one almost wonder whether a housemaid is not of greater service in the general economy of things than the Muses. The most interesting parts of these letters deal with the strange Bohemians who hung upon Rickman and Lamb, helped by the latter with a sympathy half-divine and half-disreputable, and by the former with money and austere advice. We would quote largely from these episodes, were we not sure that every lover of Lamb will desire to read the book in its integrity. It would be contrary to the justice which Rickman so manfully worshipped to say that the amusing passages color his correspondence as a whole, but a hint of the rarer good things may be gathered from these sentences in a letter dated November 7, 1801:

> I send you herewith what I much value; a letter from Lamb of exquisite, perhaps unparalleled description; and of an interesting affair; literally and seriously, of G. Dyer *starving to death* and rescued from that rueful fate by the said C. Lamb. What strange men do we know! Dyer, who can starve to death, *without knowing it,* Lamb, who can rescue him, and *enjoy it as a joke,* and Burnett, of whom no mortal can make anything: certainly most unaccountable of all.

Development of Religion and Thought in Ancient Egypt. By James Henry Breasted, Ph.D. New York: Charles Scribner's Sons. $1.50 net.

This is the most notable contribution to the history of religions recently made, and it is the most valuable ever made to the history of the religion of Egypt. It embodies the most exact scholarship of the type commonly regarded as German; and it is characterized by the brilliancy which is usually ascribed to the French. On one side there is a minute, exhaustive, and comprehensive study of the sources, and on the other a constructive ability which leaves nothing to be desired. The reader is taken back to the beginning of recorded religious texts, and is led through those of succeeding ages to the time when development had ceased and the original conceptions had become lost in the haze of antiquity.

Previous writers have confined themselves largely to the materials furnished by the so-called "Book of the Dead," long regarded as the main religious manual of the Egyptians. Temple texts found on walls, inscribed as late as the times of the Ptolemies, have furnished their share of material. Inscriptions from tombs of various periods have been used, but in none of the earlier books has there been an investigation based upon historical sequence, and one looks in vain for a perception of development in thought and conception. One may even find the assertion that there was no such thing as progress in Egyptian religious thought.

This state of things is not so much the fault as the misfortune of previous students and writers. But given the material, constructive talent was also needed, and the combination has only just become possible. Dr. Sethe of Göttingen has recently furnished the former, and Professor Breasted has demonstrated his possession of the latter.

It is about two years since a correct text of the Pyramid Texts was published by the German scholar. Twenty-five year ago Maspero, indeed, printed them, but in such incorrect form that little could be made of them. The texts in question were discovered many years ago in the smaller pyramids whose remains may still be seen at Sakkarah. Dating from the V and VI Dynasties, they form the earliest known contemporary and continuous religious documents. By reason of their antiquity they offered great difficulties of interpretation even to those familiar with the language in its later periods. There were variations in orthography, vocabulary, and grammatical construction which made them almost unintelligible.

Professor Breasted took these texts as his starting point and devoted nine months to their translation and to the comparisons upon which the presentation in his modest volume is based. Having ascertained the beginnings, he proceeded to follow the development and modifications of conception through the twenty centuries that followed. But it was not only the religious notions which called for delineation. The growth of moral conceptions also demanded investigation. As a result, his book gives an intimate view of the thought of a long-perished people, such as cannot be found elsewhere in works on Egypt.

The period covered by the Pyramid Texts is only one hundred and fifty years in the first half of the third millennium before our era. Their ruling conceptions were those of the earlier solar faith of the sun-god, Re. There existed also a rival cult, that of the god Osiris, who was associated with life and growth as seen in the phenomena of nature. It is little less than marvellous that the steps of the conflict between these rival religious systems should have been revealed to us, yet not only have they been traced, but we see the progress of the gradual triumph of the cult of Osiris over the solar faith. The first steps of the conflict go back to this remote period; the last are found near the end of the history when the earlier faith was giving way or had succumbed already to the malign influence of magic.

The section of the book which shows in the clearest way the appreciation of Egyptian religious aspiration is found in the chapters which deal with the religious reforms of the "heretic" king, Ikhnaton, Amenhotep IV. His ill-fated and futile attempt to introduce a solar monotheism is traced in its origin and development with a thoroughly sympathetic pen. The story as told by Professor Breasted is vital and pulses with the throb of religious emotion. No such delineation has been presented before.

The religious side of the discussion will interest a certain class of readers, but the social side is calculated to appeal to even a wider body. Religion and morals have not always travelled hand in hand, but where moral sanctions are most prominent there religion has had its influence. In Egypt the promises of the future at first concerned only the king, but gradually the classes and finally the masses came into view, and the prospect of future felicity became increasingly widespread. This progress was accompanied by changes in the conceptions of the chief deities, to whom were now ascribed thought and solicitude for men. Moral worthiness or unworthiness came to be emphasized in these conceptions, and there are evidences of a demand for social justice which anticipated the same cry to-day. This "emergence of the moral sense" had its effects not only upon the everyday life of the time, but also upon religion, particularly in reference to the future. Here radical changes are evident. Conscience assumed a more commanding place. When foreign conquest broadened the outlook of the Egyptian, so that he was no longer restricted to the narrow strip of land bounded by the mountains which rise east and west of the Nile valley, a conception of a world-god emerged. But the notion was too broad for the time, and it was opposed to the interests of the priests whose vested property rights promised to be restricted and whose prerogatives were seriously threatened. The brilliant ideals of the time were obscured and there was a relapse which marked the coming end. Magic, with its evil influence and its deadening of the moral sense, gained ascendency. Religion became mere formalism, and the nation fell a prey to foreign invaders.

The Trooper Police of Australia. By A. L. Haydon. Chicago: A. C. McClurg & Co. $2.75 net.

An American reprint of this instructive book from Australia is to be welcomed. The fine body of constabulary whose history and present status are herein described is a mainstay of law and order through the vast outlying regions of that southern continent. The smallness of its numbers is surprising in view of the immense area patrolled and the efficiency of the service. Each of the seven states of the Commonwealth furnishes and controls its quota, but all coöperate, so that it is virtually a homogeneous body, composed of picked men. The recruit must be at least twenty years old, well-statured, and physically perfect. He must be a good rider, able to read and write, and of proved intelligence. He is put to a rigid school in which his mind and frame are vigorously developed. His mastery of the horse, and also of the camel, is made certain. He learns, too, the elements of law, medicine, and accounts, and whatever will help him to administer widely. His pay is good, his promotion sure if he is meritorious, and support certain in old age and disability. The service attracts excellent men, its prestige everywhere is high, and its value in the wild regions which are its especial care is of the greatest.

The work is done largely by the troopers singly, though upon occasion they act in squads; any massing of the force is rare. In emergency the force may receive aid from the regular soldiery. It always has valuable auxiliaries in the "blacks," whose dexterity in tracking is superhuman, or, better, infrahuman. The trooper is first and foremost the upholder of the law, but he has been called "the handy man" of Australia. He instructs the backwoods justices as to the statutes, advises the bush-doctor in the treatment of his patients, lends a hand to surveyor, tax-gatherer, and postman, is the resourceful pathfinder; in sum, stands as guide, counsellor, and friend of the scattered settlers in all their perplexities.

The Trooper Police, during the ninety years of its history, has performed its work under varying conditions. It works in widely differing climates, in well-nigh impenetrable jungles, in rugged mountain-tracts, hardest of all in far-stretching, waterless deserts. The forms of crooked and short-coming humanity, with which it has had to deal, have been infinite in number, involving it constantly in embarrassing complications. Throughout her early period, Australia suffered the worst blight that can befall a country: receiving, with a few willing, honest settlers, a multitude of convicts. These came in fleets, through a series of years, well-nigh wrecking all hope for a proper state. The evil became only slowly apparent to its perpetrators, but the system was at last abandoned. The number of good immigrants increased; of the criminals, not a few showed that they were the victims of harsh conditions, needing only opportunity to develop into good citizenship. But when a better order seemed at hand, a new danger suddenly appeared. The discovery of gold brought upon the land an overwhelming influx of lawless, adventurous spirits. Europeans of every nation were jostled in the diggings by Asiatics and Polynesians. It was a Babel of tongues, of traditions, of ideals. The only thing in common was the greed for gold, a principle always isolating and never a bond. This second crisis, so acute half a century ago, was successfully passed. Seven fair Anglo-Saxon states have emerged from the confusion, which in our own day have united in a hopeful Commonwealth.

Throughout the turmoils early and late, the struggling provincial Governments, determined on preserving some semblance of civilized order, have had in the Trooper Police a good right arm. Mr. Haydon tells the story clearly and with much vivid detail. Mistakes in management have often occurred, but the Governments have made stepping-stones of their blunders, and with British tenacity have pushed on to better things. Few institutions of Australia are better worth study than its Trooper Police. The story is made graphic by concrete instances, and the reader's admiration grows for these intrepid and effective public servants.

Circumstances in America have been in some ways similar to those in Australia, though we have never suffered from such handicaps as the vast convict importation, or the influx, before well-ordered communities had time to grow and organize, of vast hordes of lawless gold-seekers. Nevertheless, stable citizenship in the wild West, and in many Eastern areas, has had similar difficulties to face. We have had, however, no such efficient instrument for guarding our peace as the Australian constabulary; and have been a prey to disorders which our south-sea brothers have controlled. Canada, indeed, has had in its "Mounted Police" an admirable organization, but we presume that this has not been so widely and pervasively potent as the Australian force. In the United States such an instrument is almost entirely lacking. In our older States, "Molly Maguires," "moonshiners," "white-caps," "James boys," and "Younger gangs" defy the law, and in the newer States disorders arise which we strive to cope with only

BURLINGAME PUBLIC LIB.

through Judge Lynch or the vigilance committee, falling back upon the regular army when chaos impends. The Canadians have done better than we, the Australians far better; and our Legislators, and citizens generally, appalled so often by eruptions of outlawry, may read with profit this record of how men of our stock, wiser than we, have conquered dangers even more threatening than our own.

Notes

Prof. John M. Gillette has in the press of Sturgis & Walton his new book, "Constructive Rural Sociology."

What promises to be an important book is Prof. Josiah Royce's "The Problem of Christianity," announced by Macmillan for early next year.

Kipling's "Kim" will be brought out by Doubleday, Page & Co. in a special edition, wherein will appear for the first time reproductions in color of the terra-cotta plaques of the story, executed by the author's father, John Lockwood Kipling.

Other books announced by the same house include the following: "In Other Words," a book of verse by Franklin P. Adams; "The Heather Moon," by C. N. and A. M. Williamson; "Chasing the Blues," by R. L. Goldberg, and "Brotherly House," by Grace S. Richmond.

George H. Doran Co. brings out this autumn a highly varied list of fiction, including: "A Health unto His Majesty," by Justin Huntly McCarthy; "Jack: One of Us," being a novel in verse by Gilbert Frankau; "The Major's Niece," by G. A. Birmingham; "Corporal Cameron," by Ralph Connor; "Valserine," by Marguerite Audoux; "The Key-Note," by Alphonse de Chateaubriant; "Meadowsweet," by Baroness Orczy; "Back Home," by Irvin S. Cobb, and "Adventures of Kitty Cobb," by James Montgomery Flagg.

Mrs. Henry de la Pasture (Lady Clifford) is about to issue, through Dutton, "The Honorable Mrs. Garry," a novel of fashionable London.

Henry Holt & Co. promise for this week G. H. Perris's "Germany and the German Emperor."

That commission government is far from implying of necessity efficient government, is the lesson of "The New City Government" (Appleton), by Henry Bruère. As a director of the New York Bureau of Municipal Research, the author undertook an "administrative survey" of ten commission-governed cities in Iowa, Kansas, Texas, and West Virginia, for the purpose of providing "a fact basis for judgment regarding the general character of commission government administration." The present book, which is the result, is a mass of organized information relating to the manner in which these cities meet their responsibilities. The activities investigated range from accounting systems to provision for protection of life and health. How much below advanced standards in one of the most important of these respects a widely-heralded commission-governed city can be, is told in the following passage:

> It is almost beyond belief that Des Moines, proclaimed as efficiently governed, should have no means of knowing the number of its inhabitants who die each year, or what they die of, and that it does not learn, or apparently care, about the number of births, or whether infants live or die, and if they die, the reason therefor. Des Moines doesn't even so much as attempt to know the number of persons having tuberculosis.

The book falls in two parts, the first four chapters being an exposition of the commission movement, with particular reference to the ten selected cities, while the bulk of the volume is concerned with their progress in efficiency. All these latter chapters are as applicable to non-commission cities as to the others. They emphasize the fact that efficiency is inherent in no form of government, although it has, in certain instances, not unnaturally accompanied the wave of reform that has swept in the commission plan. For town and city officials, especially, but for every one who is interested in civic improvement, the material that has been gathered and arranged in this authoritative compendium is of high value, and it is not available elsewhere.

By his popular adaptation of the Finnish "Kalevala" James Baldwin has put a noble old story at the disposition of youthful readers. Save in the case of certain chants and spells, the epic verse has been replaced by prose. Yet it is clear that the spirit of the original has not been greatly impaired. Mr. Baldwin has named his version "The Sampo" after the mill of bounty which Ilmarinen, prince of smiths, forged for Dame Louhi, the wise hag of the North, that he might win her daughter, the Maid of Beauty. Because this romance is made the centre of the present book, the deeds of the minstrel, Wainamoinen, receive less attention than in the poem, yet his outline is well sketched, as are those of outlying personages. One can readily understand the interest which Longfellow found in Finnish saga, for nowhere else, outside of Greek mythology, will you see the primitive forces of nature in such close conjunction with the doings of man. Mr. Baldwin and the Scribners may be commended for preparing an entertaining and serviceable book.

The fifth volume of the "Selected Writings of William Sharp" (Duffield & Co.) brings us, according to the title page, "Vistas, The Gypsy Christ, and Other Prose Imaginings." The opening words of Mrs. Sharp's Bibliographical Note are significant:

> The volume of "Dramatic Interludes," entitled "Vistas," was originally published by Frank Murray in his Regent series (The Moray Press, Derbyshire) in 1894. A few months later the succeeding volume in the series was "Pharais: A Romance of the Isles," the first of the writings issued by William Sharp over the signature "Fiona Macleod"; and "Vistas" is considered by some of his readers to be a link between the two methods of his thought and work.

Of that connection there can, we think, be no doubt. Its significance is brought out by a sentence or two of Mr. Sharp himself in his "Foreword" to the Interludes:

> Some of my critics say that "Vistas" is but an English reflection of the Maeterlinckian fire. Two of the most Maeterlinckian are, by those critics, held to be "A Northern Night" and "The Passing of Lilith"—creations, if such they may be called, anterior to the fortunate hour when I came for the first time upon "La Princesse Maleine" and "L'Intruse." I say "the fortunate hour," for almost from the first moment it seemed clear to me that the Belgian poet-dramatist had introduced a new and vital literary form. . . . A great creative period is at hand.

Now, there are indications a-plenty that Mr. Sharp regarded his Celtic writings, published under the pseudonym of "Fiona Macleod," as the herald voice of this new creative epoch. He thought, too, he was drawing his inspiration from the old wells of Celtic faith. As a matter of fact, it is perfectly clear that the tone and sense of this new school came not at all from the ancient literature of Ireland and Scotland, but were a proper offshoot of that peculiar romanticism which produced the Young Belgium and were fortified by the actual productions of Maeterlinck. Far from expressing the strength of a new dawn, Fiona Macleod was caught by the shimmering elusive beauty of a movement fast approaching deliquescence.

To the taste of the present reviewer, at least, the most interesting piece in this volume of William Sharp is "Madge o' the Pool," not named in the title page, a strong and finely conceived story of the Thames river "rats." "The Gypsy Christ" is too long-drawn-out and suffers by comparison with Poe's "Fall of the House of Usher." The rambling meditations on feminine beauty, entitled "Ecce Puella," are, it must be admitted, rather feeble. The "Vistas" are, as has been said, dramatic visions in the Maeterlinckian vein, and will seem successful to those who like that sort of thing. Their tone is well enough indicated by the stage directions at the opening of the first: "[An obscure wood, at whose frontiers neither night nor day prevails, but only a dread twilight, a brief way beyond the portals of the Grave. In the vast vault overhead no cloud moveth, no star shineth.]"

In style uniform with the edition of William Sharp's Writings, the publishers have reissued in two volumes the "Memoir" by Mrs. Sharp. A considerable bibliography at the end gives added value to this reprint. The Memoir was reviewed at length in the *Nation* of February 16, 1911.

Prof. Julius Sachs's volume on "The American Secondary School and Some of its Problems" (Macmillan) is a forcible plea for more efficient work in the classroom, as well as for enlarged opportunities for the teacher. The author's familiarity with American and European educational methods renders his criticisms and suggestions directly helpful. As against the frequent shifting of our teaching force, he points to the stability of the profession in Germany; as against the immovability of the work of the individual teacher here, to the much more intimate contact of all teachers and the director himself with the lowest as well as the highest classes, and he finds a close connection between the comparative independence of the textbook on the part of teachers in Germany and their habit (rare in American classrooms) of moving about among the pupils. So unusual is the sight of a seated teacher in Germany, says Professor Sachs, that in sixty-five classes visited there he saw but one teacher seated before his class. Equally radical is the difference between the privilege of taking elective courses here and abroad. In Germany an option in studies is granted only where the student has shown more than average ability and interest. Continuity in the pursuit of one subject, as much as anything else, is the secret of efficiency in the German classroom. We must refer the reader to the book itself for Dr. Sachs's stimulating remark concerning the "oral helplessness" of our pupils and the aid in the teacher's work that comes of "good health, a good constitution, sound lungs, with their concomitant, a normally resonant voice." The value of what the author says as to the need of making the pupils feel that they are all under recitation all the time might have been emphasized by referring to the conspicuous success of one of our highest institutions of learning, the Harvard Law School, where the interest is not allowed to flag for one moment, each student being under the constant stimulus of a possible direct challenge.

The purpose of the Swander Memorial Lectures, given in the Theological Seminary of the Reformed Church at Lancaster, Pa., is stated to be "the promulgation of sound christological science." It is difficult to see how that purpose can have been served by the delivery and the publication of Dr. George S. Butz's long course of lectures on the Renaissance, "The Rise of the Modern Spirit in Europe" (Sherman, French & Co.). Dr. Butz is evidently familiar with the Reformation, and has read many books—some good and some bad—on the Renaissance; but he would seem to have no personal acquaintance whatsoever with the letters or the art of Italy, and his presentation of the familiar material is ill-proportioned and confusing. The title is not justified by any attempt at synthetic interpretation. The spirit of the Renaissance, as such, is discussed only in one long footnote taken mainly from Symonds. Dr. Butz is guilty of such errors in fact as calling the victim of the Pazzi *Giovanni* de' Medici, and placing Machiavelli and Guicciardini in the fifteenth century; and of such errors in spelling—some of them repeated—as Causabon, the Chevaleur Bayard, Caesere Borgia, Maecenus, and Marsilius *Facinus*. His constant straining after eloquence results in a pelting of metaphors which begins on the first page and ends only with the final adjuration: "Young gentlemen, hitch your car to the chariot of Phœbus Apollo." Michelangelo and Vittoria Colonna are "austere forms, it is true, severely beautiful, but withal concealing beneath their snowy vesture richest treasures. Those cold, stern brows but serve to veil the flashing brilliance of the diamond and at the heart of them there glows the concentrated fire of the ruby."

A simpler and better book is J. B. Oldham's "The Renaissance," in Dutton's Temple Primer series, which offers in scarcely more than a hundred pages an introductory sketch of the leading features of the great movement. Such brevity prevents the discrimination of periods and tendencies that were really very different, and the book necessarily fails in clearness and precision; but it is generally correct, and it is thorough in its topical plan. Lack of first-hand knowledge betrays itself in the repetition of certain generalities which are as invalid as they are familiar, and lack of appreciation in the dryness with which writers and artists are enumerated and dismissed.

Prof. Edward Jenks, already favorably known by his simple but scholarly way of presenting mediæval legal subjects, has succeeded admirably in stating concisely between the covers of a single handy volume, "A Short History of English Law" (Little, Brown), the elements of English legal history from the earliest times to the present day. "Institutes" might have been a good title for his book; for it is a comprehensive manual for beginners and busy persons who have not the leisure to read the monographic literature or even the more specific textbooks of such writers as Pollock and Maitland and Holdsworth. As the early history of English law has already been minutely studied, Professor Jenks walks at the outset in a region where the main path has been fairly well beaten out. His task is to state clearly and briefly, but with independence of judgment, what others have explained at length; to give a proper sense of proportion rather than to be complete; to stimulate rather than to satisfy. He performs his task well. Mr. Holdsworth was to be commended for the way he compressed within the compass of three volumes the development of English law down to the end of the sixteenth century. Professor Jenks covers the same ground in less than two hundred pages. For the second half of his volume, that is, for the period from the accession of Charles II to the present time, Professor Jenks, as he himself truly declares, has had to sail over an almost uncharted sea. His responsibility is great. The dangers of such a condensation as Professor Jenks has undertaken—inaccurate generalizations, omissions, desiccated compilation—he successfully avoids by his remarkable conciseness and cautiousness of statement, by his exercise of a proper historical imagination, and by his frequent employment of a discriminating adjective or striking metaphor.

Baron de Méneval, the author of "The Empress Josephine" (Lippincott), is a descendant of that well-known memoir writer who was secretary to Napoleon. As such, he is familiar with Napoleonic literature, and has written a biography to place the Emperor's first wife in a more favorable light than she has usually enjoyed. He has also had access to unpublished letters between Josephine's daughter, Hortense, and her chaplain; these reveal the unfortunate Empress as a kind, generous friend, and an excellent mother. But to find that the author (or more probably his translator) has made an error in each of the first three lines and confused Josephine with her father does not inspire initial confidence as to the accuracy of this biography; nor is this confidence strengthened when one reads a few pages later that Josephine's husband was one of the forty-seven nobles who "at the close of the sitting where the oath of the Tennis Court was taken" voted for the union of the three Estates; that "on the 20th of June, 1791, Paris awoke" to learn of the flight to Varennes; and that Louis XVI was imprisoned "in the Temple on the 10th of August." However, in spite of such inaccuracies, the book is interesting, and is of value as a corrective to scandal-mongering biographers and gossips, who have too much harped upon Josephine's shallowness and frivolity, and too little praised her for certain amiable qualities, which she undoubtedly possessed and which she transmitted through her daughter to her grandson, Napoleon III.

The Hispanic Society of America has issued, as its eighty-fourth publication, the text of a probably unique little Spanish chapbook of the early sixteenth century, containing some verses by the poet Juan Boscán, edited by Dr. Hayward Keniston. This appears to be the only surviving example of any of Boscán's poetry printed during his lifetime. The introduction discusses this possibility with considerable erudition derived from the abundant sources available in the unequalled collection of the Hispanic Society in New York. The text is presented with ample margins, numbered lines, and notes giving the variations from the reading of the text, as the author desired it to appear. There is all the paraphernalia of exact scholarship, but no hint of any reason why this text was worth printing. The poet, in the authorized edition of his works, expressly disavowed the mutilated versions which had found a way into print, and the little tract possessed by the Hispanic Society is very interesting evidence that such versions existed, and that the author was more or less justified in his annoyance at having them appear, claiming to be his offspring. In the present case, there would be some slight literary-historical value in knowing from what part of Spain the tract came. The editor makes a guess, but does not attempt to analyze the dialectic variations. He also seems to be entirely unaware of the possibility of using the typographic evidence, for the two reproductions which accompany the reprint are much reduced in size, although the page is ample for an exact facsimile, such as might have enabled a competent investigator to identify the locality where the original was printed. The whole tract might much better have been reproduced by photographic process.

The scope of Norman Douglas's "Fountains in the Sand" (Pott & Co.) is suggested in the subtitle, "Rambles among the Oases of Tunisia." Mr. Douglas brings to his theme an uncommon capacity for chance companionship. His portraits of French, Arabs, and half-breeds are admirable. He is learned as well, a hater of sentimentalism, and possessor of an ironic wit. While the book is well filled with facts, many will read it rather for its incidental comment. A singularly detached observer, the author analyzes West and East unsparingly. The picture could not be wholly pleasant, and though Mr. Douglas eschews the pathetic and overemphatic, certain portraits of vicious and fatalistic Arabs and derelict Europeans will haunt the reader with nightmare vividness. A refreshing contrast is the French engineer in charge of the great phosphate mines of Metaloui. He is a model of robust but not sordid pragmatism, with a genius for being very simply right on the most complicated issues. A description of the Waters of Tozeur—an oasis of date palms—will represent the average graceful quality of a style that is pungently various:

> Arabs will tell you that there are 194 water springs at Tozeur; they are ready to give you the names of every one of them,

and several more; these unite to form what may almost be called a river, which is then artificially divided into three rivulets—divided so neatly, says an old writer, that even some fragment of wood or other object drifting down the current is split up, perforce, into three parts, one for each of them; these three, later on, are once more subdivided into seven smaller ones apiece—twenty-one in all; and these, again, into a certain fixed number of almost microscopic brooklets. Allah is all-knowing.

Seven little villages nestle under the palms; here and there, too, you enter unexpectedly upon gem-like patches of waterless, shimmering sand—mock Saharas, golden and topaz-tinted, set in a ring of laughing greenery; there are kingfishers in arrowy flight or poised, like a flame of blue, over the still pools; overhead, among the branches, a ceaseless cooing of turtle-doves. At this season a Japanese profusion of white blossoms flutters in the breeze, and strews the ground; there peaches, apricots, plums, and almonds are giants of their kind, and yet insignificant beside the towering trunks of the palms whose leaves shade them from the sunny rays; the fruit trees, in their turn, protect the humble corn and vegetables growing at their feet.

Two new "Immortals" were elected to the French Academy on Thursday of last week, when Gen. Louis Lyautey, the French Governor of Morocco, was chosen to fill the place of the late Henri Houssaye, and Emile Boutroux that of the late Gen. Hippolyte Langlois. Gen. Lyautey has written much on colonization, and M. Boutroux, who is a professor at the Sorbonne, has several books to his credit on philosophical subjects, one of his latest being a study of William James.

Homer Lea, the American who acted as adviser to the leaders of the late Chinese revolution, died on Friday at Los Angeles. He was born in Denver in 1876. Even while a student at Leland Stanford University, he was obsessed by world politics, and determined to help to overthrow the Manchu dynasty. Though himself a hunchback, he made a specialty of military tactics, and at the age of twenty-two sailed for China. He joined the army of the allies to quell the Boxer uprising, and in 1901 returned to this country, calling himself a lieutenant-general in the Chinese army. In San Francisco he fell in with Dr. Sun Yat-Sen, who was later to be the first President of China, and became his confidential military adviser. Mr. Lea was also an author. He wrote "Vermilion Pencil," a novel; "The Valor of Ignorance," a military work in two volumes; "The Crimson Spider," a drama, "The Day of the Saxon," and had in preparation a history of the political development of China. It was an *idée fixe* with him that America, for lack of military preparedness, was to be overrun by Orientals.

Science

"The New Book of Golf" is among Longmans, Green & Co.'s announcements. It consists of contributions from various hands and is edited by Horace G. Hutchinson.

The day of the elephant folio has passed, but the portfolio still persists, as in the work before us, "Studies of Birdlife in Uganda" (London: John Bale, Sons, & Danielsson). It has little to recommend it except as an *edition-de-luxe* presentation work, and its authors, R. A. L. and V. G. L. van Someren, would have been wiser to publish their pictures in some other form. They have selected twenty-five photographs of wild birds and have beautifully reproduced them as enlarged photogravures 12x16 inches in size. The subjects include woodpeckers, herons, darters, chats, shrikes, and kingfishers, all excellent but not remarkable. Five or six are mere duplicates showing the bird in slightly different pose, and a number have lost greatly in the process of enlargement.

The plates are marked only with a number, so that one has to refer to a printed list. Here, however, only very indefinite names are given, such as "Sandpiper at Nest," "Cormorants on Trees," which necessitates still further search through an eighteen-page text in which the confusion is accentuated by omission of the plate numbers. The scientific value which the authors claim for their pictures would be more real if these were differently set forth. We fail to discover the "darkest secrets" which the writers have "wrested from Nature."

George A. Lindsay has made an interesting summary of annual rainfall and temperature in the United States. Twenty-eight manuscript maps, covering the fourteen years 1891-1904, inclusive, were obtained from the office of the Weather Bureau of Washington. Half of these indicated the precipitation in inches per year, and the other fourteen the mean annual temperature. The total rainfall in cubic miles falling upon the State of Missouri during ten years, was within 2 per cent. equal to the discharge of the Mississippi River at St. Louis during that interval. So it is plain that most of the water which falls as rain or snow never reaches the sea through the medium of drainage, but is evaporated from the land. If all precipitation went into rivers, and should be conducted back to the sea, we should have enormous streams of water which would entirely dwarf our present ones. After the precipitation for each State had been computed, the amounts were summed up in five districts; the Northeast, the Southeast, the North Central, the South Central, and the Western. In 1896 the total rainfall in the Northeast section was 98.9 cubic miles; in the Southeast, 199.7; in the North Central, 363; in the South Central, 308.8, and in the Western, 326, making a total for the United States of 1,296.4 cubic miles.

With fourteen years taken as a basis, the average annual temperature of the United States, excluding the outlying parts, is 52.9 degrees F; the annual precipitation 1,308 cubic miles. Frequent attempts to show a periodic variation of the temperature and rainfall have been made, and to connect this period with some celestial phenomenon, such as sun spots. While there seems a tendency, especially in the first part of the fourteen years, for a minimum of temperature and rainfall to occur at a maximum of sun spots, the latter part of the period embraced is erratic in both the temperature and precipitation curves. The fluctuation is a large fraction of the general periodic change which coincides fairly well with the sun-spot period. The most that may be said is that there are not enough data, or perhaps, better, not enough work has been done on the vast amount of data already accumulated, to show with any certainty, or even probability, that any celestial phenomena govern the variation of temperature and precipitation from year to year. The remarkable thing is that the yearly variation is so small, considering the great storms and great variations of temperature extending over short periods. This very uniformity is perhaps more wonderful than the discovery of some celestial cause for the variation.

"The Life of the Plant," by Professor Timiriazeff, of Moscow, has been agreeably translated by Miss Chérémeteff from the seventh Russian edition. As the ripe thought of an exceptional man, the book may be read by the intelligent farmer with much profit. Recognized as the foundation of agriculture, horticulture, and forestry, the study of the physiology of plants presents to the general reader topics of absorbing interest. Professor Timiriazeff shows what the plant takes from soil and air, the influence of warmth and light upon it, how it converts the absolutely useless into those materials which nourish man and the rest of the animal world, how the green plant stands between man and starvation. When all this becomes generally known and applied, larger crops and diminishing danger of a hungry world will result.

Dr. George Montgomery Tuttle, one of the best-known gynecologists in this country, died last week in New York, at the age of fifty-six. After graduating from Yale in 1877, and in 1880 from the College of Physicians and Surgeons, he began an apprenticeship at the hospitals in New York, and from 1884 until the time of his death was attending gynecologist at the Roosevelt Hospital. He contributed to various medical journals.

Drama

"THE WINTER'S TALE" AT THE SAVOY.

London, October 17.

The excitement now raging over Granville Barker's production of "The Winter's Tale" at the Savoy Theatre means nothing in particular, except the reaction of critics and public from the dulness of a month of first nights that have not given anybody anything to write or to talk about.

All through September, theatre after theatre opened the season with new plays, each of which seemed to be trying to outdo the other in dramatic emptiness or scenic pretentiousness. We have had Mrs. Wiggin's "Rebecca of Sunnybrook Farm," with its patchwork of sentiment, stars and stripes, and innocence, and its "angel-child" strayed, apparently, straight from Anstey's music-hall parody to play the heroine. We have had Mr. Walter Browne's morality of "Everywoman," revised by Stephen Phillips, for the British public, and used as a peg upon which to hang Drury Lane's regular autumn riot of realism and spectacle—Everywoman, with her nonconformist conscience, who, if called

Mary Smith or Angelina, would not have the shadow of a chance even at Drury Lane. We have had the spectacular patriotism of "Drake" at His Majesty's, the inevitable offshoot from "Bunty" in a new arrangement of Victorian costume and Scotch accent, the—I hardly know how many more, and none in which I, at least, have been able to discover a gleam of interest, with the exception of James Montgomery's "Ready Money" at the New Theatre, like "Rebecca" and "Everywoman," an importation from America, but, unlike them, one that is welcome; an amusing farce, though I believe there have been critics who, expecting a moral in it—goodness knows why—and failing to find any, have been foolish enough not to enjoy its fun.

After such a record as this, it is no wonder that the first ambitious performance with some pretence to dramatic quality should be hailed, on the one hand, as the most original production of modern times, on the other, as a medley and farrago of all the most advanced fads and "isms" of the day. When the excitement gradually calms down, I think it will be found that "The Winter's Tale" at the Savoy deserves neither the exaggerated praise nor the exaggerated blame heaped upon it. That he has adhered rigidly to the text is a virtue of which Mr. Barker boasts and for which he may be honored. Whether or no he has given the real Shakespeare in his interpretation at the Savoy is a question over which discussion has been fierce, irrelevant as it is, since nobody to-day knows what the real Shakespeare, in this sense, is. In France, where there has ever been greater respect for form, it is pretty well known what Racine, what Molière, is, and in the performances at the Théâtre Français one has the comfortable certainty that the classic tradition is duly observed. But in England there is no tradition in these, or most other, matters; each new manager who makes Shakespeare his bid for popularity "muddles through" in his own way, and takes great credit to himself for the correctness of his version or his costumes.

When the question is one of the respective merit of their interpretations, however, it is much easier to answer, for there is no doubt that in some respects Granville Barker has left his modern predecessors far behind. The usual Shakespearean performance in the fashionable theatre means a distracting elaboration of scenery, a slowness of pace—especially at His Majesty's—that uses up one's interest before the first curtain falls, and the mouthing and ranting that destroy whatever reality might survive dramatic ideals and forms so dissimilar to our own; the usual Shakespearean performance presented by societies organized for the purpose is likely to be reduced to an archæological exercise, interesting to the student perhaps, but desperately dull to the mere playgoer. Granville Barker has wisely refrained from either popular or archæological extreme—though to the latter he may show decided inclination. One of the things he has been most severely criticised for is the rapid pace, the gallop, at which the play is taken at the Savoy—a gallop that we are assured is most un-Shakespearean. The criticism is only in a measure deserved, for Leontes (Henry Ainley), more enamored of his part than of his wife, lingers writhingly and gesticulatingly over it, acting with an evident determination that suggests he has not forgotten his lesson, as Cassius, with Beerbohm Tree; while Hermione (Lillah McCarthy) plays the statue in anticipation from the very first moment of the first scene. But the rest of the performance goes fast enough, more particularly in the sheep-shearing revels, and the effect of speed is increased by the fact that there is only one interval, and that the fall of a curtain replaces the ordinary business of scene-shifting.

But nothing could be less critical than to criticise this speed—this pace—for it is precisely what makes the play go—so much so, that if one does not happen to be a Shakespeare scholar, one can but wonder if this is not just the pace which Shakespeare himself would have given it. The action leaves no time for thought; it is so swift that all the delicious absurdities of plot and detail are carried off in the swing of the movement, the hurry from scene to scene. The encounter of Antigonus with the bear, though the most realistic of pantomime bears; the adventures of the infant Perdita, direct descendant of Romulus and Remus and close of kin to the Babes in the Wood; the naïveté of disguise by which Florizel is deceived by his father; Shakespeare's crude appeal to the gallery when he presents Paulina to Camillo, and so pairs off everybody happily at the end; all these things and as many more seem quite natural to the panoramic swiftness with which life passes in Bohemia by the sea. It may be objected that Shakespeare's verse must suffer in the race, and it does. The only lines I remember as having been delivered with genuine feeling for their rhythm and sense, as well as for enunciation and elocution, were those of Paulina's Steward (Nigel Playfair) in the one speech Shakespeare allows him, but with such generosity that it remains one of the most memorable in the play. This objection, however, is the less felt because anybody who knows the English theatre never expects to hear blank verse, or verse of any kind, or indeed fine prose, decently recited on the stage. In no detail of their profession do English actors and actresses show more lamentably the lack of that training and tradition to which the French owe their dramatic supremacy to-day.

To make Shakespeare live at this late date is no small accomplishment, and Granville Barker is to be congratulated on his success. Here, he has really been original. But when it comes to his manner of presenting the play, it must be admitted that he has not achieved originality even in his use and adaptation of the ideas and experiments of others. So freely has he borrowed, or rather, so freely have the designers of the scenery and costumes (Norman Wilkinson and Albert Rothenstein) borrowed for him, that almost every critic has brought a new accusation of plagiarism against him. He is Post-Impressionistic, he is Beardsleyesque; he takes his good from wherever he finds it, whether from the mediæval stage or *l'art nouveau;* he prigs beauty from the now fashionable Russian Ballet and eccentricity from the now over-rated Reinhardt; he has only done what Poël, Benson, and Gordon Craig have done before him; and in each of these accusations there is more than a word of truth.

But it would not matter how much he might beg, borrow, or steal, if he did it with distinction and in order to obtain fine results. At times he justifies himself, as in his treatment of the stage which he has brought down into the auditorium, and built up in three planes, with two doors for exit and entrance on either side: a modern modification of primitive arrangements appropriate to the play and to the period. The scenery in its simplicity is a vast improvement upon the vulgar gaudiness and extravagant realism that have been becoming worse and worse ever since Irving brought them into vogue at the Lyceum. The simple white palace of Leontes has no ornament save a row of quiet arches hung with dull gold curtains at the back, and is as restful as it is beautiful, besides being much more in character with Shakespeare's fantasy than the sham mediæval castle that would probably have been erected at His Majesty's to set the audience gaping with astonishment at the feat. The shepherd's cottage savors of the affectation peculiar to the modern architect of the "simple-life" cottage, but even so, it is more in harmony than the more familiar pretty pastoral scene abounding in landscape incident that elsewhere serves to distract the average theatregoer from the, to him, tedious verse of Shakespeare. The curtains, sometimes plain and sometimes relieved with conventional decorations, that fall with the shifting of the scenes, prove the effectiveness of simplicity, besides being admirable backgrounds to the different figures and groups. It is at this point that Granville Barker has gone hopelessly astray, for all his borrowing. The more simple and subordinate the background, the more it brings out the figures and groups posed and moving before it—a truth that he has not been the first to discover. But the figures and the groups at the Savoy cannot stand being brought out in such strong relief. Beardsley, the Russian Ballet, Reinhardt, have clearly been the chief inspiration of the costumes and the poses, though the spirit of Beardsley and the Ballet has been wofully misconstrued in the process. Of any mere inappropriateness it would be idle to complain, since any one costume or pose would be as appropriate as another to such a fantasy. With two possible exceptions, the costumes are guilty of a worse offence than inappropriateness—they are ugly, and ugliness in such a stage setting is the unpardonable sin. The head-dresses of men and women, with flaunting, foolish feathers and long, lean, meagre, unlovely locks of hair, would be more in keeping with burlesque or parody; in the various dresses the odd, rather than beauty, seems to have been the aim, and actors and actresses, conscious of their unloveliness, wear them awkwardly; certain details, like the birettas of the advocates in the court scene, are nothing more nor less than caricatures. Altogether, the straining after the sensational is all too obvious, and to add to the artificial effect thus produced, at certain crowded moments on the stage, the characters assume, and remain in, pantomime attitudes like so many supers from "Sumurûn" or "The Miracle"; the more obvious, and the more discordant, because of the rapidity of the action immediately before and after.

Granville Barker has made Shakespeare on the modern stage, for once, amusing—his crime to the critics; but he has not made Shakespeare beautiful, which is no less essential for success when the play is "The Winter's Tale." The triumph would have been greater had he drawn his audience by the merit of Shakespeare alone, instead of by the display of his sympathy with every "artistic" movement of the moment. But in the English theatre we must take our good where we find it, and we can only be grateful when there is any good to take, however much it may be adulterated. N. N.

Laurence Irving has published (Duffield) his English version of Maxim Gorki's "The Lower Depths," which was played in the Kingsway Theatre, London, last winter. It will convey to English readers, doubtless, a sufficiently accurate impression of the general character and scope of the work, although the habitual use of slang phrases peculiarly British indicates that it is by no means an exact translation. This, however, is not a matter of serious moment. The piece is not one of those masterpieces which demand from the adapter the most reverential literary treatment. It possesses a certain interest as a reflection of the manner of life in Russian slums, but the conditions which it depicts do not differ essentially from those which, unhappily, are only too common in the underworld of many other great cities in freer and more civilized countries. As a grimly realistic sketch of human misery and degradation it has the merit of veracity, but it throws no new light upon dark places, depicts suffering and evil without seeking the cause or suggesting a remedy, and is almost entirely lacking in the imagination, the insight, or the appeal to be found in the writings of such men as Dickens, Tolstoy, Balzac, Zola, or even Eugène Sue. Had it been written originally in English it would have been pronounced a melodrama of the third, or, at best, the second rate, in no way remarkable except for its frankness. It characterizes with crude vigor a number of perfectly familiar types, but has neither plot nor cohesion, and but very little dramatic action. Such episodes as occur, amid the wastes of talk, are of the ordinary police-court variety, and culminate in murder. The personages represented include a ruffianly and miserly dive-keeper, his abandoned wife, who fights with her sister for the favors of a pickpocket, a drink-sodden actor, a degraded swindling baron, a street-walker, and various tatterdemalions. Rascally officialdom is impersonated by a grafting policeman. The one respectable figure is a pilgrim, Luka, who preaches tolerance and acts as peacemaker, without in any way influencing the course of events. There are forcible passages in the dialogue, but they are rare, and fail to relieve the dreariness of a play which is as chaotic in form as it is pessimistic in spirit.

William Archer contributes the "Congreve" to the masterpieces of English Drama series (American Book Co.), now in preparation under Prof. Felix E. Schelling as general editor. In the present case the introduction is interesting mainly for what is said on that hoary question of Congreve's morality, or, rather, lack of it. Mr. Archer rejects the lame excuse that the different social conventions of that day are the real offenders, and equally confutes Congreve's own plea that in his works abuses are satirized. Satire, comes the retort, must, if it is to have point, set up by way of contrast a moral standard. Nothing of the sort is observed in Congreve. Nor is this irresponsible comic muse—"painted French baggage," Thackeray called her—to be fathered upon France, for the good reason that "it did not exist, in anything like such brutal and brazen forms, on the other side of the Channel." In his complete ethical indifferences Congreve, with Vanbrugh, is regarded by Mr. Archer as the last of the ancients, of the Jacobeans, rather than as the first of the moderns. "With Steele and Farquhar . . . a new spirit came into comedy—the spirit of meliorism, so utterly foreign to Congreve." The following are the plays included in this volume: "The Double-Dealer," "Love for Love," "The Way of the World," and "The Mourning Bride."

The production of "Julius Cæsar," which William Faversham has made in the Lyric Theatre, is, when existing dramatic conditions are taken into consideration, an eminently respectable achievement. It suffers, of course, as have most recent Shakespearean performances, from the subordination of text to spectacle, but the acting was upon a somewhat higher level of general intelligence than old theatre-goers might have expected. The conspicuous weaknesses in it, wherever they were displayed, were largely due evidently to over-anxiety and inexperience. Undue deliberations, excessive tonal emphasis and gesture were faults which most of the actors shared in common, and the diction—except in the case of two or three players—had neither cultivation nor distinction. In many instances the sense of the text was missed or distorted. But the representation, as a whole, was smooth, vigorous, picturesque, and had its touches of tragic dignity. Fuller Mellish, a veteran Shakespearean, had a good conception of Julius, but nearly spoiled it by over-acting and staginess. Tyrone Power, if somewhat heavy, was in many respects an admirable Brutus. William Faversham played Antony with intelligence and abundant spirit, but without rant. Mr. Keenan would have been a better Cassius if he had been less anxious over his points. Miss Opp was misplaced as Portia. The mobs had been trained with precision, but not much discernment.

"Bunty Pulls the Strings" continues to be so successful at the London Haymarket that Manager Harrison is likely to abandon his idea of making an elaborate production of Ibsen's "The Pretenders." In its place he will probably present Stanley Houghton's comedy, "The Younger Generation." It will be preceded by a one-act play of a somewhat ambitious character. This is the work of Lord Dunsany, and bears the title of "The Golden Doom." The action takes place "a long time ago," and the story is entirely fantastic. S. H. Sime is designing both costumes and scenery; the latter will be painted by Joseph Harker.

According to the local critics, Aubrey Smith has scored an emphatic success at the Liverpool Repertory Theatre with "Instinct," a play adapted by an American dramatist, Penrhyn Stanlaws, from the French of Henry Kistemaeckers. It deals with a crisis in the lives of two persons, a distinguished surgeon and his wife. The latter has taken a deep but purely innocent interest in a young poet, who has come to regard her as his Egeria. In the absence of her husband, who pretends that work calls him away, Mrs. Mandover grants her youthful admirer a final meeting in her own house. Thither he repairs, and is suddenly attacked by serious illness. Dr. Mandover, upon his return, is in the mood for murder, but is recalled to a sense of his professional duty by the frantic appeals of his wife, who tells him that it is his mission to cure, and not to destroy. High praise is given to Aubrey Smith and Miss Lilian Braithwaite for their respective performances. It is easy to credit Mr. Smith with great effectiveness in a part of this kind.

Miss Gertrude Kingston announces two afternoon performances at the Little Theatre, in London, of a play, entitled "Barbara Grows Up," which made a hit on its original production at the Glasgow Repertory Theatre. The piece is "by an author unknown to London."

Maurice Maeterlinck has finished his promised sequel to "The Blue Bird," in which Tytyl and Mytyl are introduced at a much later stage of growth. He is luckier than most authors if he has been able to find new inspiration at the old font.

Music

Interpretation in Song. By Harry Plunket Greene. New York: The Macmillan Co. $1.50 net.

Mr. Plunket Greene is one of the most prominent concert singers of our time. He is a bass, of the Wüllner type; that is, he owes his success much more to his art of interpretation than to natural beauty of voice. It is this that gives his book its special value. He has been through the mill and knows what he is talking about. His example and his teaching will be a stimulus especially to those who, like himself, have unusual obstacles to overcome. Yet let not those whose voices are naturally beautiful imagine that they can depend on that alone; a vast number of such have found out to their grief that a great gift like a lovely voice may count for nothing in the world of music. The number of such failures would be much reduced if every young singer would read this admirable volume.

Mr. Greene exaggerates when he says that, whereas players have greatly improved their technique during the last thirty years, the singer alone has stood still. Singers like players have mastered operas like Wagner's which a generation ago were pronounced impossible of execution. Nevertheless, the singer with a beautiful voice who has not taken the trouble to learn his business is much in evidence. So far as technique is concerned, Mr. Greene has nothing to tell them in this volume; he takes technique for granted—with one exception. Inasmuch as the whole structure of interpretative singing stands on breath control, the physical part of breathing is dealt with in an appendix. The rest of the volume is concerned chiefly with the three possessions with which (in addition to technique) the interpreter must start—Magnetism, Sense of Atmosphere, and Command of Tone-color. These topics are not discussed in a dry psychological manner, but are illustrated with vivid glimpses of actual happenings in concert halls. Nothing, for instance, could be more entertaining as well as instructive than the pages devoted to showing how easily the magnetic something which passes from singer to audience and from audience to singer is destroyed, not so much by some unexpected noise as by something visible which snaps the thread of attention to the artist and his music. "To a singer the roving eye in an audience is as terrible a danger signal as the early yawn."

In the pages relating to atmosphere Mr. Greene declares that the secret of interpretation lies in the treatment of a song as a whole. The atmosphere of the song creates the right mood in the singer—if he knows how to go about it. The author points the way in a long chapter, How to Study a Song, which is admirably conceived. Perhaps nowhere else in all the pedagogic literature relating to music can the student find such a key to the very heart of great songs as in this chapter. The greatest of all songs is, as the author rightly maintains (p. 238), Schubert's "Doppelgänger." To read the five pages he devotes to it, and then to play and sing the thrilling song itself (it is printed here with his interpretation marks) will mean to most students the dawn of a new insight into the inner secrets of expressive music. Among the other songs treated in the same fashion are Schumann's "Er der Herrlichste von Allen" and Stanford's "The Crow." In The Singing of Folksongs and a number of pages devoted to the analysis of British ballads that are worth while, the student will find more help of the same kind.

Singers talk a great deal about tone color without knowing as a rule what they mean by it. Mr. Greene clears up the matter by bidding the vocalist to "vitalize the breath and add to it the same color when singing the words that he would give when speaking them in accordance with their dramatic significance." After some remarks on Style he passes on to discuss at considerable length three main rules for all singers, these rules being: Never Stop the March of a Song; Sing Mentally Through Your Rests; and Sing as You Speak. The discussion of the first of these is of particular importance at the present time when singers are too prone to indulge in excessive and ill-timed variations of pace (rubato) at the expense of rhythm. It will give them pause to read the masterly remarks (p. 45) on the necessity of keeping up the march of the rhythm in "The Erlking" without any slackening, because through the whole song run haste and fear. No less timely and important are the remarks on the necessity for singing mentally through rests, so as to keep in the mood. Under this head there are also useful admonitions to vocalists as to songs and parts of songs in which the pianist sets the pace and the singer must be his humble follower.

The Making of Programmes and The Clergy and Intoning are other topics discussed. Mr. Greene's eminence as an oratorio singer also gives special value to his remarks on recitative. He is eloquent on the subject and on the causes of over-elaboration of details; he dwells pathetically on the martyrdom of memorizing poor songs and throws much light on the question why most English songs are so bad. His caricatures of the ordinary English contralto and other types are among the most amusing things in musical literature, as are his remarks on ballad accompaniments. Neat epigrams there are, as when he advises the singer to "ask himself not what he can put into the song, but what can be got out of it"—an admonition much needed. In short, Mr. Greene's book is full of wit and wisdom and invaluable advice to all who, be their voices beautiful or of mediocre charm, wish to succeed on the concert stage.

The *Harvard Musical Review* is a new periodical to be published monthly. The October number includes articles by Walter R. Spalding on "Utilitarian Values in Music," by Arthur Foote on "Thirty-five Years of Music in Boston," by T. M. Spelman on "Massenet," and by Nicholas Roosevelt on "Harvard and the Boston Opera." The editor writes that he has

> already succeeded in interesting a large number of prominent musicians in the enterprise, such as H. T. Parker, Philip Hale, Converse, Loeffler, Chadwick, Philip Goepp, Richard Aldrich, Morris Class, George Burdette, Edward B. Hill, and many others; a number of whom have promised to write for us. We intend to have their contributions form the backbone of the paper, and to supplement their work by that of the undergraduate editors, thus producing as a whole a paper which will have little in common with the usual American musical trade journal or guide for music teachers.

Next Monday the opera season opens with Puccini's "Manon Lescaut." The other operas of the week will be "Götterdämmerung" on Wednesday, "Gioconda" on Thursday, "Madama Butterfly" on Friday, and "Tannhäuser" on Saturday afternoon. Brooklyn will have "Rigoletto" on the evening of that Saturday.

The chief offering of the Philharmonic Society this season will be an elaborate production of the Ninth Symphony of Beethoven, for which the MacDowell Chorus, with its usual numbers considerably augmented, has now for some time been rehearsing. In an early concert Conductor Josef Stransky will offer the new "Merry Overture" of Felix Weingartner, its first public performance. He will introduce also for a first hearing in these concerts Alexander Ritter's "Olaf's Wedding Dance, a Symphonic Waltz." The composer was a special friend of Wagner and a teacher of Richard Strauss. Other novelties to be presented by the Philharmonic during the season will be a new French symphony by Dubois, a posthumous overture of Dvořák, an overture by Erich Korngold, the thirteen-year-old Viennese composer; furthermore, new works by Sibelius, Bruckner, Debussy, Felix Draeseke, Max Reger, Emil Graener, and others, including Henry Hadley's "In Bohemia." The Philharmonic, under Mr. Stransky, will begin its season with a New England tour, appearing in New Haven under the auspices of the musical department of Yale University, in Providence, Holyoke, and Boston, returning to New York in time for the first concerts in Carnegie Hall, Thursday evening, November 14, and Friday afternoon, November 15. Mischa Elman, the violinist, will be the soloist of the New England tour and of the opening New York concerts.

"Parsifal" is to be produced at the Paris Opéra as soon as the copyright expires—on January 1, 1914.
